HINDU AND MOHAMMEDAN RIOTS

By J. T. SUNDERLAND

THERE are in India about 69 millions of Moslems and 217 millions of Hindus.

Disturbing reports come to us from time to time of hostilities and bloodshed between these two great religious communities. As is well-known, these riots are claimed by the British to be clear evidences that their rule in India is necessary, absolutely necessary, to prevent the Mohammedans and Hindus from destroying one another in great numbers, and plunging the country into devastating wars. Is this claim well-founded?

As soon as we begin to examine the situation with care and a desire to be unbiased, we discover that there are two exactly opposite views of the case. One is that of the British, just suggested, namely, that the hostilities and riots are very bad; that the responsibility for them rests wholly upon the Indian people; that were it not for the presence of the British Government, the Hindus and Moslems would be at each other's throats and the country would be deluged with blood; and therefore for India's sake, the British must stay.

The other view, which is that of a large part of the most intelligent Indian people, denies that the hostilities and riots are as numerous or serious as the British reports indicate; and, as to responsibility for them, it places that primarily on the British, and not on the Hindus or Moslems.

It puts the case essentially in this way: The Hindus and Moslems of India are not

naturally hostile. When left to themselves, that is, when not stirred to burlful rivalries or to antagonisms by outside influences, they are kind and peaceful neighbours. Living side by side in nearly all parts of India, no one would know them apart except for possibly some slight difference in dress or in religious practice or rite, which does not affect at all their business relations or their neighborly relations or their friendship and goodwill to one another. Why then should there be riots between them? Is it not necessary to look for some outside cause?

Wherever in India the British are most in evidence, there the riots are usually worst; wherever the British are least in evidence, there riots are generally fewest.

Before the British came to India, there seems to have been little hostility between Hindus and Moslems; everywhere they seem to have lived together for the most part peacefully and harmoniously.* In the Native States to-day, where there are few British and where British rule is least felt, there are

* It is true that before the coming of the British there were sometimes wars between Hindu and Mohammedan princes and Hindu and Mohammedan states. But they were not wars of religion, but simply wars caused by political quarrels, or by the ambitions of rulers. Hindus lived in security and peace under Moslem rulers, and Moslems under Hindu rulers. Hindu princes appointed Moslems to high official positions, sometimes to very highest, and Moslem princes were equally generous to Hindus.

very few riots,† and very little enmity is seen. It is only since British rule in India began, and in those parts of the country where British rule is most directly and strongly felt, that the hostility becomes noticeable and riots of any importance appear.

The only conclusion, therefore, that it seems possible to draw is, that, instead of the British being needed in India to prevent hostilities and riots, it is their presence that is mainly responsible for such riots or other hostilities as exist.

Going more into details, the Indian view may be stated somewhat as follows :

The British policy in India has been from the beginning that known as "divide and rule," or that which the old Romans described by their well-known Latin words, *divide et impera*. This has been the policy of all great conquerors and rulers of foreign peoples, from those of ancient Babylonia, Assyria, Persia and Egypt down to Napoleon in Europe and Clive in India. All the British conquerors of India used it, and did not hesitate to boast that they did. Indeed, without employing this policy of stirring up hostility between states, between princes, and between parties, and taking the side of one against the other and thus gaining control over both, the British could never have conquered the land. Later also British rulers of India have continually employed the same policy of fostering divisions among the people.

Since the time of the early conquerors of India, this policy has been kept as much as possible out of sight; and sometimes it has been denied; and yet not unfrequently eminent officials have been frank enough boldly to declare and defend it. As early as 1831, a British officer, signing himself "Carnations," wrote in the *Asiatic Review* of May of that year : "*Divide et Impera* should be the motto of our Indian administration, whether political, civil or military."

About the time of the Mutiny, Lieutenant Colonel John Coke, Commandant at Moradabad, wrote : "Our endeavor should be to uphold in full force the (for us fortunate) separation which exists between the different religions and races, not to endeavor to amalgamate them. *Divide et impera* should be the principle of Indian government."

Lord Elphinstone, Governor of Bombay, in a minute, dated 14th May, 1850, wrote :

† This has been pointed out so often in Indian newspapers that latterly such riots have not been so rare in the Indian states as before. Editor, *M.R.*

"*Divide et impera* was the old Roman motto, and it should be ours."

Sir John Strachey, an eminent British Indian civilian and writer on India, said : "The existence side by side of hostile creeds among the Indian people, is one of the strong points in our political position in India."

Mr. Gandhi tells us that Mr. O. A. Hume, for almost a lifetime a high official in India, once made to him the frank confession that the British government was "sustained by the policy of Divide and Rule."

All this has been perfectly natural; and, if it is right for one nation to conquer another and rule it without its consent, then it has been perfectly consistent and perfectly right for Great Britain to employ this policy of fostering divisions among the Indian people so as to make her rule secure. A united nation is not only more difficult to conquer, but it is also more difficult to govern, to keep under subjection, than one that is divided into opposing factions, parties, classes, or religions. It would be very strange, therefore, if the British had not borne this fact in mind and taken advantage of it in practically all their government of India.

Of course, the question arose early with them, what particular division could be taken advantage of that would be likely to be most effective? The answer was not far to seek. Religious divisions generally strike deepest. Just as in Christian lands rulers have often availed themselves of the divisions of the people into Catholics and Protestants, arraying one of these religious communities against the other to serve their own political ends, so it was natural that the British in India should take advantage of the great and conspicuous religious division of the Indian people into Hindus and Moslems to serve their own British political ends. Perfect political unity between these two great communities would mean practically the unity of all India. The British well knew that a revolt, a strike for independence undertaken by a united India, could not be put down. They would have to surrender their dominance and give India self-rule. Hence, why should they not take every means in their power to keep the Indian people politically divided? Which, of course, is only another way of saying, why should they not avail them-

* For the three preceding quotations see "Consolidation of the Christian Power in India," by Major B. D. Basu, Chapter VI, pp. 74, 76. (H. Chatterjee, publisher, Calcutta, 1927). Also *The Modern Review*, Calcutta, May, 1926, p. 556.

selves of what seems now, and always has seemed, the most promising way of attaining this end, namely, fostering estrangement between Hindus and Moslems? Although it has been denied that this has been the policy of Great Britain, the evidences of it, both in the past and in the present, are overwhelming.

The particular ways most employed by the British to keep the Hindus and Mohammedans apart have been, and are, two; namely, *favoritism shown by the Government to the Mohammedans*, which, of course, tends to create jealousy on the part of the Hindus, and therefore estrangement; and, of late years, *communal elections*.

The favoritism shown by the Government to the Moslems has taken many forms, and it has generally been hidden and elusive; but its existence has been, and is, unmistakable.

Ramsay MacDonald, in his "Awakening of India," (p 283), calls sharp attention to the widespread "suspicion that sinister influences have been and are at work on the part of the Government; that Mohammedan leaders have been and are inspired by certain British officials, and that these officials have pulled and continue to pull wires at Simla and in London, and of malice aforethought sow discord between the Mohammedans and Hindu communities, by showing to the Mohammedans special favors."

India does not forget an address delivered some years ago by Sir Bampfylde Fuller, Governor of Bengal, in which that high official, employing a significant figure of speech, represented the British Government in India as having "two wives," Hindu and Moslem, and the Moslem wife was the Government's "favorite."

A year or two ago, Lord Olivier, who was Secretary of State for India in the Ramsay MacDonald Government, wrote a letter to the *London Times*, confessing in the plainest words this favoritism. He said:

"No one with a close acquaintance with Indian affairs will be prepared to deny that on the whole there is a predominant bias in British officialdom in favor of the Moslem community, partly on the ground of closer sympathy but more largely as a make-weight against Hindu nationalism."

This statement made a great stir in London, and Lord Oliver was widely censured. Much of the feeling was caused by

what was regarded as his indiscretion in letting the public know something which the Government thought should be kept secret. He had "let the cat out of the bag", which was a grave offence.

Passing to the Communal Elections,—the influence of these in estranging different sections of the Indian people, especially Hindus and Moslems, is so obvious that no one dares to deny it. Just what are the Communal Elections? The plan of these, or to employ another name, the plan of Communal Representation, is a scheme by which men are elected to office not to represent the people as a whole, but a section of the people, a class, a division, especially a religious sect. The electorates are divided into compartments, so to speak, social, racial and religious; that is, the people who vote do not vote all together, as citizens all on an equality, and for representatives to represent them all as Indians, without reference to their social status or their religious faith, as is the case in this country and Canada and England and nearly all other countries. Instead of that, the members of different religious faiths, and different social classes and different races vote separately, and for candidates to represent them as belonging to separate and distinct faiths and classes and races.

For example, the Bengal Legislature of one hundred thirteen members has not been elected and does not exist as a legislative body of one hundred thirteen *Indians* representing *all* the people of Bengal, or *all* the people of this, that and the other *district* of Bengal. On the contrary, forty-six members of the Legislature have been elected as Hindus to represent Hindus; thirty-eight as Mohammedans to represent Mohammedans; sixteen as Europeans to represent the relatively very small number of Europeans; two as Eurasians or Anglo-Indians to represent that section of the people; five as landholders to represent landholders, etc., etc. Of course, the influence of such a dividing political system, of such a broken-up elective and representative plan, is in the greatest possible degree to destroy all feelings of citizenship, to crush out all patriotism, to prevent all interest in India as such or Bengal as such, and to destroy all care or concern for measures aiming to promote the benefit of the nation, the province or the city. Its influence is to cause all voters to concentrate their interest on the narrow and

* Quoted in *The People* (Lahore), of July 18, 1927.

In August, 1927, Mr. Shaukat Ali, an eminent Mohammedan leader, Secretary of the India Khilafat Committee, issued and circulated widely a strong public statement deprecating the estrangement which, after a long period of "most remarkable amity and good-will," had sprung up of late between Hindus and Moslems, owing largely to the communal election system, and appealing in the most earnest way for harmony and co-operation between the two religious bodies, declaring that a united and self-governing India was the desire, the goal and the imperative need of Mohammedans as truly as of Hindus. He added that the whole Khilafat Working Committee was earnestly endeavoring to promote unity between the Mohammedans and the Hindus.

Thus we see that the evidence is simply overwhelming that the responsibility for the origin of the communal election plan rests wholly upon the British; and that if not their sole, at least their primary, object in maintaining it, against the protest of a large majority of the Indian people, is to create and preserve sufficient hostility between the two great religious communities of India to prevent their political unity and co-operation,—in accordance with the principle of "divide and rule," which has been the British policy in India from the beginning.*

Do the British officials really want to stop the riots? Many of the Indian people find themselves compelled to believe that they do not; they say, "If they *wanted* to stop them, they *would* stop them; for they have the power." Not a few Indians believe that the British regard the riots as a valuable asset,—as one of the best excuses they have for staying in India.

To be sure, the British proclaim to the world that they deprecate the riots, are pained and shocked by them, and want them to stop. The Indian people reply, "If what

you say is true, why do you do the things which promote them, and refuse to do the things which would prevent them? In other words, why do you insist on keeping the communal elections when you see that everywhere they create divisions and antagonisms and the spirit which tends to produce riots; and why do you refuse to give us in their place such elections as other civilized nations have, which tend to foster unity and peace?"

In August, 1927, Lord Irwin, the Viceroy of India, delivered a speech in Simla, the Indian summer Capital, calling public attention to the riots, which he represented as serious, giving statistics as to the number of persons killed and wounded during the preceding year and a half, and appealing to the officials of the nation and to the people to do all in their power to promote harmony and unity between the Hindus and Moslems so that the riot might be brought to an end. And yet, amazing as the fact seems, the speech did not contain even an intimation of willingness on the part of the Viceroy to do away with the communal election system which everywhere creates the divisions and hostilities from which the riots spring.

Lord Birkenhead, Secretary of State for India, in a speech delivered in the House of Lords, in March, 1927, declared, with an air of high and austere righteousness, that the Indian people need expect no concessions looking in the direction of self-rule so long as "sectarian violence" between Hindus and Mohammedans continued. And all the while his Lordship, himself, possessed the power to stop that sectarian violence, by changing the form of the Indian electorates; yet he refused to take even a step in the direction of stopping it.

An English writer has summed up in two sentences what he declares is the exact Indian situation: "We, the British, put on a face as long as the moral law and say to the Indian people, 'You want self-rule; we are preparing you for it, and will grant it to you when you are *united*,—of course we cannot before.' And then we turn round, grinning like the devil, and say to ourselves, 'We've got them in our power, and by the Eternal we will *never* let them become *united*, until water runs up hill and the sun rises in the west.'"

The present writer declines to adopt as his own the utterance of this Englishman;

* As showing the good feeling between Moslems and Hindus when not estranged by outside influences, it is worth while to notice that, from the first, Mahatma Gandhi, a Hindu, has been almost as much esteemed and honored by the Mohammedans of India as by the Hindus. Some of his strongest supporters always have been and are to-day distinguished Moslem leaders. Another thing which shows the fundamental friendship between the two religious communities is the almost unanimous election to the Presidency of the 1927 Indian National Congress, of Dr. Ansari, a Mohammedan, notwithstanding the fact that fully three-fourths of the members of the Congress are Hindus.

but he sees enough truth in it to desire to give it to his readers, and to commend it to the thoughtful attention of the Secretary of State for India and the British Government.

It is difficult to understand just what is the attitude of the British officials toward the riots. They seem both to want them to continue, and not want them to continue. They declare that they deeply regret them and are trying to prevent them; and at the same time they continue persistently to maintain the communal election system which, they know, produces them; and also they continue to use them as a seemingly prized and cherished argument for convincing the world that they (the British) must stay in India to protect it.

The situation is a puzzle. Certainly we are unwilling to think of men like Lord Birkenhead, the Secretary of State for India, and Lord Irwin, the Viceroy in India, as knowingly playing a double part, or as being otherwise than sincere when they solemnly declare that they deplore the riots and are trying to prevent them. Perhaps the kindest view to take is, that in setting up the communal system of electorates as a means of keeping the Hindus and Moslems apart, they have created for themselves a "Frankenstein," a something which they themselves cannot control, an agency which, while accomplishing the opposite which they intended, of dividing the people, has got out of hand and caused riots which they sincerely deplore. They attempt to wash their hands of responsibility for the riots, and place the blame upon the Indian people. The attempt is in vain. They created the cause; therefore they themselves are responsible for the effects.

They can get rid of the riots, and other

forms of dangerous hostility, in one way and only one. And that is by ceasing to show favoritism to the Mohammedans or to any other community or party; and by giving to India electorates and elections so planned as to unite the people and cause them all to vote together as citizens of a common country, and in the interest of their common country, instead of electorates and elections planned in their very nature to divide the people, by setting them to voting as Moslems, as Hindus, as Parsis, as Sikhs, as Christians and the rest, in the interest of their rival sects.

There is absolutely nothing fundamentally antagonistic between the Hindus and Mohammedans of India. They have lived together for the most part entirely peacefully and happily for more than seven hundred years, and are living together happily now in essentially every respect except as stirred to rivalries, jealousies and temporary hostilities by the presence and plannings of a foreign government, whose constant policy is that of the old Romans, *divide et impera*.

To conclude. Nothing is more certain than that the Indian people earnestly desire to get rid of riots and all forms of hostility between their two great and honored religious communities. How is it to be accomplished?

In the very nature of things, it can never be done through foreign rulers whose interest is and always must be, to keep them divided so as to make their foreign rule secure. It can be done only through a government of their own, some form of real home-rule, whose interest is unity, and whose security is to be ensured through unity.

[This is a chapter from the Author's forthcoming work, "India's Case for Freedom."]

ALL-YEAR COLLEGE

By DR SUDHINDRA BOSE, M.A., Ph.D.

Lecturer in Political Science, State University of Iowa

IT seems strange that college and school buildings in India should stand practically empty through the long period of summer vacation. Why should books

and valuable laboratory apparatus lie idle when they can be used to extend the frontiers of knowledge? Does the mind of the student cease to grow during the long summer recess?

ed national schools. What has India to show for itself?

I know the worst that can be said against America; but to me the most significant fact about this country is that it offers every boy and girl, rich or poor, the opportunity to get an education. Education is the heritage of American youth. It is regarded not merely as a precious boon, but a patriotic duty.

What we need most urgently in India now is not the narcotic teachings of so-called

Vairagya and *Mukti*, but, as the lameated Sister Nivedita said long ago, a sturdy "philosophy of citizenship"—a gospel of education and action which will help us win our full share in the vitality of the world. We have a long way to go. Our schools and colleges should be all-year social laboratories. They should teach us the best ways of living together, of taking an active non-quietist part in the affairs of the nation and the world.

WHAT ABOUT THE HINDUSTANI-SPEAKING PROVINCES?

BY PANDIT DWARKA PRASAD MISHRA, M.L.A., Jabulpore

IN the course of the historic debate on the subject of extension of the Mont-Ford Reforms to the North-West Frontier Province held on 19th March, 1926, Sir Alexander Muddiman is reported to have said :

"If the Government's sources of information were confined to the proceedings of this House, the deduction to be drawn from the debate, so far as I have listened to it, is that the subject is one in which the Hindus of Northern India have no interest.....I should conclude this, and indeed an unimpressed spectator in the gallery could hardly fail to come to that conclusion. On the other hand, he could have come to the conclusion that it was a matter of passionate interest to the Hindus and the Brahmans of Southern India."

Though later on Sir Alexander characterised this deduction as "entirely erroneous" and ascribed the apathy of the Hindus of Northern India to a "conspiracy of silence", yet thoughtful observers are painfully aware that the conspiracy was not one of silence but of blissful ignorance.

The anti-partition movement in Bengal kindled into flame the inherent Bengali nationalism and through Orissa it quickly spread into Andhra and other Dravidian Provinces. Maharashtra has never lacked this sub-national spirit, and so far as Gujerat is concerned, even the Mahatma has a soft corner for it in his heart and not infrequently talks of his "little Kathiawar". Nay, the Hindu people and politicians of these provinces have gone farther and have studied similar problems of Northern India with amazing depth. No wonder then if the

problem of the Frontier Province was one of "passionate interest" to Sir Sivaswamy Iyer, Diwan Babadur T. Rangachariar and other Madras members of the Second Legislative Assembly.

Unlike their Hindu brethren the Muslims of Northern India are also keenly alive to these problems, though they, almost invariably, give them a communal colour. In the January session of the present Assembly an Oriya member demanded the amalgamation of all Oriya-speaking tracts with the province of Bihar and Orissa. While not a single first-rate Hindu politician from the north took part in the debate, an eminent Muslim from the U. P. opposed it on the ground that

"Inclusion of Orissa in the province of Bihar is responsible for the low percentage of Mussalmans in the province, and if other Oriya-speaking tracts were to be brought under the province of Bihar the percentage of Mussalmans would still go down".

The last but one session of the All-India Muslim League held at Aligarh emphasised the preservation of the Muslim majority in the Punjab, Bengal and the N.-W. F. Province in case any territorial redistribution were made. At Delhi the Muslim leaders went further and pressed for the creation of a new province of Sindh with an ever-wholming Muslim majority.

With the above facts before us it needs no great play of imagination to understand the position of the bureaucracy. Though always

justifying the existing provinces of British India on the ground of their being primarily administrative divisions. It has never hesitated in the past to exploit Hindu apathy and Muslim communalism in its own interests. A mere cursory examination of the political map of India will make it as clear as raised letters to the blind that the policy of divide and rule has been the determining factor in its shaping. In the 19th century the dominant aim was to dismember warlike communities and in the present century the motive seems to be the partitioning of "agitating" provinces. The attempt to split up Bengal into two parts, the avowed decision to keep N.-W. F. Provinces separate from the Punjab and the removal of the seat of the Government of India from Calcutta to Delhi and that of the U. P. Government from Allahabad to Lucknow furnish indisputable evidence.

The future? The bureaucracy is to continue its present policy. There is no sign of the Muslims revising their attitude. The question is: Are the Hindus of Northern India also to perpetuate their present attitude? If they do so, they are bound to be taken unawares in the future as they have been in the past. There is no vain assumption in saying that the manner in which they met the situation created by the Delhi proposals was anything but graceful. Beginning from the discussions in the Assembly lobbies that followed the announcement of these proposals, right through the conference of the Hindu Members at Delhi, the session of the Hindu Maha Sabha at Patna and the meeting of the All-India Congress Committee at Bombay, the Hindu position remained unsettled and indefinite. They expressed one view at Patna and some of them helped in the adoption of the contrary view at Bombay. Moreover, both at Delhi and at Bombay the Hindu spokesmen were Bengalis and Maharashtras and not men from the Punjab or the U. P. At the latter place the guiding spirits were Messrs Jyekar, Kelkar, and Moonje, especially the first, who, by associating the vexed question of the separation of Sindh with the principle of linguistic division of India, gave a decisive turn to the proceedings.

I am far from saying that Bombay's was the last word of political wisdom on the Delhi proposals. But it may be safely asserted that the linguistic principle has met with almost universal approbation. Apart from the general soundness of the doctrine, its chief

merit lies in the fact that it will once for all raise the question of provincial redistributions, at least in a major portion of India, above the possibility of bureaucratic and communal exploitation. But what about the Hindustani-speaking provinces?

The language variously called as Hindi, Urdu or Hindustani is spoken in the British Indian Provinces of the Punjab, Delhi, the U. P., Bihar and fourteen Northern and Eastern districts of the Central Provinces. How is the linguistic principle to be applied to the vast area covered by these territorial divisions? Are their inhabitants numbering no less than 100 millions, to be brought under one common administration or are they to be distributed into several provinces? If the latter arrangement is to be favoured, how many provinces will meet the requirement? These are some of the questions that must present themselves to the minds of the people. The reason why they have not agitated them in the past, in fact the entire cause of the apathy of the Hindus of the Northern India, can be safely ascribed to the fact that these provinces have been, both in ancient and mediæval times, the seat of the Indian empires, and consequently, like Italica and Germania in the 18th century, the Hindustanis find it hard to confine their thoughts and aspirations only to the parts of India inhabited by them. But as the progressive nationalism of England and France forced Italy and Germany to limit their boundaries, in the same way if the Indus and the Gangetic plains are to keep pace with Bengal and other fast developing sub-nationalities of India, they must clean their slate and, forgetting their past glories, set their house in order.

But my purpose here is not to advocate provincialism. The problem has to be envisaged from a wider angle. If I call upon men of light and leading in Hindustan to pay immediate attention to it, it is because once the application of the linguistic principle deprives the bureaucracy of its opportunities to create mischief in the rest of India, we can rest absolutely assured that with unerring instinct it will turn its attention to the Hindustani provinces. There are not wanting signs even to-day of its desire to fish in the troubled waters of Hindustan. During the last three years there have been persistent rumours in the U. P. that the separation of Oudh from the province of Agra was being contemplated. The removal of the capital of

these provinces from Allahabad to Lucknow coupled with the irritatingly frequent assurances of the preservation of the status of the former and the raising of the status of the Judicial Commissioner's Court of Oudh to that of a Chief Court are straws pointing with evidential import the way the wind is blowing. Of late these rumours have begun to assume a definite shape. It is stated that the Rohilkhand Division of the Agra province and Lucknow and Fyzabad Divisions comprising the province of Oudh, are to be formed into one separate province of Oudh, that the present Delhi province is to be enlarged by amalgamating with it the Ambala Division from the Punjab and the Meerut Division from Agra; and that the Central provinces and Berar are to be broken up, the Marathi tracts being transferred to Bombay and fourteen Hindustani districts to be joined to the remaining districts of Agra province with Allahabad as the capital of this new province. It is also being rumoured that the districts of the Benares Division, where Permanent Revenue Settlement prevails, may be transferred to Bihar. From all this it is evident that the scheme affects almost all the provinces in which Hindustani is the prevalent language.

It is not difficult to understand the motives underlying the projected changes. Oudh and Lucknow, dominated as they are by the reactionary Taluqdars of Oudh, will shield the bureaucracy from nationalist Agra and its talented politicians. Similarly Delhi and the two divisions of Ambala and Meerut, when constituted into one province, will be less uncomfortable than what they are at present in the company of the Punjab and the U.P. The Hindi districts of C. P. have earned a bad name for themselves in the present decade and their amalgamation with the bigger, though mutilated, province of Agra is sure to result in the softening of their political tone.

With the history of the partition movement in Bengal before them, it is obvious that the Government would not have contemplated such a daring scheme of the utter dismemberment of the Hindustani people, had they not been sure of some sort of support from the people themselves. They know that the Hindustani race, already split up into so many provinces, cannot present a united front like the Bengalis. The sentiments of the Hindustanis mainly centre round the historic cities of Lahore, Delhi, Agra,

Lucknow, Allahabad and Patna. They have not yet seen the vision of a united race, seen by Cavour in the case of Italy and by Bismarck for Germany. The Government know all this. They also rely on the communal feeling of Hindustani Muslims. Rohilkhand and Oudh, separated from Agra, are expected to raise the percentage and influence of the Mohammedans. The united provinces of Delhi and Ambala and Meerut Divisions may secure a similar advantage for them. Then there is a section of politicians in the province of Agra who in its anxiety to get rid of the influence of the Oudh Taluqdars in the U. P. Legislative Council, does not hesitate even to demand the separation of the two provinces. Lastly, by the masterly stroke of making Allahabad the head-quarters of the reconstituted province of Agra, the Government hope to placate and gain the support of Allahabadi politicians, some of whom would go any length to restore the declining prestige of the town.

Is it not truly deplorable that while the Oriyas, the Andhras, the Karnatakis, and other subnationalities of India are evincing a fixed and unalterable determination to unite, the Hindustanis propose to play into the hands of the bureaucracy? I need hardly say that no pains should be spared to avert this eventuality. Let me make a suggestion. Let about a dozen men from the Punjab, Delhi, Agra, Oudh, Bihar and C. P. sit together and discuss the problem of the unification of the Hindustani people. They should examine carefully the possibility of bringing under one administration all the Hindustani-speaking people. Though aware that a mere suggestion of this nature is staggering to the imagination of the average Hindustani I must unhesitatingly say that it is well worth a consideration. But if after serious investigation this is considered to be outside the range of practical politics, let the Committee suggested above, formulate a scheme of dividing the whole Hindustani area and population into two provinces. The division of the Hindustani language into Western and Eastern Hindi by Sir G. Grierson, the reputed author of "The Linguistic Survey of India", can help them to draw a dividing line between Western and Eastern Hindustani. But this is a matter of detail and can be easily settled. What is inconceivable to me is the creation of more than two provinces. This will not only dismember the Hindustani people but will also endanger the future of

other races of India. Every student of Indian history knows that whenever a conquering people from the North-West have succeeded in occupying Hindustan, they have never taken more than a decade to overrun Bengal on the one hand and Malwa and Gujerat on the other and to threaten the independence of Maharashtra and the Dravidian lands. In the whole course of Indian history only twice the entire Gangetic plain under one administration was called upon to face foreign invaders, viz., in the times of the Nandas and their successor, the Emperor Chandragupta. The very news of

the extent of the territories and vastness of the resources of the former obliged Alexander to retrace his steps westward from the banks of the river Bias and the latter inflicted a defeat on the invading Greeks under Seleucus Nikater. Thus a strong Hindustan means a strong India. Should not then even the Bengali, Madras, Maharashtra, and Gujrati politicians co-operate with the Hindustani leaders to undo the wrong done in the past, to prevent its aggravation in the future and to give us a united Hindustan in the United States of India?

MR. EDWARD THOMPSON AND RABINDRANATH TAGORE

By PROFESSOR PRIYARANJAN SEN

MR. Edward J. Thompson was a well-known professor, in the days when he worked in the Wesleyan College, Bankura. He has now achieved a sort of notoriety by writing on Rabindranath Tagore a thesis which he submitted for the doctor's degree of the London University. However ill we may choose to speak of that thesis, it must be admitted that the author has been working on Tagore for some years together, and that his literary abilities are not to be despised. His *Other Side of the Medal* has come in for its share of praise from the Indian Press, and rightly so; for the book, though written with an average Britisher's bias, has been written with the professed object of doing justice to the Indian cause by according to it a fair treatment. So far as Bengali literature is concerned, however, apparently his knowledge of it is not so comprehensive as to fit him for a study of Rabindranath, and we propose here to read his version of Tagore's বিদায়-অভিশাপ, his *Curse at Farewell*, just to note how ill equipped he is for undertaking such a study.

Mr. Thompson has contributed a valued introduction to his own version, where he says:—

"Rabindranath Tagore's work has been so long before the outer world that he should now be

treated seriously as a writer, and studied in foreign countries as any other first-class poet is. His own versions, published as *Gitanjali* and *Chitra*, must stand for their intrinsic beauty and essential faithfulness. But the rest of his work would gain by reissue in chronological order, with accurate representation of what his own actually says, and with a minimum of notes. At present he has no notes, and often slurs over difficulties by rendering Indian thought and mythology as if they were colourless imitations of Western thought and mythology." (*The Curse at Farewell*, pp. 14-15.)

In the light of the above extract it behoves us to see how far Mr. Thompson's own version is accurate, and whether he has sufficient knowledge of the Bengali language to enter into the spirit of the poet whom he seeks to rectify and then to praise. Hence the necessity of a textual comparison which will give us highly curious results.

(i) On page 2 of the Bengali original (2nd edition, 1922, published by the Indian Press Ltd.) we get:

অদরের আশ্রয় ঘরি
কোন বাহি বাকে, কুপের অকুরদ
কুহ দৃষ্টি-অগোচর, তবু তীক্ষ্ণতম।

The English version (Mr. Thompson's) hardly does justice to it—to the phrase কুহ দৃষ্টি-অগোচর, which has a subtle connection with বাহি; for it stands as—

If anywhere, if any wish endure,
'Twill sting like kusa-grass, whose barb unseen,
Though imperceptible, is piercing keen. (P. 18)

Mr. Thompson is a poet, and his rendering may have its value from the artist's point of view; but without being so absurd as to rival him in that respect, I would suggest the following version in prose as more accurate:—

"If in the farthest recess of your heart there lurks some desire like the tender Kusa-grass, all unseen to human view but stinging intensely."

(ii) At the bottom of the same page occurs "অলক্ষণে।" Evidently it is a case of address, a polite form used by Kach in talking to the maiden Debjani—addressing her as a damsel having auspicious signs, and the punctuation mark is a determining factor. But Mr. Thompson makes it, "in this auspicious hour," confounding it probably with *অনন্ত*, and ignoring the note of exclamation, or mistaking it for a full stop.

(iii) বাও তব ইন্দ্রদোকে আপনার কাজে উৎকণ্ঠিত গৌরব বহিঃ।—(page 3)

Here *আপনার কাজে* evidently means 'bent on your duty', 'to work out your purpose', or 'your task to achieve'; it cannot mean, as the very learned translator would have it—"your task achieved" p. 19). It seems to be a case of confusion between the past and the future.

(iv.) On the same page end in the same speech occur two other, let us say, discrepancies.

নহি ছিল কেহ
দ্রবণ করায় দিতে স্বপ্নের গৌরব,
নিবারিতে প্রবাস-বেদনা।

Here Debjani seeks to draw out from the young scholar some admission as to the beneficial nature of her own influence during his stay at her father's place. But this is interpreted as—

But was there no one, say,
The thought of whom would make your exile light
And fill the house with joy? (p. 20.)

This is an enquiry; and not an accurate rendering at that. The veiled suggestion thrown out is spoilt in the directness of the question put. The following version in prose is more faithful:—

"There was no one to remind you of (your home full of joy, to relieve the sorrow of exile."

(v) On the same page and in the same speech—

কোথা হেথা অনিবারিত দুখ
দ্রবণলব্ধ

This is what Debjani is asking herself; not, as Mr. Thompson would persuade us to believe, what she would have Kach ask himself;—as in his version—

Even so, your mind aloof
Asked, "Where shall I the bliss of heaven obtain?
Where see the laughing countenances again
Of heaven's coquettes?" (p. 20)

Debjani is artfully dwelling on the inconveniences from which Kach must have suffered while away from home—"Where are to be seen here the exquisite faces of the ladies of heaven!"

(vi) On page 4, in Debjani's speech where she seems to thrust out Kach from her presence, we find—

বাও বহু, কি হইবে নিখা কাল নাশি,
উৎকণ্ঠিত দেবগণ।—

Naturally the gods are anxiously expecting him, because on him depends their fate—it was on a commission from them that he came out. An entirely new colour has been put by the translator:—

Your goddesses, my friend, impatient grow. (p. 22)
The original means—"The gods are welting anxiously."

The translator does not seem to know the difference between gods and goddesses.

(vii) বহু শত বর্ষ পরে এই কি নিবৃত্তি? (p. 4.)
This note of query is absent from the English version—

"And thus, after a thousand years have gone,
Farewell!" (p. 22)

Where it is possible to retain the tone of the direct speech, is it advisable to change it, though, it may be admitted, without entirely spoiling the sense? The above line may be more faithfully translated as—"Is this how we part after a thousand years have gone?"

(viii.) On page 5, we get

এর পরে
নহি বোর অবসার,—ভিন্নভিত্তিরে.
তিরদিন করিব দ্রবণ।

(To this I am not indifferent,—I will cherish its memory lovingly and for ever.)

For this, all that Mr. Thompson has got to say is:—

I will revere
Their memory lovingly.

(ix) On the same page we meet with *অনন্তের প্রত্যাপন*; this *প্রত্যাপন* has not been rendered by any corresponding term in the English version, and *দায়* *হাওয়া* in the

banian tree is the "hospitable shade," দোষ implies length and is hospitable only by implication.

(x) স্বপ্ন হ'তে স্বপ্নায়
ছক তার,— (p. 7)

This has been translated as
"Nectar from nectar was her milk!"

"More nectarine than nectar" gives a better sense.

(xi) আর মনে রেখো, আমাদের কলধনা
যোজিনী বেধুড়ী (p. 8)

"And Benamati, too, our singing river,
Remember."

কলধনা—*giggling*, যোজিনী—*river*; are hardly adequate synonyms. There is an appeal to the ear and the eye which this version misses altogether. A more faithful rendering would be—"And Benamati, too, our river, murmuring sweet and flowing on, remember."

(xii) On page 10,

ভোবারে শোভে না অর, দেহ অহুতি
ফুল ভুলে দিব দেবী।

"Goddess, these flowers"—I humbly can implore.
"Let your slave carry for you—'tis a task
Becomes you ill."

ভুলে here means to pluck; it cannot, here at least, mean to carry. Does it ever mean that, I wonder! A somewhat faithful rendering in prose would be: "Toil does not become you; permit me, I will pluck flowers (for you), lady."

(xiii) On page 10, agalu, we find
আমি গেছ তাঁর কাছে। (I went to him)

rendered as
I solved that dread!

Why this falling off from the literalness of the translation—this "slurring over difficulties," to quote Mr. Thompson himself? Is it because of the word গেছ? This reminds me of a story. An Englishman, a candidate for his proficiency examination in the vernacular, was asked to translate and reply to the question, বশারের নাম কি? He had read Bengali books but unfortunately বশারের presented a difficulty he could not get over.

(xiv) আজি এরে দেখায় হৃদর (p. 12) has been rendered, by what twist it is difficult to say, as

"Oh, let that glimpse still beautiful abide!" (p. 33)

What the original means to say is:—"This looks beautiful to-day."

(xv) "Now shall you see how bold a woman's mind!" (p. 36)

Is this, we ask Mr. Thompson, an accurate rendering of

তাই আমি হেন
শরীরবীর। (p. 13)

The emphasis in the original is on the reason of this boldness, "Hence to-day such boldness in a woman."

(xvi)

দেখি নাই আমি

মন তার? জান না কি শেষ অস্ত্রাঘাতো?

বিকশিত পুষ্প থাকে পলবে বিলীন,

গন্ধ তার মুখাবে কোথায়? (p. 14)

we read in Mr. Thompson's translation—

Your heart I never read?

You do not know love rules it? Ev'n when dead

The flower o'erblown clings to its withered spray—

But where has gone the scent? (p. 37)

Let the reader judge if this is faithful to the original, if the sense of the original has not been wholly lost. Does বিকশিত mean o'erblown and পলবে withered spray? বিকশিত means blown, and পদব means the tender spray. 'O'erblown' and 'withered' are strange intrusions.

(xvii)

রমণীর মন

সহস্রবর্ষেরই কথা দাঁড়ায় ধন।

(p. 16)

The force of this ইন সহস্রবর্ষেরই has been lost in the English version. The insertion of an additional 'Even so' would have admirably suited the purpose.

(xviii) In the next speech, by Kach, উভে has no corresponding term in the English version; it is simply passed over. So is অহরহ (constantly) in Debjani's speech which follows it. In this long speech, গ্রহ বাধি is translated into 'would fling your books,' but is the use of 'fling' here justified by the sense of the passage? It means 'putting the book aside.' The same remark would apply to দয়া করি দিতে বল ভুলে—'would you take my pitcher from me'; for 'would, kindly or graciously fill my pitcher for me';—অলসকে করিতাম তরু-আশ্রানে watering our creepers, for sprinkling water on to the trenches round the trees; পানি—to pet? পানি rather means to protect.

(xix) In the reply given by Kach in which he admits his love,—ছিল মনে কব না সে কথা—

What thought was in my mind it matters not.

This is Mr. Thompson's version, for "I thought it would remain untold—I would not speak of it."

(xx) আমি বর দিয়ে দেবী—I have chosen ! lady.

Literally, "Lady, I give you this my blessing—"

From the above I hope it will be clear how insufficient is Mr. Thompson's equipment in Bengali, how difficult it is for him to deal with the niceties of the vernacular, and consequently with the subtle touches of the Poet. I am afraid it is very unsafe for him to speak of accuracy as his strong point and to represent the poet as slurring over difficulties in his own versions—it is just like a man pelting others with stone, himself living in a house of glass. Without a more intimate knowledge of the Bengali language it is impossible, absolutely impossible, to understand and appreciate the Poet's turns

of thought; and translation without understanding spells danger, if not, absurdity. Mr. Thompson writes excellent English no doubt, for which he requires no testimonial from any Indian; there is a literary quality in his phrases that is extremely delightful; his noble intention to bridge the gulf between the East and the West, or to read the message of the East with a Westerner's eyes, is laudable indeed; but this noble intention by itself is not everything; and his other capacities, however brilliant, fail to be a substitute for his ignorance of the Bengali language. Much has been said recently about his book on Rabindranath Tagore; the above will have made it clear that even in handling a short dramatic poem of the Poet he fails miserably and makes at least twenty mistake, in the course of twenty pages.

AESTHETIC INDIVIDUALISM, AND ART AND MORALITY

IN his *Main Currents of Modern Thought* (English translation, Fisher Unwin, 1912) p. 393 ff. Rudolf Eucken, the German philosopher, who is also a Nobel prizeman in literature, discusses the problem of art and morality from the standpoint of aesthetic individualism.

"Morality demands a subordination to universally valid laws, art on the other hand, desires the freest development of individuality, morality speaks with the stern voice of duty, art invites the free play of all our forces; morality has its dwelling-place in the sphere of pure inwardness and is prone to think but little of visible achievement, while art values only that which can be outwardly embodied."

Reviewing the history of the problem in the Greco-Roman world, the Middle Ages, and the period of the Enlightenment with its New Humanism, he says:

"Our historical examination shows that this antithesis has existed for thousands of years. It is no temporary state of affairs; again and again morality has reproached art with disintegrating life and rendering it effeminate and inert and in its turn morality has been charged with being hard, mechanical, and soulless. Further, we have convinced ourselves that these same two elements which become so widely separate on the lower levels of life, tend on the highest level to approach one another; in the case of creative minds, the opposition, if not entirely removed, is at any rate greatly reduced; such minds clearly prove that

spiritual life cannot dispense with any of its aspects, and that the blame for this state of division must be attributed to man rather than to the nature of the problem itself. In reality, morality and art cannot take up their own tasks in a really worthy manner without each recognising the other to be not only important but indispensable; they cannot fulfil their respective missions without taking their places in a comprehensive whole of spiritual life, and seeking an understanding in this relationship."

After developing this position philosophically, the author comes to discuss the attitude of modern aestheticism towards art and morality.

"In the Renaissance an aesthetic view of the world and of life in general attained full consciousness for the first time; now the beautiful became the chief instrument in the development of life, the most important means for the expression of every kind of power and for the self-realization and self-enjoyment of man. Art taught life to find itself, to reach its own highest level. At the same time life rejected as unreal all invisible ties; predominantly devoted to immediate reality, it aspired, through the control of inner and outer nature, to realise a full and boundless happiness. Filled with a powerful desire for life and a proud self-consciousness, it was easy for men to look upon morality as a restriction imposed from without, as a rigid ordinance and a tiresome constraint; the stronger the individuality the more he seemed justified in shaking off all such constraint and following solely his own inclination. Hence arose the immorality of the Renaissance,

a chief reason of its collapse as a world-dominating power."

"A tendency compounded of individualism and aestheticism has evolved the catchword 'new ethic,' a phrase which has acquired considerable influence, more particularly in feminine circles," Eucken protests against the use of the word "ethic" in this connection.

"We have been accustomed to understand by morality an order removed from mere individual whim or desire and associated with a high respect for duty and conscience. That which æsthetic subjectivism offers us under the catchword of the new ethic is in reality a finer form of egotism, a self-insulgence on the part of the individual, who frees himself from every restriction; those who find satisfaction in it should, in consistency, reject both ethics and religion as fundamentally erroneous and remove them from their sphere of thought. They should not however make use of these names to gloss over a mode of thought which is essentially different."

Æsthetic subjectivism decries conventional morality as nothing more than an order of social life to which custom and use has imparted an appearance of sanctity.

"To begin with, morality is something other than its visible representative, social order and moral conduct is not identical with social correctness. On the highest levels of moral creation this correctness has been but little valued. The idea of making the more means the dominating aim has been decisively rejected. Nevertheless, in spite of its inadequacy, the means is by no means valueless. It does not follow because certain institutions have become problematical that all social order should be decried as an undue restraint, as human affairs are, it is an indispensable means of raising life to a certain level and offering an adequate resistance to the ceaselessly active disruptive forces. Only an unlimited optimism, so naive that we are tempted to call it childish, could possibly cherish the delusion that if humanity were granted unlimited freedom the whole of life would become joyful and harmonious. Such optimism might be described as amiable if the superficiality with which it fascinates semi-educated people did not make it dangerous. It may seem regrettable that man should need social order for the disciplining of his desires, but that is not the fault of the order; those who object to it should, if they are logical, reject every medicine which does not taste agreeable."

True, to stultify the senses is no remedy.

"For, after all, what inner purification of the soul or development of spiritual life is gained by such a misuse of the senses? Moreover, this repression of the senses, like everything unnatural, must produce greater evils than those which it undertakes to remove. Nature is in the habit of taking a severe revenge for misuse. But the matter does not end with the rejection of this type of asceticism; it is not so simple as it often

appears to be from the point of view of æsthetic subjectivism. The sensual and sexual side of life shows us man associated in the most intimate manner with nature; here, more than anywhere else, nature holds him fast. Yet, at the same time, the development of spiritual life has raised him far above nature.....should it be free to follow its own course in complete freedom, without reference to the higher aims of the spirit, according to the whim and desire of the individual, or should it subordinate itself to the purposes of the spiritual life, here finding its measure? Those who, bearing in mind the indispensable rights of nature, decide in favour of the former course, usually, overlook the fact that in our complex and frequently perverted civilization we have no longer in deal with pure nature, the sense element in modern life is often refined and artificial, nay, degenerate. In order to separate what is genuine in nature from what is not, we need the assistance of spiritual work. A simple capitulation to the so-called sense element in the life of to-day is absolutely out of the question."

The position of art in modern life may be briefly expressed by the formula, *l'art pour l'art*.

"No friend of art will contradict the negative side of this statement. Art should not serve foreign purposes: it should not lend aid to morality, politics, or religion, and thereby sink to the level of 'art with a purpose', which may be able to fascinate for a moment, but which cannot promote any real progress. It is not so easy, however, to interpret this saying in a positive sense. To-day it is often asserted that art should be indifferent to all matter and content, concerning itself solely with the perfection of its form; in this way will it be able to stand entirely alone and be able to go its own way in perfect freedom. But is such a separation from the rest of life conducive to the interests of art itself; can it under these circumstances achieve the highest of which it is capable? There is very great danger that in following this path, art may degenerate into a mere mastery of form, a fascinating and dazzling display of highly technical skill which neither has the whole man behind it nor is able to influence the whole man. Art of this type may make great discoveries in the sphere of sense experience; it may be able to enrich and perfect our sensibilities in undreamt-of fashion, it may revel in the overcoming of difficulties, but it can bring but little benefit to the human soul, and it will not be able perceptibly to elevate spiritual life.....An art devoted preponderantly to form easily becomes a mere matter of professional dexterity.....This gives rise to a predilection for the eccentric, paradoxical, and exaggerated..Genuine independence is to be found only when the creative work proceeds from an inner necessity of the artists' own nature. But this cannot take place unless there is something to say, nay, something to reveal."

This leads Eucken to devote a few words to the relationship between modern art and the sex question.

"Only an inartistic mode of thought can object to art occupying itself thoroughly with this

subject rather than withdrawing from it. But that art should often, with such visible predilection, place sex in the foreground and dwell upon it as much as possible; that it should brood over it and refine upon it to the point of absolute disgust, is a sign of moral conception rather than of technical ability. There is no aesthetical theory capable of defending such a state of affairs."

In *Life's Basis and Life's Ideal* (A and C Black, 1918), Eucken turns to the same subject (p. 61 ff. and p. 394 ff.) Aesthetic Individualism brings about a refinement of soul as well as an enrichment of expression.

"It enables much to be grasped and comprehended which, without it, passes like a fleeting shadow. It permits the observation of the most delicate vibrations of the soul, and throws light into depths which would otherwise be inaccessible. A distinctive *type of life* is thus formed from the side of literature and art...The centre of life is transferred into the inner tissue of self-consciousness...All external manifestation is valuable to it as an unfolding of its own being; it never experiences things, but only itself—that is, its own passive states of consciousness—in the things...One moment may not be sacrificed to another; the present may not be degraded to the status of being a mere preparation for the future, but every moment should be an end in itself...And so life is a ceaseless change, a perpetual self-renewal, a continuous transition; but it is just this which preserves to life its youthful freshness and gives to it the capacity to attract through every new charm."

In such a system, artistic literary creation becomes the soul of life.

"In particular, it is the inter-relationship of the sexes, with its many-sidedness and its inseparable interweaving of spirituality with sensuousness, which occupies thought and dominates literary production. Strike out the erotic element from specifically modern literature, and how insignificant the remainder would appear! It is also in the relation of the sexes that this scheme of life insists on the fullest freedom. There is a marked tendency to regard an acknowledgment of fixed standards and of traditional morals in this connection as a sign of weakness and of a narrow-minded way of thinking. Since this scheme seeks to realise an aesthetic conception of life and an artistic culture in opposition to all the restraint of tradition and environment, it will come into particularly severe conflict with traditional religion and morality.... a foundation of morality in the necessity of its own nature is lacking in this system. What motive could move a man who wholeheartedly accepted Aesthetic Individualism to acknowledge something external to the subject as a standard, and in accordance with this standard to put a check upon his natural impulses?—Individualism commits the error of asserting that the mean morality which is reached at the average level of humanity constitutes the essence of morality, and in so doing excludes from itself the feeling for everything great and deep which lies within morality."

As to the glorification of the "new ethic"

which according to Eucken is a negation of morality, he says:

"It seems as though life is limited and de- because society, particularly in the matter of sexual life, prescribes rigid statutes which if they are not irrational at the beginning, have less become irrational, and tend to brand right as wrong and the wrong as right, shaking off of these restrictions and of the pressure of society in general seems to promise a form of life incomparably more powerful, sincere individual: this life is also to offer more beauty for to-day generally the idea of beauty is emphasised with great partiality where life has clear ideas and no significant content. This criticism of the statutes of society is not entirely without reason. Such statutes do not in themselves constitute a morality, as it is easy to imagine they do; but they only advocate a morality: as life undergoes such changes, these statutes must continually be examined anew as to their validity and value. This relativity does not make them worthless. It does not justify their complete rejection in favour of an absolute freedom on the part of individuals. We could expect an elevation of life by such an effort for freedom only if we might assume that the individuals are thoroughly noble, energetic, and spiritually rich, and if in the relations between the sexes a state of paradisaical innocence reigned which only the evil arrangements of society had disturbed. But this is a way of thinking which does more honour to the hearts than to the heads of its advocates. He who takes men as they really are and does not paint them in romantic colours, and who at the same time recognises the dangers of a highly developed, pleasure-seeking, and over-refined state of culture, will not despise those social arrangements, notwithstanding their relativity, but value them as an indispensable safeguard against the selfishness, the greed for pleasure, and the instability of the mere individual—a safeguard not only against the tyranny of external but also for the individual against himself. It is unfortunate enough that such safeguards are necessary; but, as they are necessary, it is better to preserve and improve them as much as possible than to reject them, and to expose humanity to dangers that might throw it back into the condition of the animals."

We now take leave of Eucken and turn to another thinker who has now attained a permanent place in literature, we mean Henri-Frédéric Amiel, who writes in his *Journal Intime* (tr Mrs. Humphry Ward) as follows. But before doing so, we should like to draw the readers' attention to his autobiographical remark under date the 31st May 1890: "it is perhaps not a bad thing that in the midst of the devouring activities of the Western world, there should be a few Brahmanising souls."

"26th November, 1876.—I have just finished a novel of Oberhuizer.—It is a jewelled mosaic of precious stones, sparkling with a thousand lights. But the heart gets little from it. The Mephistophelian type of novel leaves one sad. This subtle refined world is strangely near to corruption—"

here is not a character who is not witty, and either is there one who has not bartered conscience for cleverness. The elegance of the whole is but a mask of immorality."

"1st June, 1890:—Stendhal opens the series of naturalist novels, which suppress the intervention of the moral sense and scoff at the claim of free will. Individuals are irresponsible; they are governed by their passions, and the play of human passions is the observer's joy, the artist's material. Stendhal is a novelist after *Taine's* heart, a faithful painter who is neither touched nor angry, and whom everything amuses—the knave and the adventuress as well as honest men and women, but who has neither faith, nor preference, nor ideal. In him literature is subordinated to natural history, to science. It no longer forms part of the *humanities*, it no longer gives man the honour of a separate rank. It classes him with the ant, the beaver, and the monkey. And this moral indifference to morality leads direct to immorality.

"The vice of the whole school is cynicism, contempt for man, whom they degrade to the level of the brute; it is the worship of strength, disregard of the soul, a want of generosity, of reverence, of nobility, which shows itself in spite of all protestations, to the contrary; in a word, it is *inhumanity*. No man can be a naturalist with impunity; he will be coarse even with the most refined culture. A free mind is a great thing no doubt; but loftiness of heart, belief in goodness, capacity for enthusiasm and devotion, the thirst after perfection and holiness, are greater things still."

We close these series of extracts with another from *Social Evolution* by Benjamin Kidd (Macmillan, 1906, ch. VIII) which will reveal the grave danger of a divorce of morality from modern culture. He says:

"With the decay of the ethical influences, we may imagine the cynical indifference, nay the cultivated intellectual pride, with which a vigorous character would regard its emancipation from what it must, in such circumstances, regard as the mere vulgar thralldom of conventional standards of morality. If our conscious relationship to the universe is measured by the brief span of individual existence then the intellect can only know of one duty in the individual, namely, his duty to himself to make the most of the few precious years of consciousness he can ever know.

Every other consideration must appear dwarfed and ridiculous in comparison. Every pain avoided, every pleasure gained in these few years, is a consideration beside which the intellect must count any aspiration to further a process of cosmic evolution in which the individual has no interest as mere dust in the balance. We must expect wealth and power in such circumstances to be grasped at with a fierce earnestness not for what are called sordid motives, but for intellectual motives—for command of the pleasures and gratifications which they alone can secure. And it must be remembered that the universal experience of mankind has been, and is still, that wealth and culture divorced from the control of ethical influences of the kind in question have not sought to find satisfaction in what are called the higher altruistic pleasures, but that they have rather, as evolutionary science would have taught us, sought the satisfaction of those instincts which have their roots deepest in our natures. Voluptuousness and epicureanism, in all their most refined and unmentionable forms, have everywhere been, and everywhere continue to be, the accompaniments of irresponsible wealth and power, the corresponding mental habit being one of cultured contempt for the excluded and envious masses."

All that glitters is not gold, and all that comes from Paris should not be the rage among us. The attitude towards life which has been decried in the above extracts has found its greatest exponent in French literature in Anatole France, who has so many admirers all over the world. But for a sober, dispassionate and thoughtful exposition of the baneful aspects of his teaching we would refer the reader to a book by Professor Barry Carl on *Anatole France: The Degeneration of a Great Artist* (The Dial Press, New York, 1926). As for the school of the modern "Parnassians" who are votaries of naturalism and are the products of an over ripe civilization, and decadents of all kinds in modern literature, the reader may also consult Dr. Max Nordau's book on *Degeneration* now available in cheap reprint (Constable and Co.).

Political

"THE LIGHT THAT NEVER FAILED"

By SEETA DEVI

.I

THE shades of evening were already descending upon the earth, when a young man was seen passing rapidly through a narrow lane of the metropolis. His dress was torn and shabby, but no one would have a doubt about his being a gentleman

after casting a look on his face. It was too care-worn and tired to be easily recognised as that of a youngman, though it carried the stamp of breeding and culture quite markedly.

He stopped before the last house in the lane. The front door was closed. He expected to see, as on other evenings spots of

light escaping through innumerable chinks of the door to the outer darkness but was disappointed. He knocked gently and called—"Charu, Charu!"

Nobody answered. He knocked a bit loudly and called again—"Mother, Oh mother!" This time the door opened with an angry jerk. The youngman stepped in cautiously and asked, "Why have not you lighted the lamp, mother? It is very dark."

"Shall I set my bones on fire to get a light for you?" cried the mother in a tone of suppressed fury. "The fool died leaving me to be roasted alive, inch by inch in this hell."

This courteous reference to his dead father shut up his mouth very effectively and he began to grope his way upstairs. In a small room of the first floor a boy of fourteen was lying ill on a bed of rags. The room was lighted by a small piece of candle. A little girl sat by it collecting the dripping tallow.

The youngman entered and asked, "What are you doing, Charu?"

"I am collecting tallow, for making new candles," the girl answered. "Indeed!" Said her brother, "You are a very important person, it seems. How will you make new candles?"

"Oh, it is not at all difficult," said Charu. "You place these bits of tallow in that pot, which contained Chorda's ointment and put it by the fire. When the tallow is completely melted, you stick a wick in it and take away the pot from the fireside. After it has cooled down you can easily draw out the new candles."

The sick boy turned round at this juncture and asked, "Dada, have you brought anything for me to eat?"

"Have not you taken anything ns yet?" the youngman asked in dismay.

Their mother came in as he uttered the last words. "What is he to take?" she asked angrily again. "There was some rice left over from breakfast, and Charu took that and there is some of it for you. I prepared some barley water for him but that did not suit this son of a Nnobb, he wants grapes and fruits."

The youngman's voice became distorted as if in pain, and he came out of the room slowly. "Where are you going?" asked the mother. "Won't you take the rice, Naren?"

"Dhiren has not had anything," Naren lied. "I cannot eat, unless he too, has

something. Charu, light one of your candles. It is very dark, on the stairs. Come down and close the front door."

Charu obeyed and Naren went down and unt of the house. He stopped for a moment at the entrance of the lane and looked up to the night sky. It was covered with a pall of smoke, and spoke no word of comfort to him. He began to walk.

He stopped before a house, whose outside appearance was as poverty-stricken as that of his own. But a hurricane lantern was burning in the kitchen downstairs and dinner was being cooked. A young girl sat by the fire cutting up vegetables. It was hard to tell whether she was fourteen or eighteen. Her saree was dirty and torn, there was no sign of ornaments anywhere on her person. There were only two bangles of ivory round her wrist, and these two had become discoloured with long use. The girl did not look pretty, but neither was she ugly. There was no doubt, that she would have looked quite all right, had she been dressed well and been taken care of.

Naren came and stood before the kitchen-door and asked, "Saraju, where is Satish?"

The girl looked up with a start. "When did you come?" she asked. "I never heard you. Is the front door open?"

"Yes, it is," Naren answered. "Thieves could have come in. Don't leave it open like this."

The girl smiled wanly and said, "What is there to induce thieves to come? A few broken utensils and some rice and vegetables are no great treasures."

"Still," said the youngman, "it is no use getting scared by their visit. But you have not told me yet where Satish is."

"You know that he is very seldom at home," the girl replied. "He has gone out in search of work."

"But didn't he secure a post in an office?" Naren asked. "I was under the impression that he was working there."

"You don't seem to take too much interest in his affairs," the girl said. "Otherwise, you would have known that he didn't get the job. These few days have been like a nightmare to us. Every other difficulty, I have got accustomed to, but I cannot bear abuse. When creditors come and call us liars and cheats, I feel inclined to run away from home."

His bloodless face flushed a little at her words. "The world contains greater unfortu-

nates than you, Saraju," he said after a while. "You can resent their conduct, but I have lost that right too. Everyone is starving at home. My poor sick brother is without food or drink. Any sort of insult, I am ready to submit to, if I can secure a bit of money thereby. But I must not interrupt your work. I am going, close the door."

"I think brother will be home very soon," the girl said. "If you wait five minutes for him, you will see him."

"He won't be glad to see me," Naren said. "Don't you understand, why I have come?"

The girl hesitated, then shook her head.

Naren smiled at her attempt to hide the truth. "Tell him that I came and he will understand why," he said. "He won't feel sorry at having missed me."

Saraju turned the conversation. She knew that Naren had come for money. And she knew too, what it had cost him to come. It was no less hard for Satish, to be unable to pay him. But they were helpless. The demon of poverty had them in a firm clutch and no consideration of love, pity, friendship or courtesy could make them do anything.

Naren felt that he should go now; yet he stood a while hesitating. She was the only star that shone in the dark sky of his life and her nearness was the only joy he knew. "Have you given up your studies altogether?" he asked.

"I had to," Saraju replied. "Education costs money. Besides, there was nobody to look after the household as mother is an invalid. So I left the classroom and entered the kitchen."

"Is dinner ready?" Some-one asked from upstairs.

"Nearly ready," the girl replied. She got busy with her pots and pans. Naren felt ashamed and came out in a hurry.

Back in the streets, he panted for a moment. Should he go straight back, or should he try his luck anywhere else? He remembered his sick brother's face and felt an extreme disinclination to meet him empty-handed. But where could he go? He owed money to everybody, but nobody owed him anything. Was this so? There were only two persons, on earth who owed him anything at all. One was Satish, a man as poverty-stricken as himself. It was sheer cruelty to ask him for money. There was another, who did not know want for himself

and so did not recognise it in others. Naren must try there as a last resort.

"Where to in such a hurry?" Someone asked from behind, "and at such an unearthly hour?"

Naren turned round and recognised his friend Amar. "Come and have a cup of tea with me in this tea-shop", Amar said.

Naren was feeling positively giddy with hunger. He needed solid food and not a fashionable drink. Still he accepted Amar's invitation and accompanied him to the tea-shop.

Naren's friend was an intelligent young-man and he ordered some food for Naren, as well as tea. Naren remembered his younger brother. The boy was going without food. Still it would do him no good, if Naren too went hungry. Naren might do something for him, if he regained strength enough to do so.

So he began to eat. His friend sat by him, sipping his cup of tea and talking incessantly. Naren scarcely heard him. He was busy with his own thoughts.

They came out very soon. It was not yet very late. Amar went off and Naren stood in the streets, pondering. Should he go back home, or should he try his luck at Ahoy Nandi's? His heart rebelled at the thought of home. The small, gloomy house devoid of air and light was not attractive. He could not even sleep there. But if he went to Ahoy Nandi's, would he gain anything? It was not likely that he had changed much with the passing of years. But Naren was determined to leave no stone, unturned. So he began to walk again.

The front door of Ahoy Nandi's house was always closed after evening. A small window of the first floor, was kept open. Anyone wishing to speak to the master, had to throw a small pebble at this. But this time, Naren noticed, the window too was shut. Still hoping against hope he went and knocked at the door.

After several knocks, a shrill voice asked from within, "Who is there?"

"Is Ahoy Babu at home?" Naren asked.

"No he is not," the same voice replied, "he will come back after two or three hours."

Naren began walking about the streets again. He had no watch with him. So sometimes it seemed to him that two hours must have passed, sometimes it seemed only five minutes had gone. The police man on

the beat, the pedestrians, the shop-keepers, all seemed to look on him with suspicion. He began to feel very uneasy, and wished he could return at once.

Suddenly it struck ten. Naren took it, that he had gone to Nandi's house at about eight. So he must have returned by this time. If he did not find him at home, he would return home. He was dead tired and sheer exhaustion compelled him to seek rest.

He came and stood again before Nandi's house. He looked and found the window open this time. He struck the door with his fist and cried out—"Ahboy Babu?"

The door was not locked and it swung open with a jarring noise as he struck it. It was a novel occurrence in Nandi's house. Nobody had ever seen this door open before having knocked at least twenty times and roused all the neighbourhood with shouts. So Naren was rather astonished at the door opening so quickly and hesitated to enter. Within it was pitch dark and silent as the tomb.

After a minute or two, he made up his mind and entered. The household, he knew consisted of three persons, Nandi and two old women. One was Nandi's mother and the other was a maid-servant. The second one went home at night, after drudging here the whole day. So Naren was not much surprised when he came in and found no sign of any person. The servant must have gone home. Nandi's mother was blind and deaf, she must be sleeping soundly by this time. But it was astonishing that Nandi's front door should remain open at night.

He came groping up the stairs to the first floor. Nandi's room was dark but the door seemed open. Naren found a match-box in his pocket, and struck a light.

The next instant he was back on the stairs, with a leap of alarm. The match went out, but he did not dare to strike another. The scene within the room had burnt itself within his brain in indelible colours.

The room was in a state of utter confusion. Papers, books and other things were scattered on the floor. The table had been overturned, and the hurricane lantern on it had been flung down. A man was lying in the middle of the room, with a cash box, clasped in his arms. His body was covered with wounds, his eyes stared sightless.

Naren understood at once, what had happened. Ahboy Nandi was known to all the criminals of the neighbourhood as the

richest and the stingiest man there. He had escaped dopradation up to this time only through extreme carefulness. Through what loophole and misfortune entered his house now and robbed him of life and property? It was strange that nobody had heard anything. Though the house stood in a disreputable neighbourhood, yet there were many people living around. It was not yet very late and how could the murderer have escaped, without the slightest detection?

But his legs were trembling through nervousness. He ran down the stairs and out of the house quickly and sighed with relief as he stood under the vault of heaven. He looked around with frightened eyes to see whether anyone was noticing him. He began to walk with rapid steps. The image of the murdered old man seemed to chase him from behind. The feud between Nandi and Nareo's family was quite well-known. So if anyone saw him running away from Nandi's house at this time of night Naren would at once be suspected of foul play.

Naren had nearly passed out of the lane, when a man suddenly appeared from the opposite direction and stumbled against him. Naren jumped aside nervously and somehow recovered his balance with the aid of a neighbouring lamp-post.

"Naren again!" cried the man. "I seem doomed to meet you, every hour of the night." Why here, at this time of night? Did you come in search of Nandi? Any luck?"

"No luck," muttered Naren and hurriedly escaped from his friend Amar, for it was he who had suddenly come upon him. He ran on aimlessly and at last had to stop through sheer exhaustion. He flung himself down on the footpath, for he could walk no longer.

After a while, he sat up and crawled to the steps of a chemist's shop. He leant against them and tried to collect his thoughts. His brain still seemed in a chaos. What had happened to him? Three hours ago, he had come out in the streets, with poverty, his only complaint. But within this short time, how had he changed from an innocent man to a criminal running away from justice? He had done nothing at all. The murder must have been discovered by this time. There were witnesses to prove that he had gone in search of Nandi, late in the evening. Amar had again seen him late at night, running out of the lane in which

Nandi's house stood. Naren certainly had not looked normal then. So it was almost certain, that the crime would be fixed upon him. His brain began to reel. What should he do now?

He must escape. But he was penniless and friendless. And what would become of his widowed mother and helpless brothers and sisters? But he could help them no more, even if he stayed. He would be a criminal, condemned for murder and he would be unable to have any connection with the outside world. God would help them.

He stood up. He remembered his mother, brothers and sisters. Another young face came peeping into his heart, together with them. But his heart was wrung with pain as he remembered Saraju. This was the end. He would see her no more and the hope of making her his own was gone too for ever.

He began to walk again reeling like a drunkard. He must escape tonight, undetected and leaving no trace behind. But how was that to be done? He thought and thought, but could come to no conclusion.

He had unconsciously come to the quarter where his own house stood. The house where Saraju lived, stood in front of him. Some unseen force seemed to draw him there. He must see her once again. Never-ending night, stretched before him covering his future years. Would not he be justified, if he tried to snatch at a light, to guide his faltering steps?

He knocked gently and called, "Saraju, Saraju!"

The young girl was still busy in the kitchen, washing up for the night. She recognised his voice and ran to open the door. Her face shone with joy and she asked with a laugh, "Have you learnt to read the future?"

Naren was puzzled. "Why?" he asked, "How did you know, that you would gain anything by coming to this house, at this time of night?" the girl said. "But why do you look so worn out? Have you been walking the streets all this while?"

"Yes", Naren said, "but what gain were you talking about?"

"I won't tell you", said Saraju, with a laugh. "If you don't come in and sit down."

Naren hesitated a minute, then entered. The girl gave him a seat, then said, "Wait a bit. I will go up for a moment."

She came back quickly, Holding out a

few currency notes to him. "Brother has left these for you," she said.

Naren took the notes mechanically and counted them. Hundred rupees. "Where did he get these?" he asked.

"Father had lent some money to a friend of his many years ago", Saraju said. "He came up after all these years and repaid the money of his own free will. Brother told me to give you half and to keep half for ourselves."

Naren did not know what to say. He had almost forgotten that love and charity existed in this world. But he found the fountain still flowing. He would take ten rupees for himself and leave the rest in his mother's hand. It would carry them on, at least for two months. The rest, he left to God.

He got up to go. He looked at Saraju, and lost control over himself. He clasped one of her hands in both of his and cried hoarsely, "Don't forget me, Saraju. The world will think me a criminal, but don't you think so?"

The girl trembled at his touch. "Where are you going?" She asked.

"Wherever fate leads me," he replied and hurried out. Saraju stood alone in the semi-dark room, with her eyes full of tears.

Naren disappeared that very night. He confided in none and took nothing with him. Next day, friends and enemies alike scoured the country for him and but no sign was found of the unfortunate youngman.

(2)

"Saraju, Oh, Saraju! Why don't you open the door? Have you turned deaf? I have been shouting for half an hour."

Saraju opened the door angrily. "What's the matter?" She asked. "Cannot I have a moment's rest or respite? Why do you shout like that?"

The anger in her daughter's voice, did not serve to quieten the mother's naturally violent temper. But she tried to suppress her own wrath, knowing that nothing would be gained by an outburst of temper. "Don't you know," she said, as mildly as she could, "that the bridegroom's party is coming to see you to-day? I have asked Buti, from the next house to come and dress you up a bit. She will be here in a minute, that's why I am calling you."

"Dress me up?" asked Saraju, with a dry laugh. "Is there anything to be dressed in? Can any dress hide my ugliness?"

"Ugliness?" said the mother, "why, you are not at all ugly. If you had to drudge less and could eat better food, you would be as good-looking as others."

"May be," said the daughter. "But even a beauty needs a good dowry in Bengal. Where is my dowry? How could you dare to arrange a marriage for me, when half the days of the month, we have to go hungry?"

"What else could I do?" asked the mother, now in a pretty bad temper. "Am I to be outcasted for you? I am telling lies right and left about your age, but why should people believe me? You are as tall as a palm tree, and don't look much like a fourteen years old girl. I arranged this match, because the bridegroom's party is in search of a grown-up bride. Perhaps they won't ask for a dowry, if you meet with their approval."

Saraju remained silent. She had heard all about this bridegroom, from a neighbour. He was a shameless libertine, and his family was on the look out for a grown-up bride, in order to enchain his roving fancies. She felt sick, with shame and grief, whenever she thought of this marriage. She had grown callous to her own fate, and did not care much, what happened to her, if by sacrificing her, her relatives gained anything. But this sacrifice, not of her life, but of her womanhood, was too much to ask even of her. She had given her heart to one, and was being now sold to another for family considerations. So much for the much-vaunted chastity of Hindu women. A girl's heart might be her own to give, but not her body.

Still she was prepared to give in to her mother's wishes. Perhaps her other brothers and sisters may live more decent lives after this. She had given up Naren as dead. No news have been received of him, these two years. His mother carried on somehow, with the help of her younger children.

At this juncture, Suki made her appearance. She had brought all toilette requisites with her. Saraju's mother had borrowed some jewellery from neighbours.

Suki knew the art of dressing and making up to perfection. She did Saraju's hair, in the latest mode, made a plentiful use of rouge and powder and dressed her in a light gold coloured Saree and blouse. The

girl nearly looked pretty now. Saraju's mother wanted to put all the borrowed jewellery on her daughter, but she could not do it, on account of Suki's violent dissent. "That won't do, auntie," she said positively. "You want to spoil all my work. If you load her like that she will look like a shop-window."

Saraju had hoped that her ugliness would protect her like an armour. But that hope, too, died within her, as she looked at her own reflection in the glass.

The bridegroom's party arrived very soon, and lost no time in expressing their approval of the bride. Saraju was then taken away and the financial side of the business came up. The bridegroom's party had previously assured the widow, that they would not ask for anything. But now they demanded four hundred rupees, to meet the expenses of the wedding. They saw that the girl was past the orthodox limit of marriageable age and hoped to gain thereby. Her guardians must be prepared to pay, to get her off their shoulders. Saraju's mother wept aloud, when she first heard of their demand. A faint hope crept into Saraju's heart. Perhaps she would gain her deliverance in this way. But alas for her. Her mother grew calm after two or three wails and sent word to the bridegroom's party, that she agreed to pay three hundred, though that was far beyond her means. The bridegroom's party left in great glee.

Saraju now discarded her borrowed finery and asked, "And whence do you expect to get these three hundred rupees, pray? We won't fetch that much, even if we sell ourselves."

"I shall write to your uncle. Won't he help, when he knows, we are in such straits?"

Saraju smiled sadly. "You still have many illusions left, mother!" she said. "Did he help, when, he heard that we were starving? Loss of caste is deplorable indeed, but loss of life is still more so. You should not have promised them the money."

"What else could I do, you idiotic girl?" cried the mother angrily. "Why do you poke your nose into everything? I never saw a shameless hussy like you."

Saraju left her mother and went down to the kitchen. She soon got busy with her pots and pans.

The day fixed for the auspicious ceremony, soon arrived. Nobody made any

preparations, only a few things were collected together somehow. A cheap red Saree was bought. Their good neighbour Suki, presented Saraju with a new silk blouse. Her mother had two plain gold bangles and these were all the ornaments the girl received. Saraju's eldest brother Satish had somehow secured a hundred rupees, to pay for feasting the bridegroom's party. But the dowry was still wanting. Still Saraju's mother did not agree to break off the match. She held to her purpose with dogged persistence.

(3)

"Now mother, you must manage it somehow. I have done all I could. You have got us into this fix and you must get us out of it."

The mother was busy, weeping and beating her forehead. She did not reply. Saraju sat in a corner of the room, dressed in her wedding finery. She did not know whether to be glad or sorry. The loss of caste would mean the preservation of her womanly chastity, but it spelt ruin for the family.

The house had become still as death. The bridegroom's party had left in anger, as the promised money had not been paid. Of course, they had not left the neighbourhood, but were waiting in a house, close by. They expected that the widow would pay, if they frightened her enough.

At Satish's words, his mother's sobs grew louder. "How can I manage it?" She asked with a wail. "I am a lonely widow woman. You are a grown-up man, you are the head of the family now, you must do something to save our caste."

"Then why was not I consulted when you arranged this damned marriage. Did not I tell you a thousand times, not to do it? Where on earth, shall I get the money? I shall see, if I can sell myself."

He rushed out of the house. The noise of weeping grew louder.

Satish rushed along the streets, like one demented. Suddenly, someone touched him from behind.

He spun round, then stood still, as if petrified. "You Naren!" at last he said.

"Yes, it is I", Naren answered. "I have come back. I could not stay away. I know that the gallows are awaiting me, still I came. Some unseen hand drew me on. Are you all well?"

"Well, indeed!" Satish said bitterly, "the person, about whose welfare you are most concerned, is on the brink of a precipice. It is on account of her, that I am rushing about like a mad man."

Naren's face clouded over. "What has happened to Saraju?" he asked.

"We are going to become outcasts, on account of her. She was to have been married to night. They have taken away the bridegroom because we could not pay them the promised money. I am going in search of money. I am ready to sell myself"

"Who will buy you at this time of night?" asked Naren with a bitter smile.

"There is one person", said Satish, "who may. A gentleman living in the next lane has got a deaf and mute daughter. He offered me a thousand rupees, the other day, if I would marry the girl. I did not agree, though he told me I could marry again and won't have to support my first wife. But I have no option now, I am going to sacrifice myself to the god of our social customs."

"Go and try your luck," said Naren, "I shall wait for you here."

Satish went off at a run. Naren stood leaning against the closed door of a house. Deep sighs escaped his breast.

Satish returned in about five minutes. "My sacrifice was not accepted," he said, "The man turned me out of his house, like a dog. He has got another youngman to marry his daughter, he said. The only thing left to us, is to commit suicide, wholesale."

"Come with me, Satish," said Naren at last, "I will get you the money."

"How can you?" asked Satish in wonder. Naren did not answer, but hailed a passing hackney carriage. The two friends got into it and Naren told the driver to drive to the nearest police station.

The driver looked at his fare, curiously and started. Satish leaped up like a mad man crying—"Stop, Stop, I won't go. Are you mad, Naren? I am not a butcher or an executioner's assistant."

"Don't be an ass," said Naren, pulling him down. "I came here, determined to give myself up. I am sick of hiding and running away, like a hunted beast. If my death could benefit Saraju, in any way, so much the better."

The carriage stopped before the police station. Naren got down and shook Satish

by the hand, "Don't grieve over much for me," he said, "and tell her also not to do so. Death is much to be preferred to the life I have been leading." They went in and Satish came out of the police station, alone, about half an hour later. He had got the reward offered for Naren's capture.

But fate did not intend Saraju to be married that night. A wall of despair greeted Satish, as he entered. He stood, sick with anxiety. What new calamity had befallen them?

His younger brother rushed to him, saying, "Never mind, brother, we shall turn Christians. Hang our society and its murderous laws."

"What has happened?" asked Satish.

"That wretch of a bridegroom has gone and married Radhikababu's deaf and mute daughter. We cannot marry sister to him after this. And the auspicious moment has passed."

"Then it was in vain that I sold Naren to the hangman," cried Satish.

"What did you say?" cried every one

and rushed to Satish. Only Saraju had no need to ask. She fell down in a dead faint, as soon as she heard Satish.

(4)

Four days had passed. Saraju was lying in their bedroom, pale and listless. She had earned her much desired rest now. After that fainting fit, the doctor had prohibited much exertion and had ordered her to the bed. Her mother was busy in the kitchen.

Satish entered the room at this time. His face positively shone with cheerfulness. Saraju sat up disregarding the doctor's orders.

"Any good news, brother?" she asked.

"I believe now, there really is a God", her brother said. "An old dying convict has confessed that he murdered Nandi. There are also two witnesses. Naren has been set free."

Tears of joy and thankfulness trickled down the pale face of Saraju.

GERMAN WORKERS ORGANIZE AGAINST WAR

By AGNES SMEDLEY

Place and Time: Berlin, on Whitsuntide Sunday, June 5th, 1927.

Persons: The "Red Front Fighters," 100,000 men, and 8,000 women, strong.

Purpose: To fight against the threatening imperialist War of England against Russia and China.

From seven in the morning the Communist workers of Berlin had gathered in parks or halls throughout the city to hear concerts arranged for them. At ten they were ready to march, and there was no part of the city but that resounded with the steady tramp of feet, the roll of drums and the sound of music. You stood on a corner of one of the greatest streets and watched one company of them come—row upon row of men in gray uniforms, and caps with red stars above, marching in perfect formation. Tens of thousands of them. Perfect discipline. Red flags floated above their ranks,

their hands playing and "The International", with its rousing lines,

"Arise; ye prisoners of starvation!
Arise; ye wretched of the earth!
For justice thunders condemnation,
A better world's in birth".....

Crashing through the air and then taken up and sung by thousands of on-lookers.

There seemed no end to the long lines of marching men and women, singing their revolutionary songs. So you made your way through jammed subways, or by trams or omnibuses so crowded that breathing seemed impossible, to Schiller Park in north-west Berlin. The streets were blazing with red banners and flags, and all the roads leading to Schiller Park were crowded with people, all going to Schiller Park. For this was the Park to which the marchers were going.

You crowded through masses of men,

women and children, under the protection of a strong, young working man in uniform of the Red Front, with a white band on his arm signifying his authority to keep order, and at last reached one of the terraces reserved for the press and for foreign delegations. About you on this terrace are not only press representatives of every kind, but many foreign delegations: a number of Indians, both men and women; a group of French Communist youth from the Anti-Fascist organizations of France; groups of Chinese—but not many, for most of them are marching with the Red Front Fighters; then Americans, Russians, Danes, Swedes, Italians, Czechs. In fact, delegates from workers' organizations in many countries determined to strike against the world-war that now

"Down with the Imperialist War." "Down with Fascism!" "Forward into the Free Trade Unions!" "War upon the Imperialist War!"

It is three in the afternoon. You came at one—two hours in advance to get through the crowds. Now, down the long avenues leading from the city to the open plain stretched before you, comes the sound of drums and of marching. Through the rows of trees far beyond red banners flutter in the wind. They come nearer, and then, in perfect formation, march up to the plain, right down across it in the centre until their band and their first men stand right below you, the long gray uniformed lines stretching back to the end of the plain. Other lines come and march right down by their side; others follow; then others, and others, and others. Before long the open plain is a sea of rhythmically marching men. Bands march before each company of men. There seems no end to the marching men that come from the central avenues, from the streets to the right and left. Below is a sea of on-lookers, seething and struggling to get nearer to the plain, but held back by chains of living men in gray uniforms with white arm bands. White uniformed men, bearing stretchers, move through the crowd—the ambulance corps of the Red Front Fighters, active in all demonstrations. Because of the masses of crowding

The Red Banner Companies marching through the "Red Front" demonstration. A Section of the open plain on which 100,000 uniformed men are standing, can be seen here. Only about half an-inch of the top of the crowd is shown here.

threatens. The editor of the leading Communist daily of Paris, *L'Humanité*, stood near, and it was impossible to forget his tense, pale face, and the exclamations of astonishment that came from his lips as he watched the gathering thousands.

Before and below you lies a massive, level, open space, a small plain; green with grass, surrounded by trees on the one side and on the other by the great stone terraces. Tens of thousands of men and women line the terraces to the back, the borders of the plain, and all the paths leading to the terraces and the plain. Stretching clear across one of the terrace faces is a huge white sign on a background of blazing red: "Workers of the World Unite!" Around the plain appear other great signs, white on red backgrounds:

5 The "Red Front" men march down the open plain. The three flags in the front are: left—A German Banner, Centre—a Chinese Banner, right—a Russian Banner.

on-lookers, they are busy carrying away men and women who have fainted.

Behind each line of uniformed Red Front men have marched thousands of men and women—members of the Communist Party. They are not in uniform and few of them

cannot find places on the plain. They carry banners of every kind: "Long live the Chinese Revolution!" "Down with English Imperialism." "Lein is dead—long live his spirit!"

There is another roll of drums from the left and you look to see—the "red marines" marching—uniformed sailors from the seaport cities, who are organized in the Red Front. Behind them march a company of French Communists from France; these are followed by a company of Chinese, most of them students from Berlin, carrying banners of the Kuo Min Tang; then come white uniformed men—the workers' sport associations; then, following, comes another crashing band—and long lines of uniformed women and girls—8,000 of them—swinging in view, sweep down across the plain, their red banners flying.

Another view of the "Red Front" men

There are at least 100,000 uniformed men and women on the plain below you, but lines still keep marching in, music comes from afar down the avenues, and red banners glimmer through the trees. It is six o'clock—they have marched since ten in the morning from every part of the great city of Berlin. It has been three hours since the first lines marched across the open plain. It seems but half an hour—to us who sit comfortably on the terrace or stand on chairs to watch the tremendous drama being enacted before our eyes. Even to those who have marched it has not seemed so long, for all along the streets they have been greeted by crowds of applauding men and women. Everywhere women have distributed free food and drink to them, and pinned red flowers upon their coats. Their music and revolutionary songs have kept up their strength, and then they are

working men and women and strong in both body and spirit.

But even as the lines continue coming from the city, it is impossible to wait for them all to arrive. The programme must begin.

There is a call of huges, the roll of drums, and from across the plain, far to the back, appear the first red flag company. All the men and women carrying red banners have been separated from the rest, and now they come marching down the very centre of the plain, preceded by a band playing "The International." Before long there is a long, thick, red line right down the centre of the crowd—interspersed with the flags of the Kuo Min Tang of China, and with red banners from the workers' organizations of China, with great white Chinese letters on them. There are thousands in the red flag companies. They also keep coming and coming. Passing the speakers' tribunal on the terrace, they pour up onto the terraces before and back of you and hang their banners over the stone walls. The gray stone terraces become blood red, from one end to the other.

In the meantime all the orchestras that have come with the men and women from every part of Germany, from East Prussia to the Boden Sea, have gathered on, and directly before, the speakers' tribunal on the terrace, until some 3,000 musicians are concentrated in one place. It seems impossible that they could all play together—that they could have the discipline, coming as they do from every part of the country. Yet a director ascends the tribunal and raises a long baton above his head. He brings it down,—there is a roll like thunder and, like one man, the bands pour forth the revolutionary songs of the working class, "The International," "The Russian Revolutionary Hymn," "The Red Flag."

The Music ceases and, simultaneously from all parts of the audience speakers arise on little platforms. They appear upon the terraces near you and speak to the crowds below. They are all saying the same thing: to save time, to emphasize the danger facing the world today, to avoid all loose talking they have decided beforehand the points to be emphasized in their speeches the important issues of the hour—that is, the danger of an imperialist war, led by England, against Soviet Russia and China. The speakers say:

"One hundred thousand of our comrades—half

of our 'Storm Troops', organized in the Red Front Fighters, have come here from every part of the nation for their third national gathering, this time to oppose the threat of another imperialist war. With joy and pride we watch this powerful marching of the working class. This third meeting is a powerful demonstration of the class-conscious working class of Germany which has decided to fight by every means at its disposal against the imperialist danger of war, and for the defense of the Russian and the Chinese Revolutions. Never in the past was the danger of war greater than today. The world stands on the brink of a new war. The struggle of the imperialist powers for a new partition of the world is at the decisive point which will lead irrevocably to a new war unless the victory of the proletarian revolution breaks the rule of the bourgeoisie.

"At the present moment the imperialist powers are trying to reconcile their differences, trying to temporarily unite for a war against Soviet Russia,—the deadly enemy of imperialist rule. For this purpose British imperialism is moulding into one front the gold, the money, international of the robber nations, against the first worker's and peasant's power,—Soviet Russia—that the imperialists may regain its mastery of the world market and re-establish their world position of power.

"British imperialism is today waging an active war against revolutionary China. Capitalist civilization is today speaking in China through tanks, battleships, and brutal destruction. The fight of the Chinese revolution, as is the fight of all oppressed peoples, is absolutely bound up with the emancipation struggle of the working class in all capitalist nations.

"In all capitalist countries today the profit-makers are making feverish preparations for a 'holy war' against the Soviet Union. But we, comrades, will awaken all the power and passion of the revolutionary forces in Germany, to destroy these plans. Our comrades from other lands will do the same in their lands. New imperialist Germany is trying, through exploitation of the conflicts among the big imperialist powers, to regain its own imperialist position. The German bourgeoisie in case of a war against Soviet Russia, will most certainly take its stand by the side of the imperialist robbers against Russia. We, the workers, will wage only one war—the war for class emancipation—the war against the bourgeoisie. All neutrality guarantees of the German Government do not deceive us. Treaties and agreements are nothing but worthless pieces of paper when it comes to war....."

The speeches went on to outline the situation in Germany today, dealing especially with the "Stahlhelm"—the Steel Helmet—organization, an organization of reactionaries and monarchists throughout Germany which held its national gathering in Berlin a month before the Red Front convention. The Steel Helmet organization is the chief centre in which is concentrated the forces of social and political reaction, the force that will be one of the supports of the imperialist

war on Russia, as well as on the German working class.

The speakers concluded,

"In case of a new war, we are determined that the working class of Germany shall not work for the German bourgeoisie..... We soldiers of the Red Front, we young workers, will fight, not in the ranks of the capitalists, but in the ranks of the proletarian revolution against capitalist mastery and rule. Therefore, comrades, raise your closed fists—the sign of our organization—and give the oath of the Red Front Fighters."

With these words, the hundred thousand raised their closed right fists, and we saw a remarkable spectacle. It was this.

The speakers repeated line for line the oath, pausing at the end of each phrase, and then the vast mass repeated in unison—a long, low rumble—this oath.

I swear:

A view of the terrace from amongst the onlookers at the demonstration. The great sign above reads: "Proletarians (workers) of the world unite!"

Never to forget that world imperialism is preparing the war against Soviet Russia

Never to forget that the destiny of the working class of the whole world is bound up with Soviet Russia.

Never to forget the experience and the suffering of the working class in the imperialist world war.

Never to forget the 4th of August 1914 and the betrayal of the reformists. Always and forever

to fulfill my revolutionary duty to the working class and Socialism. Always and forever to remain a soldier of the revolution.

A ways and forever
in all proletarian mass organizations
in industries and factories to be
a pioneer of the irreconcilable class war.

On the front
and in the army of imperialism
to work only for the revolution.

To lead the revolutionary fight
for the destruction of class rule
of the German bourgeoisie.

To defend the Chinese Revolution
and the Russian Soviet Union
by any and every means.
I swear :

Always and forever
to fight for Soviet Russia
and for the World Revolution."

The "Red Marines" march through crowds in the city of Berlin. The Banner they carry is "Lenin is dead—his spirit lives."

As the oath was taken by 100,000 voices, a Russian ascended the speakers' tribunal and presented the Red Front with a Russian banner. Following him, a Chinese ascended the tribunal and presented the blue and white flag of the Kuo Min Tang of China. As the voices ceased giving the oath, the Chinese spoke :

"As a sign that our blood, the blood of the oppressed of Asia, is mingled with your blood, we Chinese, in the name of the Chinese workers and peasants, present you our banner to carry in your ranks. We are certain of your solidarity with us in our great struggle for freedom—a struggle which is your struggle also. Together with you in Europe we will bring the world capitalists and imperialists to their knees."

The President of the Red Front, Thalmann, accepted the banners and pledged the Chinese the active solidarity of the German workers with the Chinese in their struggle.

The director of the band again raised his baton high, there was again a roll like thunder, and "The International" was sung by the vast crowd.

The demonstration was at an end. The uniformed men and women formed in line and marched back through the dozens of streets to their various headquarters.

What does all this mean ?

It means this : that the 100,000 men and women that travelled to Berlin from every part of Germany during the Whitnside holidays, to demonstrate against the coming imperialist war and against the threat of Fascist rule in the various countries, was not just a crowd of curious people unconscious of what they were doing. The Red Front is a national German organisation of the working class, under the leadership of the Communist Party which has a very definite, a very clear programme, and a definite, very clear goal. The vast crowd was gathered to watch the Red Front demonstration was also not just a curious crowd ; it was composed chiefly of organised members of the Communist Party of Germany, with large numbers of the Social Democratic Party—the Socialist Party of the right. It might be said with truth that every man present, and many of the women, was organized into trade unions of some kind or another, and most of them into some political party chiefly the Communist. It was, therefore, not an uneducated, curious crowd. The working class of Germany is highly organized, well-educated, disciplined, conscious of all political and economic factors before it. Above all, it is today conscious of the burden that rests upon it—the burden of building a new world economy as the capitalist system decays or is destroyed. It is a class which, through its weekly and monthly meetings in every part of the country, as well as through its daily and weekly press, is kept in touch with world events and developments.

Within the Red Front itself, all are not members of the Communist Party. Only 25 per cent are official members of the Party. The rest are affiliated to no political party, officially, but it must be borne in mind that they are under the leadership of the Communist Party, and to this extent are Communist. Were they not Communist, they would not be in the Red Front. In order to come to Berlin, they had for months saved money through their organizations—each member being taxed a small sum extra each week—to make this trip. Some 75,000 came

"Red Girls' and Woman's Union" Delegates in National Conference

from outside Berlin, Berlin itself and its districts, furnishing some 25,000 men.

The contrast between the reception given the "Steel Helmet" men a month before and that given the Red Front men was striking. 18,000 new policemen had to be called into action to protect the Steel Helmet men from the population of Berlin as they marched through the street, and even then hundreds of working men were arrested. The Steel Helmet marched through the workers' section of the city—but the streets were deserted as if it were a city of the dead. From behind closed doors at times came the sound of "The International." In other sections of the city workers had gathered on the streets and greeted the lines with cat-calls, hooting, and "The International." In the rich sections of the city—at least in one section—the lines were greeted by the red, white, and black Monarchist flags and by well-dressed men and women who had turned out to greet these forces of darkness. But still the Steel Helmet men had found no living quarters in Berlin.

food and water was refused them by the masses, and, weary and hungry, they marched despondently through the city they had come to "capture." When the Red Front Fighters came to the city, they found living quarters had been arranged for 60,000 of them, in private homes. The rest were taken care of in barracks, and all were fed free by the population of the city. In other words, as the Communists and Socialists of Berlin constantly say, Berlin remains "red"—Socialist.

The Red Front demonstration is only one of the vast workers organizations active against the imperialist war. The "National Banner" organization—composed of trade union men who are republicans—members of the social Democratic Party (similar to the British labour Party), are holding a national gathering in July. They are moderate compromisers to be sure, but in case of the war breaking out, they will unite with the Communists. But the Red Front Fighters are bound to be the "Troops" of the proletariat—the leaders

the struggle. 200,000 of them are organized in all Germany. At least half of them are trained in military discipline and methods, for almost all men over thirty saw service in the World War. Still, 200,000 is no gauge of their strength. Only men over 21 can join the Red Front. Men under that age join the "Red Youth." Boys and girls under 16 can belong only to the "Young Pioneers"—the organized proletarian organizations of boys and girls. The women are organized separately also, into the "Red Girl and Woman's Union," with a membership of 30,000.

Again, let it be said it is not just the numbers that are important. The thing that is important is the *consciousness*, the consciousness of organized men. The Steel Helmet, for instance, is not only composed of upper class men who always must have someone else to do their fighting for them; but the working men in its ranks—and there are a number—are brought into the organization not from conviction, but out of hunger. The Steel Helmet is supported by funds from the big industrialists and landowners who are interested in enslaving the working class; this money is used partly to support the unemployed workers and their families—provided the men join the Steel Helmet. It is a hunger policy. But when it comes to a fight, the ranks of the Steel Helmet, even if a hundred times stronger

A view of about one-fifth of the plain, from the lower terrace occupied by the Press and foreign delegates. The Speakers' tribunal is the elevated platform from which Leow is addressing.

than the Red Front, could not hold out for a day against the latter. The Red Front is composed of men willing to give their lives in the struggle. Back of them stands a huge body of thinking Germans, the

intelligentsia. And, as I said, in case of a war or an attempt to establish a Fascist dictatorship, they will work in unison with the social Democratic party, as well as with the four and a half million men organized in the General German Trade Union association.

After the Sunday demonstration, the Red Front men and women remained in the city for one more day. On Sunday night, concerts and meetings had been arranged in every part of the city for them. On Saturday evening—the evening before—there had been a demonstration of the "Red Youth" in the Sport Palace in Berlin, a building that seats 25,000 people. The building was jammed to the doors, not only every seat having been taken, but every aisle, stairway and every conceivable standing place being filled with youth, mostly boys and girls between 16 and 21.

On Monday morning following the Sunday demonstration, an international conference against the imperialist War and Fascism was held. This conference was important because of the consideration of the world situation which was outlined by Thalmann, President of the Red Front, who, in a forty minute report, gathered up all the international threads that are today leading to war. He analyzed particularly the developments, both political and economic, from 1917 to 1927 covering English relations with the Near and Far East and India; Japan in Asia; American imperialism in the Pacific and Central America; the developments in Turkey, France in Italy, and the Balkans. He emphasized the economic side of these problems, showing the struggle of world capital for mastery over economic sources in various parts of the world. In fact, his report was chiefly devoted to a study of the economic forces, political events being merely the *result* of these forces. The work immediately before the Red Front, he said, is the organization of trade union men within its ranks; the education of these men about the danger of war; the support of and co-operation with the movements for freedom of oppressed peoples, particularly in China at the present moment; and the struggle against Fascism within Germany.

Thalmann himself is a transport worker and was the Communist candidate for President in the last German presidential elections. He is a man of very sound knowledge, and is a Marxist, of course, of ability.

Following his speech, a representative of the "National Banner" organization spoke; then a Chinese; then an Indian; and finally a representative of the French organization of Youth against Fascism in France. Other men and women present added their voices to the conference, discussing ways and means in the struggle against the coming imperialist war.

The Conference closed with a resolution calling upon workers in all countries

that have not yet done so, to form defense organizations such as the Red Front; to form an international defense army of workers; to form a united front with all organizations working against imperialism; to form defense committees in all factories; to defend by every means possible the Chinese revolution, as well as the "fatherland of the proletariat"—Soviet Russia.

With this conference, the Red Front national gathering was at an end.

CECILIA MEIRELLES—A BRAZILIAN POETESS AND HER INTEREST IN INDIA

By A. A. PINTO

BORN in 1901, Cecilia Meirelles has, within the last three years, won for herself a place in the front rank among the poets of Brazil. Her first publication, "Never more...and the Poem of Poems" (1923), was very widely commented upon and the editor of "Arte e Pensamento", speaking of the "Poetesses of Brazil", went further to say that she was "an exceptional case in the literature of the country due to the decidedly Oriental, especially Indian, source of her inspiration". She has since published a book of moral stories, "O Child, My Love...", adapted to the juvenile mind and which has been introduced as a reading book in the primary schools; and another under the title of "Ballads to His Majesty the King". She now has ready for the press two more books of poems, in one of which is a hymn to "Saraswati". Besides, she has frequently contributed to the leading society reviews, gaining an ever-widening circle of admirers.

An enterprising young journalist, with a view to stimulate interest in the study of religions in Brazil and to further the cause of Spiritualism, founded "Mundo Espirita", a weekly, and invited the Poetess to contribute a series of articles on "The Cult of the Divine in the Literature of the East". Her first article was on India, and it was followed by others on China, Persia and Egypt, and by a special study of Rabindranath Tagore. Her rendering of the religions is synthetic:

she has laboured to bring to light the basic principles of all religions, and to show that

Cecilia Meirelles

any matter spiritual, blazoned with trumpets now, was a familiar subject in the remote ages and was even well-developed in the East.

Bet it is for India that her heart beats. Her mind has been so enraptured by the lofty ideals of Vedanta, and by a conviction of a previous birth in India, that she considers the country as her own, its peoples as her own kinsfolk. She feels the Vedas in her veins and the aspirations of her soul find scope for development in the spiritual traditions of our race. The recognition, by the world, of the spiritual wealth India carries in her coffers is her one dream; India's honour is her joy; while the slightest insinuation of India's inferiority tortures her. When asked how she first came to take such a deep interest in India, she says she cannot explain, but that at a very tender age she was drawn towards it.

The writer, an Indian, struck by her reverence for India, wrote to thank her for her article on Rabindranath Tagore. In reply, she sent him the following impressive letter:

"I read your letter and was deeply moved.

It is many years now that I devoted myself to the study of the East, and especially of India, which, to me, is not merely a matter of curiosity but a serious dedication of love. All my moral formation is based upon the old Indian wisdom; and my one constant dream is to contribute with my efforts to spread more and more throughout the world the immortal virtues of your race, to which the West owes so much and with which it is so very badly acquainted.

Indeed, one might almost say I am made out of the soul and word of India....

Speaking of Rabindranath Tagore, I wished to synthesise Modern India in that great soul and announce to the public the political creed of the Poet so as to contribute towards the work of confraternization. I wished, at the same time, to demonstrate to those who do not know him, how great is the philosophy, how immense the religion, of your people—philosophy and religion, that have produced a mystic and lyric work so formidable that all the rest of the world owes nothing which may be compared to it.

I do not know if my long-cherished desire to visit India will ever be realized. However I preserve it, and thank you for your good wishes for its realization.

Sir, I hail you as a representative of the most powerful traditions of the Earth, saluting in you (also) from the first vedic poet who spoke of God to the Sitas and Damayantis, the Krishnas and the Buddhas, the Valmikas, the Kalidasas and the anonymous bards of your red roads....all of whom have brought me the conception of divinity and spiritual beauty: to them all I raise the cult of my sincerity as incense.

Sir, I offer to you all my thought and sentiment of worship for India and all my active forces capable of revealing her to the heart and soul of the world.

May the blessings of Mahadeva permit that my

voice be eloquent and my Destiny have power to cross the mountains of life!

Accept, Sir, my thanks for the comfort which your words have brought me—an echo of the sacred and prodigious country which is yours.... "Accept also my compliments and believe me to be a daughter too of your land, a distant daughter, exiled by Destiny and Time, but guarding for ever, even in separation, the image, the love and the remembrance of the great and distant Mother!"

Although her knowledge of our religions, books is mainly derived from French translations, so well has she imbibed the teachings of Vedanta that, like a true Vedantist, she does not limit herself to any sectarian belief; nor does she, in spite of counting many friends among the Spiritualists, associate herself with the Spiritualistic movement rapidly gaining ground in Brazil.

In her home an Indian could feel perfectly "at home", as besides the pictures of Lord Buddha and Tagore adorning the walls, she has the Indian's love of simplicity and a vast knowledge of things Eastern to hold the attention of any one interested in them. Nor, on a visit, is a dull moment possible: her good nature, intelligence and charm of personality are capable of making you forget the time and leave her house with regret when forced to by the lateness of the hour.

On account of her knowledge of the Orient and its religions, she was recently invited by one of the Spiritualistic centres to lecture on Buddha, a task which she performed very ably and successfully, bringing out the salient points of Buddhism in a voice ringing with deep conviction and veneration for Lord Buddha, which could not have been excelled even by a devout Bhikkhu.

Her poems and works leave no doubt that her nature has hungered for mystical realizations. Her yearnings for that "distant goal", her zeal to convert others to her views, her humility before the majesty and grandeur of the source of all things, her songs of praise to the Creator are well-expressed in noble and elegant language in her many poems, of which her "Poem of Anxiety" is a very good type.

POEM OF ANXIETY

When I was not thinking of Thee,
My feet ran lightly on the green,
And my eyes wandered,
Unconcerned and happy,
Over the whole landscape....
When I was not thinking of Thee.

My nights were
 As the sleep of the sky, full of moonlight....
 When I was not thinking of Thee,
 My soul was simple and quiet...
 My soul was a tame bird,
 With eyes closed,
 Perched on a high immovable branch,
 When I was not thinking of Thee.....
 But now, O Elect,
 My pace is slow,
 My eyes being busy
 Looking for Thy shadow....
 My nights are long, dreary,
 So sad,
 Because my thought,
 Takes wing to search Thee,
 And I, without it, feel lonelier more.....
 My eyes are lost,
 Among the stars,
 Among the stars are lost too
 My hands,

In this anxiety of reaching Thee
 Elect, O Elect,
 Why have I changed so ?
 Why,
 From the ground of my body
 To the sky of my soul,
 Am I a mist of perfume
 Rising in Thy adoration ?

When I was not thinking of Thee, ...
 My eyes were wandering,
 Unconcerned and happy,
 Over the whole landscape ...

From the writer she is ever anxious to know all that he can tell her of India; when shown Sarojini Naidu's "Village Song", the "Ram re Ram" so fascinated her that she made a translation of the poem.

A GREAT CITY

A great city is that which has the greatest men and women,
 If it be a few ragged huts, it is still the greatest city in the whole world.
 The place where a great city stands is not the place of stretch'd wharves, docks, manufactures, deposits of produce merely,
 Nor the place of ceaseless salutes of new-comers or the anchor-lifters of the departing,
 Nor the place of the tallest and costliest buildings or shops selling goods from the rest of the earth,
 Nor the place of the best libraries and schools, nor the place where money is plenteest,
 Nor the place of the most numerous population.

Where the city stands with the brawniest breed of orators and bards,
 Where the city stands that is belov'd by these, and loves them in return and understands them,
 Where no monuments exist to heroes but in the common words and deeds,
 Where thrift is in its place, and prudence is in its place,
 Where the men and women think lightly of the law,
 Where the slave ceases, and the master of slaves ceases,

Where the populace rise at once against the never-ending audacity of elected persons,
 Where fierce men and women pour forth as the sea to the whistle of death pours its sweeping and unript waves,
 Where outside authority enters always after the precedence of inside authority,
 Where the citizen is always the head and ideal, and President, Mayor, Governor, and what not, are agents for pay,
 Where children are taught to be laws to themselves, and to depend on themselves,
 Where equanimity is illustrated in affairs,
 Where speculations on the soul are encouraged,
 Where women walk in public processions in the streets the same as the men,
 Where they enter the public assembly and take places the same as the men,
 Where the city of the faithfullest friends stands,
 Where the city of the cleanliness of the sexes stands,
 Where the city of the healthiest fathers stands,
 Where the city of the best-bodied mothers stands,
 There the great city stands.

—Selected from Poems of Walt Whitman.

Submarine Life-Boats

When in the future, a submarine becomes disabled and sinks to the sea bottom, its crew need not fear death by suffocation—at least, such is the belief of an Italian-American inventor, Menotti Nanni, who has devised an undersea life-boat to be attached to and released from the submarine in an entirely new way.

The principle he employs is centuries old. In 1654, before a royal audience, Otto von Guericke, an experimental philosopher of Magdeburg, Germany, demonstrated the power of a vacuum. He fitted together two copper hemispheres; then, with an air pump, sucked out the air within them. Thirty horses were unable to pull the shells apart. But when he opened a valve that let in air, they separated of their own accord.

Submarine Life-Boat

Similarly, as a means of 'bolting' an unsinkable life-cabin to the shell of a submarine, Nanni employs a pair of close-fitting, smooth-faced domes or cups, one attached to the submarine, the other to the life-cabin. Between them a vacuum is produced by a suction pump in the submarine. Under the tremendous pressure of the sea and air the cabin is as securely fastened as if riveted on; yet, he says, the turn of a valve that lets the sea into the vacuum frees the two parts instantly and releases the cabin.

The submarine has foundered! Into the cabin through the 'doughnut hole' of the pneumatic ring climb the men. Some one slides shut the watertight door at the bottom. 'Ready?'

The releasing valve is turned. A hiss of water spurting into the vacuum chambers and the cabin lurches upwards—free of the submarine.

Safe at the surface, the men climb out through a hatch at the cabin's top and summon aid by wigwagging or radio.

The Picture Of The Year In England

One superb masterpiece of modern painting, appears in this year's Royal Academy in London. It is Mrs. Dod Procter's "Morning," and Mrs. Frank Rutter, the critic for the *Sunday Times*

The Painter Of "Morning"
Mrs. Dod Procter whose picture has been bought by *The Daily Mail* and presented to the nation.

"Morning," By Mrs. Dod Procter

"Here is no artificial composition reeking of the studio, but a fragment of life, nobly seen and simply stated."

(London), is the author of the tribute with which we start, and also the further statement that this "noble painting of a sleeping girl is the outstanding picture of the year" so far as the Academy is concerned." While the Academy is one of the important social functions of the year, it is not always that pictures showing the trend of modern ideas of painting gain admission. This one, from Mr. Rutter's enthusiastic notice, would seem to be an exception. We read:

"Fresh from the glories of the Prado, fresher still from the array of contemporary French painting in the Rue de la Boétie, I find Mrs. Procter's picture a masterpiece fit to hang in any company. Here she has achieved, apparently with consummate ease, that complete presentation of twentieth-century vision in terms of plastic design after which, Dürer and other much-praised French painters have been groping for years past. She obtains this monumental plasticity of form without any mannerisms or eccentricities by the sheer power and beauty of her painting."

"Here is no artificial composition reeking of the studio, but a fragment of life, nobly seen and simply stated. The girl is a girl of the people, the bedroom is humble and austere in its furnishings. Beyond the girl and the bedclothes, which afford an ascetic but exquisite harmony in grays and pinks, we get but a glimpse of a corner of a chest of drawers, a chair, and the wall beyond. But with these few accessories the picture is full from corner to corner with life, air, and light. These are the elements which Mrs. Procter has organized into a creative design of compelling power and beauty for all who have eyes to see."

"To say that the picture is 'cold' in color is but to acknowledge the justice with which the artist expresses the chill associated with early morn in this climate. If she has preferred the silver tone

which Velasquez learned from El Greco to the golden glow of Titian, there is yet the warmth of life in the nacreous hues of the flesh-tints. How exquisite is the painting of that left hand at rest but full of life. It is only the very greatest of the great masters who have thus succeeded in suggesting the tremulous fluttering of microscopic muscles beneath the surface of the skin. Looked at in detail, or in its splendid entirety, Mrs. Dod Procter's picture is a superb achievement, the greatness of which will probably be still more patent a hundred years hence than it is to-day. For three years now Mrs. Procter has gone steadily forward. If her latest, and greatest, performance is not secured for the nation, a great opportunity will be lost."

Of the artist we read in *The Sketch* (London):

"Mrs. Dod Procter is the wife of the well-known Mr. Ernest Procter, who is also exhibiting this year at Burlington House, and both she and her husband studied at Mr. Stanhope Forbes's school at Newlyn, Cornwall. After her marriage, she and Procter went to Paris, and on their return, opened an art school at Newlyn in conjunction with Mr. Harold Harvey. In 1921 they accepted an invitation from a Chinese merchant prince to go to Burma to decorate a house there. Mrs. Procter's first important success was in 1925, with her Royal Academy picture, 'The Model,' 'Cissie,' a painting of a woman's head exhibited at the Georges Petit Galleries in Paris, under Sir Joseph Duveen's scheme, has been bought by the French Government."

The Literary Digest

World's Largest Book Is Taller Than a Man

Taller than the average man, this gigantic atlas is said to be the largest book in the world. A gift to King Charles II, ruler of England in 1660, from the merchants of Amsterdam, it now

Two men of average size, shown standing beside the 267-year-old atlas, give an idea, by comparison, of its enormous dimensions

occupies an extensive space in the British Museum in London. Latin inscriptions and text appear on the maps, which are surprisingly accurate in view of their age. The gift was a memento of Charles's visit to the Netherlands where he found friendly refuge after the fall of the British monarchy.

Paper Canoe

Paddling his paper canoe, Willy Schauer, German inventor, is shown above. The paper is stout, hard and waterproofed. Advocates of such boats say they are lighter than wooden ones, yet equal them in strength, and hence in safety. They also contend the cost of manufacture is lower. The builder says his craft has met all the tests to which wooden or canvas canoes are subjected.

Almost Beats the Camera

When the winner of the recent motorcycle races at Munich, Germany, flashed past on the last lap, a high-speed camera trained on him, barely managed to record his passage. The remarkable photograph below, which gives some impression of the speed at which he was traveling, was the result. In the infinitesimal fraction of a second that the camera's shutter took to expose

This motorcycle racer at Munich not only defeated his rivals but almost beat the high-speed camera, which in an instantaneous flash could make only this distorted picture of his passage

the plate, the cyclist's flying image had moved half-way across it.

The peculiar distortion which resulted is characteristic of pictures of swift-moving objects at close range made with the "focal plane shutter" used in fast cameras. The shutter, a sliding curtain with a slit in it, "wipes" the picture on the sensitive plate a section at a time.

Meteorites

Meteorites have been fascinating and puzzling objects of conjecture for centuries, but hitherto they have always been of rather modest size. People have woven myths about them and have worshipped them, but only recently have scientific men begun believing in them.

Dr. O. C. Farrington, Curator of Geology at the Field Museum of Natural History, responsible for the most representative collection of meteorites in existence and one of the greatest authorities on the subject said, "Meteorites are helping us to unfold chapters in the fascinating story of the universe, besides serving practical uses. Specimens are eagerly sought by museums and men of science for study, so that anybody who finds or can claim ownership in a genuine meteorite, can fairly count it as cash in his jeans!

What, after all, are meteorites? Where do they come from? Are they the flying fragments of broken up worlds? Were they, previous to their fatal collision with the earth, tiny "earths" themselves? Why do they bump into us as they do? Are we earth-dwellers in any danger because of them?

"A revised conception of space within the solar system," said Dr. Farrington, "is one result of attempts to answer these and kindred questions. We used to think of the earth traveling its orbit in solitude, its nearest neighbor the moon, a quarter of a million miles away. We know now that this idea is false.

"Indeed, the earth actually might be compared to a man in a mosquito-infested swamp, so thick are the swarms of minute 'earth's' through which we move. Only the surrounding atmosphere protects us from incessant pelting by particles of matter from the size of a pea upward.

"Most of these masses of matter are tiny, perhaps no bigger than a nut—gnats' of space—and are consumed in the earth's atmosphere in brief trails of glory. We know them as shooting stars. It is estimated that at least *twenty million* of these particles flash out their existence in the earth's atmosphere daily.

"There are other and far larger masses of matter, the asteroids, or planetoids, hundreds of which have been identified in recent years. The planetoids are like miniature planets, and probably vary in diameter from a few miles to a few hundred miles. None, so far as known, ever collided with the earth.

"Meteorites in size are midway between shooting stars and planetoids. Unlike planetoids, they do collide with the earth frequently; and, unlike shooting stars, they are too large to burn up before reaching the ground."

Some scientists assert that meteorites must be over-size shooting-stars. Dr. Farrington doubts that. His reasons are convincing. August and November, he points out, are the months of greatest shooting-star activity, but May and June are the biggest months for meteorites. Furthermore, a majority of meteorites fall in the afternoon, between noon and midnight, whereas there is no indication of any falling-off in shooting-star activity after midnight. He thinks it more likely that meteorites are different in kind from shooting-stars, possibly the fragments of larger bodies, perhaps of disintegrating planetoids.

"But of course," he adds, "nobody knows."

Nobody is certain of the commonly accepted theory that meteorites are small parts of our own solar system, perhaps left over from fragments drawn from the sun when the planets were formed. One who recently has taken exception to this view is the Austrian geologist, Dr. Robert Schinnerer of the Karl-Francis University at Graz. He suggests instead that the reason for their appearance is that our earth now is passing through a part of space where a vast heavenly catastrophe occurred millions of years ago, when two small stars collided. Our solar system, he says, is drifting now through the part of space strewn with fragments of the colliding stars. These fragments are meteorites.

Are meteoric collisions with the earth frequent? The number has been estimated by recording all known falls in a given area, like France, during a certain period, and from that computing the number for the whole earth, assuming that one place is as likely as another to be the scene of a meteorite's fall. It is supposed that about 900 meteorites fall yearly.

Most of these are never seen or recovered. For one thing, three-fourths of the earth's surface is under water, and a meteorite would as soon fall

in the sea as on a crowded street—most of us would sooner it did! For another thing, many meteorites look like common stones and, unless seen to fall or examined by an expert, may never be identified. Many meteorites, too, fall with sufficient velocity to bury themselves, as the giant of Meteor Crater is supposed to have done. Furthermore, if the material is mostly iron, as it often

A section of Willamette Valley meteorite, in the American Museum of Natural History, polished and etched to show its strange rock and metal formation

is, a moist climate is likely to rust and disintegrate it.

By an actual count, 436 meteorites were *observed to fall* and reported between the years 1492 and 1921. The total of known falls, whether seen or found, is about 850.

Dart Month

Henry B. Culver, New York lawyer, who as a hobby employs his delicate touch and historical knowledge to repair old ship models, is seen at the left restoring a copy of the *Seventeenth Century* frigate, the *Dart-month*. Col. Henry H. Rogers, owner of the model, has it insured for thousands of dollars.

Wakes Up Sleeping Muscles

A New exercise device, designed especially for training athletes, is said to develop muscles of legs and back that are not put into play by any other method. It consists of a high chair to which are attached two pedals connected with sliding weights. The exerciser pushes forward with his feet against the pedals. The weights can be varied as desired.

Training The Helpless Flapper To Fight Her Own Battles

President Roosevelt was looking over some ju-jitsu pictures presented to him by Capt. J. J. O'Brien, the man who introduced that Japanese art of self-defense to America. The President halted at one of the pictures and regarded it at length. Looking over his shoulder, Captain O'Brien saw that it was a picture of a woman straight-arming a man with her stiffened fingers jabbing his eyes. A little worried lest this maneuver should make an unfavorable impression, the Captain stammered:

"Mr. President, a dangerous situation requires a desperate defense. That was invented to give a woman protection against a thug who suddenly attacked her."

Colonel Roosevelt's response, according to a writer in the *Philadelphia Public Ledger*, was reassuring.

"I think, Captain," he is reported to have said, "that this is the best thing in your repertory."

To-day, with the greater freedom claimed by girls in their teens, and with new and menacing conditions introduced by the automobile and other modern factors, it is considered more important than ever that young women should be trained to defend themselves in an emergency. For this purpose Captain O'Brien has worked out a system of what he calls "modified" ju-jitsu, consisting of "a few simple holds and tricks by which the frailest girl can bring an assailant to the ground and make him beg for mercy." There is no need for a woman to be defenseless, says Captain O'Brien, "when the practices of several easy methods will give her ample protection against any thug, stranger or flirt who seems to have the advantage of her. Girls don't have to suffer mauling or the unwelcome arm of a sheik when the knowledge of modified ju-jitsu will give them complete command of the situation."

The *Ledger* writer tells us that Captain O'Brien is "a graduate of the old navy of wooden ships," and that he served as police inspector in Nagasaki for some years before returning home and teaching President Roosevelt ju-jitsu.

During the war he demonstrated that part of his method which would be effective against the enemy, to hundreds of instructors, and the treatment to which he has been subjected by the vigorous application of his technique by his students has resulted in the partial atrophy of his left arm.

"The system is based upon knowledge of mechanical principles which function in the human body, and upon rules of leverage," said Captain O'Brien. "One time R. Tait McKenzie, sculptor and supervisor of physical instruction at the University of Pennsylvania, tried these principles out on bodies in the dissection room at the University, and proved that full application of the force which can be exerted in defense will break bones and tear apart the muscles."

The reason this method is so successful is that it catches the assailant unawares. A man who gets set for it could avoid close contact with his victim, but when he gets near enough, there is no defense.

"Take a very common occurrence where a man attempts to flirt with a girl, walks up along-

side her and, starting a conversation, takes hold of her arm. She slides her arm under his as if about to draw him nearer to her. The sheik wouldn't object to that. He probably would be delighted to think he had made such a hit that the girl was ready to embrace him.

"As her arm goes under his, she brings it on top of his arm above his elbow and puts on a little pressure. His arm straightens out and he is at her mercy. As she puts on more force she moves as if to straighten her arm, but what she is doing is to bend his arm in the direction opposite to the natural swing at the elbow.

"He cannot extricate himself. His arm is caught in a vise from which he cannot withdraw and if he attempts to reach her with his other arm, he is prevented from turning to face her by the fact that her position bars him from swinging his free arm toward her.

"She can punish him more severely by gripping the hand on his arm with her free hand and pulling down on it. This will force the sheik toward the pavement, and she can give him a jerk, sending him head over heels, and go calmly on her way. A quick pull will break his elbow.

"This is a long explanation, but practise it with a friend and see how quickly and simply it can be done with hardly any effort."

Breaking a Throat Grip.

Just get hold of one finger, and the rest is easy—bend it backward toward its owner, and he will release you in a hurry.

"The girls would probably like to know what to do when a man attacks them without much warning, as has been happening in the cases constantly reported in the newspapers.

"Suppose a thug approaches a girl, bars her way and attempts to persuade her to accompany him. The girl draws back in some terror. He steps forward to grasp her with his arms. If she will shoot her arm out quickly with two fingers stiffened and aim at his eyeballs, it will be some time before this sheik tries to annoy a woman again.

"If the flirt has succeeded in grabbing her around the waist, the best trick to use is to lift the palm of the hand against the end of the nose

and apply it with some force. Shove up and back. The man's head will shoot back with such vim that he will release the girl, and she will be free to go on her way."

Next we are asked to suppose that the bully has caught the young woman by the throat and is making it impossible for her to shout for help. What one does instinctively, says the Captain, is to reach up and try to pull the clutching hands away from the throat; but—

"You can't get free in that way. It is almost impossible to make an attacker give up a grip on the throat by dragging at his hands. The way to make a defense against a strangler is to lift a hand to one of the hands around your throat, bend just one of his fingers back in a firm grip and force this one finger toward the attacker. Act as if you were trying to break the finger."

"Small as that finger is, turning it backward toward the outside of the hand will cause him so much suffering that his whole body will react backward in the direction his finger is being pushed, and the hold of the other hand on the girl's throat will be relaxed."

"The girl now passes from the defense to the attack. Her assailant has been completely disconcerted by the counterattack and is so completely absorbed by his suffering that if she moves quickly there is no difficulty in the next step."

"She brings her other arm under, around and on top of his using force and still pushing his single finger backward. This position keeps the thug sideways to her, making it impossible for him to bring his other arm into play to fight her off, and she can either keep him under control and push down the street to where she can obtain help, or with a sudden application of force throw the man over on his back and run away."

"If a man grabs a girl from behind and puts his arms around her, she can use an old wrestling trick. Just swing the body sideways a little so that the nearest foot to the thug can be elipt behind him, place this foot between his feet and then straighten a little and he will lose his balance and be thrown backward. If executed quickly, this will knock a man off his feet."

These holds all deal with the methods of defense if a woman is caught in the street. But in many of the cases reported to the police a man is able to penetrate into the house and catch a woman all alone, with no means of protecting herself at hand, or trapped in a room where she cannot summon help.

Captain O'Brien was asked to describe a few tricks which would help a housewife fight off a man already in the house.

"A man who has made his way into the house on a pretext," he said, "usually begins by pretending to be courteous and gentle. If a woman is afraid of her visitor and begins to suspect he will not leave the house until he achieves his real errand, she can begin throwing him out by taking his hand. A man will ordinarily not object to a woman taking his hand. All she wants is two fingers. Closing firmly on them, lift his arm up and bend his fingers back and he must go in the direction she wants him to move."

"It is important not to face the man, but to swing sideways. Here again it is impossible for him to grab her with his free hand, and the backward pressure on his fingers will readily make him behave. She can thus back him out through an open door or hold him helpless while she summons aid."

Athletes who have studied Captain O'Brien's system agree that these maneuvers, if intelligently rehearsed, actually equip a slender girl to repel a sinister assailant with heavy loss. The important thing is for the victim to keep her head, remember the motions she has learned, and not allow fear of failure to upset her. The Captain continues:

"If she can get his hand between both of hers, she can twist him in another way. This grip is accomplished by holding the man's hand with your two thumbs prest against the back of his hand and twisting his arm. If full pressure is applied, his body will swing sideways and unbalance him, and he can easily be thrown, if that is desirable."

"Of course, these hand-and-finger holds can also be used outside on the street, if the situation that occurs makes them the most desirable."

"Twisting a man's head is another hold that can be used if the man happens to be fighting to remain inside by bracing himself against the doorway. A direct attempt to push him out is sure to fail, because his strength is supported by the wall against which he has braced himself. He must be taken away from this position. That can be done by placing one hand on his chin and the other on the side of the head and turning his head. A strong pull will jerk him away from the door, and as he is off balance, a slight push will throw him through the doorway."

"A cool head and the ability to think fast in an emergency are, of course, essential. A girl must keep her wits about her and be prepared to act quickly. A few rehearsals of these simple tricks will give her confidence."

ENGLISH

THE ETHICS OF BUDDHISM: By T. Tachibana, Professor of Pali and Primitive Buddhism at the Komazawa-Daigaku, Tokyo. Oxford University Press. Pp. 288. Price Rs. 15.

Although the book is entitled *The Ethics of Buddhism*, it would however seem, that the name, *The Ethics of Pali Buddhism*, originally chosen by the author himself, would have been more appropriate, as there is nothing discussed in the book from the sources of the Sanskrit or Mahayanist texts.

After giving a short account of Buddha's life Prof. Tachibana proceeds to give the outlines of Indian thought previous to the rise of Buddhism and tells us about the classification and characteristics of Buddhist morality in the five chapters of the first book of his dissertation. In the second book, comprising fifteen chapters, he discusses different moral qualities such as self-restraint, abstinence, contentment, purity, etc., arriving at the conclusion that "Buddhism is a system of self-purification. But there are other-rewarding virtues." Readers will find here a mass of well-arranged materials collected from original sources and discussed with much ability.

It is popularly believed that Buddhism is an ethical religion. Professor Tachibana urges the rather different view that "Buddhism in its origin is a religion of a moral nature." I do not hold the popular view, but neither can I agree with Prof. Tachibana for reasons given below.

It is well-known to those who are acquainted with the life of the Buddha either from Pali or Sanskrit sources that he did not, at first, want to preach his doctrine to the people. And why? Because it occurred to him that they would not be able to understand it. Had his religion been simply of a moral nature, it is quite certain that he could not think so; for morality is not something that cannot be understood by ordinary men. In fact, it was only on account of the

subtlety of his doctrine that he apprehended that it would be beyond the power of the people to grasp it. He said (*Vinaya, Mahavagga*, I. 52) that his doctrine was profound, difficult to perceive and understand, reasoning could not penetrate it (*atakkavacca*), and it was intelligible only to the wise (*panditabedanaya*). The people were given to desire (*alayarama*), and to them the law of causality and the chain of causation (*paticca-samuppada*) would be a matter very difficult to understand. Very difficult would it also be to them to understand the extinction of *samiharas*, the getting rid of desire (*tanhakkhaya*), the absence of passion (*vijaya*), *mrosha*, *nibbana*. From the above it is quite clear what Buddhism was in origin. And again, we read in the same work (*Mahavagga* I. 23) that when the Blessed One's new disciple, Assaji, who had recently been ordained, was pressed by Sariputta to tell him at least the spirit of the doctrine which his teacher, the Blessed One, was preaching, the reply was simply this "Of all objects which proceed from cause, the Tathagata has explained the cause, and he has explained their cessation also; this is the doctrine of the great Samana (*ye dhamma hetupphara*, etc.)"

Such is the first stage of the development of the religion preached by the Buddha, and there is no mention whatever of a moral nature, though in reality from the very beginning morality was regarded as the stepping stone for the realization of the truth of his doctrine. This is made quite clear by Buddhaghosa in his *Vissuddhimagga* (p. 2) when he says: "Standing firm on morality (*Sila*) and cultivating concentration (*citta, samadhi*) and wisdom (*panna*), a bhikkhu who is wise, ardent and discriminate, may disentangle the tangle of desire (i. e., he attains the cessation of desire *tanhakkhaya-nibbana*). Thus the doctrine of the Buddha is threefold and it is fully borne out by a verse of the *Dhammapada* (183) which runs thus: "Not to commit any sin (*Sabbappassakaram*) to do good (*Kusalassupassanapada*), and

to purify one's mind (*sacittapariyodapanam*), that is the teaching of the Buddhas." Buddhaghosa explains here in his *Vissuddhimagga* (pp. 4, 5) what is meant by these three things mentioned in the above verse. He says that morality (*sila*) is the beginning of the *sasana*, concentration (*samadhi*) is in the middle, and wisdom (*panna*), which has the superiority, is the end. Owing to this threefold character of the religion the whole teaching of the Buddha is divided under three heads, viz (1) teaching regarding morality (*adhiśīlasiṅgha*), (2) teaching regarding mind (*adhiśīlasiṅgha*), and (3) teaching regarding wisdom (*adhipannasiṅgha*). These three characteristics of Buddhism are to be found all through its development from the beginning. It cannot, therefore, be maintained that Buddhism in its origin was a religion of a moral nature.

THE DELHI UNIVERSITY PUBLICATION No. 1—*The Birth-place of Kalidasa*: By Pandit Lachmi Dhar Kalla, M. A., M. O. L. S. Shastri, Lecturer, St. Stephen's College, Delhi.

In this dissertation the author has made an attempt to establish two things: first, that Kalidasa was a native of Kashmir, and second, that "the plots and incidents of his works are modelled on the lines of the Pratyabhinnā philosophy of Kashmir." As regards the first most of the arguments advanced by him are very weak and a very small number of them really deserve to be considered seriously. As for the second, though the attempt is admirable, I do not think his position tenable.

VIDHISENKAIA BHATTACHARYA.

SARA AND OTHER POEMS:—By the Srimati Sri Ananda Acharya, Gaurisankar.

In reading other volumes of verse by the Swami Sri Ananda Acharya I was dazzled by the conversational brilliance and excessive opulence of his language. He rided in colour, which many a time rhoded one to the underlying meaning of his verse. The volume under review is, however, free from these defects. In this volume the Swami has certainly improved upon what has gone before. His language is now simple, though extremely suggestive; his images are homely, though deep in their appeal; the melody of his songs is not of an obscure, eclectic variety, but something at once soothing to the ear and satisfying to the imagination; his thought, ever noble and elevated, now moves on a plane with which many of us can establish some sort of contact and his meaning, without losing his old subtlety and charm, is now clear and pointed. These verses, therefore, show the Swami's extension of power in all directions. This is, however, not all. Songs like *Joe* show that the Swami has perfected a new way of telling a story; while the figure of Sara, simple and devout, homely and worshipful, loving and serviceable, dreamy and mystical is a marvellous creation in itself.

All these things bear witness to the amplitude of the Swami's poetic powers. The Swami's poems are, indeed, "Songs of Innocence" and "Songs of Experience" combined. They reveal a world of mercy as well as of cruelty, of ambition as well as of self-denial, of misery as well as of joy, and of power as well of beauty. Whatever it may be, these poems appeal to the big heart of man. They lift our heart up to something that is above the sphere of our sorrow, and fill us with eager yearn-

ings for things beyond the ken of our senses. In short, they enable us to see purpose where we had formerly seen blind chance and to see beauty and nobility where we had been aware of ugliness and meanness only. The Swami interprets the things of this world in the light of eternal virtues and seeks to reestablish our contact with God and Nature; and this is a great thing, indeed.

DIWAN CHAND SHARMA.

Who's-Who—India—1927. Published by Messrs. Tyson and Co., Calcutta.

Demy 8vo. Cloth. Pp. 281. Price not mentioned

This is a new venture well worthy of support. It contains the usual information about many Indian and European in India. The amount of biographical details given will not be taken by any knowing reader to be an index to the relative importance of the persons to whom they relate. There are some noteworthy and probably significant omissions. There is, for example, no mention of Mr. M. K. Gandhi, Pandit Motilal Nehru, Pandit Jawaharlal Nehru, Mr. S. Srinivasa Iyengar, Dr. Ansari, Dr. Kitchlew, Mr. J. M. Sen Gupta, Mr. Bepko Chandra Pal, Lala Lajpat Rai, etc. Nor is it only among Indian political notabilities that there are such omissions. Among Indian scientists Professor Meghnad Saha, F. R. S., holds a very high place. His name is not to be found in this useful book of reference. We hope such omissions will not occur in future editions.

INDIA AND THE WEST: A Study in Co-operation, by P. S. Marrin, author of "The Living Past," "Progress and History", etc. Longmans, Green and Co., Ltd. London. Medium 8vo, Pp. 182. Cloth, gilt letters. 7s. 6d. net.

It is a well got-up book, printed in clear big type.

The author's style is clear and refined. He writes with suavity, though that may be only the velvet glove concealing the mailed fist. For he states almost at the outset: "This discussion assumes that Great Britain will and should remain in a position of power in India for at least a considerable time. The conditions and qualifications will appear as we proceed, but as to the main point there can be no equivocation, because there is no doubt: every serious person, Indian or British, agrees so far, differing only when we come to particulars, the time of the staying, the methods of co-operation, the general outlook, the ultimate ideal." That Great Britain will remain in a position of power for at least a considerable time, may be true. But we deny that she should remain so. The author will, however, say that we say so because we are not "serious" persons. Let him however, place his assumption before all the most prominent Indian political leaders, and he will find that they will reject his assumption. So, he will be obliged to conclude that they are not serious persons. The author's assumption being what it is, it would be futile to point out that there cannot be any real co-operation between a country which occupies the position of the sovereign and a country which is subject to the former. "Position of power" is a mere euphemism for the position of a master or a mistress. The author takes for granted two things: "that the British connexion is for the advantage of the country", and that the British connexion with India is

synonymous with Britain being in a position of power in India. Nobody denies that Britain's contact with India has been incidentally and indirectly beneficial to us (and mainly and directly advantageous to Britain), though Britain's object in establishing and maintaining this contact was and is selfish. British connexion and British mastery are not synonymous. There is British connexion with the Dominions without British mastery. The least that is wanted by Indians is equal partnership within the British Empire. The longer this minimum demand is withheld from India, the greater becomes the moral and material injury to her.

The author deals with a large variety of topics—the problem, England, India, the West at the junction, Government, education, economic life, social life, religion and philosophy, India as a nation, and India and the world. We have marked numerous passages in it which call for criticism. But if we were to state all our objections and give our opinions, giving references and quoting authorities (which the author has not done), we should have to write a book bigger than the one under review. But we have no time to do it, nor is it necessary. What is more important is to see how we can derive considerable advantage from the writings of those who, like Mr. Marvin, are opposed to our point of view.

Japan has been able to maintain and consolidate her position as an independent nation by developing certain qualities which are latent among all peoples but which have been more highly developed in the West, and by following Western political, military and industrial methods. It is these qualities and methods which enabled England to win sovereign power in India. If we would be free we must have full knowledge of these qualities and methods, dissociating from them all that is immoral, injurious and degrading in them. In the fourth chapter of his brochure Mr. Marvin gives us some idea of these qualities and methods, saying: "It is the common gift and characteristics of Western civilization that enabled England, in the first place, to plant herself in the peninsula and, still more, have formed the substance of her power ever since. Other Western nations have done the same thing, on a smaller scale and with many differences of detail, elsewhere. And the junction came at the end of the eighteenth century, when Western civilization in its typical modern form of scientific industry was beginning to overspread and transform the world. The question, therefore, is fundamental: in what does this Western civilization consist which has enabled it to do these things? It is a question not of panegyric nor of denunciation, but of fact, the facts of history."

Before attempting directly to answer the question formulated above, the author admits that "if we go back far enough in history, the distinction between East and West disappears", and that "actually when the forces of East and West met in the twelfth century in their most acute antagonism the West had much to learn from its opponents."

Let us now turn to the author's answer to his own question.

"At the time when the West thus began definitely to take the lead, it was marked by a pre-eminence in three or four qualities and posses-

sions, none of which were peculiarly its own in origin, but which by the converging influences of history and geography had come to be concentrated in Western Europe by the fifteenth century A.D. One, perhaps the most potent of all, was an exceptional vigour and adventuresomeness of character. There were more energetic and fearless spirits in those lands, and specially in England, than anywhere else.... Another source of strength was their religion.... the adventuring nations had all a stimulating religion, common in its main features, and to all its professors both comforting in trouble and fortifying to action,"—from which the lesson to be drawn is not that the people of the East should profess Christianity, but that their religion—whatever its name—should be stimulating, comforting in trouble and fortifying to action.

The third cause of the ascendancy of the West is that "nations arose." He adds that "it is right to notice the evils due to aggressive and competing nationalities, but wrong to overlook the vigour poured into the world by the union and ambition of youthful states. As now under the treaty of Versailles, so then in the ferment of the Renaissance, work could be done by men beld together and inspired by nationhood which never occurred to the unorganized masses who covered the largest part of the land-surface of the globe. Any form of union gives strength, and France and England, the first and most strongly organised of Western peoples, have through this cause left the widest and deepest impression on the world."

The author then states the fourth cause of the predominance of the West:

"France and England, and all the other nations of the West in varying degree, were carriers also of a more far-reaching principle of organization in scientific method and its results. Here we have the modern and most potent differentia of West and East, or rather of the West from the remainder of mankind which did not take the crucial step represented by the work of Galileo and Newton in the seventeenth century."

Mr. Marvin dwells only on the application of science to industry by the West, but not on the application of science to war, though the latter is undoubtedly one of the causes of Western ascendancy.

As elucidating the author's point of view, we will quote some more sentences from his fourth chapter.

"The essential point of the revival of science in the West in the sixteenth century, and its rapid development since, is the return to nature, the study of how things around us actually work instead of the repetition of other men's id as or the spinning of theories about reality from our inner consciousness."

The "union between Homo Sapiens (the man who knows) and Homo Faber (the man who is an artificer)" is the life-blood of the modern system."

"Vigour, reason, progressive change for the general good are the forces which consciously or unconsciously impel the typical agent of Western civilization as it has emerged from the long, foggy process which we have sketched. And it is faced in other parts of the world by populations not necessarily hostile, often superior personally in many ways, but collectively inferior

or less highly developed in those points which have given the West its present place. With them, as one sees in India, tradition, custom, and authority bulk larger than the constant effort to adapt one's actions to fresh and consciously chosen ends."

"...how to correlate the worship of Durga and Kali with the Modernism of Europe or the ethical religions which stand outside the churches?" "Law, goodness and beauty now stand out as the salient qualities of the divine. Kali, Durga, and the rest, have divine elements as well as baser. Can they be sublimated and used to convey a growing and higher ideal for humanity, or must we become iconoclasts and raze old temples to the ground to make way for the new?"

These questions may be left to be answered by the worshippers of "Kali, Durga, and the rest." Meanwhile we note that Mr. Marvin has not told us whether the God of the Old Testament and of the Book of Revelation in the New who is worshipped by Christian nations before going out to fight and plunder and thumped after winning bloody victories has only "divine elements" or "baser" elements as well.

According to Mr. Marvin, "Communalism, nepotism, corruption—to mention points recently prominent in descriptions of Indian society—are all features well-known in every part of the world. What communalism was ever stronger or more destructive than that of the Huguenots and the League in France at the end of the sixteenth century? It was surmounted by the higher national ideal embodied in the policy of Henry of Navarre.....Had Akbar the same opportunity, national unity would have triumphed over communalism in India in his time. His ideas were similar, but the area and the population with which he dealt were too vast. India lacked also that impulse to new life and organization which modern science was beginning to offer to the West, and, which was independent of political party, race or creed."

The British Government in India has been extremely niggardly in its educational expenditure—particularly expenditure relating to scientific and technological education.

Mr. Marvin rightly points out that the practical equality of women with men in education or social and political status has not been developed to the same extent in India as in the West, "though a movement may be detected in this" matter. "In the West, the vestiges of caste have been more and more obliterated. Wealth and personal merit in varying proportions now classify our society, and there is no bar, except opportunity, in the way of any person doing any work for which he is fit. Nor have we in the West those taboos on touching, intermarrying with, or eating with other persons of whatever class, which are so troublesome and to us such irrational features of Indian society."

According to Mr. Marvin, the last great achievement of Western thought in social and political theory is the recognition of "the doctrine of individual development and individual rights," of the place of the individual in the social order, his claim to full development and enjoyment of the best means of attaining these ends. "Every man—and woman—was to be an end in himself, and not

to be regarded as an instrument for the profit and enjoyment of others."

As none of the qualities and achievements which, according to the author, has given ascendancy to the West, are inherently racial, the peoples of other parts of the world should and can emulate the West in these respects.

We have little space left to give examples of the author's statements which may be wholly or partially contradicted or controverted, but we will give a few. He says that Warren Hastings himself left India surrounded by the love and gratitude of all who knew him or his work, Indians and British alike. He writes: "It (India) has at the moment over two hundred distinct languages, some of them spoken by tens of millions of people and quite unintelligible to the rest." If dialects were considered distinct languages, Mr. Marvin must be right, otherwise not. Among the languages spoken by tens of millions are Hindi, Bengali, Marathi, Panjabi, Rajasthani and Oriya. It is not true that every one of these languages is quite unintelligible to the speakers of the other languages of India. It is no longer true that the past history of India "cannot be dated with any confidence or accuracy until the contact with the Greeks in the fourth century B.C." Mr. Marvin speaks (p. 42) of "the social and spiritual conservatism and the political incapacity of India" as if they were inherent facts true in all periods of her history. He asserts that the system of self-government in ancient India "dealt purely with village business and that the government of the state or empire was always autocratic." Evidently Mr. Marvin has not read the works of Rhys Davids, K. P. Jayaswal, R. C. Majumdar, N. Lew, Benoy Kumar Sarkar, U. N. Ghoshal and others, relating to ancient India; else he would not have been so dogmatic. Nor is he justified in making the sweeping remark that "India is not democratic in spirit." In some senses she is, in some not. On p. 72 he speaks of Sikhs and Akalis as if they were mutually exclusive groups. There is no justification, again, for the following sweeping and emphatic statements: "School education, with the bulk of the rural population, is intensely unpopular and any attempt to extend it meets generally with opposition.....These are the bold facts, which are now admitted by all....."

Mr. Marvin states that "scientific teaching has only lately been introduced, mainly at the instance and largely at the cost of some of the manufacturers who have arisen" and refers to "the excellent Institute of Science at Bangalore." The late Mr. J. N. Tata's princely endowment for the encouragement of science teaching has not been surpassed. But the author ignores the endowments made by others to and the successful research work done at the Bose Institute, the Calcutta Science College, the Bengal Technical Institute, etc. He records with pride that "Great Britain has created four large maritime ports" in India, but omits to state how many hundreds have disappeared during British rule. According to him "the recurrent and sweeping famines of earlier days have now become a thing of the past." What a perversion of ancient, mediæval and modern history! What is the meaning of 'earlier', 'now', and 'past'?

In spite of many other such statements of

undoubted inaccuracy or doubtful accuracy, the book would amply repay perusal.

THE WORLD'S PILGRIM: By Eva Gore-Booth. Longmans Green and Co. Ltd., London. 1927. Crown 8vo., pp. 118. Stiff boards, cloth back, gilt letters. 3s. 6d. net.

The paper, printing and binding of this small volume are excellent. It contains eight imaginary conversations: Buddha and Pythagoras, Francis of Assisi and Brother Giacomina, Giordano Bruno and one unknown, Lorenzo and the prior of St. Marks, Michelangelo and Pheidias, The Lament of Lazarus, The House of Life, and Easter Eve. They are written in choice and beautiful English, and the persons introduced generally speak to character.

INDIA TO-MORROW: By "Khuh Dekhta Age." Oxford University Press, Cloth Crown 8V. Pp. 87. 3s. 6d. Printed clearly on thick paper.

The author has assumed a pseudonym in bad Hindustani to suggest that he is far-seeing and looks far ahead. He disclaims originality, and writes in his foreword that "a readiness to absorb the ideas of others is not without its compensatory advantages. Some imperfect sittings of such ideas are to be found in this little book." The foreword is dated September, 1927. It may be assumed, therefore, that the booklet was probably written in August last. In its pages we find some observations and statements identical with or similar to many made in the British Parliament by Cabinet ministers and others in the course of the debate on the Statutory Commission. May it be assumed, therefore, that these men gave expression to these "ideas" in private and the author "absorbed" them and gave publicity to them in this book before they were uttered publicly in Parliament? In any case, owing to these similarities it would be prudent for our political leaders and their followers to be prepared to expect and meet the likelihood of recommendations being made by the Simon Commission similar to some suggestions made by this author. For instance, he says: "There is much to be said for an Imperially administered Police Service." It would undoubtedly be quite a genuine brand of self-rule which would place the Army and the Police entirely beyond popular control. Why not include Provincial and Central Finance also in the same category?

In this author's opinion, "Nepotism, which is regarded as a crime in England, makes a strong appeal to some of the finer attributes of the Hindu family and caste relationships." Mind, it is only the Hindu, not all Indians, who are guilty of nepotism: so there is hope for India minus the Hindus. But Mr. Khuh Dekhta Age is rather partial to the Hindus? For Mr. Marvin says in *India and the West*, page 57: "Communism, nepotism, corruption—to mention points recently prominent in descriptions of Indian society—are all features well-known in every part of the world." Which prophet is to be believed?

The booklet consists of Foreword, The Problem, The Constitution of the Commission, The Work of the Commission, The Communal Question, The Services, The Indian States, The Provincial Councils, The Central Legislature, Conclusion.

The author opines that "self-determination is a phrase and not a principle." We do not at all

agree. He proceeds to observe that "India desires the appointment of a Commission that shall be both competent and impartial; competent by reason of the practical experience of its personnel in the problems to be handled; impartial by reason of the alcoholness of its members from all participation in the events of the past." The fulfilment of these two conditions by the same set of men seems to us rather impossible. How can anybody have practical experience of the problems of India if he has kept himself aloof from all participation in the events of India of the past? And where did the author discover his "India" which "desires" such absolutely detached members?

In the chapter on the constitution of the Commission the reader will find such questions asked or discussed as whether the Commission should consist entirely of M. P.'s, whether, if there were Indian members, there are any in India today who can guarantee that, given a seat on the Commission, they will be able to carry the country with them in their findings, etc. With reference to Indian members we have also such expressions as "a long dissenting minute, possibly written by others," "a mere collection of conflicting minutes," etc. We have also a discussion of the function of the Commission—whether it is to be the *rapporteur* or something else. The author also says that "a truly representative Commission, where such vital interests are concerned, would be unwieldy and, even if it were a possibility, could hardly consist of less than a score or two of members, whose varied conclusion would be of little value in arriving at any unanimous and acceptable scheme."

Does not all this sound like anticipatory echoes (if we may use such a self-contradictory phrase) of the Parliamentary debate on the Statutory Commission? It is quite evident that the author having been a high official in India was in the secrets of the rulers of India in London.

The author is entirely wrong in thinking that "the open sore of the Meston Settlement has now become a thing of the past," but he is right in stating that "it is an anomaly for the Central Government to draw so large a proportion of its financial resources from two of the provinces (Bombay and Bengal), one of which (Bengal) finds what should be one of its chief sources of revenue blocked by a permanent settlement." We have marked the book with a good many queries, but cannot stop to discuss the passages so marked. Indian publicists will do well to read it.

THE STORY OF MY EXPERIENCES WITH TRUTH: By M. K. Gandhi. Translated from the original in Gujarati by Mahadevi Desai. Narayan Press, Ahmedabad, 1927. Volume I. Demy 8vo., pp. 602. Appropriately and neatly bound in home-dyed, home-woven cloth, made of homespun yarn. Price Rs 5-8.

The printing, paper and get-up of this volume are excellent. It is a human document of absorbing interest, relating to the inner and outer history of the life of one of the world's most notable personalities, and as such should be studied by all who know English. We may review the book later in some detail.

The portraits of Mr. M. K. Gandhi which forms the frontispiece of the book is the best we have seen. It expresses the character of the saint, so austere in life, yet so cheerful in conversation.

and so full of bliss in the look of his eyes and ice.

THE HINDU ANNUAL, 1927. *Re. 1.*

It contains many interesting and instructive articles by J. A. Spender, Fenner Brockway, H. A. F. Lindqvist, W. Pethick Lawrence, Patrik Geddes, George Lansbury, J. C. Wedgwood, E. B. Havell, O. C. Ganguly, S. Radhakrishnan, Kedarnath Chatterji, Sudhindra Bose, Harindranath Chattopadhyaya, etc. There are several colour plates and photographs. The reproduction of two oft-reproduced works of Ravi Varma and Dhurandhar should and could have been avoided.

THE BOMBAY SAMACHAR ANNUAL, 1927. *Re. 1.*

This interesting annual is bilingual in character. There are many contributions of topical and permanent interest in Gujarati and English by well-known writers. There are many pictures in colours and monochrome.

THE INDIAN DAILY MAIL ANNUAL, 1927.

This annual also is interesting and contains many pictures in colours and monochrome. Among the principal contributors to it are Sir P. S. Sivaswami Aiyar, Principal A. B. Dhruva, Prof. V. G. Kale, Mr. Balak Ram, etc. The reproductions of two frescoes from the temple at Sittannavasal are very fine.

The Third Anniversary Number of the *Calcutta Municipal Gazette* contains much readable matter from well-known pens. The pictures, including cartoons, are good.

The Twenty-first Anniversary Number of *The Musselman* makes interesting reading. The editor has reviewed contributions from non-Muslim writers also. That has its obvious lesson.

R. C.

IN SEARCH OF JESUS CHRIST: By Dhirendranath Chaudhuri. *Vedantamagis* M.A. 1927. Price *Rs. 5 or 10 s.* Published by the Author from 3D, Nivedita Lane, Bagbazar Calcutta. Royal Octavo. Pp. 434+XVI+XXIV.

The book noted above may truly be called an epoch-making one. At any rate, for those who will read it in this country and accept its conclusions, it will mark the end of a period of uncritical faith in "great men" and the more or less blind dependence on their utterances which such faith generates, and inaugurate an epoch of rational faith based on direct knowledge. It embodies the result of a long course of study and research the vastness of which the present writer, with his limited reading on the subject, can hardly measure. The author tells us in his preface and introduction what led him to these studies—studies on the historicity of the New Testament narrative and the origin and development of Christianity. He is grieved and surprised at the absence of such studies in this country either among the Christian missionaries, who show "no sign of mending their crude orthodoxy in the light of modern scholarship", nor among Indian non-Christians, to a section of whom he ascribes "a misguided zeal for Christ." "The book," says the author, "claims no originality, but it places before the reader the most up-to-date information on the subject in a connected form. The first of

the three parts into which the book is divided appeared in 1922 in the form of articles in *The Indian Messenger*. These articles, being not amply modified and revised almost beyond recognition, and enlarged in the light of recent researches of Vedantaratna Mahesh Chandra Ghosh, B.A., B.T., of Hazaribagh Brahma Samaj, published in the columns of the *Modern Review* and *Pravasi*, have formed Part I of the book. The other two parts are quite new."

The three main parts of the book comprise twenty chapters, several of which are again divided into sections, sub-sections and addenda. A perusal of the mere 'contents' of the book,—filling eleven pages and prepared with great care and minuteness by the author's worthy wife, would give the reader an idea of the amount of study and patient industry he has gone through. We hope the book will help our young people to shake off their intellectual lethargy and, following in the author's footsteps, seek "fresh fields and pastures new", and induce our elders to prompt, if not actually to lead them there.

The three main divisions mentioned treat successively of "Jesus the Teacher," "Jesus the Messiah" and "Jesus the Saviour." The first shows that there is no uniqueness or originality in Jesus's teachings as represented in the Gospels, all being borrowed either from the *Old Testament* or from Greek, Buddhist or Egyptian sources. The second shows that Jesus the Messiah is not a historical person, but a picture drawn by the gospellers with the help of *Old Testament* prophecies concerning the expected Messiah wrongly interpreted and applied to a scottish person whom they wanted to be accepted as the Messiah already come. The proof of this contention is stated in such a varied and elaborate manner that we can give no idea of it in a short article like this. The third shows that Jesus the Saviour is only a copy,—varying according to local circumstances,—which the Jews dispersed far and wide after the destruction of the Temple of Jerusalem, made of pre-Christian models of Saviour Gods,—Judean, Greek, Roman, Egyptian, Syrian, Phrygian and Persian,—all of whom had the general characteristics of being the "first-born" of God and of having been ritually crucified or put to death in some other way, so that their innocent blood might be a propitiation for the transgressions of their brethren. "These religions," says the author, "inculcated a dead and resuscitated God whose triumph over death was prophetic of man's deliverance from the grave. The new religion was only a populariser of an old mystic cult. Its success was due to the fact that when the old Gods were being disbelieved, it proceeded by substituting the legend as historical. Sometimes it succeeded in pushing its way onwards on the ground of its resemblance to the old,—its advantage lying in its being more concrete and more definitely historicised, though full of anachronisms, (p. 341-342). The starting point of the gospel story is said to be the existence of a pre-Christian Jesus-cult in Judea itself. Our author quotes Mr. Thomas Whittaker, author of *Origins of Christianity*, on p. 354: "The real basis of the Christian community I take to have been, as Robertson holds a cult which was connected with a Jesus or Joshua long since concerned as of divine status." "The basic idea" our author

adds, "of the myth originally lay in an esoteric sacrifice which had its exoteric side also. This is Robertson's starting point. When the rite was presented in the form of a popular drama, it took a definite shape with the help of similar religious stories current in the Hellenistic world. It underwent modifications as it grew in strength and volume." Our author shows elsewhere how these dramatic scenes came gradually to be taken as historical events and found place as such in the Gospels in course of time.

We shall conclude by pointing out what appears to us as a grave defect in a book otherwise deserving of the highest praise. Our author seems to labour under a certain anti-Christian obsession which makes him somewhat oblivious of the excellences of Christianity and its services to mankind. We need hardly say that we do not share in this. And we hardly wonder at it. More frequently than this anti-Christian bias we meet with an anti-Hindu bias in some reformers which in the same manner as the other bias makes people very tardy in recognising the excellences of Hinduism. Both are equally regrettable. As to Christianity, we know its grievous errors, both theoretical and practical. But we know also that, whatever it may or may not have done in the West, it has a high and important mission to fulfil in this country. Among other things we have received from it, at any rate through it, our zeal for the reconstruction of Hindu society. We are yet far from paying off this debt by successfully following and emulating Christian teachers and workers. Even our study of Christianity is very imperfect. Prof. Vedantavasis has led the way to higher Biblical studies amongst us. If he now gives us the result of his study of the spiritual aspects of Christianity,—something which we came to hope for from some of his articles on Christian Mysticism which appeared in the *Indian Messenger* sometime ago, our obligation to him will be at least as great, if not greater than he has laid us under by writing the book under review. And who can say that through a sustained course of study in the line indicated the prepossession we speak of may not be greatly modified or perchance disappear altogether?

SRINATH TATTVABHUSAN

HINDU MYSTICISM: By Professor S. N. Das Gupta, M. A., Ph. D. (Cal. and Cantab). Published by The Open Court Publishing Company (Chicago & London) Pp. 168. Price two dollars (in America) or 10 s.

This is a new book written by Professor Das Gupta, and we heartily welcome it. His "Study of Patanjali" and "History of Indian Philosophy" are rather stiff books and are intended for or at least can be understood by scholars only. But his lectures on "Hindu Mysticism" are easy and delightful reading. The book contains six lectures which he delivered in 1926 at the request of the Harris Foundation Lecture Committee, U. S. A. The N. W. Harris Lectures were founded in 1906 through the generosity of Mr. Norman Wait Harris of Chicago and are given annually. The purpose of the lecture foundation is "to stimulate scientific research of the highest type and to bring the results of such research before the students and friends of North Western University, and through them to the world".

Our author is a competent person to speak on "Hindu Mysticism" and he has performed his task worthily. He has defined "mysticism" as a theory, doctrine or view that considers reason to be incapable of discovering or of realising the nature of ultimate truth, whatever be the nature of this ultimate truth, but at the same time believes in the certainty of some other means of arriving at it" (p. 17). This idea has been developed in six lectures. From the sacrificial mysticism of the Samhitas, he comes to the mysticism of the Upanishads, which is further developed in the 'Yoga Mysticism'. In the fourth lecture he discusses 'Buddhist Mysticism'. The subject of Lecture V. is 'Classical Forms of Devotional Mysticism' and the concluding chapter deals with 'Popular Devotional Mysticism'.

Our author has combined scholarship with spiritual insight, which is very rare in the philosophical and the religious world.

The book deserves wide circulation, but the price is rather high. The Open Court Publishing Company has done much for the propagation of truth and it should issue a cheaper edition and include it in the "Religion of Science Library".

BUDDHISM AND ITS PLACE IN THE MENTAL LIFE OF MANHINDO By Dr. Paul Dahlke. Published by Messrs Macmillan & Co., Pp. VIII+254. Price 10s. 6d.

Dr. Dahlke is an able expounder of Buddhism. His earlier books are 'Buddhist Essays' (1908), 'Buddhist Stories' (1913), and 'Buddhism and Science' (1913)—all translated from the German.

In the Introduction of the book under review, the author writes—"with a clear conscience I can say before all the world: I have not written this book, but it has been forced out of me by that pressure of inner living experience which, like all living experience, seeks to comprehend itself, and in comprehending, to take to itself a form. This book is a new country—from the first to the last line, I might almost say. Not as if it contained new ideas such as have not before been heard of! O no! What I offer is the Buddha-word, the pure original Buddha-word".

The subjects dealt with in the book are, Buddhism as Historical-Superhistorical Phenomena, Concept and Object, Faith and Science, The Concept, The Ego, Nutrition as living experience. The five grasping groups, Consciousness, Mind-form, and Consciousness. Dependent-simultaneous arising, Ignorance, Re-birth, Nibbana, the Buddha, and Atyakatas and Dhatus.

According to the author, "Buddhism is the Doctrine of Actuality. Actuality is always actual, is always important and, in the last analysis, the only subject worthy of the actual thinker".

In another place he writes:—"Grasping is the only activity in the world and—there is only one actual object (one "standing against") of this Grasping: the bodily form conventionally called personality. That this latter is the object in dependence upon which Grasping exists, and at the same time is that which exists in dependence upon Grasping—to understand this, to realise it, to live it out, this in the deepest sense means Buddhism" (p. 12).

Dr. Dahlke's language is, in many places, technical. In one place he writes:—"Buddhism, briefly put, is that form of mental life which in

the light between concept and actuality, not without due examination, takes the part of the former, and now from this side seeks to interpret Actuality, whereupon this entire mental life exhibits itself as a process in which a minus sign must be made up for corresponding to a gap in it filled up between Actuality and the knowledge of it" (p. 68).

The author's treatment of the subject, though abstruse, is highly interesting and will be appreciated by philosophic students and Buddhist scholars. But non-philosophic readers will find the book rather stiff.

A FEW PROBLEMS SOLVED: By Durganath Ghosh, Tattvabhusan. Published by D. N. Ghosh, 31-2 Harrison Road, Calcutta. Pp. XVI+203. Price Re. 1-8.

The author has "tried to approach the problems of life in the light of the Gita". The book is, in fact, an exposition of the theory and practice inclicated in the Gita.

In Chapter XX, a resume of the Gita has been given and the Appendix contains some important verses from the Text rendered into English.

ANTHROPOLOGY IN INDIA: By Dr. Hans Koester. Published by Thacker, Spink & Co., Calcutta. Pp. XII+44.

The subjects discussed in the booklet are:—(i) The Philosophic Basis of Anthropology, (ii) The Cosmic Man in Space, (iii) The Cosmic Man in Time and (iv) The Spiritual Basis of Anthropology.

There are five symbolic diagrams. The book has nothing to do with "a historical representation of Anthropology in India"; its standpoint and exposition are akin to those of present-day Theosophy.

SWAMI-GITA: By Swami Parmanandji; translated by Shib Krishna Dutta. Published by Jagat Narayan Asthana (Sarnam Singh Lane, Wallisly Ganj, Mirzapur) (with a portrait of the Swami) Size 6½x4½; pp. 24+106+18. Price Re. 1-8 (paper); Rs. 2 (cloth).

This Gita was originally delivered by Swami Parmananda in Bengali. He was born at Kapa-sharia, Hoogly and his name was Saratchandra Sen Gupta. He left home at the age of 45 and is now residing at Vindhyachal, Mirzapur.

There are many good sayings in this booklet.

MAHES CHANDRA GUOSH

EKNATH: By Justin E. Abbott. The Poet-saints of Maharashtra Series, No. 2. Pub. by Scottish Mission Industries Co., Poona. Pp. viii+295. paper cover, price Re. 1-8.

This is an English translation of the life of Eknath as given in the *Bhakta-lilamrita*, Ch. 13-24, of Mahipati (which was completed in 1774 A. D.). There is an earlier life of the saint, namely, by Keshava Swami, which Mahipati has here re-written but in a more interesting manner.

Eknath, who lived and wrote in the second half of the 16th century, is in Mr. Abbott's opinion, "the greatest of the Maratha poet-saints, in character, in ideals, in learning, in the consistency and nobleness of his life." The legends about

the saint, his traditional sayings, etc., as here recorded, are extremely interesting, the translation is simple and lucid, and the notes and appendices added by Mr. Abbott are very valuable and give all the necessary—and even possible—information on the subject.

We should like to draw the reader's attention to the similarity of saints' legends in all parts of the world as evidenced here. Bengali followers of Chaitanya will be interested in the following "final message" delivered by Eknath, before he gave up his soul by entering the Godavari river:—

"In this Kaliyuga there is no means of salvation other than that of His Name. Be kind to every creature. Keep this truth in your hearts." (p. 235.)

So, we see, one touch of Nature makes all religions kin.

X

PRESIDENCY COLLEGE (CALCUTTA) REGISTER: Compiled and Edited by Prof. S. C. Majumdar and Gokulnath Dhar. Bengal Secretariat Book Depot, Calcutta. Price Rs. 2-8. 1927.

The Register consists of two parts,—the first part containing the circumstances that led to the foundation of the Hindu College in 1816 and its subsequent transformation into Presidency College in 1855 and the second containing a register of ex-students of the Hindu and Presidency Colleges with brief accounts of their careers.

The Hindu College occupies a unique place in the annals of western cultural progress in Bengal. Founded by leading Hindus of the age like Raja Rammohun Roy, Raja Radhakanta Deb, Boddinath Mukherjee and others in collaboration with eminent Englishmen like Sir Edward Hyde East and David Hare, the Hindu College had been the pioneer institution which took upon itself the task of diffusing the "knowledge of western science and literature" in Bengal. This does not pre-suppose that Bengal was culturally backward before the advent of the British or the establishment of the Hindu College. Major B. D. Basu in his well-known work entitled "Education in India under E. I. Co." (R. Chatterjee: Calcutta) tells us that in the pre-British period India was not an illiterate country. This land was far more advanced in education than many a Christian country in the west and "that the Indians themselves were the pioneers in introducing western education in this country." The editors of the Register, therefore, rightly observe: "The Hindu College came into being as the result of the spontaneous desire of the Hindus of Bengal."

The Hindu College, however, passed through many vicissitudes and established a firm reputation. The East India Company's administrators had an excellent knack of pouncing upon everything that flourished under others' guidance on some pretext. It was no wonder that the rapid success of this institution should attract the notice of the Company's servants, who wanted to bring it under their control for their own benefit. Major Basu's devoted search among old records has brought to light the truth that the Company's administrators helped to "impart (English) education to swarthy 'heathens' of India for their own benefit" only, and in the present case too there had been no departure from that practice. Government soon found out that "the generosity that

had originally called (the Hindu College) into being proved inadequate to sustain its enlarging needs; its sectarian basis was more and more out of keeping with the progressive spirit of the times. And so it was compelled to rely, in even larger measure, on the financial support of government and finally to suffer evolution into a completely government institution." In spite of strong public opposition and in utter disregard of the views expressed by Prosonno Kumar Tagore, the Maharajah of Burdwan, Ransomoy Dutt, Sreekishen Singh, Ashutosh Dey and other prominent Bengalees who were directly connected with the college, it "suffered evolution into a completely government institution." This step was no doubt "unfortunate" but we fail to understand what makes our editors to jump to the conclusion that "this change was inevitable."

The Hindu College had done a great work. It produced a gallery of brilliant scholars like Durgacharan Banerji, Rajnarain Basu, Michael Modhusudan Dutt, Chandramadhab Ghosh, Kasiprasad Ghosh, Ramgopal Ghosh, Ramtanu Lahiri, Digumbar Mitter, Bhudeb Mukherjee, Maharshi Debendranath Tagore, Pearymohan Mukherjee and others. We are inclined to think that the particulars supplied about these distinguished alumni of the Hindu College are very meagre.

We next come to the Presidency College. Throughout this long period the College has maintained a career worthy of its forerunner. It has produced litterateurs like Bankim Chandra Chatterjee, Dwijendralal Ray and Ramendra Sundar Trivedi; jurists like Rashbehari Ghose, Lord Sinha, C. R. Das, Gurusdas Banerji; educationists like Mahamahapadhyay Haraprasad Shastri, Syamacharan Ganguli, Ashutosh Mukherjee, Sir Bipin Krishna Bose, Jadavchandra Chakravarti, Gaurisankar De and Jadunath Sarkar; journalists like Krishna-behari Sen and Rajkrishna Mukherji; publicists like A. M. Bose, Baikantha Nath Sen, Gurusprasad Sen, Bhupendranath Banerji; and administrators like R. C. Dutt, Albion Rajkumar Banerji, Dewan Bahadur Jnanasara Chakrabartty, Sir Atul Chatterjee and many other distinguished Bengalees who have rendered signal services to the country in different walks of life. Therefore, a publication containing the record of activities of those who built up the Hindu and Presidency Colleges as well as of those whom these institutions "fashioned" will be read with great interest by many.

In this connection we desire to point out that the details of careers of eminent students of those Colleges are not sufficiently informative and that some particulars appear to be incorrect and incomplete. We cite only a few examples. The editors have omitted to mention that Ramesh Chandra Dutt was the author of well-known Bengali novels; that Jm. Haraprasad Shastri is a fellow of the Calcutta University, author of History of India and other well-known books and was in charge of the Department of Sanscrit and Bengali studies of the Dacca University at its inception, that Rai K. K. Banerji Bahadur was a fellow and Inspector of Colleges of the Calcutta University, etc. Likewise in the list of staff of the Presidency College full informations have not been supplied in all cases. This kind of omission in the cases of Sir J. C. Bose or Sir P. C. Ray is regrettable. We are also of opinion that the particulars about undergraduate ex-students have not been "as a

rule" excluded, and departures have been made in several cases. This selection ought to have been made in a more judicious way.

The introduction to the Register well repays perusal and amply testifies to the care and caution with which it has been compiled.

P. C. SANYAL.

GHOSH'S DIARIES FOR 1928: M. C. SARKAR'S POCKET DIARY To be had of J. N. Ghosh 23-4 Ray St., Calcutta and Messrs M. C. Sarkar & Sons, Booksellers, 90-2A Harrison Road, Calcutta

We have received a few copies of these Diaries for 1928. These handy diaries are useful to everybody—businessmen, lawyers, journalists, doctors, etc. Dates in Bengali, Samvat, English, Fashi and Muhammadan have been given and the directory portion is full of up-to-date useful information. The publishers (Messrs M. C. Sarkar & Sons) are to be complimented on the get-up, which surpasses any imported article of the same or even a higher value.

ALBUM OF MR. THAKUR SINGH'S PAINTINGS Vol. I Punjab Fine Art Association, 123 Corporation Street, Calcutta. Price Rs. 2.

This album contains 15 reproductions of graceful paintings of Mr Thakur Singh, the well-known Indian Artist. The printing and get-up are excellent.

X

MALAYALAM

ORU VINNA-TARUNI (A Heroine). By K. R. Bhaskaran, with a Preface by M. Rama Varma Tampian, B. A. L. T. Published by the Kerala Bhanu Book Depot, Pudukad (Cochin State) Pp. 48, price as 5

Ballads form an important part of the Malayalam classics. But, most of these are unfortunately only in a floating condition, being handed down from mouth to mouth. A few which have been printed are not properly edited. Mr. K. R. Bhaskaran deserves our special thanks for having brought out one such ballad at least in a fairly proper form with his lucid explanatory notes here and there.

Unniyarcha, a young Malayali lady, is the heroine of the story. Early one morning she sets out with her husband to witness a festival in an Ayyappan Kavu (temple). On the way they have to pass through a bazaar which is a strong Mohamedan centre. The days are such that there is no power in the land to check the atrocities crimes committed by the Mopla merchants upon innocent Hindu ladies. No sooner the pair reaches the Nagapparam bazaar, than a large number of Mohamedan rowdies surround Unniyarcha and demands her to be the wife of their headman, the Mappan. The bold lady stands undaunted in spite of all their threats, and then slowly untying her wet handkerchief whirls it round once or twice, when all at once her assailants fall down in a swoon. In the end the headman himself appears before the scene, when Unniyarcha coolly extends her hand to him; but he begs her forgiveness and surrenders a portion of his rich jewels

and ornaments to her in compensation. Unniyarcha then proceeds to witness the festival in the Ayyappa Kavu without any molestation and returns home with all the riches that she has got.

Mr. Bhaskaran claims the heroine to be an Erzava lady.

As regards the get-up of the book, we could not commend it much, which when compared with the merit of its contents should have been more attractive.

P. ANUJAN ACHAN

MARATHI

RAO SAHEB V. N. MANDLIK: *A biography in two volumes: By G. R. Havaldar, B.A., LL.B. Pages 1230 and 34 (Index). Published by the author himself at Angre's Wadi, Girgaum, Bombay. Price Rs. 3-8.*

No part of India is perhaps less diligent in discharging its debt to the illustrious dead by producing their biographies than Maharashtra. While Raja Rammohan Roy, Vidyasagar, Kristo Das Pal, Sir Sheshadri Aiyar, Dhanvanthi Saraswati and other distinguished Indians had had their biographies written not long after their deaths, great Marathi luminaries of unquestioned merit have to wait several decades after death before the honor of a biography is conferred upon them by their admiring countrymen. Full justice has yet to be done to Justice Ranade. Telang's biography was promised long ago, but it has not yet seen the light. The Right Hon'ble V. S. Shastri or his lieutenants of the Servants of India Society have not yet found leisure amidst their multifarious activities to perpetuate the memory of their master. Lokmanya Tilak's biography by Mr. N. C. Kelkar is only half done. The late Rao Sahab Mandlik must therefore be considered lucky in having a biographer in Mr. Havaldar after nearly forty years had passed since his death! Apathy, pure and simple, seems to be the cause of this excessive and inexcusable delay. For the late Rai Sahab had left ample material in the form of his diaries and extensive correspondence carefully preserved. There never were wanting good and kindly persons intimately acquainted with Rao Sahab who willingly help the writer with material and money; yet it took forty years for Maharashtra to pay off the debt of gratitude to that Marathi hero, who fought many a battle in the cause of political, social, and educational advancement of the country and whose name was writ large in the pages of the history of many institutions in the Bombay Presidency in the seventies and eighties of the past century. Mandlik was a prominent figure in his time not only in Western India but in the whole country. He was a politician, a Pandit, an educationist, a social reformer, a journalist, an author, and a jurist, all rolled into one. He was loved and respected alike both by Europeans and his own countrymen, whether traders, merchants, lawyers, authors, administrators or Municipal Councillors. It is a very difficult task to write the biography of such a many-sided person. Bearing this in mind, one cannot but utter unmitigated praise with reference to Mr. Havaldar's work. He has sifted and carefully arranged the

material at his disposal, and displayed it with skill. Even a cursory glance at these two volumes will enable the reader to judge how the writer has made the hero of his biography to tell his own tale by piecing together numerous extracts from the diaries and correspondence of the late Rao Sahab. Yet one cannot help observing with regret the frequent failure on the part of the biographer to see things in their proper perspective and to keep proper sense of proportion in narrating the several incidents in Mandlik's life. The author has so completely identified himself with the times he has written about that even his language and style have partaken of the peculiar characteristic of those times, and stand the risk of being called archaic in these days. He seems often tempted to give elaborate accounts of comparatively insignificant things, interspersed with long extracts from contemporary newspapers or private correspondence to tiresome length, which have served only to swell the bulk of the book without shedding much light on the subject. It shows that condensation is a virtue which has yet to be cultivated by many a Marathi writer. The book on the whole gives a very clear idea of the keenness of intellect and its penetration, the untiring energy, application and industry, truthfulness, sincerity of purpose, habits of regularity, devotion, high regard for religion and for good things traditionally handed down, the courage of conviction, and such other virtues which characterised the late Rao Sahab Mandlik and which enabled him to command respect from princes and peasants alike. The two volumes before us supply ample food for reflection to the young Maharashtra and set before them an example of out-standing merit. The biography is thoroughly interesting and deserves to be found on the shelf of every Marathi household.

RAVI-KIRANA-MANDAL BOOKS SERIES I-VII.

Four years ago there was formed, in Poona, a private club of only seven members who met together every Sunday and chanted verses of their own composition. This club goes by the name of Ravi-Kirana-Mandal and holds a respectable position in the literary world of Maharashtra. This small body of only seven devotees of Saraswati has not grown in number, but has gained in reputation by issuing seven publications till now, five of which are collections of songs, short stories, and stray skits, the other two being dissertations on Poetry and Prosody. These latter will be separately noticed later on. Most of the pieces of poetry contained in the earlier publications are either out-pourings of love-ridden hearts or bear the impress of the superficiality of patriotic feelings roused by the sight of places of historical interest in Maharashtra. It is noticeable from these poems that the feeling of patriotism is confined within the four walls of Maharashtra and has not yet widened its boundaries. Later publications show some welcome change in the choice of subjects and also a healthy growth in the refinement of sentiment. Madhav Julian's (what a strange combination of Eastern and Western names!) special pleading in favour of his poem *Viraha-Tarang* is clever but not convincing, and the boast of the two poet friends who are responsible for *Madhu-Madhu* that they are not followers of traditional Marathi poetry is

superfluous if not childish. No one in these days expects budding poets to follow old Marathi poets who lived two or three centuries back amidst surroundings entirely different from our own and looked for their inspiration to God and religion rather than young widows or maidens. As types of good Marathi poetry turned out in these days, these publications of the *Ravi Kirana-Mandal* may well be recommended to Marathi readers.

V. G. ARTE

HINDI

VIRANGANA—Translated from the Bengali of Michael M. S. Dutta by Madhupa pp. +130 Published by Sahitya Sadan Chirgaon Jhansi Price Re 1

The translation is fairly literal but something more than a mere literal rendering is required to convey the spirit of one language into another. As in his *Meghnad*, the author has in this case also violently strained and pulled the Hindi language, so that at times one is inclined to wonder if it is Hindi at all that he is reading. We found some flow and vigour in his *Meghnad* but here even that is lacking.

The author has done well to give a translation of Jorindranath Basu's appreciation of *Virangana Kavya* in his book. This will enable the readers to form a more correct estimate of the powers of M. S. Dutta than can possibly be had from this wooden translation of his 'Epistles'.

M. B.

GANGAVATARANA: By Mr. Jagannathdas 'Ratanakar'. B. A. Published by the Indian Press, Ltd., Allahabad, 1927. Pp. 122.

The hook under notice is a Hindi Kavya in the *brajabhasha* dialect and is completed in thirteen cantos. The theme—which is the descent of the holy Ganges on the earth—fits well with the dialect which has got a natural charm and flexibility. Those who are interested in the old style Kavya in Hindi will surely thank the poet. Some alterations in the phonetic rules of the *brajabhasha* are noticed in the preface. There are two coloured pictures on the subject-matter.

SANKAR: By Rai Krishnadas. Published by the Sahitya-sadan, Chirgaon, Jhansi. Pp. 60. 1925.

Rai Krishnadas of Benares City is well-known as an art-collector. His debut in Hindi literature with this work is of promise. Here are four dialogues between some cognate animate and inanimate objects, each bearing a certain moral lesson. The last dialogue is between *Urvashi* and *Arjuna*, and has been endowed with a romantic touch.

KAMANA: By Jayasankar 'Trasad'. Published by the Hindi-Pustak-Bhandar, Laheriasarai, 1927. Pp. 137.

This is an allegorical drama in three acts. The eternal struggle of the human passions forms

the subject-matter of the drama. The style of the drama is praiseworthy and the songs are nicely done. The get-up reflects credit on the publishers.

RAMES BASU.

GUJARATI

THE VOICE OF CHINA: By Chandra Sankar P. Shukla, printed at the Nayyan Printing Press, Ahmedabad. Paper Cover pp. 103. Price Re. 0-8-0. (1927)

This is a translation of "Letters from John Chinaman." The letters breathe the spirit of "China for the Chinese," and would no doubt furnish interesting reading in the present times when her nationalistic tendencies are actively coming to a head.

MALA DEVI AND OTHER PLAYS: By Batubhai Lalbhai Umavadiya, B.A., LL.B., printed at the Kalamaya Printing Press, Surat. Paper Cover. Pp. 252 Price Rs 2 (1927.)

This batch of five short plays admirably portrays the psychology of several individuals of a type we come across in daily life but whom we either disregard or wink at—of both sexes. The brevity of the work adds to its piquancy. These plays are easier to understand than the prior batch of plays of the author and hence better.

DISIDENT MALA By Dina Sarak.

A small book full of illustrative stories leading to *Bhakti*.

NAOANAND By Rameshlal Jaychand Bhai Dalal, printed at the Aditya Printing Press, Ahmedabad. Thick card board. Pp. 100. Price Re. 0-8-0 (1927)

This is a second translation of the play of Sri-Harsha in Sanskrit, the part one having become old. The translator has fully entered into the spirit of the original and produced a creditable work.

ATMA-JNAN By Dhanyasha Merwanji Hathilhanavala.

A small book of Vedantic studies, remarkable because of being written by a Parsi, who is saturated with Hindu Philosophy.

THE SCIENCE OF SELF-SACRIFICE: Compiled originally in English by Bharamdas N. Motwala, B.A., LL.B. and translated by Ambalal M. Patel, B.A.

This is a collection of excerpts from writings in various languages on the tenets of social service. The selection is very representative and very helpful. Mr. Motwala being a well-known, practical social servant, *Sarita* is a collection of verses, written by members of the Udaya Mandal, who are mostly students of the National School, Bombay and who have published another work *Kunj-Kohi*. The same observations apply to this collection as to *Kunj-Kohi*.

SHRI PRABHU CHARAN-E D:

At the feet of the Lord, is a compilation by Jaysankar Pandit and Bholashankar Vyas consisting of selections from various veinaculars of Bhajans and devotional songs.

K. M. J.

NOTE ON THE REPORT OF THE VERNACULAR DEVELOPMENT COMMITTEE, BIHAR AND ORISSA

By PROF. KALIPADA MITRA, M. A., B. L.,
Principal, Diamond Jubilee College, Monghyr

FOR nearly two years the Committee very closely considered the question of developing three of the principal vernaculars of the Province, viz, Hindi, Urdu, and Oriya. The subject has been discussed in its various aspects for a long time by learned doctors deeply versed in the philology of the several vernaculars, reputed authors whose contribution has enriched their literature, scholars of wide and liberal culture instinct with patriotic ardour for the languages and teachers of deep and wide experience of the actual conditions of vernacular teaching in its higher and secondary stages. An opinion arrived at after mature deliberation and franked by so many learned experts commands the biggest respect. It is, therefore, with great hesititation that I venture to offer the following observations. As I am quite conscious of my limitations. I do it in all humility as a student of philology—a philology mostly of the English language which I taught for six years to the B. A. Honours students of a first grade college, and of Sanskrit and Bengali which form the subjects of my private studies. My observations must, therefore, be of a general character.

The majority of the members have recommended that in Bihar and Chota Nagpur High schools boys and girls who have taken up either Hindi or Urdu as one of their vernaculars must take up both from classes VIII to XI as compulsory subjects.

They have carefully considered the effect it would produce on the student's health. Nevertheless they have advocated such a course as being the only effective means for building up in due course "a common vernacular literature," "a common mentality and a common intellectuality."

In the first instance, what puzzles me is the projected contemplation of having a possible *self-growing vernacular literature* common to Hindi and Urdu in course of time. If one is to follow the genesis and development of the process of the argument

till it reincarnated into the present resolution he will find it in its incipience shaping thus—"It should be one of the goals of this Bureau to evolve a common language that would be understood both by the Hindi and Urdu sections." The memorandum of Babu Ramdas Gour acted like the Buddhist *abhinnā* (the faculty of revealing the reality by dispelling the illusion) or the Sanskrit *vagaro-cana* (which clears up the vision and discovers the thing apparently hidden) and showed that the quest for a common language which was already there in their midst had in reality no meaning. Accordingly at the eighth meeting held on the 15th of May, 1927, "instead of the expression evolution of a common language in (2) of page 3 of the printed proceedings it was decided to put 'development of common literature,' as it was thought that there was already a common language known as Hindustani, the language used in common parlance, in existence.

Now let us examine what "this 'common literature'" may mean. Babu Ramdas points out, as one claiming to be an authority, possessing as he does a very intimate acquaintance with the highest literature of both Hindi and Urdu, that the illusion of the committee sprang in fact from the mere accident of the literature appearing in Persian script or Devanagari. If the *Farhang-hi-Asafia* were put in Devanagari character, it would be one of the best Hindi lexicons. Similarly if the Hindi Sabdasagar were put in Persian character, it would be one of the best Urdu lexicons. He contends, therefore, that in essence there is no real difference, for that arises mainly from the script chosen to give form to the language.

The *Farhang* has 54,000 and odd words, the Sabdasagar, perhaps nearly as many. He suggests a compromise by digesting the *Farhang* and the Sabdasagar into one consolidated dictionary by taking out a mean which will yield a collection of over 45,000 words (which if necessary may appear in both the

scripts) to which all writers should confine themselves and there should be no further borrowing beyond coinage of special technical terms.

In our ordinary economy we do not use 51,000 words or for the matter of that even 45,000. Consequently besides the words generally used in common parlance the remaining must of necessity be used in literature, highest or otherwise. One is likely to suppose, therefore, that there is thus a common literature also already existing, the difference mainly lying in the one (Hindi) containing a larger percentage of words of Sanskrit origin and in the other (Urdu) containing a larger percentage of words of Persian origin.

In my view there do exist separate literatures of Hindi and Urdu, whatever be the common language, and this difference must exist and continue for the simple reason that fact must always remain as fact and history, history. I cannot understand how the two literatures could be pounded into one that we might get a common vernacular literature, even for the sake of attaining 'nationalism'. A literature develops in its own way, drawing its sap from more sources than one can imagine for its growth and life and attains a characteristic which is its own and which it cannot share with any other; for such divorce will be its end. It has its roots deep down in tradition and association and will not outlive forced grafting. Literature is artistic, and its life is the rasa that feeds and sustains it in more subtle and mysterious ways than the fine grains of pollen are wafted by the breeze to fertilise regions of which the human vision has no ken.

It has been urged that there should be no further borrowings beyond the 45,000 words of a contemplated consolidated dictionary. But there is no Ultima Thule in this matter and not even the most imperious dictator could thunder "Thus far and no further". Our good old Chaucer claimed that his language was the "well of English undefiled." But every student of English philology knows the merit of his pretension. Much water has flowed down the Thames under the London Bridge since then and history has played its part. Has there been no accretion to the vocabulary of the English language since then? Did not the Boer War, to cite an instance, and the Great War do their parts? Do not the present English

dictionaries look fatter than they did before? And has the English language or for the matter of that the English literature therefore become denationalised? And may not a present-day writer repeat the claim with half a wink and perhaps with equal consistency that his language still remains "the well of English undefiled?"

The Bengali language has equally borrowed from Persian and nearly 2,500 words of Perso-Arabic origin have so far established themselves that they cannot be banished at all. We have scarcely a perception that the following are not Bengali: e. g. *Khajna*, *gomasta*, *jama*, *jame*, *taluk*, *daroga*, *daftar*, *piyada*, *ukil*, *darkhast*, *makaddama*, *Munsef*, *Ilakim* etc. or *ayna*, *atar*, *arak*, *kajal*, *kulup*, *chasma*, *chaphan*, *Jama*, *doyal*, *badam*, *matmasla*, *shawl* *sinduk*, etc.

The following European words are as much Bengali as Hindustani—French—Kartu (cartouche), Kupan (coupon) etc., English—bhot (B) bot (H) vote, Secretary, Oazette, apis, (b), afis (office); ardali (orderly) daktar (b) dangdar (doctor), pallish (polish), bakas (box), gavarnment (government), dabal (double), hariken (hurricane) (lantern), nambur (number), dazau, daryan (dozen), shart (shirt), sarj (serge) jel (jail), fel (fail), mel tran or toron (mail train), taim (time), phain (fine), hicot (high court), konsil (council), rodses (road-cess), photo, motor, teligraf (telegraph), gelas, gilas (glass), istishan (station), iskool (school), benchi, berenchhi (bench), ripot (report), insolvent, kerasin (kerosine), gonji (garrison), tikat (ticket), tax, outis (notice), pulis (police), fitan leting (phaeton), majistar (magistrate), rivolver (revolver), rejestari (register), saman (summon), dipti (deputy), sigret (cigarette), soda, harmonium, bicyclo.

And the Portuguese words—pistol (pistola), salsa, almari (almario), istri (iron, estirari), toalha (toalha), kamra (camara, chamber), etc.

I need not multiply examples. We cannot banish them, nor can an academy of scholars invent their Sanskrit (or any other) equivalents to replace them with any sensible hope of uttering them as current coin. We borrow not consciously; we are compelled to borrow. To quote an example—the word *camouflage* has well-nigh got into English, and who knows may one day get into the speech of some character in a Bengali Novel? Was even Sanskrit free from borrowing? Did not quite an appreciable number of Kolarian and Dravidian

force their way into the Vedic and Classic Sanskrit and also into our Vernaculars Hindustani and Bengali? Hemchandra's Desi-nama-mala stands witness to that. Pika, dinara, dramma were good Sanskrit words (*Lat* picus, denarius, Grk. drakme).

It has been complained that the "present tendency to write the Hindi and Urdu varieties of Hindustani on lines calculated to accentuate differences in vocabulary and style being considered undesirable in the larger interests of a common language." The purport seems to be that the Hindi writers are using more Sanskritic words and the Urdu writers more Persian words in their writings. I believe no apprehension need be entertained on that score. This is bound to be a failure and will defeat its own end, if an artificial attempt is made to Sanskritise Hindi (or Persianise Urdu) in much the same way as it was a failure in Bengal.

I do not know if there is any distinction between "common mentality" and "common intellectuality," but as I have said that there cannot be a common literature properly speaking, I do not see how its non-existence may lead to "the common mentality" or "common intellectuality," whatever it may mean.

The one thing which I desire to emphasise is the extremely injurious effect it would have on the health of the students if every Bibari boy were to read compulsorily both Hindi and Urdu. As Babu Ramdas has pointed out, the script would be a barrier. At this point arises the question of having a common script—no doubt it would be a capital thing if we could get it. But I, for one, cannot even visualise with the utmost stretch of my imagination how a common script could be evolved. And withal this common script should be "the greatest indication of real nationalism." The suggestion, therefore, of the use of Roman character as a possible common script in higher literature, for example, would be at once spurned as an un-national and even unpatriotic idea and perhaps as a rank heresy. Amongst scholars, however, this is a common form of expression and almost the entire Pali literature appears in this script, and also a goodly amount of literature in Sanskrit, and perhaps even Persian. I do not know if it injuriously affects the nationalism of scholars reading Pali and Sanskrit literature written or printed in Roman character.

But if the common script is bound to be national, it must be a compromise between the Devanagari and the Urdu script. How this compromise may be attained between one script written from right to left and the other written from left to right may be investigated and possibilities explored by competent men. If it is not attainable, then perhaps either the one or the other should have to be given up. Sentiment, I am sure, will be opposed to such effacement. But if I be allowed to elect one of the two, I will vote for Devanagari. And the reason is this. The true principle of phonetics is that a letter is (or at least should be) the invariable and distinct mark of a sound. In trying to spell out the letters in Urdu script into a Urdu word I have, as a beginner, come at a wrong word, and I felt before I could correctly pronounce a word by means of spelling I should be acquainted with it, or, in other words, one must have a preliminary knowledge of the vocabulary of Urdu or Persian before he should try to read it. The diacritical marks and their arrangement and sometimes the disposition of a letter, e.g. *cis-alif* where it should be *trans-alif*, cause confusion. Devanagari has no such drawbacks.

Some gentlemen connected with secondary education are of opinion that year after year the average student is deteriorating in intellect and memory. I have often wondered if this has any thing to do with his physiological condition. Out of 67 pupils whom the school medical officer could examine in my school 36 were found to be defectives. This I consider to be an appalling revelation of facts. I do not know if the condition of the health of students in other schools is any better. Why this is so should seriously concern the authorities. While this is the state of things here, we read (e.g. in the newspaper of the 7th inst.) that the British boys have gained in weight and stature and their condition is now better than in the past half a century. When should we be able likewise to congratulate ourselves? Why should our boys with all the advanced method of teaching, etc., get worse in physique and intellect? Already the Matriculation course is fairly heavy. Should we make it heavier by throwing on the weak shoulders of the average student yet an additional burden? And for what? For the eventual possibility of evolving a nationalism? It is worth while considering what price we have to pay for realising this probably unattainable end.

I would plead for option; and this option is given to the student who can take an additional vernacular under Regulation 8 (6) iii of Chapter XXVIII of the Patna University Regulations. Compulsion may be introduced after the Matriculation stage.

The question of the permissive use of the Urdu script in the law courts has been dropped, only to be taken up for examination by the Council and the Government, "on grounds of political expediency rather than on literary considerations. The Urdu Development Sub-committee regard the matter as of "vital importance and upon this hinges the future progress, development and growth of any language."

I am unable to see how a language used in the courts for issuing summons, filing plaints, written statements, conveyance documents and the like can help in embellishing literature and further its artistic development. Parties in a suit are more zealous of winning their cases than intent on the turning of a graceful phrase or a luxurious flight in the ethereal space of rhetoric. Rigid adherence to legal points is all that concerns them. And little do they hesitate to clip the wings of the Muse that she may have a fall on the *terra firma* with a thud. I have a bit of experience in this line in a Bengali court language. *Ekanavarti Parivara* (একাদশী পরিবার) is written as একাদশী পরিবার। Mistakes of orthography, grammar, style, etc., run the whole gamut and gashes are made so ruthlessly that the lotus grove of goddess Saraswati is reddened with her gore. How above all if the Urdu script is not accommodated in the law-courts would it jeopardise the very "vital importance" etc.? But what we can afford to be sentimental even in this age of the twentieth century 'Nationalism'.

Preference for instruction through the Vernacular is a natural thing, but we should not make a fetish of it. So long as a terminology (*Paribhasa*) of mathematical and scientific terms is not constructed and approved let not 'purism' be insisted on, but let the teacher be allowed to intersperse his Vernacular lectures to students with the existing terms. So let examination in geography, mathematics and science be not conducted in Vernacular for the present.

"The supreme importance of imparting to the rising generation a knowledge of the English language and literature in as high a perfection as possible" has been realised.

This along with compulsory Hindi and Urdu teaching may well bring about a breakdown in the health of our young scholars. I am sure safeguards will be devised to prevent our young men from becoming imbeciles and our graduates will emerge out of the laboratory of knowledge as buoyant and beaming as one may hope.

The establishment of an academy is a very good idea and this will do its work as other academies in the world are doing.

I will put in a plea for Bengali. Mr. S. Sinha in explaining the exclusion of Bengali from the discussion said that "Government rightly felt that the Bengali language was so highly developed, that for a backward province like ours it would not do to try to foster its growth which was done in Bengal itself." And possibly this consideration was influenced by the idea that "about 6 percent of our population speak Bengali."

One thing however may claim our notice. There are many Bengali families in our province who have been so thoroughly domiciled that they have entirely forgotten Bengali. At Bhagalpur I had an occasion to meet a Mr. Ghose who could neither speak nor understand Bengali. I am not speaking for them. I speak for those Bengali families who, though domiciled, speak and write Bengali. Such families invariably give their wards at least a secondary education. What percentage of the school-going population do such Bengali pupils represent? The sub-joined table of Matriculation candidates from 1918 to 1925 will show that out of the total number of 23,371, 10,593 offered Hindi, 6183 Urdu, 3008 Oriya, and 3594 Bengali.

PATNA UNIVERSITY

Total		MATRICULATION EXAMINATION, ANNUAL				Total	
Year	Hindi	Urdu	Oriya	Bengali			
1918	1439	1161	455	619			3674
1919	1394	1036	395	508			3133
1920	1964	1231	526	576			4297
1921	1632	972	444	397			3445
1922	1049	524	245	354			2172
1923	992	467	272	362			2093
1924	1632	392	320	375			2119
1925	1081	413	351	403			2238
Total	10583	6186	3003	3594			23371

In every year excepting one the Bengali candidates outnumbered the Oriya and in 1925 equalled the Urdu. They represent about 15.4 p.c. of the candidates. Some facilities should therefore be given for such a population. I would not ask for the establishment of an academy for Bengali, as has been done for the

three other principal vernaculars. But bad Bengali also been given a corner in the B. & O. Academy, such fellowship would doubtless have been appreciated, and the seatment even of the Bengalis would have been soothed. Nothing but good would have resulted from mutual companionship. But

then perhaps the administrative difficulty sticks in our throat.

In one word, what I ask for is the barest justice, the minimum of justice to the Bengali school-going population. In areas where they form the majority, let proper facilities be afforded for teaching them their vernacular.

COMMUNAL REPRESENTATION IN THE PUBLIC SERVICES

THE remarks H. E. the Governor of Bengal is reported to have made at Khulna regarding communal representation in the Public services give another instance if any instance is needed, of the eternal variance between gubernatorial profession and practice. Sir Stanley waxed eloquent on the necessity of maintaining the efficiency of the services which received adequate showers of benediction from the lips of His Excellency. It was no doubt refreshing to hear that "no Government can over-ride the claims of the efficiency of the services in an endeavour to secure a mathematically proportionate representation based merely on population. It should be our unflinching aim to attain a position where it shall no longer be necessary to secure by safeguards special representation of any particular community." Fine sentiments these are indeed—the more so since they are never meant to be tested by actual practice!

The irony and hypocrisy of the whole thing will be amply manifested if we place beside the above the rules and regulations of the Bengal Civil Service and other competitive examinations formulated by Sir Stanley's government and published in the *Calcutta Gazette* about a month and a half ago, no doubt with the sanction of the sportsman Governor of Bengal.

Let us quote from the said Rules. Rule 4 goes on—

"The examination board will submit to Government separate lists showing (a) the Muhammadan candidates (b) the candidates belonging to the backward classes and other minorities and (c) all others."

The importance of the above and the full significance of the necessity of submitting "separate lists" will be evident when we

read further that in services other than the Upper Division of the Secretariat Clerical Service and the Income-tax Department.

"Government reserve the right to fill as many as 45 per cent. of the vacancies by the appointment of Muhammadan candidates if there are qualified candidates available."

In the Upper Division of the Secretariat Clerical Service.

"The minimum proportion of Muhammadans is secured by appointing a Muhammadan to every third vacancy in each office if a qualified candidate is available."

Further,

"The Commissioner of Income-tax also reserves the right to make appointments by nomination from the test of qualified Muhammadan examinees."

We refrain from giving similar passages from the L. C. S. Examination Rules as Sir Stanley is not responsible for their formulation. Even about a month after His Excellency's Khulna speech a Finance Department notification of the Govt. of Bengal announced that 23 vacancies of Lower Division Clerical Service would be filled after an examination out of which 14 were reserved for Muhammadans. Another notification of the Finance Department published in to-day's (14.8.27) newspapers announces that a vacancy in the Upper Division Clerical Service (initial salary Rs. 150 rising up to Rs. 500) will be filled by a Muhammadan.

A "competitive examination" which provides for "appointment by nomination" in case of candidates professing a particular faith and requires the Examination Board to submit "separate lists" of candidates thus making an invidious distinction between the Muhammadan and others not only loses much of its competition but betrays its real and true character. A community which

has failed to avail itself of the facilities of education, primary and higher, is by reason of its failure, claiming and receiving preferential treatment and a virtue is thus being made of what should have been considered its discredit. By thus putting a premium on the intellectual backwardness of a community Sir Stanley's government, besides acting in an unsportsman-like manner, is not only

lending a helping hand towards the creation of a commonwealth of pampered youths who are naturally unwilling to run the risks necessarily attending an open examination of merits but is indirectly corrupting the morale of the services and spreading discontentment far and wide.

14. 8. 1927,

FAIRPLAY

HYDERABAD FINANCES

By PROFESSOR S. KESAVA IYENGAR

THE general position of the Hyderabad Government in financial matters as revealed in the seventh Budget Note of Mr. A. Hydari (just published) and His Exalted Highness' appreciation of the well-known financier's services, serve as an effective proof of the ability of Indian talent to independently organise the development of the country's natural resources, to provide adequate amounts for expenditure on augmenting social welfare and enlightenment, to ensure a high degree of stability with earmarked reserves, profitable investments and sound capital outlay. "The evenly prosperous era of Hyderabad Finance", says Mr. Hydari, "began in the time of Sir George Cassen Walker, continued notwithstanding the stress of a world-wide war and unfavourable seasonal conditions under the skilful guidance of the Hon'ble Mr. Glancy, still pursues its smooth course, and is now through the system of departmental finance and specific Reserves for specific objects, on foundations which may under Providence be considered as reasonably assured for the future." This is a generous eulogy of the past workers, but it must be recognised by students of finance that while the beginnings were made undoubtedly in the time of Sir George and Mr. Glancy, the difficult task of handling a post-war situation and the credit for thoroughly reorganising the financial system, were in the main reserved for the present Finance Member.

The criticism of Hyderabad's financial position has not been all just, and in the

interests of truth it is necessary to lay bare some facts and figures for the purpose of disproving the legitimacy of certain allegations. It has been said in some quarters that the Hyderabad purse is so full for the simple and apparent reason that taxation is very heavy and expenditure on nation-building departments very meagre: one Bombay journal went so far as to say that it was not "sound finance" but "insane usury". The following figures will show that the increased and increasing receipts are really due to more prosperous conditions of the population than to increased taxation.

	RECEIPT (in lakhs)	
	1921-22 (accounts)	1927-28 (estimates)
Land revenue	302.5	300.0
Forests	9.6	17.9
Customs	129.6	132.3
Railways	1.7	32.9
The prospect with regard to receipts is even brighter on account of a forward capital outlay policy and a businesslike investment policy.		
	1921-22 (accounts)	
	1927-28 (estimates)	
Capital outlay	103.5 lakhs	120.8 lakhs
Investments	20.1 ..	165.5 ..

The following table, showing the expenditure on humanitarian departments and its progressive character may not in all respects compare favourably with a similar table for any British Indian Province:—

EXPENDITURE
(in lakhs)

	1921-22 (accounts)	1927-28 (estimates)
Total service expenditure	668.8	724.1
Police	57.4	61.6
Education	64.6	68.6
Medical department	16.1	18.8
Development	2.1	11.0
Co-operative credit	2.3	3.0
Agriculture	.9	2.2

But the explanation for this lies in the fact that in the matter of bringing about a healthy expansion in service expenditure (as distinguished from expenditure on capital outlay), a serious limitation hampering an accelerating pace—especially in a locality like the Hyderabad State with its powerful mediaeval traditions and unprogressive conservatism—is the lack of men qualified for and capable of soundly administering the increasing allotments. It is easy to throw away money, to encourage waste and extravagance, and the fault of Mr. Hydari (if it be such) lies in not allowing expenditure to soar high in order to enable him to take credit for bumped up figures (not accompanied by a proportionate increase in public utility). Here is the innermost reason for the apparent wide disparity between the rate of increase in capital outlay and that in service expenditure amounts: in the seven years of Mr. Hydari's finance membership a total of Rs. 797.0 lakhs will have been spent on capital outlay; the Reserves total up to more than Rs. 15 crores; yet, by the end of 1934 F. (1926-27) departments of Government which should have required tens of lakhs more per year for providing efficient service and opportunities to the people for better enlightenment and welfare, were not able to spend all the amounts allotted to them respectively for expenditure. The departmental balances which lin to the credit of some Departments where expansion is most urgent-

ly needed, out of budget allotments made in previous years (these balances do not lapse as in the annual budget arrangement, but continue available in the concerned departments throughout the contract period under Departmentalisation Rules), are as follows:—

DEPARTMENTAL BALANCES BY THE END OF 1926-27

Department	Budgetted Expenditure for 1926-27 (in lakhs)	Accumulated balance unspent (in lakhs)
Education	67.9	6.5
Medical department	19.9	4.1
Municipalities and public improvements	19.3	14.0
Co-operative credit	3.0	.3
Agriculture	2.2	1.3

Mr. Hydari declares therefore that he has sufficient money, but he wants efficient men "who will use the ample resources of their country with wisdom and integrity". And such men he hopes to get and has a right to expect as the result of granting numerous Asiatic and European scholarships to promising Hyderabadites, the running of the Hyderabad Civil Service Class and the establishment of the Osmania University. Human calculations and expectations assure an optimistic outlook: what time will be required for the supply of an adequate manpower for the purpose is difficult to foretell. Similar services in British India must have earned for Mr. Hydari a much wider and more grateful appreciation from the public, and much quicker results: the burden of the past woes of Hyderabad is still hanging heavy on the State, and if in several respects Hyderabad is much behind British India, this is due to factors which lie far beyond the reach of the Finance Member, and it would be the "unkindest cut" to blame him on that score: it would amount to the argument of the wolf to the lamb in the fable.

SIAM AND INDIA

By PROF. SUNITI KUMAR CHATTERJI, M. A., D. Litt. (Lond.)

Calcutta University

"We are Chinese in race but Indian by religion and culture." So told us Phra Rajadarn Nides at the dinner-table on the evening of our arrival at Bangkok in the suite arranged for Rabiadrath and his party at the Phya Thai

Palace, one of the sumptuous royal residences at Bangkok which the railway administration has altered into a hotel, one of the finest of its kind in the East. Phra Rajadarn Nides is an official of the Siamese Government: keen, intelligent, highly cultured,

with an English education, and a very proper pride in the history and the present condition of his country—namely, as one of the really independent countries of Asia—he was our friend, philosopher and guide during the seven strenuous but most happy and instructive days we spent in Bangkok. He is a member of the Department of Education, and his services were placed at the disposal of Rabindranath and his party to help them in carrying through the rather busy programme of interviews, audiences, meetings and lectures and visits to important places which was fixed for them. Rabindranath went to Siam at the invitation of the Indian community there, and the Government of Siam also welcomed his visit to the country. One can go to Bangkok either by railway or by steamer. The railway route is the quicker one from India. There is through railway connexion between Singapore and Bangkok. From Penang (or rather from the mainland opposite the island of Penang) which is about one-third of the way to Bangkok from Singapore, an international express goes to Bangkok twice a week, and this is the most convenient route from India. There is also steamer service between Singapore and Bangkok. After our tour in Malaya, Bali and Java, we had come back to Penang *en route* for Siam. We took train at Prai, the station opposite Penang, in the international express on Friday the 7th of October at 9 o'clock in the morning. It was a very pleasant journey, and the cars were exceedingly comfortable and well-appointed, with the minimum of rolling. The Siamese railway service compared very favorably with the British section of the line in Malaya, being considerably superior to the latter. After a journey of two days and one night, we arrived at Bangkok on Saturday evening. To meet Rabindranath a record crowd had gathered at the station, consisting of Indians largely, of course—such a huge concourse of Hindustanis (Bhojpuris), Gujarati Musalmans, Sindhis, Panjabis (Sikhs, Hindus and Musalmans), Bengalis, Tamilians and Ceylonese would seldom be found outside India; and there were Europeans of various nationalities—English, German, French and others; and Siamese, and Chinese. The eager crowd had pressed from all sides to have a sight of the poet, and it was with considerable difficulty that volunteers by making a cordon round the poet could enable him to pass

through the seething mass of enthusiastic people. Phra Rajadham Nides, who was to remain constantly with us during our stay at Bangkok, met us at the station. We were taken to the Phya Thai Palace where we stayed during our sojourn of seven days in Bangkok.

The entire tract between India proper ("India within the Ganges"—extending up to Assam and Bengal) and China Sea has been called by the ancient Greek and Roman Geographers "India outside the Ganges" (*India extra Gangem*). Later Europeans called it *Further India*. It was really an extension to the east of India; a true *India Minor* of the east as we have an *India Minor* of the west in Afghanistan. Eastern Iran Indian culture, or Hindu i. e. Brahmanical and Buddhist culture had established itself there in the early centuries of the Christian era among the original people, who belonged to the Mon-Khmer race and who were the kinsmen of the Kols or Mundas of India—of the tribes like the Santals, the Mundaris the Hos, the Kurks and others, and of the Khasis of Assam. This Mon-Khmer people had built up great kingdoms—Srivasthumbi or Pegu in Burma, Dvaravati or Siam, and Kamhuj or Cambodia, besides Champa or Cochin China. Later, this Mon-Khmer people fell in evil days, and the Burmese and Siamese and other tribes from the North who were the kinsmen of the Chinese, and of a totally different language and stock from the Mon-Khmers, came down into the rich and civilised lands of the South, fought with the Mon-Khmers, and gradually reduced them to non-entity, either entirely absorbing them (as in North and Central Burma and in Siam) or reducing them to utter insignificance (as in South-eastern Burma and in Cambodia). But the old Indian culture and religion of the Mon-Khmers was accepted by the newcomers practically *in toto*—by the Burmese and the Siamese. So the present-day name of *Indo China* for *Further India* is very well-merited, meaning a tract now inhabited largely by people who have common origins with the Chinese, (the Burmese and the Siamese), but culturally who participate in the life, the sacred literature and the religion of India, in Hinduism (i. e. Brahmanism and Buddhism both combined),—which they received from the original Indianised Mon-Khmer people whom they conquered and absorbed.

Of course, in this area there are tribes which have resisted the Burmese-Siamese pressure, and have remained still purely Mon-Khmer, e.g., the Mons of South-Eastern Burma, and the Cambodians; and the North-Eastern and extreme Eastern tract of Indo-China is now inhabited by the important Annamite people numbering 8 millions, who are culturally affiliated to China and not to India.

But the name *Indo-China* aptly describes the country and the people: the present condition at least for the greater part of Indo-China has been very well summarised by our friend Phra Rajadham—"Chinese by race, Indian by religion and culture." This sort of analysis of the situation presents itself in all the walks of life in Siam (and also in Burma). Listen to the language: you would seem to hear some dialect of Chinese, with the peculiar system of tones, giving it a sort of sing-song character. In fact, the language is a sister of the Chinese speech. But it is written with Indian letters, *ka, kha, ga, gha, nga* etc.; and all its culture words are from the Sanskrit and Pali; and at the present day, as the experience of life is expanding in the free country of Siam by the inevitable impact of modern conditions, and as new things and ideas and institutions are constantly demanding admittance into the life of the people of Siam, the need for new words is being felt more than ever; and Siam, true to the old tradition of her peoples, Mon-Khmer and Siamese, has not abandoned the classic languages of Brahmanism and Buddhism—viz., Sanskrit and Pali: she is content to find a source of strength for her language in the borrowings from these. In the formal and ceremonial departments of life, as much as in the informal and the natural aspect of it, we find Sanskrit and Pali words to an astonishing degree, especially among the educated classes. To begin with, His Majesty the King of Siam has for his personal name *Prajadhipaka*, and his dynastic name is *Rama the Seventh*. The present royal family claims Kshatriya descent, from Ramachandra. His brother, the late King, was *Rama VI Vajrayudha*, in the Pali form *Vajiravudha*. And the names of members of the royal house are equally Sanskritic. Prince Damrong *Rajanubhab*, Prince Dhani, Prince Balabhadra, Prince Bhanurangsi, and Prince Narisecara. The names of towns are reminiscent of India:

Ayodhya, Lavapuri, Nagara Svarga, Vishnula, Sukhodaya, Svargaloka, Vrajapuri, etc. Bangkok is a city of pagodas, and some wonderful temples and monasteries are there, *Mahadhatu, Jetavana, Panchama Paritra, Aruna, Khema, Sudarsana, Devasirindra*, etc. When our train entered Siamese territory at the station of Padang Besar, the Siamese authorities took charge of the train. At Padang Besar we saw a few Siamese officials in the official dress of the land—blue silk *panung* (a sort of Siamese *dhoti*, consisting of a loose awn *loonghi* made into pleated folds in front which are then tucked under the legs and fastened at the back, the garment coming down to the knees only—this is the common dress in Siam for both men and women), with a white buttoned-up coat of cotton jean, white stockings up to the knees, European shoes, and a European hat. One official in similar costume met us in the train. We exchanged our visiting cards. I found his name to be given as *Phra Rathacharn Prachaks*. This was the Sanskrit *Rathacharana Pratyaksha*, and he explained that it was his official title in Siamese, and he was a *District Traffic Superintendent*. I must admit I felt a thrill of joy at finding the Language of the Gods, which is a most important heritage and a necessary thing in our Indian culture, used also in independent Siam. Phra Rathacharn Prachaks made enquiries about the poet's comfort in the train, and we had some very nice half-hours in his company, both on our way to Bangkok and back, talking about various matters. Trained in Europe, like a great many Siamese officers and officials, he is rather anxious for the cultural future of his people, as he feared a rage for too much westernisation might set in and overwhelm the national character and thus deprive it of the vitality that the national culture alone can give it. He particularly welcomed the visit of Rabindranath to Siam as it would help the Siamese to look back to the common cultural heritage of Asia which it is the ideal of the Visva-Bharati to study and revitalise, as the first necessary step towards a federation of the East and the West in the common harmony of a cosmopolitan culture. However, to return to the use of Sanskrit in Siam. A Bengali Mohammedan gentleman has settled down in Siam and has become a naturalised Siamese subject. He is an irrigation department officer there, and his official title is *Varisamadhya*, that is *Vari-stmadhyaksha*. The Siamese

Air Force is said to be one of the most efficient and well-equipped, and in Siamese an air-ship is called *akasa-yana*. I need not dilate further upon this aspect of obviously Indian character of Siamese culture. In fact, it is Sanskrit and Pali everywhere in public and court life. Of course, the Siamese do not pronounce the Sanskrit and Pali words in the ancient way, which is largely preserved by us in India. They have their own pronunciation. The Siamese speech has absorbed these words and has made them Siamese which shows there has been a complete assimilation of them. They write *a-ka-sa-ya na*, but pronounce it as *agat chhan*; they write *ara-nya-pra-de-sa* but pronounce it as *aran-pathet*; so *Samudra-prakara* becomes *somut pragan*; *nagara, nakhon, Vishnu-loka, phitsanulok, Tushita, Dusit*, which is the name of a Buddhist heaven and which name has been given to the throne hall palace; *Parara-niresa*, the name of a monastery, is pronounced as *bovor-niwet*; and so forth.

The people of Siam number a little less than 10 millions, and they are practically all Buddhists. Buddhism does not mean a religion separate from Hinduism. Buddhism in ancient India, as practised by the common people, meant the popular religion with the belief in the existence of the *devas* and the *devis* and the *yakshas* and other supernatural beings; and the only difference from orthodox Brahmanism was in not insisting on Vedic sacrifices, in not acknowledging the authority of the Vedas and the Brahman priests, and in regarding Buddha's philosophy and teaching as the only true explanation of the meaning and object of life. In Siam, we have a similar kind of Buddhism. The Pali Buddhism of Ceylon, the Hinayana School, obtains in Siam. But the Hindu *devas* also reign there in the heart of the people. The *devas* are higher beings, who are not eternal in the same way as the Supreme Divine Spirit, the *Parabrahman*; they are not the almighty Gods as in many systems of polytheism who are the final godheads. Saints and sages are on a higher plane than the *devas*. This is the common Indian idea. This is also the idea in Siam. Buddha, the perfect saint and sage, is, after his realisation of the truth, higher than the *devas*. But the *devas* are still worthy of being honoured, even as good and helpful angels. In Siam are to be found in the monasteries and palaces frequent effigies of Vishnu on Garuda, generally on the eaves of houses;

the royal crest is the Garuda with spread-out wings, and in the air mail stamps, we have also the figure of Garuda soaring in the sky. Figures of other Indian *devas* are common in the monasteries: Siva with his bull, Vishnu with Lakshmi reclining on Ananta the *Naga* in the ocean; Brahma on his swan; Kumara on his peacock; figures of the Deva, two-armed as well as ten-armed; in front of the Museum Building is a modern bronze image of Rama standing with his bow; in the Government School of Arts and Crafts we have another pretty bronze figure of seated Visvakarman, the architect and craftsman of the *devas*, with his plumb line and his building angle; and in a corner of the Royal Piazza, which is a large open space with rows of tamarind trees in front of the Museum and Public Library and close to the Maha Chakri Palace, there is a pretty fountain which is a veritable gem of Siamese sculpture and bronze-casting, with the figure of Naag Torani i.e. Devi Dharaui, the Earth-goddess, as she appeared to drive away with the floods of water (which she wrung out of her hair) the hosts of Mara who attacked Buddha when he was striving to obtain the *bodhi*, the illumination. Behind the white umbrellaed throne of the king in the Dusit Mahaprasat (*Tushita Mahaprasada*) Palace, which has been built some time ago at a cost of several millions, there are figures of Vishnu or Garuda. And the late king Rama VI Vajiravudh who was an accomplished Sanskrit Scholar and a poet and dramatist of note, and had edited in the Siamese character the Sanskrit text of the *Nalopakhyaana* from the Mahabharata with copious Siamese notes and had translated the Sakuntala of Kalidasa, had also written a long poem on the Ten Incarnations of Vishnu. In the bazaars of Bangkok are to be found for sale modern images of Indian *devas*, of Brahma, Indra, Vishnu or Garuda, and ten-armed Durga mounted on Siva's bull (and not on her own *vahana* the lion); and of Rama and Lakshmana. The *Ramayana*, called in Siamese *Rama Kien* is as much the national property of the Siamese as it is of the Indians; plays on the *Ramayana* are always acted, and shadow plays of *Ramayana* subjects are a characteristic thing of the cultured of Siam and Cambodia, as much as of Java and Bali. Added to this, there is a class of Siamese Brahmins who are always attached to the Court and whose presence is required at all solemn occasions.

Among the Mon-Khmer peoples supplanted and absorbed by the Siamese coming from the North, the institution of Brahman priests in the court and in the *deva* temples was quite common, more so when in the earlier period some of the ruling dynasties were avowedly Brahmanical; and the Siamese had adopted that institution as a stately court and ceremonial thing from their predecessors, although as believers in the philosophy of the Buddha this institution is not required in their religious observances. The present-day Siamese Brahmins are descended from some families of South India (Telugu and Tamil country) Brahmins who went from India evidently at the invitation of the kings there and had settled there. They had apparently got mixed up with the Siamese and Mon-Khmer people, and now have practically become Siamese, with no other language but Siamese; they have some Sanskrit Manuscripta written in the South Indian *grantha* character, and they know about some old ceremonies and some old Sanskrit *mantras* in a very much altered pronunciation. These Brahmins are in charge of the ceremonies at the time of the coronation; and the chief of the Brahmins must go to Benares to fetch water from the Ganges for the *abhisheka-snana*, the anointment-bath of His Siamese Majesty. The study of Sanskrit has been given up by them as the connexion with the mother-country was lost, but they agreed, when I met some of them (in the temple dedicated to Brahma, Vishnu and Siva which they have in Bangkok) and spoke to them about the necessity of their studying the lore of their fathers which was such a great heritage of Mankind, that they should avail of the opportunities of studying Sanskrit as soon as arrangements were made for the teaching of it in the Chulalongkorn University which was being organised. These Brahmins dress like the other officials, only their *panung* is white, and they do not wear any headdress, and besides their long hair is doaa up into a little and top-knot, towering above the crown of their head.

It would thus be seen how intimately Siam is connected with India by ties of religion and culture. In fact, if Indian unity is really the unity of a confederacy of peoples bound up by a common culture, and not the unity of a homogeneous people speaking one single language and having one sole type of culture, Siam most naturally

is to be regarded as a member of a Greater Indian cultural confederacy.

I shall not go on much longer with this rambling talk about Siam, as I intend to write more in detail about all that we saw there, and about the most hearty reception that Rabindranath Tagore as a great representative of the deathless culture of India was accorded by the people of Siam from the highest classes downwards. The Siamese people are our brothers in religion and culture; and what they received from India, either directly or through the Mon-Khmers, they have preserved and further enriched by the peculiar genius and the mental gifts of their own race. They have built up a distinctive architecture, and their wall-paintings and mother-of-pearl inlay work are among the most remarkable achievements of the art and craftsmanship of Asia. Pali studies are very living there. One finds Pali-knowing and Pali-speaking monks everywhere, with whom any Sanskrit-knowing Indian scholar who has just a little acquaintance with Pali can easily talk. An edition of the entire Pali Buddhist canon was brought out by the Siamese scholars under the auspices of King Chulalongkorn—who is regarded with the same veneration as the maker of Modern Siam, as the Emperor Meiji (Mutsu Hito) is in Japan—and this entire edition comprising all the books of the Pali canon was distributed free to a great many scholars and institutions all over the world. This indeed forms one of the best gifts of present-day Siam to the nations—*dhamma-danam sabba-danam jinati*—"the gift of the dharma exceeds all other gifts." In commemorating the late king a new edition of this Siamese recension of the Pali *Tripitaka* is now being printed, to be similarly distributed. And we may note that this new edition of the Pali canon in the Buddhist country of Siam synchronises with the publication in Japan which is also largely Buddhistic of a new edition of the Chinese version of the Buddhist scriptures with other Chinese and Japanese works of a supplementary, and expository character. This thing in Japan expresses the newly-awakened desire of the Japanese people to dive deep into the ocean of Buddhist philosophy for gems whose lustre may light up the paths of our modern life. And Japanese and Siamese enthusiasm in Buddhism is of the utmost significance for a cultural awakening of Asia, under the smile of the serene figure of Buddha.

The most heartening thing in Siam is the great vitality of the Buddhist religion there. It is still a living force. Its priesthood still produces learned men. It is tolerant, and by its very toleration it softens intolerant creeds that have been allowed to settle within its borders. Young Siamese are proud of their religion and its philosophy. It is common practice for young men of the intellectual and aristocratic classes to live for some months, even years, in a monastery, following the monastic life and its aspiration for mental calm, and then come out into the world, sort of purified for the struggles of life by the age-old discipline of the *Vihara* which seeks to help man to curb and quell the distracting lusts of the flesh and finally to annihilate his own ego-consciousness. I met some such youngmen—bright intellectual faces, with a certain arresting expression of benignity and seriousness which certainly was an index of the inner spirit, for which one could not but have great respect; young men who had put some years of study in Germany, England and America. In recent years, there have been cases of young princes and scions of the nobility voluntarily turning monks and they at least show that the old ideals are still potent factors in the life of the people, and that idealist Prince Siddhartha has not yet abandoned this world entirely.

As Indians, and as Hindus, we felt perfectly at home in Siam with the Siamese: and even the humble Bhojpuris, Brahmins and others, who are found in their thousands in Siam serving as *daricans* or watchmen and as bearers and sometimes working as petty merchants and dairy men, who are the typically intensely orthodox Hindus of Northern India, told us that they felt themselves very happy (as far as their exile's life permitted them—the question of expense prevented them from taking their wives and families with them to Siam even if they wish it very much in the land where the king was a descendant of Sri Ramchandraji, where the Ramayana was honoured and sung, and where the people were worshippers of Buddha Bhagwan, the ninth avatar of Narayanji. Rabindranath's recent visit to Siam has been of tremendous significance, and with his world-adored personality he has been the means of strengthening more than anything else in the modern times the cultural union between India and Siam.

His Majesty King Rama VII Prajadhipok

of Siam desired to hear Rabindranath, and at his command a special meeting was arranged at the royal residence on October 11 at 9 P. M., when a select audience consisting of princes and nobility and a few foreign officials serving under Siam were asked to be present. The Poet was received by His Majesty, and later on we as the members of his party (Professor E. Ariam of Santiniketan, Mr. Sorendranath Kar, Vice-Principal of the Kallabhavana of Santiniketan, and myself) were also accorded the honour of being presented before the king. His Majesty is a young man, rather slenderly built, with a bright smile, and well-educated in Europe as he is, he has already manifested a sincere desire to improve his people and has introduced a number of reforms in all the departments of his household and the administration. The poet spoke on the ideals of a national education and specially emphasised on the place of national culture in education. He concluded by speaking about the *Visva-Bharati*. According to the well-known Indian usage, which is also current in many other lands, one should not go to see a king empty-handed: and the most fitting present with which Rabindranath the poet approached His Majesty Prajadhipok was a poem of his own composition in Bengali, with English translation by himself. This was printed and distributed among the guests, and the manuscript copy in the poet's own hand both in Bengali and English, was presented to the king in a wallet of Benares gold-brocade, the gift of the Indian merchants of Bengal, after the poem had been read in both versions. The poem is a most beautiful one, and it wonderfully expresses the sentiments which should fill the heart of an Indian when thinking of lands like Siam which have entered into fellowship of spirit with India: and I conclude my talk on the cultural connection between Siam and India by quoting the last portion of the poem.

"I come, a pilgrim, at thy gate, O Siam.

To offer my verse to the endless glory of India.

Sheltered in thy home, away from her men deserted shrine,

To bathe in the living stream that flows in thy heart,

Whose water descends from the snowy height of a sacred time

On which arose, from the deep of my country's being

the Sun of Love and Righteousness.

in India of to-day? Need, usury and illiteracy are the three chief enemies of progress. Heavy indebtedness contributes largely to the continued poverty of the cultivator; his poverty and the oppressive burden of debt facilitate the growth of usury which, combined with the appalling illiteracy of the population, leads to a moral degradation thus sapping the very foundations of the race stock. The poverty and indebtedness of the villages are not peculiar to India, and if in other countries like Germany and Ireland, where Shylocks fleeced the countryside, co-operation has effaced the evils, there is no reason why India should not equally benefit from an active promulgation of the co-operative practice. "If only people could read" — has been the complaint of several Registrars of Co-operative Societies in various provinces. But illiteracy, as universal and deadly in its effect as is prevalent in India, has been successfully combated in Italy through co-operation. With the examples before her India has launched on a wide programme of co-operative effort.

The Current System of Female Education

Shrimati Chandrawarti, B. A., writes in the *Vedic Magazine*:

Various types of female education are prevalent in India. There is the current system of Western education which is followed in most of the schools. The Government, District Board and Municipal Board Schools and the Arya Kanya Pathshalas, all come under this system.

Many people have felt that this system is defective and unsuited to the needs of the society. Its most glaring defect lies in the choice of textbooks. The books usually contain description of scenes and society quite foreign to the students. Students can not visualise what they read, hence they take longer time to grasp things than they would otherwise do. They are taught what is really a caricature of history. The real history of the country is kept hidden from them with the result that the patriotic sentiments are found altogether lacking in them. Nor do they cherish any feelings of respect for their traditional past which it is the main business of history to create. This system also ignores the fact that the duties of woman are quite different from those of man.

Subjects like music, painting, domestic economy, sewing and home-nursing are of supreme importance to girls. Sanskrit which is the language of the Indian religion and is the key to national history figures only as an optional subject in the curriculum, while English is not only the main subject but also the medium of education. Then the very manner of imparting education is unnatural and artificial. The medium being a foreign language, a great deal of unnecessary strain is put on girls with the result that they find all their energies exhausted and spent up before they enter life.

Besides, this education is one-sided and ignores all other aspects such as the social, moral and physical. It atrophies the sense of social duty.

Regarding the need for teaching English, she observes:—

English being the highest official language some knowledge of it is necessary as all the business of the country is carried on through it. One is also required to know the language to be in touch with the current events of Modern world. Then the English language is considered to have the richest literature in the world. From this point of view also a knowledge of it is useful. Considering both the sides of the question, English should amply be regarded as one of the necessary means of literary accomplishment for women.

She thinks our women should have a knowledge of politics.

A general knowledge of Politics is also essential for girls. They should know what place their country holds among the nations of the world. They should also be acquainted with the needs of the country. It has been noted that women are slow to respond to the call of the country at the time of a national crisis. This sluggishness is mainly due to their being quite ignorant of the needs of their country. On the whole they lack the patriotic spirit which characterised the women of the past.

Change in Muslim Culture

The Rt. Hon'ble Syed Ameer Ali observes in *Islamic Culture*.

No one to whom it has been vouchsafed to have a glimpse of the polished courtesy and dignified intercourse of the Musulman geotry of the old school, that have either passed away or are fast passing away, will ever fail to regard it as a privilege. To me it is a memory to cherish. The sight of those dignified men, with their courtly manners, sitting together conversing in well-modulated tones which never rose to a noise, on history, poetry, literature, and Musulman divinity, would be a revelation to many Western critics. Each man was attended, among other servitors, by his own *khalka-bardar*; the reception of each guest as he arrived was dignified, in cases of intimate friends casual.

Poetical assemblies were still held twenty years ago. But now debating clubs have taken their place. In the first half of the nineteenth century the *Mushavars*, as they were called, were often attended by one or two English officials who, with their knowledge of Persian and Urdu, were able to follow and appreciate the poems that were recited.

The results of the change in Musulman culture within the last twenty-five or thirty years remains to be seen. But I cannot help regretting the passing of the old order. Had it been possible to engraft the best part of European culture on the remains of Islamic culture, the awakening of Musulman India would cause no misgiving. We can only watch anxiously the present development and trust that the hopes of helpers will be justified by the fruit borne by Anglo-Mahomedan culture.

Leprosy

The following passages are taken from the *Federation Gazette of Patna* :—

Leprosy is a very loathsome and contagious disease and is caused by a germ called *Lepra bacillus*. The disease causes very great suffering and disfigurement. The disease is of great antiquity and existed in India in remote periods and is no respecter of caste or creed. It has been estimated that there are three million lepers in the world of whom one million are in China, half a million in Africa and about a lac in India.

According to the census of 1921 there are 32 lepers per 100,000 of the population against 59 in 1881 in India.

It is generally to be found that lepers of good social position usually try to conceal their affliction, but the vast majority of lepers in India are poor persons, usually beggars, who live by parading their suffering. A leper is a source of great danger to healthy persons. Segregation, therefore, of the lepers is the best effective measure for reducing the prevalence of the disease.

It is generally held that the disease is not directly hereditary; children being free from actual infection at birth, but they are especially susceptible to contagion from an early age. It is, therefore, advisable that children born of leprosy patients should be separated from them at the earliest possible age. Lepers should not marry.

Ignorance and indifference are responsible for much of the leprosy now in existence. Lepers should live apart and should not be permitted to beg in the bazar, or on railway platforms. They should also not be allowed to roam about in the streets, to keep shops, or handle foodstuffs, or to wander about the country as mendicants.

The disease in its early stages is amenable to treatment and anyone having the first symptoms like those described above should at once consult a competent doctor. The treatment takes rather a long time and should be persevered with. Leprosy patient, therefore, need not be despaired of and to enable them to get proper treatment dispensaries at convenient places will be opened in the near future.

Literacy in India, A Hundred Years Ago

The *Progress of Education* reproduces the subjoined paragraph from Adam's Reports on Vernacular Education, 1835 :—

A distinguished member of the General Committee of Public Instruction in a minute on the subject, expressed the opinion that if one rupee per manem were expended on each existing village school in the Lower Provinces, the amount would probably fall little short of twelve lakhs of rupees per annum. This supposes that there are 100,000 such schools in Bengal and Bihar, and assuming the population of those two Provinces to be 40,000,000 there would be a village school for every 400 persons.....(or) on an average a village school for every 32 boys.....The estimate is confirmed by a consideration of the number of villages in these two Provinces. Their number has been

officially estimated at 150,748 of which, not all, but most have each a school.....Let it be admitted that these calculations from uncertain premises are only distant approximations to the truth, and it will still appear that the system of village schools is extensively prevalent; and that the desire to give education to their male children must be deeply seated in the minds of parents even of the humblest classes.

The Need for a Village Dairy Factory System in India

Mr. W. Smith, Imperial Dairy Expert, writes in the *Journal of the Central Bureau for Animal Husbandry and Dairying in India* :

Let us look at those countries of the world which have made the greatest progress in the advancement of agriculture during the past fifty years. They are Great Britain and Ireland, France, Germany, Norway, Denmark, Sweden, Holland, Belgium, Italy, Finland, United States of America, Argentine Republic, South Africa, New Zealand and Australia. Dairy development on a gigantic scale has taken place in every one of these countries, and without exception they have adopted a dairy factory system.

India does not differ fundamentally from these other countries mentioned. She owns something like 100,000,000 adult cows and female buffaloes, most of them grossly inefficient as milkers and most of their owners technically ignorant of the first principles of scientific milk production. Wherever there is sufficient milk produced to support it, we need the co-operative dairy factory in India more than any other country to—

- (a) Educate our cattle-owners as to the value of the milk they now produce and the necessity of producing more milk;
- (b) Secure for the milk producer the profits from the milk industry;
- (c) Improve our methods of breeding, feeding and rearing of cattle;
- (d) Improve our methods of handling milk for urban consumption;
- (e) Improve our methods of manufacturing milk products.

Increasing the British Garrison in India.

Pandit Hirday Nath Kunzru writes in *The Indian Review* :—

The projected visit of the Secretary of State for War to India is commonly regarded as a portent. Speaking in the House of Lords on the 30th of March 1922 Lord Haldane suggested that relief might be given to the Indian tax-payer by reducing the Indian Army and maintaining a portion of the Imperial Expeditionary Army at England's cost in India. "In these days of rapid transport," he said, "it would be possible to keep some part of our own Home Army, some part of our Expeditionary Force generally in India. It

need not be a large part. A comparatively small part of it would be sufficient to relieve the necessity of keeping up quite as great a Military Force in India." It is rumoured that the visit of Sir Laming Worthington Evans is connected with the discussion of this suggestion with the Government of India. The response of the Imperial Government to our demand for control over our own army seems to be taking the form of an attempt to cut the ground from under our feet by reducing that portion of the army which we can call ours. Lord Haldane's suggestion if carried out would virtually amount to the tearing up of the Declaration of 1917. In every dominion of the British Empire self government has been followed by a gradual reduction and the ultimate withdrawal of the Imperial forces, but in India apparently it is not regarded as a paradox that the promise of responsible Self-government should be followed by a decrease in the Indian and an increase in the British Army. The Arms Act, the virtual exclusion of the Indians from positions of trust and responsibility in the army, the maintenance of a British garrison in India and the recruitment of soldiers from extra-Indian areas in the Indian army have, it appears, not succeeded in crushing all manhood out of our countrymen. It is perhaps regarded as necessary now that the profession of arms even in its bungler grades should be gradually closed to them. India certainly complains of the crushing burden of Military expenditure but the proper way of giving relief to her would be not to increase the British garrison in India but to replace the costly British soldier by his much cheaper Indian colleague. She will indignantly reject any scheme of financial relief which involves a permanent danger to her freedom.

Junior Rani of Travancore, mother of the Maharajah who is still a minor. Viscountess Goschen opened the Madras City Conference of which Dr. Muthulakshmi was President, and Mrs. Rukmini Lakshminarayanan the hard-working Secretary. Ten delegates have also signified their readiness to represent Madras in Delhi. Mrs. Mirza Ismail presided at Mysore Conference. The programme of resolutions, speakers and details, is a model of artistic efficiency and is a proof of the organising ability of the Secretary. Miss Lazarus, Malabar held its first Constituent Conference with success at Calicut. It had some invited men speakers including its local Member of the Legislative Assembly. A happy feature of all these Conferences has been the number of Muhammadan ladies who have attended and the expression of their demand for Compulsory Primary Education under purdah conditions. The other outstanding mandate of these Conferences is the protest of all women against the low age that Rai Sahab Har Bilas Sarda had introduced into his Bill to prohibit early marriage. Everywhere there is the call from women: "Amend the ages to 16 for girls and 21 for boys." It is the Resolution against early marriage that brings out most enthusiasm in these Conferences. Further Conferences are booked this month for Maharashtra, the Central Provinces, the United Provinces, Bihar, and some Indian States. The future of India is assured now that its women are awake to the vital necessity of gaining properly balanced education for their sons and daughters.

The Age of Marriage

The same journal records:

The Baroda Legislative Council has fixed the marriageable age for boys and girls at 18 and 14 respectively.

The Maharajah of Kashmir has sanctioned a new law prohibiting the marriage of girls before 14 and boys before 18. The Indian States of Gondal, Kotah, Mysore and Indore have similar laws. The State of Rajkot leads all India as it has just this month made the legal age 15 for girls and 19 for boys. The legal age of marriage in China is 16 and in Japan 16 and 18.

Women's Conferences on Educational Reform

Siri-dharma expresses the opinion that

The past month has been noteworthy for the splendid activity and enthusiasm shown by women throughout India in holding local Conferences of women as preliminaries to the Delhi All-India Conference, in February. In Delhi the Conference lasted two days, was organised by Mrs. J. C. Chatterji and presided over by Mrs. S. R. Das, wife of the Member of the Executive Council of the Government of India. In Bombay Miss Minahni Chattopadhyaya presided, and Mrs. Hamsa Mehta organised; ten delegates were elected. In far away Karachi, Mrs. Hudson, wife of the Commissioner presided and the occasion was linked to the auspicious opening of five premises, which are the property of the local Ladies' Association. In Madras the Constituent Conference for the Tamil Nadu took place under the Presidency of Dr. Muthulakshmi Ammal, Deputy-President of the Madras Legislative Council. Its able Organiser was Dr. Mrs. Anna Thomas who circulated as many as 16,000 notices of different kinds in Tamil and English connected with the meeting and gained a full audience in the largest hall in the city. The honour of having a Royal President has fallen to the lot of Travancore Constituent Conference where Mrs. Kamaladevi Chattopadhyaya who organised it secured the patronage and presence of H. H. the

The University of Mysore

Mr. D. Venkataramaiah writes in the *Mysore Economic Journal*:

In the preamble of the Mysore University Regulation certain features are set forth as marking it off from the older Indian Universities. I may just invite your attention to one or two of these features. The institution of a system of University extension lectures and of a Publication Bureau is a distinct advance in the direction of extra mural activities. The second feature to which His Highness the Chancellor drew special attention in his first convocation speech is the greater recognition of the value of Kannada and Sanskrit study. His Highness said on the occasion: "I trust that the University will do all in its power to foster the study of our mother-tongue and of Sanskrit, two languages which must always command the

sympathy and interest of all educated Mysoreans." The University, one may feel sure, will see that the cherished desire of His Highness is fulfilled.

In his lecture on "The Vision of a Prosperous Mysore" Sir M. Visvesvaraya, to whose far-sighted statesmanship our University owes its being, has pointed out the lines on which Mysore should proceed if she should achieve a high place in the comity of nations and may we trust that the Mysore University will play no small part in the realization of that vision? For after all the hopes of the future lie in the youth of the country in whose proper up-bringing the University is so vitally concerned. I am confident that the University will ever keep before it the two aspects of all higher education—cultural and pragmatic.

could not have picked upon any Indian for the high office. In view of the long experience of the Rev. Canon Davies, and his valuable work in the United Provinces, the appointment is not altogether unsatisfactory, but it is obvious a European Missionary, working in this country, cannot be as enthusiastic as no Indian in the matter of the advancement of a University like that of Agra. Want of union among Indians has been the bane of the country during all the centuries of its history and we are not surprised at its expressing itself in the case of small institutions like Universities, as it has expressed itself in the case of great events in its national history.

Sister Nivedita

Eric Hammond contributes to *Prabuddha Bharata* an impression of the earlier years of Sister Nivedita, which is quoted below in part.

Prejudice against Negroes in U. S. A.

Dr. Kuohi Kinnnan says in *Current Thought* :

Not all Negroes are black. Six millions of the eleven millions in the States are of white extraction, and a great proportion of these cannot be easily distinguished in features or complexion from the White except in regard to the hair which is almost invariably woolly or kinky. Even this feature is said to be absent in a few. No similarity of features however close, of fairness of complexion however great, will secure equality of treatment. The faintest trace of Negro blood suffices for rigid exclusion, and white or black, all Negroes are treated alike. The treatment accorded to the white Negro is in striking contrast to the treatment of the Eurasian in India, who is indulged and favoured so much as almost to put a premium on the immoral relations between Europeans and Indians in India. That in spite of it there are only about 200,000 Eurasians in India against the six million half-breeds in the States is eloquent of the higher standard of Indian morality.

The prejudice against the Negro does not extend to the American Indian who is also colored. But American Indians are but few in number, and several of them are very rich and have not the taint of slavery. Union with them does not entail social obloquy or persecution. Indian ancestry may even be asserted with pride by a girl who has it. A white woman who dares to marry a Negro will be treated almost as a leper. It will be recalled, in this connection that the wife of the world-famous boxer Jack Johnson was driven to suicide by the persecution of the Whites.

Choice of a Vice-Chancellor for Agra

The Educational Review of Madras observes:—

We congratulate all concerned on the formal inauguration of the Agra University.

At the first meeting of the Senate, the member elected as Vice-Chancellor, a European and a Missionary, the Rev. Canon Davies, M.A., of the St. John's College. It is surprising that there should have been such lamentable want of unity among the Indian members of the Senate that they

She adored originality and smiled at customary conventions. Parents of her pupils were sometimes aggrieved by her attitude, as when, for instance, she persisted on retaining a bronze of Buddha on the mantelpiece of her studio. She revelled in argument, in disputation. Nothing gave her greater delight than a debate during which speakers became heated and excited. From time to time, on such occasions, she would interpolate some striking utterances calculated to stimulate the combatants, and the fiercer the fight the happier she grew. She admired Walt Whitman, Emerson and Thoreau, quoting with earnest emphasis any passages from the last two authors which endorsed Eastern philosophy. For Buddha and his teaching her reverence was great. The popular presentation of Christianity lost its appeal to her and thus, when Swami Vivekananda arrived in London, she responded to his call as a harp responds to the touch of a master-player. She listened to him at her club, the Sesamo; at Miss Muller's Wimbledon; at many religious and philosophical centres in and near London. Everywhere she went she hailed him as the Prophet of the age. She assisted his appearances at various places, including the Christo-Theosophical Society established by Sir Richard Stapley in Bloomsbury Square, where by the bye, Swami Abhedananda made his maiden speech in English. There is no doubt that her influence and her persuasive faith backed by Mr. W. T. Sturdy's solidity of aim and pecuniary aid, largely contributed to Swamiji's career in London. Immersed as she came to be in the Vedanta, she employed all her oratorical power on its behalf. Once caught in Vivekananda's wonderful web, she spoke of him and about him unceasingly. "Have you seen and heard the Swami?" she would ask. "If you have not seen him and heard him, you simply must. There is no one like him, no one to equal him, no one at all!" Eloquent, persistent, imperious, she drew friends, acquaintances, even strangers, towards this Son of India who was, she assured them, the Suz of Truth. Her acceptance of, and adhesion to the Swami's gospel was whole-hearted.

The East African Commission

The National Christian Council Review opines:—

It is impossible to claim for either of the invaders of East Africa that they are disinterested or that the interests of the children of the soil are safe in their hands. Mr. Oldham as a Christian intercolonialist, may be trusted to do all he can to find the way of justice and of compromise. 'Everyone,' St. Francis Xavier said of the immigrants into India in his day, and no doubt it is largely true of the immigrants into East Africa today, 'everyone takes the same road—*rapiis rapiis*.' Many from among both Indians and Europeans are conjuring that same 'wretched veil,' and the chief duty of the Commission is to protect the African people against this rapacity, as well as to protect the weaker of these two communities against the rapacity of the more powerful. The Indians in East Africa have few to champion them, but we trust that on the Commission they will have in Mr. Oldham one who will not forget that they, too, have rights. They have had their fears accentuated by the recommendations made by the recent Feetham Commission, which was appointed to go into the question of the extension of local self-government. One of their recommendations is that Mombassa, which has among its population 720 Europeans and 9,997 Indians, should henceforward have the number of Europeans on its Municipality increased from 7 to 13, while the Indian representation remains still 4 only. It is difficult to persuade oneself that that Commission discharged its task with justice and impartiality. We trust it will be less difficult in the case of the new Commission.

Religion as Experience

Dr. J. T. Sunderland contributes to *Welfare* a convincing and elevating sermon on Religion as Experience, from which we extract the following passages.

Religion presents itself to man under four aspects: as something to be gone through with, or performed; as something to be believed; as something to be studied, analyzed, or speculated about; and as something to be experienced. In other words, it presents itself as a Ceremonial; as a Creed; as a Philosophy; and as a Life.

What are we to say of these differing conceptions of religion? Doubtless we should say that all are legitimate; all are useful; but no one taken alone is complete—each needs the others to round it out to wholeness. Especially is this true of the first three, but they need the fourth. Experience or life is the end toward which each of the others ought to lead the only result which gives them justification for being. Without religion as a personal experience, ceremonial, creeds and philosophies are a body without a soul.

Experience of religion! I know there is a prejudice in many minds against the thought. To some persons, such experience seems only superstition, or cant, or pretence; to others, an empty dream of the imagination. Persons with habits of untettered thinking, or who care much for science

and reason, are perhaps particularly liable to be among those who look upon religious experience with incredulity and disfavor. But why should this be so. Can any one give a good reason?

No one denies the validity of experience in matters outside of religion. Indeed, the scientist and the man of independent thought are the very ones who, in other things, are likely to appeal to experience most. They do not want speculation, they tell you; they want to know. They want the testimony of somebody who has seen, heard, felt, experimented. They of all men, then, should show not least but most respect for experience in matters of religion.

If I believed that religion rested upon a foundation of mere hypotheses and speculations, I certainly should not be a religious teacher. Indeed, if I did not believe that the main, central truths of religion are as evident, certain, verifiable as anything known to man—as the facts of science, or as the demonstration and axioms of mathematics—I certainly should never stand in a pulpit. I do believe that nothing in man's knowledge rests upon a more secure foundation—upon one more absolutely incapable of being disturbed, than religion. Why? Because it rests upon the soul's deepest experiences. Below these it is impossible to go. If here is not reality, then indeed—

The pillar'd firmament is rottenness,

And earth's base built on stubble.

For even the validity of our knowledge of the outward world depends upon the truthfulness of the world within.

How to Get the Most Fun Out of Life

Mr. Henry M. Stegman tells us in *The Oriental Watchman*—

The truth is that the real way to get the most fun out of life is to be well. The best meal you ever ate was probably not the most luxurious and expensive one but some simple repast which followed a long tramp to the woods. A keen appetite will give you more enjoyment than lobster à la Newburg and champagne. The nineteenth Psalm contains an illuminating phrase; "rejoiceth as a strong man to run a race." That feeling of vigor, of bodily well-being, spells more of stimulation and exuberance than the costliest wine—and there is no headache, the next morning. If you will view the facts comprehensively, you will see that Shakespeare's 'primrose path of dalliance' is a short one, it soon ends in a briary thicket.

Let us then change the saying thus:

"A long life and a merry one!"

Buddha's Influence in His Life Time

Mr. T. L. Vaswani says in *Buddhist India*—

I do not know of in the world's history there has appeared another who in his own life-time wielded so great an influence upon the people as that ancient Indian Prince who left his palace and became a Brahmin and later a teacher of wisdom. I refer to Sakyanum, who became the Buddha. I do not know, I repeat, if our human world has

thrown up another who in his own life-time had so mighty a hold upon the people as Buddha. The world's great teachers have cast a spell on large numbers; but this, in the case of all the great ones except Buddha, has been of gradual growth, and often after they passed away. Buddha, cast a wonderful spell on millions in his own life-time. Whenever he would appear in a town or village,—as the ancient documents declare—people would gather together in large number to have his darshan. One day he comes to a small town; people come to know that he has come; so men and women ran to meet him. They are eager to see and hear him. They come to him and say:—"Master, teach us! speak us some words of wisdom."

Impressions Of Sir J. C. Bose

Mr. P. K. Kapre contributes to the *Morris College Magazine* his impressions of Sir J. C. Bose. Here are some of them:—

Amongst the very few persons who had the good fortune of having a talk with Sir J. C. Bose, my friend and I were two. When he came here last month, we ventured to approach him. All the while the feeling that we were going before a world-renowned man, a man who had done conspicuous work in the domain of science, was present in our mind. Naturally we expected to see one, a bit old, with many creases on his brow and with an expression full of care and thought. We expected too, to be disappointed in our object to see him, for it is a popular belief that all scientists are men who are cross and presumptuous.

Luckily for us, we were agreeably surprised. Never before, did I see such simplicity and unassuming nature in a great man, as I did on that day.

My friend was rather a bit too forward. He asked for his autograph. He gave it after giving us a stirring advice, which has created an indelible impression on my mind. 'Be alive', were the words he wrote. Yes! How significant those two words are! This life is full of strife. Only the fit will survive. In this world which is cruel and callous to take care of the weaklings, the unfit must ever go to the wall. Sir Jagadish asked us to keep fit. 'Work hard, play hard. Spend some of your time with your friends. Do some dramatic performances and enjoy yourselves in a healthy manner. But never be vulgar. In this way alone you will live and live well.' He alone lives, by whose living many others can live too.

Jagadish Chandra stayed here but for a couple of days. But during that short time he carried away our hearts. His message of hope, that a dark cloudy night is always followed by a pleasant sunny morn, will ever remain a stay for us whenever we are discouraged and found in difficulties. His personality is marvellous. Are it seems, has not laid its sinewy hands on him. His complexion is clear like a child's, his hair silvery white, his dress simple, all go to make us bend before and revere him. Until last month, we knew Sir Jagadish Chandra Bose as a great savant. Now we understand the real man in him.

Let everybody of us try, as far as in us lies, to emulate him and pray for his long life.

Experimental Measures of Prohibition

Writing on the Bombay Government and the Drink Problem in the *Social Service Quarterly* Mr. J. F. Edwards states:—

Experimental measures of prohibition are being adopted by two other Indian Provincial Governments, namely, Madras and the Central Provinces. The Governor of the latter has himself announced that in response to the popular demand, all liquor sheops are to be closed in the rural parts of the Damoh District, and the Excise Minister for the Madras Government has declared his intention of introducing prohibition in two districts, one of which is Nellore. This is splendid.

On this, as on every other aspect of the drink question, every European in India and every one who has influence with European, can render to India service of enduring value, and we commend to them the biting words of *The Indian Social Reformer* in one of its recent issues; 'Prohibition is primarily a moral not a financial question, and must be approached from the moral standpoint. When Germany invaded Belgium, no Committee of British financiers was asked to calculate the net loss of the country that may accrue from going to war with Germany and suggest new sources of taxation for making up the loss. The War was fought and won regardless of the cost in men and money, because it was felt to involve the very existence of great Britain. The prohibition question is one of life and death to the people of India. An Indian National Government, if it is true to its mission, will deal with it as such, and not haggle about the price to be paid for it. It will be to the eternal discredit of British rule that it obstructed as long as it could, a reform demanded by the vital interests of the nation, a reform which had behind it the sanction of the two great religions of India and the support of the overwhelming majority of Christian missionaries in this country. We hope that the Government of India will see their way soon to come into line with the overwhelming consensus of Indian opinion on this crucial question.' We agree with the reformer that the continuance of India's liquor traffic is a serious blot on British rule in India, and we believe also that all who strive by constitutional means, for the removal of the blot are the truest friends of that British connection with India.

The Education of India

Mr. E. C. Dewick writes in the *Young Men of India*:

In his Introduction Mr. Mayhew gives his readers a foretaste of the 'five main conclusions' to which he proposes to lead them; and in these there is hope and faith, as well as criticism and regret. These five conclusions may be summarised as follows:

1. Our education has done far less for India's culture than for the material and political progress

of India. We have multiplied the knowledge of India; but we have not increased her joy in life.

2. The present emotional tide of Indian nationalism makes a real fusion of Western and Eastern life and thought impossible, for the moment.

3. The education divorced from religion will never touch the heart of India, nor assist real progress in social reform. The religious sanctions which lie behind the Hindu social system can be influenced only by religion, on a higher plane.

4. Higher education in India needs to be, as far as possible, free from government control; but in the education of the masses Government must supply the initiative and the finance.

5. The unofficial help of English educationalists in India will be greatly needed, and deeply appreciated, in the future; all the more so because it is not associated with an alien government (pp. 4, 5).

Pali Translation

We read in The Mahabodhi:

So many in the East who know Pali well, know no other language, that is, no occidental language. And so many of us in the West know little or no Pali. Evidently it is a long labour that lies before us here, and we cannot begin upon it too soon. There seems only one way to set about securing the truly authentic translations of our Scriptures which we require, and that will be for those of our Bhikkhus and Theras in the East who know Pali well, now to turn the study of some occidental language, preferably English, since that language is now fast becoming the *lingua franca* of all the educated, travelled people of the world. Let them acquire a sound knowledge of its forms and idioms and general style, by a careful study of its best writers, ancient and modern, and never cease study till they have to a certain extent made English their second mother-tongue. Then let those of us who live in the West, and have a good working knowledge of English already, take up the serious study of Pali. It is not a very difficult language for us to acquire. Every educated Sinhalese already has at his command a considerable stock of Pali words and idioms in the language which he learnt and studied at College when going up for an examination in Sinhalese. Ten years hence, let us say, for sooner, if the gods are favourable to us), let there be a gathering of as many as can manage it, of lay Sinhalese knowers of English, and of Thera knowers of Pali, and in concert let them decide to produce a translation of one of the Scriptures of the Buddhist religion, going carefully over it word by word, and line by line, never passing over any doubtful point or rendering until it has secured the approval of at least a two-thirds majority of those present. Then, when at length the book is completed, let it be produced with the due warrant and seal of the head of one of the leading Nikayas in Ceylon, or still better, of all of them, if that prove possible, to show to the world that here they have a rendering of Buddhist Scripture approved of as authentic in every way by the chief Buddhist authorities of the Island.

Railway Bosses and the Human Scrap-heap

The Indian Labour Review observes:—

It is one of the sad features of our economic system that human beings are treated with infinitely less respect than machinery. The plant in a workshop is expensive to buy. When bought every piece of machinery is carefully tended. Siled, cleaned and kept in the best possible condition. In most workshops the largest fines are those imposed for failure to give proper attention to the machinery. Even when the machinery becomes out-of-date or worn out and is relegated to the scrap-heap, it still fetches a decent price as old iron. But human labour can be had for the mere asking. And as the supply is considerably in excess of the demand, this very fact is often exploited by the unscrupulous middleman so that the worker, in his desperation, has frequently to "crease somebody's palm" before he can get a job. He is then compelled to work long hours for starvation wages, during which the employer, who is all the time making profit out of him, does not, with rare exceptions, give him a hundredth part of the care and attention that he bestows on his machinery. When he gets worn out, or when a retrenchment scheme comes round, he is remorselessly flung on the human scrap-heap where he has not even the value of scrap iron.

The Boers and Anti-Indian Agitation

Dr. Tarakanth Das expresses the following opinion in *The Calcutta Review*:—

None should be deluded by the supposition that it is the Dutch or the Boers who are at the root of the anti-Indian agitation in South Africa. Although the British Government fought the Boers and held up before the world that Britain could not tolerate the ill-treatment accorded to the Indians in Transvaal, the treatment accorded in British colonies of Natal, Cape Colony and other places was no less abominable. The Dutch, the English, the Irish, in other words, the Europeans—the majority of them—are pledged to the anti-Indian or anti-Asian policy. There are rare exceptions and only a few people wish to see justice done to the people of India in South Africa and their rights preserved. From the days of indentured labour in Africa through the days of the Boer War, the World War and after, the history of Indo-African relations has been persecution of Indians and depriving them of their just rights. This will continue, in spite of all "agreements," unless the people of India can set their own house in order and become independent as the South African people are. When the Indian nation will become a sovereign power, controlling its internal and external affairs and national defence, then South African Union and others will treat the Indians with some respect and consideration. In the present-day world there is no justice for enslaved and weak people.

The "Chemical" Cure of Infectious Diseases

The Literary Digest observes:—

The "chemical" cure of infectious diseases is not impossible, however; it is, in fact, a daily occurrence. The body kills its microbes by "chemical" means. There is certainly a chemical basis of life. Living tissues have been analyzed; many of them have been manufactured: urea, sugar, and many other products of life can be made in the laboratory. There must be a chemical formula for the substance in healthy blood, which slays, in laboratory conditions, a microbe.

A writer in *Discovery* says —

"We make our 'antitoxins' today by laborious biological means. We use the horse to manufacture them. Readers of 'Martin Arrowsmith' will remember that one of the characters in that book succeeds in making antitoxin in his laboratory. Alas, that character—the recognizably founded on a well-known scientist—has not yet, in real life, achieved that great success. But one need not be an H. G. Wells to foretell that result with complete confidence. How, to-day, do we combat infections? Frankly, we scarcely do at all.

"Where an organism produces a toxin, or poison under artificial conditions, we can induce a horse to yield us an antitoxin. So we cure diphtheria, tetanus and dysentery; where it does not—as in pneumonia—we are really helpless. We treat symptoms instead of tackling root causes and effects. And in some cases we are inefficient in the treatment even of symptoms. But that is another question.

"There is room, in fact, for the profoundest dissatisfaction with our modern toleration of our ignorance of the chemical constitution of living matter. There are comparatively few fully trained chemists in Europe examining living matter. Biochemists there are, in abundance; but many of them are spending their time estimating the sugar in blood by the different techniques, and comparing results. If the time and ability that has been spent on metallurgy were spent on medicine, we might be able to manufacture antitoxin to-day as readily as we can make coil steel. Young chemists, afire with enthusiasm, are always seeking new fields to conquer. Let them, therefore, turn from the anilin dyes, and study bio-chemistry."

Monochromism versus Polychromism in Dress and Religion

Professor I. Takakusu writes in *The Young East*:

The Aryan race generally appears to keep to monochromism. This is to be seen specially in

women's dress. Ornamentation by women of their figures is a means of demonstration towards the sterner sex, and so women's taste for colours cannot be considered merely their own taste. It must be said to be an expression of the taste of the whole race. Now love of one colour only is common to the Aryan race. In fact, it is common to Europeans, Persians and Indians, who are subdivisions of the Aryan race.

While travelling in India, the first thing we are surprised at is the colour of dress worn by women working in the field. White, scarlet, dark green, greenish brown, orange, blue, yellow and purple,—these are the colours of their dress. These colours make a picturesque harmony and present an indescribably beautiful sight. It is made especially striking as Indian women are generally very tall. They have the habit of carrying water-jars on the head and so even women of lower classes walk in an erect and dignified manner. Imagine an extensive green field under a clear sky dotted all over with tall graceful women clad in their flowing garments of gorgeous colours. It is a sight that you cannot see in any other countries and a traveller coming from another land cannot but be struck thereby.

It appears to me that monochromism appears best in religion. In Europe and America, religion is synonymous with Christianity, which excludes all other religions, and regard them as heresies. Government and education are essentially carried on the principle of one religion, which is deep-rooted. Even after Christianity was divided into Catholicism and Protestantism, this principle has continued to be maintained. Protestants being hostile to Catholics, and vice versa. Against the Jews Christians have been particularly bitter putting them everywhere.

A question may be asked: Admitting that monochromism is a characteristic of European and Persian religions, can it be seen in Indian religions? The question is reasonable, for, to all appearance Indian religions have nothing of monochromism. India has Brahminism, Buddhism, Jainism, Zoroastrianism, Sikhism, Vishnuism, Sivaism, Mohamadanism, Christianity, in fact a whole array of religions. Possessing, as she does so many religions, sects and many philosophical doctrines, India, however, is not really destitute of the characteristic monochromism. As a matter of fact, no matter how many religions India possesses, they stand opposed to each other in an attitude of strict exclusiveness.

Though situated in the same Orient, Japan is altogether different from India in respect to taste for colours. In other words, while India is monochromatic, Japan is polychromatic. In fact, the Orient generally keeps to polychromism. It is mainly expressed in Japan and China. Especially is it strikingly expressed in the dress of Japanese women, which needs no detailed explanation.

Similarly religion is polychromatic in China and Japan. In the former Confucianism, Buddhism, Taoism exist in peaceful harmony. In that country adherents of pure Confucianism are few, and those of pure Buddhism fewer, while with regards to Taoism, it has few followers in its pure form, the prepondering majority of its adherents believing more or less in the other two. In fact, most Chinese, so to speak, wear the Confucian headgear, Buddhist cloak and Taoist shoes.

Christianity, Buddhism and Hinduism.

An article on the Hindu View of Life by Prof. S. Radhakrishnan, published in the *Oriental Magazine* of New York, concludes thus:

While some forms of Christianity and Buddhism judge the life of the world to be inferior to the life of the monk, and would have loved to place the whole of mankind at one swoop in the cloister, Hinduism while appreciating the life of the *Sannyasin* refrained from condemning the state of the householder. Every state is necessary, and in so far as it is necessary it is good. The blossom does not deny the leaf and the leaf does not deny the stalk nor the stalk the root. The general rule is that we should pass from stage to stage gradually.

The liberated soul is not indifferent to the welfare of the world. It is related of Buddha that when he was on the threshold of nirvana he turned away and took a vow never to cross it so long as a single being remained subject to sorrow and suffering. The same idea comes out in the sublime verse of the *Bhagavata*: "I desire not the supreme state (of bliss) with its eight perfections, nor the cessation of rebirth. May I take up the sorrow of all creatures who suffer and enter into them so that they may be made free from grief." Mahadeva the prince of ascetics drank poison for the sake of the world. Freedom on the highest level of existence expresses itself on the lower as courage to suffer, sacrifice and die.

This fourfold plan of life yet dominates the Hindu mind. The general character of a society is not always best expressed by the mass of its members. There exists in every community a natural elite, which better than all the rest represents the soul of the entire people, its great ideals, its strong emotions and its essential tendency. The whole community looks to them as their example. When the wick is ablaze at its tip, the whole lamp is said to be burning.

Against Capital Punishment

We read in *The Theosophical Path*:

Henry Ford was quoted in the press early this year as saying:

"It is wrong to kill a man—everybody agrees to that. It does no good to the man, and it does no good to society. Capital punishment is as fundamentally wrong as a cure for crime as charity is wrong as a cure for poverty....."

"But we kill—or want to kill—the criminal, because it seems to be the easiest way of disposing of the problem. We are taking hold of both problems by the wrong handle. I wouldn't mind giving a man a licking, but I wouldn't want to kill him, and I don't see how anyone can vote for capital punishment, unless he himself were willing to be the executioner. I think there are mighty few citizens who would be willing to take that job. Then why ask the state, through any citizen, to do the killing?"

"I am sure capital punishment is not a deterrent to crime. Any man who has reached the point of being willing to kill another does not care whether he himself gets killed. It was only ten years ago we were teaching millions of people to kill."

And Lena Madesin Phillips of New York, known as one of the most brilliant attorneys in America and President of the National Federation of Professional Women's Clubs—an organization of 45,000 members—was quoted in an interview published in *The Oakland Times* during the recent convention of the Federation in that city, as saying:

Hanging men, "burning" them to death in electric chairs, putting them in prisons to rot their lives away, is what I mean by being sentimental in dealing with the crime problem. Proponents of such barbarism accuse advocates of common sense in handling the crime problem with being 'sentimental.' Sentimentality is emotion without the benefit of reason, and hanging men and putting them in prison as a form of punishment certainly is acting without intelligence, dealing with effects rather than with causes. It is sentimentality in a disgusting form."

"What should be done to attack this problem intelligently?"

"Abolish the horrible examples of baying the State set the example of murder," came the quick answer. "Then let men in prisons be considered as human beings who can be rehabilitated and made useful to themselves and to society, rather than as caged, dangerous animals. Stop putting boys in jails with hardened criminals. Abolish the slums and the unemployment problem, which breeds crime as a mosquito-pool breeds malaria."

G. Bernard Shaw now assails the hypocrisy of those who defend capital punishment. Below are a few brief extracts from a recent article of his published in *The London Daily Mail*:

"To punish people satisfies our vindictive instincts. We hurt them for the satisfaction of hurting them, not that two blacks make a white, but that we think that one good black deserves another. The punishment costs money, and harms both us and its victims; but we think it worth while because we are built that way. We have the grace to be ashamed of this, and invent excuses or vice names for it. We use the word retributive instead of vindictive; and we pretend that our ferocity deters people from crime....."

"Criminologists have long since had to admit that as deterrence is a function, not of the severity of a punishment, but of its certainty, and that as certainty cannot be secured, deterrence, though useful as an excuse for vindictiveness, is, as a preventive of crime, a dud....."

Japan's Opportunity in the Dutch East Indies

The *Literary Digest* has summarised an article in *Kaigai no Nihon* partly thus :

Color, Race, or religion does not mean a thing to the Hollanders who are ambitious for the further development of the resources of the Dutch East Indies by foreign investment. Such is the message conveyed to the Japanese people by a Japanese authority who, in company with many others of his countrymen, is always looking over the world to safeguard the nourishment of Japan's big population in a limited area of limited productivity. Java, Sumatra, Celebes, and their sister islands in the Dutch East Indies are pictured as becoming "sirens of the South Seas" in their call for foreign capital and foreign enterprise. The comparatively restricted Dutch capital available for the exploitation of her East Indies, it is asserted, has not been enough to reach much beyond the island of Java in all the three and a half centuries of her occupation and administration of the islands. In this generous welcome to foreign traders by the Dutch East Indies, Japan finds the one effective answer to her population and food problems, according to K. Matsumoto in an illuminating article in the *Kaigai no Nihon*, a Tokyo publication devoted to the interests of the Japanese people in foreign lands. Mr. Matsumoto is said by Japanese writers to speak with considerable authority because he has served as the Consul-General of Japan in Java, and what he has to say is the result of first-hand investigation and personal knowledge gained through his years of residence in Batavia. He tells us that Japan's opportunity lies where—

"There is land of a total area close to 740,000 square miles—about three times the size of Japan, with a native population of some 45,000,000 and a tremendous wealth of industrial raw materials. In three centuries and a half Holland has done a great deal in developing the resources of Java, but in Sumatra, Borneo, and Celebes there are great forests which have never yet echoed to the ring of a woodman's axe. The untouched wealth of mountains and rivers patiently wait for the hand of exploitation."

Mr. Matsumoto goes on to say that the Dutch are aware that their own capital is far from sufficient for the rapid development of the Dutch East Indies, and in order to encourage the inflow of foreign capital into the islands, they are following the liberal policy of international co-operation. They welcome all foreign investors irrespective of color, race, or religion, and give them a free and wide scope in various lines of enterprises." At present, it is noted, the Dutch investors head the list with their 1,219,000,000 florins. The British follow the Dutch with their capital investment of 240,000,000 florins. Next come the Chinese with investments of 206,000,000 florins in total. America is said to have 27,500,000 florins of capital there and the Japanese 29,000,000 florins.

Nationalist Egypt's New Leader

The same journal tells us :

The son of Zaghari Pasha still lives, tho his body be dead, we are assured by various state-

ments and editorials appearing in the Egyptian press of Cairo, Alexandria, and other cities. When the Egyptian Nationalist party (the Wafd-El-Massri) elected Mustafa Nahas Pasha to succeed the deceased Zaghari as leader, it issued a manifesto which was published in all the Egyptian-language newspapers, and it declares that the party is and will remain united and faithful to its obligations, and, while "developing every effort, it will not abandon the field of honor until the destiny of the country is accomplished through independence and complete liberty." It is further asserted that :

"The Wafd will have no other mission than that set by Saad, this mission being the independence of Egypt. Its program will be the same as it has always been, namely, the continuation of the struggle in an atmosphere of peace and friendship."

Births and Deaths by Night

We read in the same journal :—

For some time, says *La Science Moderne* (Paris), conclusions have been drawn regarding the times of day when most births and deaths occur. The question was studied in different countries, and the results indicated that the results varied with environment. No biological law was found to exist. Laignel-Lavastine has now re-examined the question, and has presented his conclusions and reflections to the French Academy of Medicine. We read :

"The inquiry has been carried on in various hospitals for a year past. Hourly statistics of births at La Pitié hospital, kept under Professor Jeannin, show that every month the number of births is greater between midnight and noon than between noon and the following midnight. As for deaths, they are more frequent during the period of sleep from 6 p.m. to 6 a.m. than during waking hours. In a single year, in Mr. Laignel-Lavastine's service, 113 patients died during the night and only 89 in the daytime."

Besides, of these 113 deaths, 59 took place between six o'clock and midnight, in the early part of the sleeping period. There is thus a cosmic influence of night on births and deaths, and perhaps, says Mr. Laignel-Lavastine, sleep also does its part. These two causes, by increasing the excitability of the pneumogastric nerve, work together to predispose to death. Such at least, is the impression of the distinguished pathologist."

Faith Healing

Swami Paramananda writes in *Message of the East* :

In India a holy man is expected to raise the dead, there is so much faith. When every hope is abandoned by physicians the sick man often will go on a pilgrimage just to lie in the dust of a sacred shrine, he has such faith that if he can only get there, he will be restored.

We may say it is nothing but superstition, but superstition never brings any power. Sometimes we see the man through his faith and fervor

becoming whole. It is not, however, the holy place which holds the secret of miracle. In a great measure it is the person himself who by his faith opens the gate, the avenue of healing. We find this in the Bible. When sick people came to Christ, imploring Him to heal them. He asked simply: "Do ye believe that I can do this thing?" "Yes." "Then let it be so." There is a wonderful psychology here. He did not merely say with aggressiveness, "I am going to heal you," but, "Do you believe that it is possible for me to become a channel through which you can receive such a blessing?" "I believe;" "then let it be according to your faith."

Faith is a very potent factor. What it is we cannot analyze.

A Leader of Turkish Women

Anne Hard contributes to *The Woman Citizen* an interesting character sketch of Nezihé Mouheddin Hanoum, a leader of Turkish women, which reads as follows in part:—

Past the great building that once housed a ministry of War, and now is filled with students, past the shrouded, little cafes where men sit sipping *aperitifs* as if in Paris, past the streets of dismal little shops and the archway that leads into the bazaars where still you may find a hundred charms of rugs from Turkestan and Iraq, of enameled box and filigree of silver or of gold, of tiles in peacock colors, Anatolian embroideries and inlaid brasses, of spoons of jade and gold, and thick beads of amber—then down a sharp, still cobbled street, to the shore of the Marmora, to a plaster house with a swinging gate in its high wall, a courtyard, a steep flight of stairs—and I am in the apartment of Nezihé Mouheddin Hanoum—leader of Turkish women.

"Hanoum" in Turkish is the same as "Mrs." As I waited, I had a chance to observe the bare simplicity of the room, and the photograph of Nezihé Mouheddin in the centre of a group of Turkish women—the executive committee of her organization.

Then she came in—and I had no thought of anything else.

A beautiful woman, young. A woman who would be called beautiful by any standard. Tall and graceful of carriage, with chiseled features, a lovely brow, pure white skin. But in her splendid eyes there was not only beauty but the expressive charm of sympathy, of gaiety and of humor.

We spoke in French. For all this part of the world French is the second language. And, after we had sipped a glass of mildly sweet lemonade (for if French is the second language, lemonade is always the second drink, after coffee) we began to talk of women—in Turkey and in the United States.

Educated at home, with tutors, Nezihé Mouheddin Hanoum owes to an unusual father the chance to prepare herself to be, as she is today, the president and outstanding figure in an organization which may be broadly translated as "Movement for the Emancipation of Women."

Her father was most unusual in this, that he

believed that his daughter should receive the same education as his son. He permitted her to study, accordingly, side by side with her brother and to study the same subjects and under the same masters. She studied, then, French and Latin. She read the classics of the East and she read a few English classics—in French translations. Then one day she stumbled upon a work on physiology. One can guess, if one thinks of the Turkey of fifteen years ago, how primitive that work undoubtedly must have been. Nevertheless, it was enough to fire her with a desire to study medicine. She was already studying law. She now added what there was to be had in the preparation for the science of medicine. She worked at home, but she took the examinations that the young men took in the university.

Before she was twenty she was appointed Inspector of the *Ecole des Femmes*.

Meanwhile, she was writing. At eighteen she published one of her first articles on education for women, in which she urged that Turkish girls be sent abroad, to England and to France, to be educated. Nor a startling idea to us. But revolutionary to a system which kept the girls in cotton wool and idleness.

Nothing came of it, then, for girls. But from it, in part, for Nezihé Mouheddin, came the opportunity for more writing. She went on with her school inspecting, but she also wrote more and more, sending her articles to the newspapers under the names of men—fictitious men.

Late in life—for a Turkish woman—that is, at twenty-four—she married. She has a son.

With marriage for her came also the beginning of new endeavors. She began the publication of a fortnightly magazine called *"The Road of Women."* Unlike the magazine of Mme. Charaoui Pasha of Cairo, hers is not printed in French, but in Turkish. I call especial attention to this fact, for one cannot realize till one comes close to the Near-East how completely the life of the intellectual and upper classes here is dominated by French culture, French manners and the French language.

Mothers' Allowances in North America

Elsinore Haultain introduces his article in *International Labour Review* on Mothers' Allowances in North America thus:

The problem of providing aid for mothers who have lost the support of their natural breadwinners is one which must attract the attention of all students of social questions. No doubt the perfect solution would be to do away with the problem itself—i.e., to prevent the premature death or invalidity of the breadwinner and ensure that he shall earn a wage adequate to provide for the present and future needs of himself and his dependants; or alternatively, under present conditions to provide an adequate measure of social insurance to cover all cases where the mother is deprived of the normal means of bringing up her children properly. Failing this, certain States have tried to provide some form of social assistance by granting mothers' allowances out of public funds. Legislation to this effect has been in force in North America since 1911.

The whole idea of mothers' allowances—an idea that has taken such a hold on the minds of people on the North American Continent that now forty-two States of United States, Alaska, Hawaii, and the District of Columbia, and five of nine Provinces of Canada, have mothers' allowance legislation actually on their statute books—this whole idea, together with its practical results, has grown out of a realisation of the great social truth, that in no place can a child be brought up in he such a desirable citizen of the country in which he is to live, as he can in a good home.

That is how the article opens. Further on we read :

It was in 1909 that President Roosevelt called the White House Conference, whose correct name is the Conference on the Care of Dependent Children. At this Conference the ideas on child care which had gradually been growing up, became centralised and crystallised. Out of them emerged the great dominant idea—that it is desirable, whenever possible, to keep the child in his own home. Perhaps the most important conclusion of this Conference was the following :

"Home life is the highest and finest product of civilisation. It is the great moulding force of mind and of character. Children should not be deprived of it except for urgent and compelling reasons. Children of parents of worthy character, suffering from temporary misfortune, and children of reasonably efficient and deserving mothers, who are without the support of the normal breadwinner, should as a rule, be kept with their parents, such aid being given as may be necessary to maintain suitable homes for the rearing of the children."

The Osaka Mainichi

According to the *Japan Magazine*,

In circulation no newspaper can surpass the *Osaka Mainichi*. The paper celebrated its circulation attaining 1,000,000 copies in the 13th year of Taisho (1924), and to-day over 1,300,000 copies are in circulation which is unexampled in Japan.

The building cost over Yen 25000,000 being a fire and earthquake-proof ferro-concrete structure of six storeys, or seven-storeyed including its high tower.

The *Osaka Mainichi* possesses ten up-to-date high-speed rotary presses manufactured by R. Hcc and Company of the United States, besides ten Marmon presses. All these machines are running fifteen hours a day. The electric motors, large and small, number 234, having 865 h. p. total; gravure printing, etc., are features of this newspaper.

Education Without Sex Taboos

Mr. Bertrand Russell has contributed to the *New Republic* an article on Education without Sex Taboos which should he read, if read at all, in a serious spirit. Some extracts from it are given below.

Sex taboos are a far more serious matter, because they enter into and poison the life of

instinct, and because very few adults are really free from them. I believe them to be totally irrational and very harmful. The teaching that everything to do with sex is wicked—which is what a child learns from conventional moral instruction—unfits many people for marriage, some in one way and some in another. Girls who have been strictly brought up become incapable of unrestrained love; though they may believe that marriage is a sacrament, the part of it that seems to them sacred is the prohibition of adultery. Thus jealousy becomes surrounded with all the attributes of virtue, and love is kept like a tiger in the Zoo, as something interesting but too dangerous to be at large. Among well-to-do young women this attitude has given place to another, which is its antithesis, but has the defects of a revolt. Having rejected, superficially but not fundamentally, the view that all sex is sin, they have taken up the view that sex is a trivial amusement. The poetry, the sense of mystic union, the blossoming and unfolding of all that is best in our nature, which belong to a deep love, are not for them; love, like school, is snatched in an atmosphere of prohibition, trivial, crude and poisonous. The puritan succeeds much more easily in destroying the poetry of what he considers sin than in preventing the acts which he deplores.

I have known men who could not have sexual relations with women whom they respected, who lived platonically with their wives, whom they deeply loved, and had trivial affairs with women whom they despised. All this is a result of bad education in matters of sex.

Coming now to the concrete problem of the education of children, it is, of course, evident that, if the right result is to be produced, they must not, at any age, be left in charge of people whose outlook is wrong. The foundations of deceitfulness in later life are laid when a child is taught, in the name of decency, to be furtive about evacuation. Moreover, the usual motive to which ignorant women appeal in trying to produce what they consider right conduct is terror; thus the child comes to think that acts inspired by fear are better than those inspired by adventurousness. This produces a timorous adult, incapable of independent thought or feeling, and anxious only to escape the censure of neighbors.

Children should not at any age be taught that certain parts of the body are peculiar. In a civilized community, there would be no such thing as "decency," which is merely an externalization of indecency in thought and feeling. When we were equipping our school, we were looking one day for diagrams suitable for the teaching of physiology. We found some which were admirably made, one showing muscles, one nerves, one veins and arteries and so on. But, unfortunately, in all of them the sexual parts were omitted. To show such things to children is to give them a feeling that there is some mystery about these parts which causes them to think about sexual matters, and to think in just the wrong way. We all, however; virgins and mudish, think a great deal more about sex than we should do if we had been brought up freely.

Questions about sexual matters must be answered in the same tone of voice, and with the same manner, as any other questions. It will then be found that the interest in the subject is vastly less than the interest in trains and aeroplanes. I have

found in both my own children great interest in the fact that children grow inside their mothers, because they feel that this is a fact about their own early lives. My boy (five and a half) knows that a seed comes from the father into the mother, but the fact does not interest him and he has not yet asked how it is planted. When he asks, he will be told, but so far he has shown no signs of wanting to know.

I do not believe in teaching children about the "sacredness" of sex or motherhood or anything else. The right attitude seems to me to be purely scientific: the facts are so and so, like all other facts, they should not be forced on children, but should be told them when they want to know them.

I have not attempted to deal with the problems which arise after puberty and before the boy or girl is fully adult. These are difficult problems, as to which I have as yet not much experience of modern methods.

Whatever restrictions may be necessary in later life as regards sexual behaviour, I am sure that the method of the taboo is not the right one for securing them. There should be freedom in thought and speech and feeling; so far as the police permit, there should be freedom to discard clothing for instance, in bathing. The belief that sex is sinful, which must otherwise exist in the unconscious if not in conscious thought, is a potent source of unhappiness, leading to intolerance, cruelty and mental cowardice. I read in a letter to the newspaper from a religious person that we ought not to expose the body, because God made it. I could not follow the argument, nor understand why it should not involve hiding our noses, which, presumably, God also made. The whole conception that certain things are shameful, and must not be mentioned above a whisper, seems to me a mere relic of barbarism. So far from contributing to human happiness, it causes untold misery. And it produces that very preoccupation with sex which it is supposed to prevent. Men and women brought up without this taboo will think about sex freely and fearlessly, but far less frequently and broodingly than the old-fashioned puritan, who is led by unconscious envy to see it everywhere.

"In Sportive Mood" and "Sakuntala"

East-West of New York has reproduced in black and white from Chatterjee's Picture Albums Samarendranath Gupta's "In Sportive Mood" and Sailendranath De's "Sakuntala."

India's Educational Ideal.

The following by A. Baqui Khan also appears in the same periodical:—

Power was the key-note of German education: Napoleon inspired his men with the idea of glory; Rome dreamt dream of dominion and Spartan boys were asked to help Sparta to become a great military organization. But to India a new ideal has been interpreted, "Knowledge is Sacrifice." Knowledge which is aggressive, science which slays and culture which comes to kill, are dangerous forces which break down civilization and set up Babel instead. It is a humanising education of the masses for which we plead. It is knowledge pure as a sacrifice on the altar of men which will help India and all nations in the coming days.—*The Patna Times.*

Mr. A. V. Thakkar.

men like Gokhaleji; but he does not get a sufficient number of sincere workers." He concluded that memorable and inspiring letter with a remark, "If I am committing a mistake

A. V. THAKKAR, THE MAN AND HIS WORK

By H. P. DESAI, M.A., LL.B.

In the service of mankind to be
A guardian god below : still to employ
The mind's brave ardour in heroic aims.
Such as may raise us o'er the grovelling herd.
And make us shine for ever : that is life.

THOMSON

A salvation army worker whose hair has grown gray in the service of this country according to his light, remarked to a press representative that ever since the inauguration of the non-co-operation movement a new fire of service and sacrifice has kindled in the youth of Gujarat ; and added :
"Perhaps the most important consequence of this Conference was the following :
"Home life is the highest and finest product of civilisation. It is the great moulding force of mind and of character. Children should not be deprived of it except for urgent and compelling reasons. Children of parents of worthy character, suffering from temporary misfortune, and children of reasonably efficient and deserving mothers, who are without the support of the normal breadwinner, should as a rule, be kept with their parents, such aid being given as may be necessary to maintain suitable homes for the rearing of the children."

The Osaka Mainichi

According to the Japan Magazine,

In circulation no newspaper can surpass the Osaka Mainichi. The paper celebrated its circulation attaining 1,000,000 copies in the 13th year of Taisho (1924), and to-day over 1,300,000 copies are in circulation which is unexampled in Japan.

The building cost over Yen 2,500,000 being a fire and earthquake-proof ferro-concrete structure of six storeys, or seven-storeyed including its high tower.

The Osaka Mainichi possesses ten up-to-date high-speed rotary presses manufactured by R. Hico and Company of the United States, besides ten Marumori presses. All these machines are running fifteen hours a day. The electric motors, large and small, number 234, having 865 h.p. total ; gravure printing, etc., are features of this newspaper.

Education Without Sex Taboos

Mr. Bertrand Russell has contributed to the *New Republic* an article on Education without Sex Taboos which should be read, if read at all, in a serious spirit. Some extracts from it are given below.

Sex taboos are a far more serious matter, because they enter into and poison the life of

humanity thickness you may any day chauce to meet this protean figure whom Mahatmaji facetiously described as "The priest of the untouchables." The theatre of his activities is among the depressed and the oppressed in out of the way places or among forest tribes in hilly regions. His spotless khadi coat and thick dhoti, with a Kathiawari turban which protect his furrowed forehead and swarthy cheeks, baked in summer heat with an unvarnishing smile, which shrink into a sweet chiselled shape when he is discussing plans of purity expedition or is engaged in deep contemplation, mark him out from among the workers as the tried and unostentatious friend of the oppressed who symbolises to himself the vow of service to which he has dedicated the best part of his life.

The land of Sudama and Krishna, Gandhi's place of birth. Deynanda, Kathiawar is also the birthplace of Amritlal. Nearly sixty years ago if a bhanna family in Bhavnagar he first saw the notlight of the day. Little Amrit received his school education and part of his college education at Bhavnagar. Kathiawar is proverbially the land of chronic poverty and bright promise. Few Indian provinces have undergone the pangs of famine as this land of Sri Krishna has done. Paradoxical as it may appear, reckless extravagance has gone in history hand in hand with dire want and chronic starvation. Scores of princes who hold their sway in Kathiawar symbolise the aristocratic pomp and luxury amidst unspeakable squalor and undescribed misery.

Vithalvas, father of young Amrit, having noticed his acute intellect might have seen visions of Dawanship for his son which might have induced him to send him to the Poona Engineering College for qualifying him for an engineer's post. It might be that the young lad took a liking for the Engineering course and chose it for its inherent value. Any way, it was believed by good old folks and is still believed that the engineer's post is a step in the journey to Dowanship. However, the final choice was yet to come. Amritlal became a Bachelor of Engineering in the early nineties. After trifling with the academical diploma for a short period he

chose to be the architect of living clay, having tried his hand at brick and mortar in the Deccan, East Africa and even in Bombay where he filled the post of Engineer on a handsome salary. The lure of money or office held no temptation for Amritlal. Many stories are related of his sacrifice, self-abnegation and self-imposed poverty. Though drawing a large salary as an Engineer on the Uganda Railway when he returned from East Africa, Amritlal had just enough money to purchase a ticket for his native place while his cook had amassed quite a small fortune in the same period!

The commercial instinct of hoarding which is commonly associated with a Gujarati in general and a Kathiawari in particular receives a striking refutation in the life story of Amritlal. As an engineer of the Bombay Municipality, Thakkar earned the affection and goodwill of all those who came in contact with him by his honesty, diligence and his promptness to be serviceable to all those around him. His work among the municipal sweepers and the untouchables still bears fruit to the social workers of Bombay.

At last came the call. His restless soul could find no peace in the spasmodic attempts to be useful to the suffering community. In a farewell message he sent to his brother before he adopted the pink robe of the priest of untouchables Thakkar stated that he had resigned from the Bombay Municipality and had joined the Servants of India Society. "I have taken this step in obedience to the inner voice of conscience." He epitomised

his philosophy of social service in that letter. He wrote, "I firmly believe that India at present wants men who are life workers and not workers at leisure or at convenience. Our country will not be able to mark substantial progress till we can get such life workers. There are treasures of wealth awaiting sincere, honest workers. Heaps of money are being placed at the disposal of

Mr. A. V. Thakkar.

men like Gokhaleji; but he does not get a sufficient number of sincere workers." He concluded that memorable and inspiring letter with a remark, "If I am committing a mistake

by my act of renunciation, believe me it is a mistake made with good intentions and best of motives."

Then begins the life of unsparing toil, varied experience, sacrifice which knows no faltering and service which has been continuous and unbroken for a period of thirteen years. There is no part of Gujarat which Thakkar has not visited or the people of which are not acquainted with Thakkar's familiar face wreathed in smiles. He is the moving spirit of the Bhil Sava Mandal, as he was one of the pioneers of the social work among the untouchables, the Kaliparaj and the depressed classes. He has collected round him a band of devoted workers whose sense of sacrifice and service can be equalled only by their devotion for Thakkar. They conduct schools, attend to hospital work, visit Bhils and untouchables in their huts and hamlets, preach the abolition of untouchability among the ignorant village people and listen to the complaints of official or social persecution. "They are," as Napoleon said while performing the funeral obsequies of a brave soldier, "heroes of obscurity, greater than the heroes of the battlefield, braver than the religious martyrs whose names are sung across the oceans." It is this band of workers who have faced social rebuffs and insolent persecution of hidebound Hindu orthodoxy. But they are determined to attack the fortress of this soul-crushing orthodoxy which denies to its adherents elementary rights of human beings. Mr. Thakkar's immediate work among the forest aboriginal tribe of Bhils consists in looking after their educational, sanitary and economic needs. Temperance is the pivot on which turns their economic and social redemption and adequate attention is paid to the comprehensive plans of temperance propaganda.

What is the secret of Thakkar's social work and the personal affection he inspires among his workers? Like Gandhiji, Thakkar is a hard task master, a strict disciplinarian. But both of them have overflowing love for the workers and each of them knows their shortcomings and makes allowance for them. While both of them are preachers and practitioners in their lives of the Kantian Categorical Imperative, none of them demands from his co-worker the mast which the Imperative implies. To them their co-workers are their family, the only members of the family they have known in their lives. They can go to any extent, when the occasion

demand. In their devotion and sacrifice for the young men who have dedicated their youth, their ambition and their desires on the altar of the service of the poor and the downtrodden.

Even a casual observer cannot fail to notice the habit of accuracy which is a striking characteristic in the warp and woof of Mr. Thakkar's character. He is accurate to the smallest detail and if he is doubtful about a certain particular he will make sure about it before he admits it. This habit has rendered his work, wherever he has undertaken it, an example of 'thoroughness' and of complete harmony. This habit of accuracy and 'thoroughness' prevents Mr. Thakkar from tolerating a wrong thing in a wrong place. The writer remembers a certain occasion which took place many years ago when Mr. Thakkar in the course of his periodical visits to a students' boarding-house began to collect and clear out the tooth-washing sticks which the students had thrown the compound of the buildings. This personal example made an indelible impression on the students and the premises ever after remained clean and tidy.

There is so great a similarity between Gandhiji and Thakkar as social workers that one cannot help drawing points of resemblance between these two humanitarians of Gujarat even at the risk of incurring the latter's displeasure at bracketing him with a world personality like Mahatmaji. Gandhiji has so often declared that had not the circumstances drawn him into the vortex of politics he would have chosen to work in an unostentatious, quiet corner, casting his lot among the castaways of the society. No doubt, he would have been employed in exactly the same type of work Mr. Thakkar is carrying on at present. Both have inherited in common the penetrating shrewdness and robust commonsense of the Kathiawari. Both have sat at the feet of the late Mr. Gokhale, whose magnetic personality inspired them and drew them to social service. The young and the ambitious will miss the fireworks and explosives of political leaders in the social work among the depressed and the aborigines undertaken by Mr. Thakkar, who is universally known among the workers and the people by the affectionate appellation of "Thakkar Bapa." True as steel and gentle as a lamb, Mr. Thakkar is a particular favourite of children who approach him with as much familiarity as

GREATER INDIA REVISITED

they approach their own parents. In quite and serene dignity and solid work without the least ostentation or dilettantism, there is perfect resemblance between these two great men of Gujarat. There may not be in Thakkar the piercing intellect or infinite idealism which can conceive of no defect of faltering; but there is in both these men—each great in his own way—the intensity of emotional fervour, the rare quality which has marked the lives of all social workers who have brought to the miserable mankind the healing message of light, peace and mercy. Mahatma's powerful personality has impressed the world with the originality of his message of non-violence, which is his contribution to the arsenal of ideas and the world's store of knowledge. It is given but to few to serve mankind in this unique way.

As an humble worker whose love for the miserable and the poor knows no limit, who weeps for them and labours for them and strives day and night for their well-being, who shares their joys and sorrows and who knows not that he is unhappy, Mr. A. V. Thakkar stands apart from the rest of the workers. Accurate in every detail, a task-master with a heart as warm as a mother, a Yogi who has brought the light of education and sanitation to the hovels of the poor and downtrodden and whose conception of self has traversed the bounds of the ordinary family relations, Mr. Thakkar is an inspiration to the Youth of India and an ideal for patriotic workers. It is men like him that Swami Vivekananda wished for when he fervently exclaimed, "give me a score of them and I will place India on the pinnacle of her ancient glory, prosperity and happiness."

GREATER INDIA REVISITED

IV

BY PROF. KALIDAS NAG M.A., D. Litt. (PARIS)

PILGRIMAGE THROUGH BALI

WE were accustomed to consider the culture of Bali as something derived from Java. The collapse of the Hindu-Javanese empire of Majapahit in 1478 as the result of Islamic onslaught was supposed to have produced the migration of Hindu culture to the island of Bali. But the latest researches of Dutch antiquarians like Prof. Krom, Dr. Bosch and others have revealed a series of new facts of capital importance. They assure us that the island of Bali was *directly* colonised by the Hindus from India long before the forced migration of the Javanese Hindus under the pressure of the Moslem invaders in the 15th century. This conclusion was arrived at by Prof. Krom after a prolonged and intensive study of Indo-Balinese arts and crafts which, as he has shown, cannot be explained exclusively with reference to Javanese artistic evolution. So my friend Dr. Goris of the Dutch Archaeological Department writes: "Since 1825 a

beginning has been made with the exploration of the island of Bali and it has become clear that the Hindu-Balinese Art and Religion forms a branch of its own apart from the Javanese branch. Formerly scholars thought that the Balinese art was a mere offshoot of the Javanese art. But now by discovery of many inscriptions in the old Balinese language in copper as well as in stone, and by the finding of Sanskrit inscriptions in stone dating from the 9th and 10th century, of the Sakas era, the history of Bali had proved itself fit to stand on its own grounds."

My pilgrimage through Bali was in 1924, a year before the formal announcement; of this new discovery but I felt at every step of my visit how strikingly *original* are some of the manifestations of Balinese religion and art and how unsatisfactory it was to try to explain every thing in terms of Javanese history and institutions. Moreover, while the progress of Hindu culture in Java was seriously interrupted by Islamic conquest in the 15th

A Brahmin priest of Bali

century, the original Hindn-Polynesian culture of Bali, strengthened by the vigorous infiltration of Javanese culture from 1478 had an uninterrupted progression through these centuries, thereby producing a cultural mutation quite different from that of Java. Even in the course of my hurried observations during my journey from Singaradja to Gianjar I felt that I was in a cultural milieu quite different from that of the neighboring island of Java. The somatic type, the life and manners, the dress and ornaments, the picture of the villages nay, even the physiognomy of the fields and forests, were so different! My rambles in the heart of south-central Bali specially impressed this fact on my mind.

FROM DEN PASAR TO GIANJAR

The area round about Den Pasar is the most fertile part of the country and here the Balinese art of irrigation and cultivation may be studied to the best advantage. The : made for irrigation purposes, the

damming of rivers and such works which may be seen in the vicinity of Den Pasar show the height which the Balinese have reached as regards irrigation."

Den Pasar has a museum built with a view to give an idea as of different styles of Balinese architecture. The museum is situated in the central square of the village and necessarily commands a good view. There is a *pasangrahan* (rest-house) where one may enjoy games and amusements special to Bali, cockfight being the most important of them. The *mandoor* or native manager of the rest-house, provides for these recreations when due payments are made in advance.

The most important temple here is called *Pura Satria*. It was once considered to be the centre of the greatest ritualistic celebrations of Bali. Even today it is deeply venerated by the people as a sacred spot. The temple fell into decay and was being reconstructed while we were in Den Pasar. I was struck by the skill of the Balinese architects who were rebuilding the temple with the sure touch and self-confidence of the builders of ancient temples. I gathered that as temples in Bali are suffering wreckage from the constant convulsions of earthquake, the architects of Bali have almost the uninterrupted practice of building and rebuilding according to ancient traditions. And as the structure is mainly of brick, the cost is not so heavy as to retard the work of prompt renewal.

Very near Den Pasar there is a remarkable temple in the village Kapal. Here we found the figure of a huge elephant carved in the rock. Above the elephant there was a deity riding a lion or tiger, worshipped as the guardian of the bathing place.

The next village was Kesiman where we stopped to see the residence of the Raja who lost his life in his struggle with the Dutch Government. One of his descendants was living in the spacious house which through neglect looked deserted. Cockfight is a passion with the Balinese people and this chief of Kesiman has cultivated it into a vice. We found plenty of his prize-fighters—cocks, not men—and tried to catch a glimpse of the Raja's palace. This is just what a village palace should be. It marks a natural evolution out of the dwellings of the commonfolk: the same materials of construction—brick, bamboo, timber and straw, with sparing use of stone just occasionally to decorate the windows with exquisite carvings.

This community of taste testified to a democracy of social behaviour which is remarkable. The ruler and the ruled, the rich and the poor participated in the same cult, similar common comforts and culture.

The general features of the palace are the same that could be seen in ordinary houses; only the dimensions and execution are richer. On the road front, we see an ornamental brick-built gate flanked on either side by two corner pavilions made of wood and straw, one resembling our *nakarat-khana*, or the music-room, and the other containing a huge log of timber hanging from the roof—a wooden hell kept there in order to rouse people, as I gathered, in case fire breaks out or thieves and robbers break in! This queer danger-signal of Indonesia to help the wardens of the village amused us greatly and we entered into the spacious central courtyard separating the out-houses from the inner chambers. The Balinese have the same bunger for space which the Chinese betray in their architecture and painting. This open space lends an additional charm to the delicate structures around—the rooms in the wings and the house temples (Panaradian) soaring to five or seven-stories in thatched towers. The brick work with a modified pyramidal design reminded me of the architectural styles of the Hindu colony of Champa and the wood and stone carvings in the lintel and window sills looked simply charming. In India, the land of village communities, we must have had such village palaces in ancient pre-Asokan pre-lithic days. The spacious country-houses of north India, though different in detail, evoke, I do not know how, the same feeling as I had while surveying these Balinese houses from the central courtyard.

Passing from Den Pasar to Kesiman we took to the south-eastern road which passed through Sukawati very near the sea and we caught a glimpse of the strait of Badung separating Bali from the small island of Nusa Peida, which, though thickly populated, had several *Pura* or Hindu temples round about the hilly range of Mundi.

In Sukawati we took a little rest and tried to realise the past days of happiness and glory that conferred this proud name on this humble village. The name *Sukawati* (Abode of Bliss) suggested Buddhist Mahayana atmosphere and probably it may have been a seat of Balinese Buddhism; but found Brahmanical vestiges prominent in

the central temple which unfortunately had been seriously damaged by earthquake. The debris of the super-structure that collapsed, debris of the local people into had been gathered by the local people into a *stupa*. The base of the original temple, still partly standing, shows on the bas-reliefs lions, horses and monkeys. The five-storied thatched tower being lighter, was still erect and a block of rooms had also escaped destruction. Entering with the kind permission of the priest I was surprised to find a series of paintings like the Bengal *Pot* drawings on some kind of cloth. The subject is taken mainly from Brahmanical *Puranas*. Rahn devouring the moon, which is supporting itself on a huge serpent (Apsara?). The figures of a pair of women are visible, one in an attitude of lecturing and the other plying her *charkha*. On another side Vishnu is seen cutting the head of some wicked demon with his terrific *chakra*. We found several Hindu gods and goddesses sharing the central altar with a Dhyan Buddha—showing how in Indonesia, Hinduism and Buddhism flourished peacefully side by side.

From Sukawati we passed through Blahbatu and reached Gianjar, the seat of the great funeral sacrifice which had attracted us from Singaradja. My friend Njoman Kadjeng shrieked with joy to reach this destination and I expressed my thanks to him for guiding me so carefully through the most interesting and picturesque part of Bali, thus preparing my mind, as it were for a proper appreciation of the gigantic ceremonial at Gianjar which had drawn such a huge crowd from every part of the island.

THE COURT OF THE PRINCE OF GIANJAR

We reached Gianjar about 12 A.M. and before we could reach the palace of the Prince we had to get down several times on the way in order to watch that wonderfully orderly and picturesque crowd of fully ordered and picturesque crowd of Balinese men and women, boys and girls, all marching in their charming dress to the central place of celebration. It was really a wonderful spectacle, the like of which I never saw anywhere in Java but which strongly recalled to my mind our huge *melas* of North India.

Prince Dewa Ngurah Agung, the chief of Gianjar, very kindly received me in a spacious verandah of his palace where he had been sitting with several distinguished guests and I met Dr. Schrieke, Director of

watching freely, unmolested by the policing of an official levee, the music of the Polynesian people impregnated with Indian spirit, the entire decorative and artistic background, combined to transport me to the days of the great courts of Ayodhya and Hastina where the heroes and heroines of our Ramayana and our Mahabharata played their fateful roles. Their lives and achievements have almost been overshadowed by the lowering clouds of modernism in India, the soil of their origin. But in this far-off cultural colony of India I caught a glimpse of that Epic Age and seemed to peep into its actual life! By a weird coincidence I found before

my eyes, a queer piece of painted curtain depicting a scene which, as was explained to me emanated from our Mahabharata. Before the outburst of that tragic fight between the Kauravas and the Pandavas, Krishna is seen to come to the Kaurava capital with a view to settle matters if possible. The arrival of ambassador Krishna and the approach of the Kauravas to meet him is dramatically presented according to the local conventions by the Balinese artists who heightened my feeling of affinity and wonder, while I have been breathing that magic atmosphere of that wonderful Hindu colony.

COMMENT AND CRITICISM

[This section is intended for the correction of inaccuracies, errors of fact, clearly erroneous views, misrepresentations, etc., in the original contributions, and editorials published in this Review or in other papers criticizing it. As various opinions may reasonably be held on the same subject, this section is not meant for the airing of such differences of opinion. As, owing to the kindness of our numerous contributors, we are always hard pressed for space, critics are requested to be good enough always to be brief and to see that whatever they write is strictly in the point. Generally, no criticism of reviews and notices of books is published. Writers are requested not to exceed the limit of five hundred words.—Editor, *The Modern Review*.]

Dravidian Civilization

Mr. R. D. Banerji in his article on Dravidian Civilization, in the September issue of *The Modern Review* refers to the burial urns found in Southern India (page 306, Col. 2, last para) and says they are usually ascribed to Pandavas and called Pandu-Kulis i.e. "temples of the Pandavas" as he calls them. The word Pandu-Kuli is purely a Tamil word which means a Pandavapit and nothing more. It cannot be interpreted to mean "temples of Pandavas."

The word Pandu-Kuli, itself is supposed to be a corruption of the word Mandava Kuli i.e. the pit of the dead. The word Mandava Kuli, therefore, rightly conveys the real meaning of the pit, as a receptacle of the body of the dead—though the word, Pandu-Kuli a corruption of Mandava Kuli is current among the people obsessed with an idea to elevate the commonplace by ascribing it to mythological personages.

Coimbatore

S. R. VENKATA RAMANAN

JOURNALISM IN INDIA

By RAMANANDA CHATTERJEE

NOTHING like leather, they say. Once upon a time, so the story runs, a town being in danger of a siege called together a council of the chief residents to fix upon the best means of defence. A mason stood up to suggest that a strong wall should be built, and a shipbuilder counselled "wooden walls". Last arose a currier and said, "There's nothing like leather". As a journalist I have, of course, a good conceit of my profession. Nevertheless, I do not wish to imitate the example of the worthy leather-dresser and observe that, among professions, "There's nothing like journalism".

I may be reminded of the other version of the saw, "nothing like leather", which is understood to mean, "Nothing like leather to administer a thrashing". Journalism is, no doubt, very often used to give people a regular drubbing. But I do not think my fellow-journalists would like to run a race with the knights of the thong or the cone for first place as censors of morals. I say this with all respect for the journalistic genius of whom Morley tells in his *Recollections*:

A young man once applied to me for work, when I was editor of the *Pall Mall Gazette*. I asked him whether he had any special gift or turn. "Yes," he said, "I think I have a natural turn for *Invective*!" "That's capital," said I, "but in any particular line, may I ask?" "Oh no—General Invective". I found myself yesterday blessed with a wonderful outpouring of this enchanting gift.

Fletcher of Saltoun wrote in his *Account of a conversation concerning a Right Regulation of Governments for the Common Good of Mankind*: "I know a very wise man, so much of Sir Christopher's sentiment, that he believed if a man were permitted to make all the ballads, he need not care who should make the laws of a nation."

An Indian journalist would be considered oversanguine and conceited if, following in the footsteps of Fletcher, he were to declare: "Let me but make all the newspapers and periodicals of a nation, I would not care who should make its laws".

Having said all this to prove that we journalists are not wanting in humility, we

may be permitted to claim that our profession is a very useful, very influential, and very honourable one. It is not meant that there are no useless journals, none which have little influence or have influence of the wrong sort, and none which are conducted in a dishonourable manner. What is submitted is that, like other things, journals as a class are to be judged by the best specimens or at least by those which may be regarded as average or normal ones.

Just as capable journalists of high character whose mission is to serve man can do great good, so those newspaper men whose character and intentions are the reverse are a source of great danger to the world. Five years ago, at the annual dinner of the London District of the Institute of Journalists, Lord Hewart, Chief Justice of England, once a journalist himself, said in the course of his speech:—

A newspaper has a considerable power, especially for mischief. Suppose that a man has acquired a great deal of money and he puts that money into soap, mustard, tobacco, or any other household commodity, his opinions, likes and dislikes are precisely of as much consequence to the civilised world as they were before. If he was a foolish person before, his friends know he is a foolish person still. But suppose that that same man chooses to put his money into double rotary printing machines, the merest caprice and whim of that man, by the mere force of this mechanical duplication, may become a danger to the peace of the world.

I say in all seriousness that that is a very formidable circumstance. When you put aside for the moment the dreadful consequences of infinite multiplication—by the double rotary machine—it may now be a quadruple rotary—machine—it may now be a quadruple rotary—machine—the merit of the newspaper depends, in the last resort, upon the individual capacity and character of the man who writes. The merit or demerit of that which is given to the public depends absolutely upon the character and the attainments of the individual journalist.

The power for mischief that Lord Hewart spoke of is possessed particularly by widely circulated newspapers in powerful independent countries. In subject countries like India, no newspaper, whatever its influence or however large its circulation, can endanger

the Ethnographic Survey, who informed me that the Resident had already requested him to take charge of me. We became friends very soon and started observing that wonderful festival from different vantage grounds. The Prince made kind enquiries through his interpreters about India, her people, her *shastras*, her *pedandas* (priests) and so many other things that I was at a loss to answer! This spontaneous sympathy for a land so far away and from which so few people come to visit Bali (I was the only Indian in that crowd of guests and tourists from different lauds, photographers, cinema operators, etc., from Germany and the inevitable America!) spoke a great deal about some mysterious attraction that the Balinese feel for us Indians, an attraction which probably suggests centuries of ethnic and cultural interaction in the past. Amidst that heterogeneous crowd I felt as if I had been transported to an atmosphere so different from that of the Indonesian world that I had been recently exploring and so similar to that of our ancient Indian history that we read of in our classical works.

In the huge court-yard flanking the palace a splendid *mandapa* had been created. The decorations were simple and impressive because of that simplicity. The Prince was receiving guests and at the same time moving about giving instructions to different persons as the master of ceremonies. He kindly introduced me to his royal chaplain; the venerable priest, appearing in his ceremonial dress, his special turban his Balinese *alshamala*, his crystal heads, his strange ornaments, deepened the mystery that was overpowering me! We tried desperately to exchange our ideas and I felt how sadly we Indians have neglected our duty towards our own kith and kin of Greater India! Neither do we care to learn any of the living vernaculars of our ancient cultural colonies—the dialects of Champa and Cambodia, of Java and Bali—nor do we send any of our scholars to those places so that the Hinduised population of those areas could learn our languages and texts. With a pathetic gesture I told the high priest through my Balinese friend Kadjie that I might try in my humble way to rouse up my people so that they would consider it worth their while to send mission after mission to Bali and to re-establish direct relations with our brethren of that island.

There was a sudden rush of people

towards the pandal. The *gamelan* orchestra had started playing! The *Sradha-sabha* was full of guests seated on comfortable chairs and the common folk were crowding the remaining spaces with their beaming faces and intent looks. There was no undignified shouting or elbowing as we find in our Indian crowd. A peculiar restraint and serenity seemed to reign in the *mandapa*. The musical instruments were arranged in 3 successive rows: 3+4+5 altogether 11 *Gamelans* of different pitch and intensity. I found also a pair of gongs exactly like our *Kansar*, a pair of *Karatala* or cymbals and a pair of drums corresponding to our *mridanga*. The accentuation of the rhythm, the division of the liquid movement of Polyesian melodies into musical bars by

A Balinese dancing girl with characteristic ornaments

means of harmonious beats, all tending to evoke in an Indian mind the feeling of a superb execution of our timing instrument like the *mridanga*, the total absence of any wind instrument or vocal accompaniment conjured up a musical atmosphere which was wonderfully pleasant but strikingly different from our own. Here *tala* or rhythm seemed to be everything and

GREATER INDIA REVISITED

musical word-painting or imagery nothing + Or, who can say, this rhythm-music might evoke sense and pictures to the Polynesian soul that we are not capable of appreciating. For,

A masterpiece of the goldsmith's art of Bali

didn't I see the wonderful response of the delicate dancing girls to the inspiring movement of the gamelan? They seemed to understand perfectly that wordless rhythm-language. Sitting in a conventional pose, reclining against a richly ornamental frame heightening the statuesque character of these Balinese beauties, we found them to grow as it were from a state of suspended animation to the first tremor of quaking life and thence, to the exquisite scanning of the gamelan melody by their eloquent steps—a veritable *tala* symphony! The slim sinuous limbs of these girls were decorated with charming touches of ornaments and drapery. The lower part of the dress in bright green silk embroidered with gold, a flowing yellow upper garment and a purple piece tightening the body which was ever bending and twisting in a serpentine grace, making me realise for the first time the significance of our Sanskrit rhythmic mode called *Bhujanga-prayata*. There was a pair of a miniature wings attached to the girdle and the necklaces and the tiara were made in imitation of those found on the age-old Vayang figures, their designs strongly recalling the ancient Indian ornaments. These dancing apparitions were keeping time not with their feet only but with every fibre of their body, every

particle of their ornaments,—now trembling like a storm-scarred bird then rushing into a whirlwind of uncanny rhythms, the *Gamelan* keeping pace all the while with these variations.

In the midst of this music the royal party streamed in with the same untutored grace as the common people demonstrated, the Prince of Gienjar with his jewelled turban, followed by guards of honour carrying real and symbolical arms, swords and *Kris* blades of wonderful workmanship. But the most fascinating sight was the slow entry of the Queens and their train of maids of honour. The four queens took their seats in the assembly with a rare refinement and dignity about their face, and the maids stood behind, each carrying some exquisite work of Balinese goldsmiths: a betel box or a sandal carrier as they used to carry in the courts of ancient Indian princes of the Heroic Age. The bare body of these healthy Balinese maids, decked with old-world ornaments and shining with the grace of unsophisticated womanhood, hypnotised the audience into the belief that the vulgar modernism was no more and that the

A page from a Balinese Mahabharata illustrated according to the conventions of Balinese painting

bygone ages of beauty and chivalry had dawned anew! These living moving sculptures of our Indian Epics, the King and Queens with their attendants, the respectful crowd

the peace of the world. But journals in India, particularly those owned and conducted by Europeans, can do great harm to the cause of India's political, economic, educational and social progress. Though Indian-owned and Indian-edited journals cannot cause wars, they can nevertheless foment intercommunal hatred and jealousies and thus jeopardize the progress of the country. It ought, therefore, to be the primary concern of an Indian journalist to study how he can do good to his country and the world. His power for good depends on his character, attainments, and capacity. And the good which a journalist can do is very great indeed. The ways in which he can serve his people and all mankind are the ways in which social reformers, educators, spiritual teachers, and great and good statesmen serve man and in which financiers and industrialists may serve man but often do not. It is for this reason that Wendell Phillips, the American abolitionist, reformer and orator, declared: "Let me make the newspaper and I care not who makes the religion or the laws". When he said this, he had the ideal newspaper in view. Like all other ideals, journalistic ideals cannot be entirely realized; but we can in any case make strenuous endeavours to come up to them.

It is only in recent years that some Indian journals have been started mainly as business enterprises. Formerly Indian newspapers for the most part used to be conducted mainly with the object of serving the country. I do not mean to suggest that no journal conducted for pecuniary gain can do good to the country, though in starting and running newspapers the sole or chief object should not be money. It is true, newspapers cannot be conducted without money; but sufficient money can be earned for running a journal without sacrificing moral principles and public good.

The average young Indian journalist who works for money takes to the profession with a high object. His achievement can, however, only be commensurate with his character, attainments, capacity and industry. Whatever his attainments, capacity and industry, he cannot be much of a public benefactor unless he possesses character. He should also be able to work very hard systematically and regularly. A journalist need not be without genius; but however great a genius he may be, he is prepared for a life of unremitting

toil to begin with—call it drudgery, if you will. Readiness is another quality which he must have. He should have all his wits about him. A journalist cannot succeed in his profession if his memory be not very retentive and capacious; for one cannot command a reference library everywhere and at all times, and very frequently there is no time to consult books. At the same time, accuracy must never be sacrificed. Moreover, there are things which cannot be found in any book, which a man learns by using his eyes and ears; and though a journalist should carry a note-book with him, everything that one sees and hears cannot be noted down immediately.

Journalists should cultivate the habits of considering a question from as many points of view as possible, of judicious impartiality and of calm and balanced judgment. Eloquent and impassioned writing may come after. It is a mistake to think that any one can be free from bias and prejudice without effort. It should be a journalist's constant endeavour to remove from his mind bias, prejudice, partisanship and self-interest. Though a hero does not court danger and death and though it is not a soldier's ideal to run unnecessary risks, yet it is only a traitor to say that an ideal journalist should be quite fearless.

Journalism has been the butt of ridicule of many who are masters of a good literary style. But however much it may be cried down, if a journalist can write clearly, forcibly and tersely, he will be able to gain his object, even though he may not have cultivated all the graces of style.

A journalist may be truly said to have taken all knowledge as his province. It would be difficult to say what kind of knowledge would be perfectly useless to him. The omniscience of editors is a well-worn joke. But though it goes without saying that editors, like other human beings, cannot be omniscient, the more subjects and more things they know, the better fitted for their work they would be.

The chief subject of discourse and discussion in newspapers is politics. Hence politics in the abstract and as embodied in the history and laws of nations and their constitutions and government should be seriously studied by journalists. As we have to do with India, a study of Western politics alone, from the works of Aristotle and Machiavelli downwards, will not do for us.

It is necessary for Indian journalists to read Snankriti, the Arthasastre of Kautilya, the maxims of Kamandake, the Santi Parva of the Mahabharata, etc. An up-to-date journalist needs to be acquainted with even the latest thing in popular government, viz., the principles underlying the soviet government of Russia.

Circumstanced as India is, we cannot do without a sound knowledge of history, which is a sure cure for national despondency. The history of those peoples in particular which, after arriving at a high stage of civilization and then falling into decay or remaining unprogressive, have again joined in the onward march of nations, is sure to fill us with new life and hope. The history of Japan is well worth study. A somewhat detailed knowledge of the history of our own country is necessary, in order that we may know why and how we have become what we are and how we may be what we ought to be. No true lover of his country wants bloody revolutions. History tells us their causes. A journalist who is a serious student of history may be able to suggest how bloody revolutions may be prevented, and how at the same time ordered progress resulting speedily in a peaceful revolution may be secured.

The last big war and its after-effects have convinced thinking men in all civilised lands that the fates of all peoples and nations are inextricably interwoven. This makes it necessary for all public men and newspaper men to be acquainted with world history and world politics. Indian newspapers and periodicals generally shy of the discussion of foreign politics, partly because of ignorance, mainly because of pre-occupation with our own disabilities, grievances, and misery. It would be better if we could feel more at home in international politics. It is true, formally and officially India has no independent political relations with other countries. But informally and non-officially, we can influence and be influenced by foreign nations.

The interdependence of nations would be more evident even to the man in the street (if he knew and would only think of it) in the spheres of commerce, industry, finance, banking, business in general, and economies than in the province of politics. Newspaper men have, therefore, to be in their element in economics and all that is related thereto and included therein.

Like houses, machinery and vehicles,

social systems, too, are liable to decay and disruption. They can be mended or renovated to the advantage of society by those who are acquainted with human psychology, moral philosophy and the principles of sociology. Anthropology, the principles of heredity, and the art and science of race culture as related to sociology, should also engage our attention.

Progress and improvement are impossible for any people without education. The art and science of education, the relation of the State to education, the influence of Art, Literature, Science and Religion on national character, and how these in their turn are influenced by national character,—these are subjects well worth the serious attention of those who desire faithfully to serve their people. There is not the least doubt that children and, along with them, all mankind have suffered because of ignorance of child psychology. Our loss has been no less because of ignorance of what women are capable of and owing to preconceived notions relating to that sex. Newspaper men should have sufficient up-to-date knowledge to be able to do full justice to the woman's cause.

News relating to crimes, arrests, trials, judgments, punishments, prisons, prison-reform, etc., form not an inconsiderable portion of the contents of newspapers. Hence journalists require to know jurisprudence, criminology, and penology.

Editors have to discuss village and town improvement schemes, the respective advantages and disadvantages of rural and urban life, rural and urban sanitation, etc. Our equipment should, therefore, include a knowledge of the history and causes of outbreaks of epidemics, sanitation, town-planning, &c.

Village and town industries (including agriculture), and various vocations and professions are necessary for the existence and progress of society. All kinds of productive activity are attended with some disadvantages or other. Publicists ought to be able to suggest and discuss their remedies. This would require an adequate knowledge of these industries, etc. Mining laws, forest laws, etc., should be such as would tend to the conservation and promotion of the interests of the people of a country. To be able to safeguard such interests, we require to be acquainted with such laws, particularly with mining laws, in all progressive and

cratically governed countries. A knowledge of geology also will not come amiss.

All questions and legislation relating to labours in field, factory and plantation have to be studied by us. The publications of the International Labour Office at Geneva have facilitated such study.

Vitality connected with agriculture and other industries are the problems of Railway transportation and administration, shipping and navigation on the high seas, coastal navigation, inland waterways, motor traction along highways, aerial transport, radio, telegraph, telephone and postal rules and rates, customs duties, transit dues, octroi, terminal taxes, tariff, etc. Great progress has been made in the handling of these problems in the West and in Japan. We should be acquainted with the state of things in all these matters in the most progressive countries. As forming the ground work for such studies, a thorough knowledge and grasp of commercial geography would be of great use.

In politics and in industries, as well as in transportation, larger and larger masses of men are getting involved and interested day by day. Crowd psychology, implying a knowledge of the group mind, should also, therefore, be studied by us.

The duty of journalists is to conserve all that is good in the existing state of things, to revive, if possible, all that was good in the old order, to reform abuses where they exist in order that the good may survive, and to suggest and help in the introduction of what is new, for the promotion of the common weal. Progress in any sphere of life is dependent on progress in all other spheres. Hence a publicist who is a genuine and thoughtful progressivist in any sphere cannot but support and sympathise with progress in all other directions. But faith in the possibility of progress in any sphere and all spheres is itself born of faith—it may be unconscious faith—in the certainty of human improvement. That, again, is founded on the conviction—though we may not always be conscious of the fact—that this universe is ruled by an Immanent and Transcendent Spirit Whoso will makes for the welfare of man.

Hence, when Wendell Phillips declared that if he were allowed to make the newspaper he would not care who made the laws or the religion, he had in mind, not the ordinary run of money-making partisan or sensational newspapers or the gutter press, but

ideal newspapers conducted by persons who, in addition to being statesmen of high character, lofty nims, great capacity and ripe wisdom, are inspired with the faith of the man of God and guided by the light that lightens the world.

No journalist can know everything, no one can become a walking encyclopaedia. Some of us have to specialize in some subjects, others have to specialize in certain others.

It has been said above that a journalist need not be without genius. Some very distinguished men of genius have, however, done journalistic work. A living example is that of Rabindranath Tagore. Ordinarily, however, journalism does not require genius of a high order, but only the qualities and talents which have been referred to before. Nor should it be taken for granted that a great or a successful journalist is to be counted among the immortals. We cannot too clearly grasp or too vividly and tenaciously bear in mind this fact. For, as it is our task sometimes to sit in judgment on even the greatest poets, philosophers, artists, and scientists, we are apt to suffer from a swelled head, considering ourselves equal and sometimes superior to those whom we criticize.

It has been said above that a journalist may be said to have taken all knowledge for his province. But his special function is to make even abstruse and difficult things intelligible to the man in the street. This he has to do without sacrificing accuracy. It is a hard job. But if he cannot do it, he will fail in his duty as popular educator. For his business is not merely with the ephemeral politics of the hour, but with all that makes life worth living. So all knowledge and beauty, all elevating influences, all that makes for power, have to be brought to everybody's doors, in acceptable but not sensational forms.

It is a main part of our duty to report and record what happens. Now, these happenings are of various kinds. Some are good, some bad; some sensational, some quite humdrum. Things which are bad are reported to a far greater extent than things which are good. Criminal news of various sorts and the reports of many kinds of courts make more "interesting" copy than stories of the good that is being done all over the world in innumerable ways. I do not know whether this is inevitable. But perhaps it is possible to narrate even little acts of

kindness and courtesy in a charming and inspiring manner. 'I must confess I do not possess this gift.' But others do. We are all too ready to report that one man kicked another and that the assault was brought before a magistrate, but not the fact that a blind man was led by a little boy at considerable risk to himself across a public thoroughfare along which continuous streams of all sorts of vehicles were rushing. Or take this true little anecdote. A blind old beggar woman sat by the wayside with her hand outstretched asking for alms. Many a well-to-do person passed her by, without taking any notice of her. But another old beggar woman, who was returning to her hovel, after the day's collection of alms, saw her, took pity on her, and gave her something out of her own all too insufficient store of doles. Or take this other true story. During the last famine year in Bankura, in a small village, a little boy, belonging to a very poor family all whose members had been literally reduced to skeletons, got a little food for himself unseen by his brothers and sisters. But as soon as he had got it, he went to them of his own accord and shared it with them.

As examples of courtesy and kindness are generally not reported, whereas instances of rudeness and cruelty are, an impression may prevail that in this world there is more of the latter than of the former and that in human nature the evil predominates over the good. No doubt, if newspapers took to reporting the former, there might sometimes be the danger of ostentation and theatricality in well-doing and some 'faked stories, too. But by a process of sifting what is genuine may be separated from what is not. Of many of the donations reported in newspapers, it cannot be said that the donor's left hand did not know what the right hand did. Yet such announcements serve a useful purpose. It should be noted here with pleasure that the organised activities of all public bodies and institutions whose object is to do good are given publicity to by our newspapers.

As between countries, peoples, nations and governments, all signs of strained relations, all sinister animosities and suspicious and scares are quickly published. But the efforts to promote amity between peoples, and all those things which naturally go to draw peoples closer towards one another, do not receive prompt and prominent publication, and most often they are not at all published.

The world-public may thus be led to believe that all peoples are only waiting for an opportunity to fly at one another's throats; which may not be a fact. It has often seemed to me that we journalists do not do all that we can to promote friendship between the peoples of the earth. If we devoted more time and space to the literatures, arts, humane and philanthropic activities and the like, of different countries, the peoples of the world might love and respect one another more than they do. This is a kind of work which journals belonging to powerful nations can do better than others. But they do not if they really want to promote peace, they should do such work.

Our duty being to report what is happening in the world, we should not only record new scientific discoveries and inventions, but also take note of new ideas, thoughts, feelings and impulses and forms of beauty as they manifest themselves in the work of contemporary thinkers, poets, philosophers and artists of different countries. No doubt, it is not so easy to discern the emergence of new thoughts, ideas, forms of beauty, feelings and impulses as to grasp and publish the other things which are our usual stock in trade. But the things which may be called objective or external happenings ought not to be allowed to monopolize all our attention, to the exclusion of what may be styled subjective happenings or events in man's inner world.

Movements and organizations which strike across the barriers of country, race, nation, creed and language have begun to claim our attention. This is all to the good. A time there was when history was understood to mean a chronicle of the rise and fall of dynasties, of dynastic wars due to dynastic ambitions, fights between nations and their kings, etc. A sounder, and more comprehensive view, of the historian's work has prevailed for some time past. Modern books of history which approach the ideal are histories of peoples—their culture and civilization, of the evolution of their society, literature, art, commerce, industry, and the like, and their interaction. The historian also notes how there has been and may be the spread of cultural influence of various kinds, though there may not have been any political and economic conquest and domination. Italian and French influence was in the ascendant in England long after all traces of Roman or Norman supremacy had disappeared.

ed in Great Britain. India influenced many countries which she never conquered. Though a subject country now, her philosophy, religion, literature and art are still influencing mankind. The influence of the English language extends over countries which England never conquered. Not to refer to deeper and more important proofs of that fact, two small incidents may be referred to. One is that a treaty which was concluded between Japan and Russia was composed originally in English and ratified and was subsequently translated into Japanese and Russian. Similarly, recently the Italo-Albanian treaty was drawn up in English.

The change in the conception of history indicated above ought to bring about a change in the conception of our duty as journalists. For newspapers are fragments of the history of our own times.

Ours is a very difficult task. I shall point out the difficulties with reference to Indian conditions. We have to serve and please many masters. The staff of those journals which are owned by capitalists have to serve them. They may not in all cases have to do their bidding directly, but there is indirect, perhaps unconscious, pressure on their minds. But even in the case of those who own their own papers, there are other masters to serve and please. There is the circle of readers, drawn from all or some political, social, religious (orthodox or reforming), or communal sections. There are the advertisers. And last of all, one must not offend the ruling bureaucracy beyond a certain more or less known and unknowable point. Having to serve so many masters, we may seek to be excused for not listening above all to the voice of the Master within, speaking through our conscience. But there can be no excuse. Ours is a sacred duty. We must not sacrifice our convictions for any advantage whatever. Great is the temptation to play to the gallery; but our task is to mould and guide as well as to give publicity to public opinion. Capitalists who are not journalists but own journals should not interfere with the freedom of opinion of their staff. If they want a particular kind of policy to be adopted, they would be well-advised in choosing and employing only such men as have the same kind of political opinions as themselves.

The very nature of our work rises in us the desire to be first in the field. Nevertheless we must hasten slowly and publish news and views and conclusions after due

deliberation and examination of all the evidences and arguments available. That requires equanimity, impartiality and self-examination. The spirit of partisanship is one of our greatest enemies. It often impels us to take it for granted that those who do not belong to our party must necessarily be wrong or act from wrong motives.

It is obvious that the spread of literacy and education has greatly to do with the progress of journalism and journalistic success. Political freedom and economic prosperity are other factors in such progress and success. Religious and social freedom also are indispensable for progress in journalism. Indians who for the most part illiterate, only 82 per thousand persons, aged 5 and over, being literate. India is also a dependent country subject to stringent and elastic laws of sedition, etc. Our religious and social servitude is another obstacle. And, last of all, India is a very poor country. No wonder then that we possess only a small number of journals compared with other peoples who are more educated, more prosperous and politically and socially free. The following table will give some idea of the position we occupy in the field of journalism. The figures are taken from the Statesman's Year-Book for 1927.

Country.	Population.	Number of Journals.
India	318,942,450	3,449
Canada	8,788,483	1,554
United States of America	115,378,000	20,681
Japan	61,081,354	4,692
China	3,963,462	627

The table shows that in proportion to her population India possesses a much smaller number of newspapers and periodicals than the countries named above, which are all politically free and more educated and prosperous. But the mere number of India's journals perhaps gives an exaggerated idea of her progress in this respect. For, whereas in U. S. A., Japan, etc., many newspapers and periodicals have each sales exceeding a million, no journal in India has a circulation of even 50,000, most papers having a circulation of only a few hundreds or a thousand.

Though India has a large population, the multiplicity of languages spoken here, added to the prevailing illiteracy, stands in the way of any vernacular journal having a very large circulation. Of all vernaculars Hindi

is spoken by the largest number of persons, namely, about 99 millions of people. But unfortunately all the Hindi-speaking regions in India are among the most illiterate in the country. Moreover, as the speakers of Hindi live in 4 or 5 different provinces, and as owing to distance and other causes, papers published in one province do not circulate largely in others, Hindi papers cannot under present circumstances have a large circulation. About fifty millions of people speak Bengali. Most of them live in Bengal. But owing to most of them being illiterate, Bengali journals also cannot have a large circulation. Each of the other vernaculars is spoken by less than 25 millions, and several by only a few hundred thousands. Some papers conducted in English, particularly those owned and edited by Britisheers, circulate in more than one province. The British-owned and British-edited papers are more prosperous than Indian ones; because the British sojourners here are well-to-do and can ell buy papers, and the adults among them are all literate. Another reason is that as India's commerce, trade, industries and transport are mostly in their manufacturing bands, their papers get plenty of advertisements. Our journals cannot prosper and multiply in number unless all our adults are able to read, and unless the commerce, manufacturing industries and transport of our country come into our hands.

Besides illiteracy and other causes, our postage rates stand in the way of the circulation of our papers. In Japan postcards cost four and a half pies, in India 6 pies. In Japan the lowest postage rate for newspapers is half sen or one and a half pie; here it is 3 pies. There are differences in other items, too, all to the advantage of Japan. For this and other reasons, though Japan has a much smaller population than India, the number of letters, postcards, newspapers, parcels and packets dealt with by the Indian Post Office is smaller than the volume of ordinary (as apart from the foreign) mail-matters handled by the Japanese Post Office, as the following table shows.

Country.	Population.	Mail Matters.	Year.
Jodia.	318,942,480.	1,244,425,235.	1924-25
Japan.	61,081,954.	3,806,120,000	1920-21

The invention of type-writing machines has greatly facilitated the speedy preparation of quite legible "copy" for the press. But so far as the Vernaculars of India are concerned, the invention has not benefited their writers much. For, those vernaculars have different kinds

of characters and alphabets, for all of which typewriters have not been invented. And the machines constructed for some of the vernaculars are not at all as satisfactory and as convenient to use as those constructed for the Roman characters. A great difficulty is the existence in Sanskrit alphabets of numerous compound consonantal letters and the different forms which the vowels assume when connected with consonants. The compound consonantal letters and these duplicate vowel forms could be done away with by abolishing the convention that the vowel (अव) a is understood in all consonants written without the *hasanta* sign. My suggestion will be clear from the following two examples: instead of writing कलिया (कलिया) we should write कलिया (कलिया), which in Roman characters would be *kariya*; instead of writing भक्ति (भक्ति) we should write भक्ति (भक्ति), which would be *bhakti* in Roman characters.

A far greater handicap than the absence of satisfactory typewriting machines for our vernaculars is the non-existence of type-casting and setting machines like the linotype, the monotype, etc. for our vernaculars. Unless there be such machines for the vernaculars, daily newspapers in them can never promptly supply the reading public with news and comments thereon as fresh and full as newspapers conducted in English. The vernacular dailies labour also under the disadvantage that they receive all their inland and foreign telegraphic messages in English, which they have to translate before passing them on to the printer's department, which dailies conducted in English have not got to do. Reporting in the vernaculars has not made as much progress as in English, which latter even is here in a backward condition. This fact often necessitates the translation of English reports into the vernacular. I am dwelling on these points, because journals conducted in English can never appease the news-hunger, views-hunger and knowledge-hunger of the vast population of India. Of the 22,623,651 literate persons in India, only 2,627,350 are literate in English. When there is universal and free compulsory education throughout India, this difference between the number of literates in the vernacular and that of literates in English will most probably increase instead of decreasing. Therefore, for the greatest development of journalism in India, we must depend on its development through the medium of the vernaculars.

Madras has earned for itself the credit of establishing an institution for imparting education in journalism. Fully equipped institutions for giving such training should be established at all University centres. As reporting has necessarily to be taught at all such schools, special attention should be paid to reporting in the vernaculars.

Progress in journalism depends to a great extent on the supply of cheap paper, ink, etc. Raw materials for their manufacture exist in India in abundance. If we could supply our own paper, ink, etc., that would be a great step forward. The manufacture of our own printing machinery would also be a great help. Though that is not a problem whose solution can be looked for in the immediate future, we note with hope that the mineral resources of India are quite sufficient for all such purposes.

Photographic materials and everything else needed for equipping process engraving departments are also required for big newspaper establishments. How far India can ever be self-sustaining in this respect can be stated only by specialists.

One of the disadvantages of Indian journalism is that the supply of foreign news is practically entirely in the hands of foreigners. Renter gives us much news which we do not want, and does not give us much that we want. Moreover, what is given reaches us after manipulation in British interests. "The Free Press of India" has recently rendered good service in arranging for news being sent, quickly from London in relation to the Simon Commission. Permanent arrangements for such independent supply of foreign news would remove a much-felt want, though the disadvantage of cables and ether waves being controlled by non-Indians would still remain. Some of our dailies have correspondents in London. There should be such correspondents in the capitals of other powerful and progressive foreign countries.

Indian dailies in many provinces already have correspondents in other provinces. In addition to correspondents in all the principal provinces, who ought to pay greater attention to their cultural movements and events and vernacular journals than they do, it would perhaps be very desirable for the most flourishing dailies to have among their

editorial assistants competent young men from different provinces, who could pay attention to things appearing in their vernacular newspapers also. The German mode of apprenticeship known as *Wander-jahr* or wander-year, that is, the time spent in travel by artisans, students, etc., as a mode of apprenticeship, may be adopted by our young journalists also. Of course, they could do so with advantage only if our dailies in the different provinces would, by mutual arrangement, agree to allow such persons to serve in their editorial offices for fixed periods. Such all-India experience would stimulate our love of India as a whole, broaden our outlook, and cure us of our provincial narrownesses and angularities to a considerable extent.

It would be desirable to have an All-India Journalists' Association and Institute with branches in provincial centres. These should be registered under Act XXI of 1860. The Association may have a monthly journal, and draw up a code of ethics and etiquette for journalists. Without such Associations, solidarity and co-operation, we cannot aspire to acquire and exercise the influence belonging rightfully to the Fourth Estate. There should be libraries connected with such Associations or with the schools of journalism referred to above. In these libraries, in addition to books, reports, etc., required by the profession complete files of all important journals should be kept. It may be difficult if not impossible now to procure files of all such papers from the beginning; but earnest attempt ought to be made.

There should be Journalists' Defence Funds in all provinces, in order that no deserving journalist may go undefended for want of means when prosecuted for sedition and similar technical offences. A Journalists' Benevolent Fund may also be created for helping the families of deceased journalists under stated conditions.

So far as I am aware, there is no complete and connected history of journalism in any province of India, though fragmentary notes and articles have been written. When such provincial histories have been published, it would be easy to write a complete History of Indian Journalism.

December 24, 1927.

INDIAN Womanhood

Indian women have been making constitutional agitation for obtaining political and social equality. The months of November-December have been noteworthy for the splendid activity and unbounded enthusiasm shown by them in holding the Provincial Women's

presidency of Mrs S. R. Das, in the Bombay Conference, Miss MRINALINI CHATTOPADHYAYA, the talented editor of *Shama's* presided, in Madras the deliberations were conducted under the guidance of Dr MUTHULAKSHMI ANJAL. Similar Conferences are reported

Srimati Pratima Devi

Srimati Hiranprava Das Gupta

Conferences as preliminaries to the All-India Women's Conference to be held at Delhi next month. In the Punjab, the Provincial Conference was held at Delhi under the

to have been held in the United Provinces, C. P., Bihar and Orissa and even in several progressive Indian States. The sitting at Mysore needs special mention inasmuch as

Mrs. Janabai Rodke

the said school named after her father—the late Mr. Madhavrao Rodke. The Bombay Municipal Corporation has given fitting tribute to Mrs. Rodke's worthy efforts by locating the institution in a new building and has decided to run it as a free school. We are further told that Mrs. Rodke has now set up on her own account a small Free Maternity Home after her dear sister Ahelyabai who had sacrificed her all for the maintenance of the Madhavrao Rodke Free School. She has been running this maternity home on the most approved lines for the last three years. She has also opened a Free Library on the school premises in memory of her dear departed brother to whose unbounded enthusiasm and untiring exertions the continuance of the school after his father's death was chiefly due. In appreciation of her good work among the masses the Kaiser-i-Hind Silver Medal has been conferred on her.

One of the few lady-students who have graduated from the Dacca University last year, SHRIMATI HIRANPRAYA DAS GUPTA deserves particular mention. Born at Kakina (Dt. Kungpur) she received her early education at the village school. Her father

bad to experience great difficulty when he intended to give her further education. There was no Girls' High School in the locality and he could not afford to defray the expenses of her education at Calcutta. Shrimati Hiranpraya was, however, sent to Dacca whence she passed her Matriculation and Intermediate examinations—in the later examination she stood 20th among the successful candidates of the Dacca Board. She prosecuted her studies for the degree examination even after her marriage.

DR. MRS SEETALAI AJGAONKAR, M.A. D PHIL. (Oxon) BAR-AT-LAW is reported to be the first Hindu lady to be called to the Bar. In a recent speech at a Calcutta meeting held

Miss V. K. Draupadi Amma

under the auspices of the Sarojnani Dutt Memorial Association she denounced the Pordah system and reminded her audience to remember the following words of Ramchandra addressed to Bhivishan: "That the veils and closed walls are not the natural protection of woman, but it is only their character that should protect them."

Mrs. C. GOWRI DEVI, daughter of Mr. C. Rajagopal, Vatil, Ootacamund, has just taken the Vidwan degree (for proficiency in Sanskrit) in the Oriental Title Examinations conducted by the Madras University.

SRIMATI N. LAKSHMI DEVAMMA NAIMMA RAJU who took her B. A. degree at the last convocation of the Mysore University has

also been the recipient of a prize for obtaining record marks and a gold medal for good conduct.

We learn that MRS. GOURI PAVITRAN, B. A., L. T., a lady, has been nominated as the first lady member of the Ernakulam Municipal Council (Cochin State). She is an enthusiastic social worker and is the superintendent of the Sree Narayana Vidyarthini Sadana, a cosmopolitan Students' Home which has become a very useful institution under her able management.

MISS V. K. DRAUPADI AMMA, B. A., L. T., has recently been nominated by the Madras Government as a Councillor of the Trichur Municipal Board.

By PANDIT BENARSI DAS CHATURVEDI

Mahatma Gandhi's advice to Colonial Indians

At the time of his departure from Ceylon Gandhi left the following message for our countrymen in that island :—

"The one maxim of conduct that should guide us in life is, that we who come from another country must throw in our lot entirely with the people of the country of our adoption. Their welfare must be our primary concern. Our own must be subservient to theirs. That seems to be the only line consistent with dignity, and it follows along the lines of the great teaching that we should do unto others as we wish that they should do unto us. Thinking along these lines, as you know, I have repeatedly suggested to Englishmen in India that they should subordinate their own interests to those of the people amongst whom they are living, and nobody has questioned the propriety of this statement. There cannot be one law to govern the relations between ourselves and the governors who come to our land and another for us when we go to another land.

"I would ask you to live as sugar lives in milk. Even as a cup of milk, which is full up to the brim, does not overflow when sugar is added to it, but the sugar accommodates itself to the milk and enriches its taste, even so would I like you to live in this island, so as not to become interlopers, and so as to enrich the life of the people amongst whom you are living. Take care that none of the vices we have in India are brought with you in order to poison the life; nor must we bring with us to these shores the curse of untouchability."

It will be good if our people in different colonies follow this valuable advice of Mahatma Gandhi. Now that the fate of the Africans in East Africa is going to be decided by the British Government, our leaders there should keep this advice constantly before their mind while taking any definite line of action.

An Unhappy Utterance of Mr. Sastri

Here are some extracts from a speech of the Right Honourable V S Srinivas Sastri delivered at the Rotary Club luncheon meeting at Durban, South Africa. Explaining the movement of Non-co-operation Mr. Sastri is reported to have said —

"In such a large country as India this movement had a number of followers—say, 100,000. But what is 100,000 to a country of 250,000,000 in British India alone? After doing a great deal of harm, and causing a great deal of embarrassment to the Government, this non-co-operative business, which divided parties, is no longer in the field. Non-co-operation has failed, and Gandhi has said that he will not revive the issue for a long time. Some of us think he will never raise it again for times are not going to be propitious for such drastic propaganda.

"Now, if such issues are not going to be there what will be our dividing line politically in the future?"

Mr. Sastri went on to say :

"I need not say how reluctant people are to part with power, although they may realise it has to be parted with at some time. So it happens that the Britisher in India erects his own platform. He knows that the moderates are his friends in the main; he knows that the extremists are, always clamouring for complete and thorough independence; he knows that while that opinion is held, by the few, the bulk of the people are on his side, and that rather strengthens him, because he says the hour of danger has not yet come.

A GREAT MISJUDGMENT.

"And therefore, you find in India that moderates and extremists are being continually thrown to-day as if their common lot was to defy the Britisher. Nothing to my mind is a greater misjudgment. The Britisher is going to remain there a long time, and it is largely under his guidance and good example that India is going to learn the necessary lessons of patience, moderation and discretion in political matters. To me, therefore, it is a matter

of special regret and lamentation that the Britisher has not yet seen the need of taking the moderates completely into his confidence.

THE COUNTRY'S FUTURE.

"It seems to me that the future of the country will be in jeopardy until these two sides—the Indian moderate and the Britisher—learn to identify their interests in the country.

"We shall then put the extremist in his place, because the extremist is a person who wants to cut India off from the Empire, and who thinks generally that it will be good for India to have an outlook of her own as distinguished from those that Great Britain and her civilization have brought in their train. I have no part in such Chauvinistic views.

"I say, left to ourselves I do not think we shall be able to find it possible to evolve a polity of our own. I see, therefore, no future for India unless it is based on goodwill and co-operation between the Britisher and the Indian moderate.

And having that conviction I have always thrown in my lot on the side of the British connection. I am grieved to think that the strong desire of the representatives of Great Britain still to remain aloof from the moderates delays the consummation."

Enlightened public opinion in India, irrespective of any party divisions, thinks that Mr. Sastri is not only the Agent of the Government of India in the Union but that he represents all that is best in us. In fact, he is known as our first Ambassador abroad. Under these circumstances he ought not to give expression to such views as befit a party politician and not a gentleman of the position of Mr. Sastri, who should be above all parties.

Our opportunity in Tanganyika

Mr. U. K. Oza, special organising officer of the East African Indian National Congress writes to me in his last letter from Nairobi:—

There are vast empty spaces in Tanganyika and it is under a mandate. It is only the grossest lack of imagination and of a spirit of enterprise that makes our people sit down and watch it being colonized by the British and the Germans. I am unable to reconcile myself to this and I hold both the Government of India and the Indian Princes of the West Coast responsible for failing to make use of this opportunity which may slip away at any moment. Sauntering along the white roads of Dar-es-salaam, listening to the deep roar of the Indian Ocean, and contemplating the luxuriance of the African landscape I have often heaved a deep sigh of regret and disappointment. Tanganyika is spacious and open to-day—tomorrow it may be overcrowded and closed."

As one who has seen with his own eyes that beautiful land of Kilimanjaro I can

endorse every word of Mr. Oza. We are really losing a great opportunity in Tanganyika and the coming generation will have to lament for our criminal negligence. Mr. Oza holds the Government of India and the Indian Princes of the West coast responsible for this negligence but the leaders of the public opinion in India are no less to be blamed.

An Aryasamajist Worker in Fiji

Thakur Sardar Singh, who has gone to Fiji with his educated wife for educational work there, said in a meeting held for his reception at Suva:—

"Here in Fiji we should serve the Hindus, the Mohammedans and the Christians all alike. They are the children of the Bharatmata. It will be a great blunder if we forget our nationality. In spite of differences of opinions we are Indians first. It is a crime to quarrel in the name of religion. There is nothing bad in loving one's own *Dharma* but religious fanaticism must be condemned. We ought to live here amicably."

It is to be hoped that our people in Fiji will wholeheartedly respond to these noble sentiments of Thakur Sahab. They should not allow narrow communalistic views to prevail there.

Aryasamaj and Indians 'Abroad:—

Will the Secretary of the Arya Sarvadeshik Sabha, Delhi, kindly tell us what steps have been taken to carry out the following resolution passed at the Dayananda Centenary held at Muttra in the year 1925?

(a) Every educational institution of Aryasamaj shall admit one (or more than one if possible) student from colonies giving him free-studentship and free-boardings.

(b) A scheme for doing religious and educational work among Colonial Indians shall be prepared by committee which shall include some prominent Colonial Indian workers also.

(c) A full report of the work done by the Aryasamaj in the colonies shall be prepared and published.

(d) Help shall be given to colonial institutions and journals which are doing religious educational or Hindi propaganda work among Indians abroad.

(e) Every Aryasamaj shall help the returned emigrants in being admitted in the society.

Returned Emigrants and the Fiji Government

In June 1926 the Fiji Legislative Council carried a non-official European's motion asking that the returned emigrants be brought back to the colony and now it has granted £10,000 for this purpose. The Fiji Government is sending one of their own officers to India to supervise the transfer of these people. This officer will take back those who have been for at least two years in this country and are too poor to pay for their passage to Fiji. In their case free passage will be provided with free food and clothing on the voyage. On arrival in Fiji they will be conveyed free to places where they may desire to settle, small cash advances repayable in easy instalments being made to them.

Of course, there is no philanthropic motive behind this action of the Fiji Government. They want cheap labour and nothing else. As the returned emigrants at Matlabur, Calcutta have refused all the offers made to them to settle in India, the only course left open to us is to allow them to go back to Fiji Islands. We have only two suggestions to make here:—(1) The old parents of those who may be going to Fiji should not be left out here in India i.e. families should not be divided. (2) The returned emigrants of colonies other than that of Fiji should also be given a chance to settle in that Island.

We know this move on the part of the Fiji Government will, to a certain extent, make our work in Matlabur a little easier as it will relieve the present difficult situation but it will not solve the question permanently. For that we require Indian emigrants friendly service committees at Calcutta and Madras.

Indians in Madagascar

H. H. the Aga-Khan referred in a press interview to certain difficulties of our countrymen in Madagascar. There is a tax for business against Asiatics. I understand the Aga-Khan has been working to get this tax removed by the French Government and that he has engaged the services of a well-known French lawyer to represent the case of the Indians. His Highness deserves our thanks for this active interest in the cause of Indians abroad. We shall request him to do something more. If he were to donate for the

education of Indian children in East Africa only a portion of what he gets from his followers in those territories, the educational problem will not be as difficult to solve as it happens to be at present.

Indians in Sarawak

Honourable Mr. K. Natesa Aiyar writes in his paper, the Public-Opinion of Ceylon that there is some correspondence going on between the Native State of Sarawak, Borneo and the Government of India on the subject of opening of emigration to that island. Mr. Aiyar writes.

There are just now about 1,000 Indians in this country and of this nearly 600 live in and about the capital town of Kuching. The rest are scattered in the interior, quite a considerable number living in Miri, the city of the Asiatic Petroleum Company. There are about 100 women, and about 120 children of the school-going age. Of the merchants 60 are South Indian Mohammedans, with a handful of Sindhis and Boras. The Police force chiefly consists of Sikhs, numbering about 25 in all. Of the Indian medical men, one is in Government service and the rest are all private practitioners. There are nearly 43 Indians working on the F. W. D. roads under the Government others are under various contractors."

It is said that a good member of Moplah labourers are going from Singapore to Java, Borneo and other countries to which emigration from India is prohibited. Mr. Aiyar says that the Government of India sent their Agent Rao Bahadur D. Arulauandam Pillai to Sarawak to prepare a report on the question of opening of emigration to that colony. Is this a fact? The Government ought to have consulted the Indian legislatures before doing so.

An Appeal to my Countrymen in East Africa

We are passing through a great crisis in the history of our community in East Africa and it appears that our Motherland has not yet realised the seriousness of the danger that lies ahead of us. A great deal of publicity work is therefore essential. To do my humble bit in this direction I have decided to get a special East Africa number of an English journal in India issued in February next.

I appeal to my friends and correspondents in Kenya, Uganda, Tanganyika and Zanzibar to contribute their articles to this special number. Those who cannot write English should send their views in Gujarati, Hindi or Urdu.

I hope there will be a ready response to this appeal of mine. May I add that my friend Mr. C. F. Andrews joins me in this appeal?

NOTES

Congress and Conferences at Madras

As in the meeting-places of most previous sessions of the Indian National Congress, so in Madras during last Christmas many other all-India conferences besides the Congress held their annual sessions. We are not sure, but perhaps some three dozen conferences may have been convened there altogether. A few were perhaps provincial in their character.

The disadvantages of holding so many conferences in the same city during the same week are obvious. Even the biggest of them all, the Indian National Congress, does not under such circumstances get the single-minded attention that it deserves, from the vast concourse of people coming together from all parts of India and a few from abroad. The smaller conferences get a still smaller share of the attention that they deserve and require.

The reason why, in spite of these drawbacks, so many conferences are held in the same week and same place are also obvious. Small is the number of holidays common to all the provinces which are sufficiently long to enable people to assemble in one place from all parts of India and go back home before their expiry. Of them perhaps the Christmas vacation is the longest. And the season is more favorable for travelling than any other.

The holding of so many conferences at the time and place of the Congress is not without some advantages, too. A Press Conference, a Library Conference, or even the Social Conference, can bring together only a comparatively small number of men, whereas the Congress attracts a vast multitude of men and women. Some of the latter, however small in number, are drawn, by curiosity or for some other reason, to some of these conferences, thus adding to the number of listeners. And some whom mere curiosity may have brought

to such a meeting may become so interested in the cause as to remain a steadfast supporter of it ever afterwards.

Those who have devoted some thought to the problem of Indian regeneration are not unaware that political reform, progress or revolution alone cannot take us to the goal. Similarly, our object cannot be gained by attempting a solution of only some social, educational, economic, or any other problem alone. The solutions of each and all are more or less interdependent. When so many conferences are held at the same time and place for the attainment of so many objects, it may strike even the most enthusiastic and single-minded adherent of political, social, economic or other movements that the shrine where he worships is not the only shrine dedicated to the Motherland, and that the problem of national regeneration is bigger and more comprehensive than he thought. That is no small gain.

Advance Copies of Presidential Addresses

In some years we get advance copies of the presidential and some other addresses, in some years we do not. This year we have not got any. The Congress spends every year more than a lac of rupees, and some conferences spend thousands. The extra expenditure of a few hundred rupees for postage and printing so that all editors may get advance copies is not too much to ask for. There is no harm in assuming that even the editors of monthlies would not become intolerably conceited by receiving such consideration. Not that all of the editors of even the highest dailies are able to make use of all the materials received. But all of us as servants of the public would like to have all possible facilities to do our duty.

Address of the Chairman of the Congress Reception Committee

In his address as Chairman of the Reception Committee of the Indian National Congress, Mr. G. Muthuranga Mudaliar, delivered at the congress and some of the conference, dealt with many of the topics now engaging public attention. He dwelt on the reasons for boycotting the Simon Commission. "I assure the minorities and the special interests who have been persistently misled by interested persons," said he, "that in a free and a democratic India, their interests would be safer than now. India has, through history, been the asylum of the oppressed and the persecuted and it is part of our national character to treat minorities hospitably and even charitably. Protection to minorities will be the first canon of political conduct in Swaraj India. Nextly, we must repudiate the suggestion that Britain should ever be the peace-maker in India, holding its diverse interests and peoples in justice to each other, but is an abjection to herself. We must proclaim our right and our capacity to settle equitably and honourably all these delicate questions. Thus there is no argument for co-operation with the Statutory Commission except the argument of fear, of toadyism and of atrophied political sense." This assurance, addressed to minorities gains additional force as it comes from a member of the non-Brahman community of Madras.

As the boycott of the commission is only a negative programme, he advocated in addition the drafting of a Swaraj constitution by a National convention to be summoned by the National Congress, the draft to become the national demand after ratification by the Congress. Along with Mr. C. Vijayaraghavachariar, Mr. Mudaliar is in favour of a unitary, instead of a federal, constitution for India, for the following reasons:—

It is my humble opinion that the Government we should organise for India under Swaraj should be on the unitary basis. Federal Government, however, suitable to the conditions of other countries, will be peculiarly inappropriate to India with its revived sense of solidarity. It will also disrupt the synthesising forces of nationalism and present the sad picture of a divided India. If there is local sentiment and local aspiration, we can well provide for them by a careful process of decentralisation. Administrative units organised on a linguistic basis, with adequate provisions for the needs of localities will amply answer the requirements of local patriotism. At the same time, a

strong central Government will keep nationalism intact and elevate India among the nations of the world.

These are all undoubtedly important considerations worthy of attention.

He pressed the claims of the depressed classes alone to special representation, saying,

Although the exclusive representation of any special interests would not be in strict consonance with the democratic theory, considering the peculiar conditions in India, I would advocate that the Depressed Classes alone may be given special representation, if only for a time. I do not sympathise with those with similar demands made on behalf of Anglo Indians and corporations like the Universities and the Chambers of Commerce. Their interests, if they have any, apart from those of the people, will, I conceive, be sufficiently safeguarded by an assembly composed of members chosen in general constituencies.

In his opinion, "Parliament should recognise and that at once that" "all authority should be derived from the people and not from Whitehall. In the absence of any assurance in this behalf we must abandon any further thought of framing our constitution as a constituent partner of the British Commonwealth of Nations."

To enforce the demand for the constitution ratified by the Congress, he suggested the devising of adequate sanctions in that connection, he drew attention to the need for the practical union of the religious communities, the different castes and depressed classes, the Brahmins and the non-Brahmins, and the different political parties. He dwelt on the most urgent need for the propagation of higher economic ideals in the country, for the practical realization of which educational, agricultural, sanitary and other kinds of work and among the ryots are necessary. As a political sanction behind our demand for Swaraj, he advocated a strict and ruthless boycott of all British goods.

But the economic interests of India require that we should proceed a step further. We should boycott all foreign goods, which would anyway compete with Indian manufactures. India gains nothing economically by purchasing continental and American substitutes, sometimes inferior to British goods. The Congress should, as early as possible, appoint an expert Committee which will organise this boycott, and make it thoroughly effective; so that the emphatic refusal to take any article of British manufacture will serve our political purpose, and the exclusion, as far as possible, of all foreign goods, will serve our economic purpose.

Here we thought would follow the advocacy of a scheme for the production on an adequate scale of all those classes of British

and other foreign goods whose boycott Mr. Madalari advocated. He expressed gratification at the expansion of the movement for the production and sale of khaddar, as the result of the untiring efforts of a noble band of workers. He added :—

I appeal to them to combine political work, as especially propagandist, with the beneficial activities they are now pursuing. Secondly, I suggest that they should not confine themselves only to khaddar, but should include among their activities, the promotion of the sale of other purely indigenous articles in general demand. This would greatly help the indigenous industries as well as improve the finance of the Spinners' Association. I earnestly appeal to Mahatmaji to consider this suggestion.

He next advocated the organisation of labor as another vital matter. "The Congress must stand fearlessly and wholeheartedly by the laboring population, industrial and agricultural. The Congress should co-operate with the All-India Trade Union Congress and help it to secure human conditions for Indian labour. By enlisting their active assistance, the cause of 'Swara' could be tremendously advanced." He then invited attention to the Congress organization in the country in order to make it thorough and efficient. "So high must be the character that our propagandists possess with the people that they would be always looked upon as earnest servants of the country, capable of giving intelligent guidance on every matter, and, at the same time, sound exponents of politics and economics." Mr. Madalari wants them to be paid workers. "It would not be very easy to find the kind of workers he wants—particularly if they must be chosen from adherents of a particular clique.

Mr. Madalari reaffirmed his faith in Mr. Gandhi's original policy of absolute boycott of all legislative bodies. But as, "somehow Mahatmaji's policy is to-day not in public favour," "if we must contest council elections," the elected members should, abstain from attending the councils except for retaining their seats. "If they are to attend on some days at least, they should, in our opinion, attend on those days on which the Committees to help the Statutory Commission are to be elected in order that such elections may be successfully thwarted. The speaker went on to urge.

Remember the detenus of Bengal: remember the tone of Lord Birkenhead's speech before you think of co-operation. For it is clear to my mind, that the alternative to non-co-operation, is co-opera-

tion the hybrid has produced anarchy. With great humility, I venture to suggest that the only policy which will meet the present delicate situation is the one which permits us to enter the Councils but forbids us to sit there.

Dr. Ansari's Presidential Address

Dr. Ansari's address as President of the Madras Session of the Indian National Congress was commendably short, clear and methodical. It was free from theatrical tall talk. One of its defects was that it did not lay down any definite line of political action for the country to follow. On the political goal and ideals of India and on the difficulties in our path he observed :—

All schools of political thought in India are agreed that the goal of our activities is a free and self-governing India, offering equal opportunities to all, and recognising and guaranteeing the just and legitimate rights of all sections and classes, at peace within herself and friendly with the rest of the world. Indians do not claim anything more or less than that they shall occupy the same position and enjoy the same rights in their country as free people do in their own. If this can be achieved within the Empire, they have no desire to break away from it, but if the Imperial connection stands in the way of our reaching the goal we should not hesitate to sever that connection. Our motto, in the words of Mahatma Gandhi, should be, "Within the Empire if possible, without, if necessary."

I do not minimise the difficulties in our path. They are many, but none so formidable as the one arising out of the aggressiveness of Imperialism and the greed of High Finance, the two most fruitful sources of trouble and misery in the world to-day. Empires are carved and nations are deprived of their liberties to satisfy the Imperialist ambition and to monopolise resources in raw materials to feed the factories in Europe and to secure exclusive markets for their output."

"Dr. Ansari" went on to expose in a scathing manner the hypocritical cant of the civilizing mission of the West and the white man's burden.

Politicians and statesmen wax eloquent over the "mission of civilisation" and the "white man's burden," but none has exposed the hollowness of these professions better than Cecil Rhodes, the great master of imperialism in South Africa, when he said, "Pure philanthropy is very well in its way, but philanthropy plus five per cent, is a good deal better." Joseph Chamberlain, the High Priest of imperialism, was more outspoken. "The Empire," he said, "is commerce," and India, he was frank enough to add, was "by far the greatest and the most valuable of all the customers we have or ever shall have." The history of this philanthropic burglary on the part of Europe is written in blood and suffering from Congo to Canton. The steel-

frame theory of government, the arrogant claims to trusteeship of dumb millions and the newly-invented illusion to cloak the pre-war Concert of Europe, known as the League of Nations, are but different manifestations of the same spirit. So long as these dangerous doctrines are pursued, the sources of human misery shall endure. India holds in her hands the remedy for this universal misfortune, for she is the key-stone of the arch of Imperialism. Once India is free, the whole edifice will collapse. The best guarantee for the freedom of Asia and the peace of the world, is a free and self-governing India.

He proceeded to say that since its inception the Congress has tried three policies or methods: Co-operation, Non-co-operation, and Obstruction in the Councils. Co-operation has had the longest trial—for about 35 years. Then Non-co-operation was tried for about a year and a half. Next came Obstruction in the Councils. Real Co-operation is possible and fruitful only between equals and those having common ideals. Otherwise the weaker party has to surrender its ideals and interests for the gratification of the desires of the stronger. Dr. Ansari showed by quoting the following passage from the Montagu-Chelmsford Report that the British Government never contemplated giving Indians any political rights which would in any way limit or interfere with Great Britain's ambition and interests, camouflaged as "Imperial responsibilities":—

"It seems to us axiomatic that there cannot be a completely representative and responsible Government of India on an equal footing with the other self-governing units of the British Commonwealth of Nations until the component States whose people it represents and to whom it is responsible, or at least the great majority of them have themselves reached the stage of full responsible government. Not even then can we say that the form or the degree of responsibility which will be reached in India will exactly correspond to that attained by the Dominions. The final form of India's constitution must be evolved out of the conditions of India, and must be materially affected by the need for securing Imperial responsibilities."

Regarding the experiments along three lines made by the Congress, the President observed:

We have now before us the results of the three experiments made by the Congress during the last forty years. We gave an unbroken period of thirty-five years to Co-operation, about a year and a half to Non-co-operation and four years to the policy of Obstruction within the Councils and Constitutional Deadlocks. We can, at this stage, appraise the real value of each programme and judge the comparative merits and demerits of each. Co-operation has led us nowhere. Obstruction within the Councils has not given us any better results. Non-co-operation certainly did not

achieve all that was expected of it but it, was through our own weakness and inability to rise to the high level demanded by it and not through any inherent defect of that policy. Non-co-operation did not fail us, we failed. Non-co-operation did not receive an unquestionable and a serious set-back in the first encounter. I also admit that in the present atmosphere of mutual suspicion and hatred created by deplorable communal quarrels and with the whole country divided into hostile political camps and factions groups, there is no prospect of an immediate resumption of Non-co-operation. The spirit of Non-co-operation, however, has come to stay as a potent force in Indian politics and as I have said elsewhere, "I feel as certain as ever that apart from very extraordinary and unexpected occurrences we shall win back our freedom only by self-discipline, self-organisation and self-help and through a movement in which we would be obliged to resort to direct action in some shape or form. I firmly believe that India is only recuperating from the moral and material effects of a disastrous war and would soon emerge once more resuscitated and rejuvenated to attain what it is destined to attain."

He did not give the least indication of the shape or form direct action should take. As regards how the process of resuscitation and rejuvenation can be helped and the people prepared for the next encounter, the speaker thought that "this cannot be done unless we have established unity in the country, unity in the Congress and unity in the councils."

In considering how unity may be brought about in the country, Dr. Ansari has dealt with the Hindu-Muslim question.

While attempting to solve the Hindu-Muslim question we should not, however, mistake the symptom for the disease. The political and religious differences which are straining the relations between the two communities are but outward manifestations of a deeper conflict, not ward manifestations of a deeper conflict, not peculiar to India or unknown to history. It is essentially a problem of two different cultures, each with its own outlook on life, coming in close contact with one another. The best remedy lies in a recognition of the rights of each culture to exist, in a development of a spirit of tolerance and respect and in the encouragement and cultivation of cultural affinity by the establishment of national institutions where young people of both the communities will come into touch with each other and get opportunities to study and understand the ideals underlying the civilisations of both. The educated Indian is forced by circumstances to study European culture but knows next to nothing about the culture of his fellow-countryman living next door. It is time this dangerous isolation and colossal ignorance were ended. With greater knowledge of each other's deep-rooted sentiments and sympathy for each other ideal questions of separate representation, cow-slaughter and music before mosques will become matters of the past of interest only to research scholars of Indian history.

There is considerable truth in these observations. One moral to be drawn therefrom is that in Hindu educational institutions, Islamic history and culture should also be included in the courses of study and in Moslem institutions Hindu (including Jain and Buddhist) history and culture should also be similarly included. In tandem educational institutions arrangements should be made for the study of both. And it would perhaps be best for the country if henceforth universities, colleges and schools meant mainly or solely for particular sects were not founded.

Dr. Ansari then dealt with the political causes and the religious causes which have brought the communal problem into being. He thought the Bombay resolutions of the All-India Congress Committee were an advance upon the Lucknow pact of 1916, and was of the opinion that, if given effect to, would solve the problem so far as its political aspect was concerned. Similarly in his opinion the Calcutta resolutions of the All-India Congress Committee on the cow-killing and music-before-mosques questions afforded a satisfactory solution of the religious part of the problem. As both the Bombay and Calcutta resolutions have been discussed in the past and their defects pointed out, they need not be discussed afresh. It need only be pointed out that in neither set of resolutions did the Hindu point of view receive adequate consideration. Dr. Ansari said that he did not propose to deal at length with the problem as it affected the Sikhs in the Punjab and non-Brahmins in South India, but he put in a plea on behalf of the "untouchables."

For bringing about unity in the Congress, he made several suggestions in addition to the solution of the communal problem. He touched on the question of the reorganisation of the Congress on a wider basis. "Measures must be adopted to make the Congress franchise popular and to induce all communities to join the Congress in large numbers." He deeply regretted the dwindling in the number of Sikh and Muslim adherents of the Congress. "The case of the Parsis who took such a leading part in the early life of the Congress, is worse still." From the experience of his own community the President was able to tell the Indian Christians that they could advance their interests only by joining the Indian National Congress and making common cause with the

rest of their countrymen. He declared that he would like to see every section of our people entering into a healthy rivalry to contribute its share to the conduct of national affairs through the Congress. "The doors of the Congress should be thrown wide open to all parties and we should stop at nothing short of a surrender of basic principles to bring back every party to the Congress." It would be difficult to foretell whether Dr. Ansari's earnest desire for unity would be able to effect a breach in the walls of the Swarajist monopoly or even in those of a particular clique of the Swarajya party in Bengal. But we whole-heartedly share his desire for unity.

As for unity in the Councils, the President observed :—

I do not believe in the Councils. At the same time I am aware that the Congress has permitted its members, if they so desire, to enter the Councils, and a considerable number of my fellow-workers believe that they can render useful service to the country from inside them. To all these I humbly suggest that if they must go to the Councils the least that the country expects of them is that instead of allowing their opponents to take advantage of the division in their ranks they will join forces with other nationalist groups to form a People's Party of Opposition and present a united front. As it is, on a majority of problems the various nationalist groups have been invariably found in the same lobby.

Dr. Ansari is whole-heartedly in favour of boycotting the Simon Commission. "We can have no part or lot in it," said he.

As regards a draft constitution for India, which he considered urgently needed, he replied :—

Whatever be the final form of the constitution one thing may be said with some degree of certainty, that it will have to be on federal lines providing for a United States of India with existing Indian States as autonomous units of the Federation taking their proper share in the defence of the country, in the regulation of the nation's foreign affairs and other joint and common interests.

As soon as the Draft Constitution is ready the Congress should take steps to call a National Convention consisting of representatives of all interests, communities and political parties to consider it and give it a final shape.

He thoroughly exposed the inequity and wickedness involved in depriving a large number of men in Bengal of their liberty for an indefinite period without even the mockery of a trial or formulation of any charge against them. "It is the most damning confession of moral bankruptcy when the Government have not the courage to bring these young men before their own law-courts, to be tried

by their own judges and in accordance with the laws promulgated by themselves."

Restoration to liberty of these young men would be some indication of the advent of a better spirit in the regulation of the relations between India and Great Britain. Our efforts should not be confined merely to the release of these unhappy detenus but a repetition of a similar outrage on the inviolable rights of citizenship in the future should be made impossible by incorporating in the fundamental laws of the country a Declaration of Rights guaranteeing to every citizen liberty of person, liberty of speech, liberty of association and liberty of conscience.

[Dr. Ansari

Dr. Ansari next turned his attention to India's exiles abroad.

Closely associated with the question of the detenus is the question of Indian nationalists compelled to live in exile in foreign lands. We may disagree with their methods of work in the past but the abnormal conditions, which impelled them to adopt that course of action, have disappeared and there is no longer any reason why they should be denied the right to return to the country of their birth and to serve it peacefully.

The President then showed how the regulations relating to the grant of passports have been manipulated to curtail our freedom of movement.

It is not detenus and exiles alone who suffer. Ordinary citizens are being deprived of their freedom of movement and their right of ingress and egress is being tampered with through an ingenious administration of the regulations relating to the grant of passports. Passports have become one more weapon in the hands of the bureaucracy to be used against us. India has been turned into a vast internment camp and a number of Indians abroad have been successfully locked out. Respectable citizens have been prevented from leaving India even for purposes of health, business or travel. It will, perhaps, be difficult to find a more glaring example of the abuse of these regulations than in the cancellation of the passport of Mr. Shapurji Saklatwala, M. P.

He lamented the general deterioration in national health which has become specially noticeable during the last fifty years, and urged that all causes of such deterioration, whether climatic, social, economic, etc., should be strenuously combated. He drew attention to the growing evil of drink, to lack of proper provision for health and hygiene, and to neglect of physical culture. There is much room for improvement in our general standard of cleanliness both in relation to the person and the household, and in the sanitation of villages and towns.

He suggested in conclusion that we should consider Indian problems in their international setting and cultivate cultural relations and maintain friendly contact with Asiatic countries.

"The Naivete of the English"

Under this caption the New York *Nation* publishes an article on the situation created in India by the appointment of an exclusively Parliamentary Statutory Commission. That this journal is not an entirely pro-Hindu or pro-Indian one will appear from the following extract from the article:—

The problems of governmental reform in India are not merely technical ones of division of administrative responsibility; extension of the franchise; collection, control, and expenditure of revenue. They are, in their most troublesome aspects, rooted deep in social and political anomalies. Until the violent Hindu-Muslim hatred melts away, no satisfactory system of representation will ever be devised. Each element, distrustful of the other, clamors for a different method. The Hindus wish a single, general electorate, such as we have in this country. The Mohammedans,

forming only one quarter of the country's population, insist on the election of representatives to the various legislative bodies by separate religious communities. Otherwise, they argue, and perhaps justly, they would never be represented and their rights would be ignored. A somewhat similar situation exists in the southern part of the country between Brahman and non-Brahman communities. Of a totally different character is the problem of the Native States, governed by hereditary monarchs and with greater or less degrees of independence as regards their internal administration. These are in no respect bound by the system of government prevailing in British India. But since they are scattered through all parts of British India like polka dots, they create an unusual disharmony of autocratic with representative government.

Yet, what does such a paper say?

What has shaken India is the personnel of the commission. It consists of seven members, among whom there is not one Indian. Not only have the avowed Nationalists like Pandit Malaviya and Pandit Moti Lal Nehru been ignored; but men like Mr. Patel, who has officiated with the greatest satisfaction to all parties as the first elected president of the Indian Legislative Assembly, have been passed over, as has Mr. Srinivasa Sastri, who was long a "moderate" and seemed to have the confidence of the Government of India, and even those Indians of ability, occupants of posts of trust, who have been staunch supporters of the British Raj. All Indians have been omitted on the ground that "the desire, natural and legitimate, of Indian members to see India a self-governing nation could hardly fail to color their judgment of her present capacity to sustain that role." Could any but the most self-contented Tory Government in history have uttered a statement of such perfect naivete?

The American paper proceeds to observe:—

There lies nowhere in the announcement a hint that India is in any degree possessed of either the right or the ability to make decisions concerning her own fate. Rather she is like a child before its parents asking for a dime to go to the movies, or with forbidden jam on its lips; or, perhaps in a better analogy, a plaintiff before a jury—or is she considered a defendant at the bar?—without even a jury of her own lowly peers! This is the spark which is kindling India's flame of resentment and in some quarters threatening a boycott of the commission. Once more India's self-esteem has been shattered on British arrogance. We predict that in the future as in the past Britain will get small satisfaction from her policy of governing this proud people in the manner of condescension, not to say of insult.

Referring to the problems mentioned in the first extract in this note, *The Nation* concludes:—

These problems and others with them have baffled many excellent British minds for decades. We wonder what this commission's seven members, who start so innocent of Indian affairs, will accomplish in two short years. We suspect that until Englishmen admit the equal right—we should say even a better right—of Indians to discuss the

government of India, all the commissions in the world can do no better than mark time. Englishmen who cannot see the imperial color of their own minds are an obstacle to progress wherever they flaunt their naive complacencies.

We wonder why our American contemporary forgets or ignores the fact that British commissions relating to India are generally intended to "mark time," if not sometimes also to put the clock back.

The Goal of Independence

It has been urged in this Review repeatedly for years that India's political goal cannot be other than independence. Therefore, when a representative public body like the Congress declares its object to be the attainment of independence, it is not for us to quarrel with it on a point of principle.

It has been stated that this declaration does not introduce any change in the Congress creed. Article I of the Congress constitution was stated at the Nagpur session in 1920 as follows: "The object of the Indian National Congress is the attainment of Swarajya by the people of India by all legitimate and peaceful means. If the Madras declaration does not introduce any real change in this Article, that means that for the word "Swarajya" the word "independence" is substituted, and that "Swarajya" was always understood to mean "independence." This latter statement cannot be accepted as correct; for then Gaudhiji's formula of Swarajya "Within the British Empire if possible, without, if necessary" would be unmeaning. We think, therefore, that a change has been introduced, if only to the extent of removing vagueness and ambiguity.

This Review, as stated above, has theoretically placed before its readers for two decades independence as the political goal of India. It has not advocated any kind of action meant directly to win independence, because its editor is not aware of any that is at present feasible. So if its editor were a member of the Congress, he would not perhaps have moved or supported a resolution declaring independence to be its goal. For, in our view, the Congress is not a body for merely stating what is true or desirable in the abstract but also for laying down and carrying out programmes which would lead to the attain-

ment of its object. We have not so far read what lines of action the Congress has laid down for attaining independence by "all legitimate and peaceful means." We are not adepts at making hair-splitting distinctions. But it may be permissible to ask whether the means to be adopted must all be both legitimate and peaceful, or some of the means may be legitimate though not peaceful. We are emboldened to ask this question, because the mover, seconder and supporters of the independence resolution all appeared to adopt the attitude of freedom from mental reservation and of bold expression of the faith and conviction that was in them. In pointing out what means are legitimate in attaining independence, we do not mean to enter into any ethical or spiritual discussion. It is sufficient for our purpose to say that we find numerous examples in history of subject peoples gaining independence by war. We take it, then, that war is considered one of the legitimate means of winning independence. The question that we may, therefore, plainly put is whether in the opinion of the Congress, war would be a legitimate means for its adherents to adopt for winning independence, or are they confined to the use of peaceful legitimate means alone.

So far as our knowledge goes, no really subject country has ever yet gained independence without war. Specialists in history will kindly correct us if we are wrong. The case of Norway may seem to be an exception. But Norway was not really subject to Sweden. We do not, of course, suggest that what has never taken place in the past history of mankind may not happen in its future history. What we ask is that the Congress as a body of men who are or ought to be practical politicians should give us at least an inkling of the means to be adopted for gaining independence. The programme of Non-co-operation laid down by Mahatma Gandhi was accepted by the Congress at one time as an effective means for gaining Swarajya, whatever that might mean. But that programme was driven out of the field, so far as the Congress is concerned, by the programme of obstruction in the Legislative Councils. That has not, however, succeeded in creating deadlocks. But even if it had succeeded, it could not have led to independence. In fact the policy of obstruction was meant to destroy dyarchy and win provincial autonomy and a responsible Central Government or at the best, what is

known as the Dominion status for India. That policy was never meant to and cannot be imagined to be calculated to lead the nation directly to independence.

Nor can one console oneself with the thought that the Congress pins its faith on Non-co-operation as the peaceful legitimate means by which India may gain independence and has re-affirmed such faith. For, at the same Madras session in which independence was declared to be the goal of the Congress, Sriji Syamsundar Chakrabarti's attempt to revive Non-co-operation failed.

We are not so conceited as to think that our desire for the country's independence is as ardent as that of many of those who voted for it at Madras. But we may say be without vanity that we, too, should like to be perfectly free, and, therefore, want to know from the Congress Independentists what we can do to promote the cause. The country is entitled to expect guidance from grey-headed men and women and elderly young men and women who have devoted their time and energy to its service. They must refuse to be told that these leaders indulged in mere vaporing and bluffing when they declared independence to be India's political goal.

We are not sufficiently versed in the British-made law of the land to be able to state whether this declaration may justify any legal action against the Congress. But the supporters of the resolution are or ought to be prepared to face all risks.

Bombay Session of the National Liberal Federation

Not having received an advance copy of Sir Tej Bahadur Sapru's presidential address at the Bombay session of the National Liberal Federation and seeing it for the first time in *The Bengalee* on the morning of the 23rd December, we are unable to go through and summarise or comment on it. *The Bengalee's* summary is printed below.

Presiding at the tenth session of the National Liberal Federation which commenced its sittings on Tuesday afternoon in Bombay, Sir T. B. Sapru launched a vigorous attack on the manner in which the Simon Commission had been appointed and characterized the rank and file of the Commission (i.e. barring Sir John Simon) as having been composed "of men in the second flight" to quote the words of the "Times". Sir T. B. Sapru

then regrets to say, "The irony of it all is that we are invited to rejoice in such a team and to believe that these six worthies in the second flight can take good care of the present interests and of the future of three hundred millions of this country."

Replying to Lord Birkenhead's assertion that the Committee of the Central Legislature will be invited "in a spirit of great sincerity to co-operate as colleagues with the Commission", the speaker says that "there is not even an indication that these committees will take part in the examination of witnesses or documents or that they will be at liberty even to submit any report. They are to place their proposals and try to persuade the commission to accept them which will analyse and criticise those proposals and in the end may accept or reject them. They cannot vote at any stage of their contact with the Commission. They are simply to plead, to persuade, to urge and then to withdraw, and yet we are told that these committees will be colleagues of the Commission. If an advocate can be a colleague of a judge, if a person who is put on his trial can be the colleague of a jury: then no doubt these committees will be the colleagues of the Commission."

Dwelling at length on the function and duty of the Liberal party, specially in its relation to the Statutory Commission, the speaker said that it cannot be a party to anything which is inconsistent with the honour and self-respect of India and that the Liberal Party "must repudiate not only the Commission which has been appointed but, the entire spirit in which the question of India's further advance has been conceived by Parliament and the Government of India."

Our contemporary comments on Sir Tej Bahadur's Address in part as follows:—

Out of the mass of verbiage which constitutes the presidential address of Sir Tej Bahadur Sapru at the tenth session of the National Liberal Federation the following sentence, addressed to our British rulers, arrests attention:—"You may do anything you like in the assertion of your right as supreme power, but we are not going to acquiesce in this method of dealing with us." This is the central fact of Indian politics; and it were much to be desired that each programme and policy was based on a recognition of its implications....

We must refuse to acquiesce in our present condition, though we have to submit to it. We cannot afford to lower our national ideal, however helpless we might be to vindicate the least part of it. Sir Tej Bahadur merely says that "neither our self-respect nor our sense of duty to our country can permit us to go near the Commission"; but the inference ought to be wider. We should not only boycott the Commission in every way and at every stage, but we may not also accept the constitutional arrangements, present or future, except under protest—utilizing them wherever possible for furthering our national ends and resisting them to the best of our ability whenever they go counter to those ends. We can approve of no constitution that does not at the outset concede our right to self-determination as a nation and is not framed or sanctioned by our own representatives.

The Indian National Social Conference

In the absence of an advance copy of Mr. K. Natarajan's presidential address at the Madras Session of the Indian National Social Conference, we print below its summary prepared by the Associated Press:—

A strong plea for the eradication of social evils was entered by Mr. K. Natarajan in his presidential address to the Indian National Social Conference. He expressed the opinion that even now the only solution for communal difficulties was to concentrate upon social reform. Referring to women's educational progress he held that it was marvellous and added that in the present conditions it was necessary to make no distinction in the courses of study; especially in higher education open to men and women.

Detailing the evils of child marriage Mr. Natarajan urged the enactment of a marriage legislation with provision for associating monogamy as an integral part of the Indian marriage system.

After referring to the cramping effects of unmeaning superstitions Mr. Natarajan pleaded for the elevation of the so-called depressed classes. He repudiated the allegations in Miss Mayo's book regarding the honour of Indian womanhood and said Miss Mayo's purpose was to prove the superiority of the white race.

Concluding he expressed his firm conviction that if ever a universal religion and civilisation were to embrace all mankind that religion and that civilisation would have the origin in the ancient land of India.

We agree with Mr. Natarajan in thinking that "in the present conditions" it was necessary to make no distinction in the courses of study, especially in higher education, open to men and women as also in the other opinions to be found in the above summary. But if he really said women's educational progress in India has been marvellous, we cannot help saying that his enthusiasm led him to indulge in the language of hyperbole.

Sympathy in the Case of the Kakori Prisoners

The telegraphic messages summarising the proceedings of the Congress and of the subjects committees of the Congress are often not quite explicit, nor is the full text of every resolution and amendment invariably given. In the absence of such full text, criticism may often be unjust and misleading. In the case, however, of the resolution relating to the Kakori prisoners put from the Congress presidential chair and carried unanimously without debate, we have the full text before us which is:—

This Congress puts on record its sense of deep pain at the callous attitude of the Government in not commutating the brutal sentences passed in the Kakori case against Srs. Ramprasad Biswas, Rajendra Nath Lahiri, Asfignilah and Singh in spite of the powerful public indignation aroused by the vindictive sentences and offers its heartfelt sympathy to the families of the victims.

It is to be borne in mind that these young men were sentenced to death on the ground that they had taken part in dacoities and murder alleged to have been committed in furtherance of a conspiracy to overthrow British rule and make India independent. The resolution does not state that the evidence against them was insufficient or weak. It may, therefore, be taken for granted that the Congress tacitly admitted that it was proved that the accused had committed dacoity and murder.

On grounds which need not be stated here we are opposed to the infliction of capital punishment. If the Congress were of the same opinion, it would be expected to condemn the Government for inflicting capital punishment in all cases of murder, not in this case alone in particular. But as it has not passed any resolution condemning capital punishment in general, it is to be presumed that it has done so in this particular case because the dacoities and murders were said to have been committed from patriotic motives.

The execution of the four prisoners is a tragedy too deep for tears. We, too, sympathise deeply with their families. But we do so, not in the least because we have any sympathy with what the deceased did, but because we feel that had they continued to live and acted under the guidance of wise, fearless and good patriotic men, there would have been a probability of their immortalizing themselves as benefactors of their countrymen. It is for the blasted promise of their lives that we mourn.

In judging of their actions, it would ill become us to assume a superior and high moral tone. We would adopt the standard generally followed by historians, however low and defective it may appear according to the highest teachings of the most spiritual teachers of mankind. For gaining independence, war is held to history to be justified, and in such wars the killing and plundering of enemies are not condemned in books of history. By no stretch of sympathetic imagination can the deeds of the deceased be spoken of as a war of independence or as bearing any resemblance to such war. The

farmer killed at Bamrouli, the boy killed at Bichpuri, and the law-agent and another person who were slain by the deceased or their associates were no more enemies of India than any of those who supported the resolution adopted by the Congress. Nor can any man who is not an inmate of a lunatic asylum say that getting together a few thousand rascals by robbery and murder is part of a preparation for war. Patriotism has, unfortunately, been made to cover a multitude of sins. But we hope the Congress did not mean to condone, far less indirectly to encourage, crime, if committed by young men from patriotic or alleged patriotic motives. Some months ago, when the judgment in this case, delivered by the trying magistrate, was published, we remember to have read that the prosecuting counsel as well as the judge admitted that some of the prisoners were not actuated by any greed or other sordid motive. We do not now remember their names. But assuming that all the persons named in the resolution acted from a patriotic motive that cannot justify the means and methods they adopted or the deeds they did. Even to this day, news occasionally reach the public of some superstitious ignorant man or woman having sacrificed some innocent human being for propitiating some deity. No one tacitly or expressly admires or sympathizes with such slayers of men or their families. The mistaken patriotic motive cannot be considered higher than the mistaken religious motive. "Oh, but human sacrifice is a damnable superstition", some will exclaim. True, but is the destruction of human lives such as that of which the deceased were guilty a commendable act of enlightenment? Is the Motherland a blood-thirsty deity at whose altar innocent men are to be sacrificed in this way?

We think the Government, in consideration of their youth and inexperience, ought to have commuted the death sentences into one of transportation for life in the case of those who were penitent and begged for mercy. That would not have endangered public safety, while it would have given the deceased a chance for turning over a new leaf.

In conclusion, we have to express our deep regret that the Congress had no sympathy to express for the families of the four innocent men who were killed by the men who have been executed. We beg to be forgiven by the families of the latter for any

pain that our comments may give them. But for the Congress resolution we would not have referred to this topic at all.

The Khilafat Conference

At the All-India Khilafat Conference held at Madras during last Christmas,

Moulvi Martuza, M. L. A. pleaded in the course of his welcome address for boycott of the Simon Commission, which he characterised as a wanton affront to India and Indian Moslem public opinion and also emphasised the need for a national constitution. He also pleaded for Hindu-Moslem unity and for the acceptance of the Delhi and Calcutta proposals for Hindu-Moslim settlement.

Moulvi Md. Shah, M.L.A., who was then formally elected to the Chair amidst cries of "Alla-ho-Akbar," delivered his Urdu speech pleading for co-operation of his co-religionists in boycotting the Royal Commission on the Reforms. The President was against the acceptance of Legislative Committees, which he remarked, was calculated to demoralise Indian life and lower its tone besides vitally affecting their best and national interests.

Moulvi Shah prefaced his address with a plea for keeping the Khilafat Committees alive. He opined that Mahomedans would be committing a folly if they should say that unless a settlement was arrived at in regard to their social and political rights, they should desist from boycott of the Simon Commission. Certainly this was no time to talk of settlements.

He then welcomed the visit of the King of Afghanistan and supported His Majesty's suggestion of an Asiatic League.

Dewan Bahadur M. Ramachandra Rao

The Indian States' Peoples' Conference

The Tribune of Lahore rightly thinks that

More than ordinary interest attaches at the present time to the deliberations of the All-India Indian States' Peoples' Conference which concluded its Sessions at Bombay on the 18th December last under the presidency of Dewan Bahadur M. Ramachandra Rao. The president in his comprehensive address dealt in an impressive manner with the various problems which the subjects of all the Indian States have to face in common and on the solution of which depends the realisation of their political aspirations and the evolution of representative institutions in the States. We have the powerful arguments addressed by the Dewan Bahadur to the ruling Princes for the betterment of the lot of their subjects and his plea for co-operation and assistance from British Indian subjects will obtain sufficient response, so that both parts of India may march hand in hand to their heaven-appointed destiny.

Sir T. Sadasiva Iyer

Sir T. Sadasiva Iyer, whose death was announced last month, was formerly a judge of the Madras High Court, and at the time of his death occupied the position of President of the Religious Endowments Board. If we are not mistaken he, a Brahman, was appointed to that office by the non-Brahman ministry, showing in what high respect he was held by all sections of the Madras public for his character and wisdom. He was a distinguished judge, an ardent theosophist and a staunch social reformer. His wife was a true helpmate to him in all his beneficent activities. Notwithstanding his high position he led a very simple life.

Sir T. Sadasiva Iyer

Hardiness of Indian Young Men

It is a welcome sign that Indian young men are giving proofs of physical hardiness. Sometime ago Rabindranath Chatterjee of

Mr. Rabindranath Chatterjee

Allahabad swam continually for more than twelve hours in the sea near Bombay, covering a distance of 20 miles. Though he had to give up swimming before reaching his goal, the feat itself was noteworthy.

More recently Bansaribhushan Mukherji of Calcutta has distinguished himself as a fast long-distance walker. According to two *Free Press* messages,

The results of the All-India 28 miles Gymkhana Walking Competition of Lucknow were decided on December 1, last. Mr. B. Mukherji, who has so long won all the Walking Tournaments, each for the championship, gained the laurels this time also by the record timings of 3 hours 30 minutes and 2 1/4 seconds. Mr. Mukherji also won the H. E. the Viceroy's Cup for the best walker of India.

Mr. B. Mukherji of Bengal has won the 7th annual All-India 45 miles Walking Tournament held at Benares on December 4, in 6 hours and 59 minutes, by defeating among others P. Turner of Rangoon and Mc K. Green of Jamalpur. There were altogether 28 entries, hailing from different parts of India among which 20 completed the course.

The Statesman records —

Following on his success in two All-India walking competitions—28 miles at Lucknow and 45 miles at Benares,—in both of which he defeated candidates from all over India B. Mukherjee, the Bengal champion has won the 15 miles walking competition as well as the national 40 miles walking competition at Allahabad. Thirty finished the course.

Mr. Bansaribhushan Mukherji

In the 15 mile walk, Mukherjee finished in 2 hours 17 minutes 19.3 seconds. J. C. Harris (Allahabad) was second in 2 hours 32 minutes 9

secs., and Gopesham (Nepal) third in 2 hours 40 minutes. Thirty-five candidates entered.

There were entries from all over India for the 40 miles walking competition. Mukherjee was first in exactly 5 hours. J. Briggia (Allahabad) was second 1 minute 36 seconds later, and F. Millett (Bombay) third in 5 hours 1 minute 52 seconds. Of the 42 competitors 20 finished the course.

In the All-India 72 miles walking competition from Burdwan to Calcutta on the 10th and 11th December last, at the finish the second man was about one foot behind the first and the third was about five yards behind them. The following is a list of the first four competitors:—

(1) S. Datta. (Mohani Bagan A. C.) 18 Hrs. 48 Mts. 13 Secs.

(2) S. Prosad, (Survey of India) 18 Hrs. 18 Mts. 13-4 Secs.

(3) J. Prosad, (Totally Sporting) 18 Hrs. 48 Mts. 13-4 Secs.

(4) Su-hilendra Mukherjee (Moohur Fakur Balak Samiti) 18 Hrs. 51 Mts. 27 Secs.

Physique of British Women

The *Statesman's* London correspondent has sent to that paper the following facts gleaned from the Industrial Fatigue Research Board's report on the physique of women in industry:

Glasgow's worst slums produce a race of Amazons. Girls are doing "oavy" work for ten hours a day with ease and in bare feet. Their physique is most remarkable. One woman in a chemical works has shovelled 20 to 25 tons of bente in a day. Girls in a Midland brickworks have carried hundred-weight loads of bricks a distance of eighty yards.

It is noteworthy, however, that the physique of a group of provincial college women undergoing training as teachers, drawn from the country districts of Scotland, has excelled that of the Amazon labourers, being taller, heavier and stronger.

As the leaders of India's womanhood have begun to care for the interests of their own sex, they should aim at making Indian girls and young women physically as strong as those of any other country, and should take all the necessary steps for this purpose.

Hindn-Moslem Unity Resolution

The Hindn-Moslem Unity Resolution has been adopted by the Congress at Madras in the following form:

This Congress resolves that in any future scheme of constitution, so far as representation in various Legislatures is concerned, joint electorates

in all Provinces and in the Central Legislature be constituted. That with a view to give full assurances to the two great communities that their legitimate interests will be safeguarded in the Legislatures for the present and if desired such representation of communities should be secured by reservation of seats in the Joint Electorates on the basis of population in every Province and in Central Legislature, provided that reciprocal concessions in favour of minorities in the Punjab may be made by mutual agreement so as to give them representation in excess of the proportion of the number of seats to which they would be entitled on the population basis in any province or provinces, and proportions so agreed upon for the provinces shall be maintained in the representation of the two communities in the Central Legislature from Provinces. In the decision of reservation of seats for the Punjab the question of representation of the Sikhs as an important minority will be given full consideration.

That the proposal made by the Muslim leaders that Reforms should be introduced in the N.-W. F. Provinces and British Baluchistan on the same footing as in other provinces is, in the opinion of the Congress, a fair and reasonable one and should be given effect to, care being taken that simultaneously with the other measures of administrative reform an adequate system of judicial administration shall be introduced in the said provinces.

That with regard to the proposal that Sind should be constituted into a separate province, the Congress is of opinion that, time has come for the redistribution of Provinces on linguistic basis, the principle that has been adopted by the constitution of the Congress.

This Congress is also of opinion that such readjustment of provinces be immediately taken in hand and that any province which demands such reconstitution on linguistic basis be dealt with accordingly.

This Congress is further of opinion that a beginning may be made by constituting Andhra, Utkal, Sind and Karcatak into separate provinces.

That in the future constitution liberty of conscience shall be guaranteed and no Legislature, Central or Provincial, shall have power to make any laws interfering with the liberty of conscience. Liberty of conscience means liberty of belief and worship, freedom of religious observances and association and freedom to carry on religious education and propaganda with due regard to the feelings of others and without interfering with similar rights of others.

That no Bill, resolution, motion or amendment regarding inter-communal matters shall be moved, discussed or passed in any Legislature, Central or Provincial, if a three-fourths majority of the members of either community, affected thereby in that Legislature, oppose the introduction, discussion or passing of such Bill, resolution, motion or amendment. "Inter-communal matters" mean matters agreed upon as such by the joint standing committee of both communities of the Hindu and the Moslem members of Legislatures concerned, appointed at the commencement of every session of the Legislature.

RELIGIOUS AND OTHER RIGHTS

This Congress resolves that without prejudice to the rights that the Hindus and the Mussalmans

claim, one to play music and conduct processions wherever they please and the other to slaughter cows for sacrifice or food wherever they please, the Mussalmans appeal to the Mussalmans to spare Hindu feelings as much as possible in the matter of cow slaughter and the Hindus appeal to the Hindus to spare Mussalman feelings as much as possible in the matter of music before mosques and, therefore, this Congress calls upon both the Hindus and Mussalmans, not to have recourse to violence or to law to prevent the slaughter of a cow or the playing of music before a mosque.

This Congress further resolves that every individual or group is at liberty to convert or reconvert another by argument or persuasion but no individual or group shall attempt to do so or prevent its being done by force, fraud or other unfair means such as the offering of material inducement. Persons under eighteen years of age should not be converted unless it be along with their parents or guardians. If any person under eighteen years of age is found stranded without his parents or guardians by persons of another faith he should be promptly handed over to persons of his own faith. There must be no secrecy as to the person, place, time and manner about any conversion or reconversion, nor should there be any demonstration of jubilation in support of any conversion or reconversion. Whenever any complaint is made in respect of any conversion or reconversion that it was effected in secrecy or by force, fraud or other unfair means or whoever any person under eighteen years of age is converted, the matter shall be enquired into and decided by arbitrators who shall be appointed by the Working Committee either by name or under general regulations.

We are not responsible for the involved and confused structure and the punctuation of the first paragraph of the resolution; it has been printed as found in the dailies.

In the seventh paragraph, the resolution speaks of "either community", and defines "inter-communal" matters as certain matters affecting either Hindus or Muslims. Is it to be understood that in the opinion of the Congress matters relating to communities other than these two should be legislated upon, etc., in disregard of their feelings and protests? Evidently communities which cannot or will not break heads do not count. In taking this view, Congress co-operates with and follows the lead of the Government.

In our last June number we dealt in detail with the questions of joint electorates, the formation of Sindh and the N.W. F. Province as separate provinces with governors and legislative councils of their own and the reconstitution of provinces on a linguistic basis. It is not necessary to repeat all that we then wrote. But some considerations may again be placed before the people concerned.

The proposal in favour of the constitution of joint electorates has our full support, though the reservation of a number of seats in the legislatures for different communities on the basis of population is likely to nullify to a great extent, if not entirely, the nationalizing tendency of joint electorates. Joint electorates with reservation of seats may, however, lead to joint elections without any such reservation. We support this compromise in that hope.

The resolution provides for concessions in favour of minorities, including Sikhs in the Punjab. India does not contain only two or three communities, but many more. So, if seats are to be reserved for any of them, they should be reserved for all. In fact, we have all along contended that, if any protection by means of communal representation be at all needed, the weakest and the smallest communities require such protection more than the most important and numerically strongest ones. But in politics, it is often the most clamorous who have their demands met, and the weakest go to the wall. Expediency, not justice, guides the actions of politicians, including our Congress and Swarajya party leaders. It may be contended and contended rightly, that it would not be practicable to reserve seats for all communities. That has been one of our main reasons for being all along opposed to communal representation. If justice be meant to be done to different communities by a particular method of communal representation but if in attempting to do so it be found impracticable to help those who stand most in need of help, that method stands self-condemned. But the advocates of conciliating only the Muslims throughout India and the Sikhs in the Punjab may contend if we cannot have an ideally comprehensive scheme of communal representation, let us at any rate have one which placates those whose dissentient voices may destroy the harmony of the national chorus. From the point of view of expediency, there is some force in this contention. But let us then cease to talk of justice and of protecting the interests of all minorities.

If joint electorates, without any reservation of seats, were agreed upon by the different Indian communities, the Government would be deprived of the use of the argument that, since other communities have had seats reserved for them, the European and Anglo-Indian communities must be similarly

provided for. This would deprive the Government of the support of some pro-Government votes. No doubt Hindu-Muslim acceptance of joint electorates without any reservation of seats may not ensure its acceptance by the Government. Even if the Government accepted it, it may invent sufficient excuses to give special representation to Europeans and Anglo-Indians. But what we wish to impress upon the Indian public is that we should do nothing which would give a handle to the Government to do a wrong thing to prop up its autocracy and would thus indirectly make us consenting parties to such a step.

The language of the resolution does not make it quite clear whether majority communities in particular provinces are to have seats reserved for them, nor whether reciprocal concessions in favour of minorities in the form of representation in excess of what their numbers would entitle them to, would be governed by the same rule or principle in each and every province automatically. What we mean is this. Supposing in Madras, U. P. or Bihar, where Muslims are in a minority, it be agreed upon that they are to have seats 25 or 50 per cent in excess of what their numbers would entitle them to, would the Hindu minority in Sind, or Punjab, or Bengal have the same percentage of excessive representation? Further, if a Muslim or a Hindu minority in a particular province asks for and gets excessive representation, would that lead automatically to the giving of such excessive representation to minorities in all other provinces? Or would it be necessary for each minority in each province to petition separately for such concession? One more question. It has been one of the demands of the Muslim League that in no province must a Muslim majority be reduced to an equality or to a minority. If that demand be adhered to, would it be possible to do justice to the Hindus, in Bengal for instance?

Our object in asking these questions is to draw attention to them in order that, in case of reservation of seats, every care may be taken to prevent heart-burning, injustice, inconsistency, and the wounding of the self-respect of any community in any province.

It is to be borne in mind that the reservation of seats on the population basis implies adult suffrage for both sexes. Provision should, therefore, be made for such

suffrage in the constitution to be drafted for India by the Congress.

As regards the proposal made by the Muslim leaders that the Reforms should be introduced in the N.-W. F. Province and British Baluchistan on the same footing as in other provinces, we do not think that it is "a fair and reasonable one." We shall repeat some of our reasons for holding this opinion.

When people agree to the constitution of Muslim majority provinces or to the re-constitution of provinces on a linguistic basis, they do not always bear in mind the numerical strength of the peoples who are proposed to be given full provincial status. Let us, therefore, quote some figures of the population of different administrative areas in British India. Ajmer-Merwara has a population of 495,271; Assam, 7,606,230; British Baluchistan, 420,618; Bengal, 46,695,536; Bihar and Orissa, 34,002,189 (Bihar 23,380,268, Orissa 4,968,873, Chota Nagpur 5,653,028); Bombay Presidency, 19,348,219 (Bombay 16,012,342, Sind 3,279,377, Aden 56,500; Burma, 13,212,192, Central Provinces and Berar, 13,912,760 (Central Provinces 10,837,444, Berar 3,075,316); Coorg, 163,538; Delhi, 488,188; Madras, 42,318,985; North-West Frontier Province, 2,251,340; Punjab, 20,685,024; United Provinces of Agra and Oudh, 45,376,787 (Agra 33,209,145, Oudh 12,166,642).

The smallest of the Governor's Provinces is Assam: but even it has a population which is more than double that of Sind, more than three times than of the N.-W. F. Province and nineteen times as large as that of British Baluchistan! From the figures given above, it will also be clear that if British Baluchistan with a population of only 420,618 can be made a province and pay for a governor and a legislative council, etc., Ajmer-Merwara, Orissa, Chota Nagpur, Berar, and Oudh may also claim singly to have the status of a province. Nay, taking merely population into consideration, over one of the districts of Bengal, except Darjeeling and Chittagong Hill Tracts, could present a better claim to be constituted a province by itself than British Baluchistan. Mymensingh with a population of 4,837,730 is more populous than Sind; and Mymensingh, Dacca (3,125,967), Tippera (2,743,073), Midnapore (2,666,660), 24 Parganas (2,628,205), Bakarganj (2,623,766), and Raipur (2,507,854), are singly more populous than the North-West Frontier Province. Similar populous

districts there are in some other Governor's provinces, viz., Saran, Muzaffarpur, Darbhanga, South Arcot Tanjore, Malabar, and Gorakhpur. But none of these districts have a legislative council apiece, nor has any such district the privilege of being represented in its own name in the Indian Legislative Assembly and the Council of State. Therefore, the constitution of British Baluchistan, N.-W. F. Province, and Sindh into Governor's provinces, with the Central Legislature franchise to boot, would practically mean that the few voters of these new provinces were supermen compared with the comparatively numerous pigmies of the above-named districts which have no legislative councils and which do not singly in their own names enjoy representation in the Central Legislature. Yet each of these districts can show larger numbers of public-spirited educated men than either British Baluchistan or the Frontier Province. Nay, many of these districts have more literate Muslims even than the latter two provinces. For instance, in the Bengal district of Mymensingh the number of literate Muslims is 100,299; whereas in the N.-W. F. Province the total number of literates of all religions is 87,053, Hindu literates numbering 35,818, Sikh literates 11,292, and Muslim literates 31,672 there, though the total number of Muslims in the Frontier Province is 2,062,786 and of Hindus and Sikhs 149,881 and 28,040 respectively. Yet the N.-W. F. Province and Baluchistan must be made self-sufficing provinces, but not the more populous and educated districts with a larger number of public-spirited inhabitants.

There is no logical connection between the acceptance of joint electorates and the stipulation that three Muslim majority provinces are to be constituted. But Indian Muslims would derive this advantage from the latter step that there would be three additional provinces sending some Musalman representatives to the Central Legislature, thus increasing the total number of Muslim representatives therein. True, there would be some additional Hindu members, too; but the Hindus being in a minority in the new provinces, the increased Hindu membership would fall short of the increased Muslim membership. But another fact must not be lost sight of. The Congress resolution supports the re-constitution of provinces on a linguistic basis. Andhra, Utkal and the Karnataka are definitely named as such provinces. They would be Hindu majority provinces.

Like provincialism, linguisticism, if we may coin such a word, has its dangers. One of the dangers of too great insistence on provincial autonomy has been indicated in Major B. D. Basu's new book on the *Consolidation of the Christian Power in India*. A certain amount of centralization is necessary in order that the people of India may become a strong unified nation. The linguistic basis hobby should not, therefore, be ridden to death. There are so many languages in India that even if only the principal ones with well-developed literatures were to be assigned separate provinces, great confusion would arise, and there might be even financial bankruptcy in some areas, Madras Presidency, Bombay Presidency, Bihar and Orissa, and Assam would all be dismembered if cut up into separate linguistic areas; and the Central Provinces and Behar would disappear altogether, as part of it would go to Maharashtra and part to the U. P. We should not insist too much on any abstract theory, if it stimulates the fissiparous tendency which has been so much in evidence throughout India's long history. Of course, a case like that of Orissa does not derive its undoubted strength from mere abstract theory. And the re-inclusion in Bengal of the Bengali-speaking districts of Sylhet, Cachar and Goalpara in Assam, of the Manbhum district in Bihar and Orissa, and of the Bengali-speaking areas in Purnoa, Balasore, Singhbhum and Santal Parganas can be supported on historical and ethnological as well as linguistic grounds.

As regards the constitution of Sindh into a separate province on the linguistic basis the question may be asked whether Sindh is such a well-marked and well-developed language as, for instance, Marathi or Gujarati or Bengali, with a good and growing literature. Hindu Sindhis prefer to make Hindi their vernacular and Muslim Sindhis, Urdu. We find from the Bombay Census Report for 1921 that Sindhi-speakers have decreased in number from 3,007,000 in 1911 to 2,618,000 in 1921. The Census Superintendent writes:

"The languages of Sindh present more difficulties than those of the Presidency proper. The boundaries of the various languages of the desert region are not at all sharply defined and the question is still further complicated by the use of the same term as the name of quite different languages or dialects. Thus in Grierson's language index 'Jatki' is given as a name used for nine different things and 'Hindki' for seven." P. 152, *Bombay Census Report, 1921.*

All this would appear to show that when the Congress professed to recommend the constitution of Sindh into a separate province on the linguistic basis, they chose a rather slippery basis.

That Baluchistan and the North-West Frontier Province would be unable by themselves to meet the expenses of Governors, Secretariats and Legislative Councils should be obvious to all. Sind is also at present in the same financial condition. If it be not called upon to pay for the Sukkar Barrage scheme and if that scheme results in making Sindh very prosperous, it may be self-supporting in the not very near future.

As regards cow killing and music before mosques, if orthodox Hindus and orthodox Muslims met in the spirit of the resolution, there will be peace in the land. Otherwise, the exact reverse may be the case.

The Liberal Federation and the Simon Commission

As was anticipated, the National Liberal Federation has resolved at its Bombay session to boycott the Simon Commission.

The Muslim League

As we write (Dec 29), there is still a probability of two meetings of the two parties of the Muslim League being held at different places. This split, apprehended at first, is due mainly to difference of opinion as regards the attitude to be adopted toward the Simon Commission, Bengal Muslim opinion favouring a boycott, whilst a section of Punjab Muslims oppose it.

The Industrial Congress and the Boycott

The subjects committee of the Industrial Congress has adopted a resolution to boycott the Simon Commission.

Some Social Conference Resolutions

At the Social Conference Sir Sankar Nair moved a resolution asserting emphatic

adherence to the principle of civic equality between man and woman, recommending abolition of all inequalities in the marriage laws, adoption and guardianship of the children and inheritance of property. The conference favoured the raising of the minimum marriageable age for boys and girls to 21 and 16 respectively, supported legislation for marriage reform now on the anvil in Delhi and Bombay, and strongly condemned indignities forced on Hindu widows. It expressed the opinion that the purdah system is prejudicial to healthy development of women and urged its discontinuance. Speakers emphasized the need for a freer and a fuller life to women and pleaded for public support. Mrs. Jamini Bai Khat of Poona Sera Sadan urged the necessity for extension of educational facilities to women in an increasing measure, whilst another lady speaker deplored the denial of equal opportunities and rights to women.

On the motion of Mrs. Sarojini Naidu the Conference passed a resolution supporting Dr. Muthulakshmi's bill for the social, moral and economic emancipation of Devadasis. Mrs. Naidu deplored the evil consequences of the Devadasi system and pleaded for enlightened public opinion to refuse to countenance such a social custom.

Prithwis Chandra Ray

By the death of Mr. Prithwis Chandra Ray the country has lost the services of an able and well-informed publicist who was noted for his careful study of all political questions of the day. While quite a young man he wrote a book on "The Poverty Problem in India" which was highly spoken of by competent men in India and England. He also wrote pamphlets on famines in India under British rule, and on the map of India showing how the country could be very conveniently divided into provinces on the linguistic basis. For years he avowed and edited a monthly review, named *The Indian World*, and edited *The Bengalee* with ability. His gift to the Indian Association of his valuable library to form the nucleus of the Gokhale memorial library will be remembered with gratitude. He had finished before his last long illness his projected biography of the late Mr. C. R. Das. It is now in the hands of

his English publishers. He was a constructive thinker in politics, and had he lived longer and enjoyed good health, there is no doubt he would have contributed his quota to the building up of a constitution for India.

Dayaram Gidumal

In Dayaram Gidumal has passed away an Indian who was truly great and good. The following passages are taken from an excellent sketch of the man contributed to *The Tribune* by Mr. Negendranath Gupta:

Dayaram Gidumal Shahani died at Bandra, a suburb of Bombay, on the 7th instant. He was about 72 years of age when he died. How many people of the present generation are familiar with his name? And yet he was a great and gifted son of India, a man of the highest character and unequalled humility, and one who atoned for a single error by long years of penitence and utter self-repression. Dayaram Gidumal was a Sindhu Amil born in Hyderabad, Sind, and belonged to one of the best families in that city.

Dayaram Gidumal was one of the ablest Judges in the Bombay Presidency.

Dayaram wrote for newspapers, he was the moving spirit of the Sind Sabha, and he was mainly instrumental in founding a college in Sind. He was a Government servant, but that did not in any way interfere with his public activities. Nothing, however, could ever induce him to take the lead in any movement, for his modesty and humility were part of his nature. About this time he was very intimate with B. M. Malabari, the editor of the *Indian Spectator* and the well-known social reformer. He wrote a life of Malabari and helped him in every undertaking.

Of his charitableness no one ever knew the full extent; for he never allowed his left hand to know what his right gave away. He was a man of the simplest habits. The whole of his income, which increased as he rose in the service, was given away in charity. Once an individual or an institution was on his list the promised amount was sent with unflinching regularity every month. Dayaram retained this habit as long as he was in the public service.

No one ever knew the substantial assistance that he gave to the Seva Sadan in Bombay and the sanatorium for consumptives at Dharampur in the Simla Hills. After the terrible Kanjira earthquake Dayaram equipped a travelling dispensary at his own cost and distributed medicines, blankets and food freely in the distressed area, but very few people in the Punjab knew of the good that was being done, almost by stealth. From his brother he had inherited a large property, but he never touched a pice of this income for his own use. Part of it was occasionally used for charitable purposes, but the entire property was maintained intact and Dayaram created trusts for the administration of various charities from the income of the estates, houses and lands bequeathed to him by his brother. From the day that he took up an appoint-

ment up to the end of his life he lived on a small part of his salary, and later on, his pension.

I met him at Lahore, Agra, Allahabad and Benares, and noticed a steady growth in his humility and unselfishness.

Then came the tragedy of his life. He had some children but spent most of his time away from his wife and children who lived at Hyderabad, Sind, while he was serving in different districts in the Bombay Presidency. Dayaram Gidumal was one of the shyest of men in the presence of women and of a most retiring disposition. He was on very friendly terms with a Gujarati family, the head of which was also a statutory civilian and a judge like Dayaram Gidumal. There was a daughter in the family, accomplished and attractive, between whom and Dayaram grew up a friendship which ripened into love, and they were married in accordance with Anand rites. The young wife died in childbirth within a year of the marriage, but the child, a boy, survived.

For this second marriage in the lifetime of his first wife Dayaram Gidumal was violently assailed in the vernacular Press in Bombay and Sind. He wrote a brief reply saying that he renounced everything with which he was associated and bowed to the condemnation of the public. From that day to the day of his death the world knew him no more and he passed the fifteen concluding years of his life in the strictest seclusion. He cut himself off entirely from his family at Hyderabad, refused absolutely to meet his numerous former friends, resigned all honorary offices which he had held, and spent all his time in study and religious meditation. He spent these last years in the eight and hearing of the sea, living quietly in a house on the seashore of Bandra, strolling about in the afternoons by the seashore. For ten years we were almost neighbours, but I spoke to him only once, though we had been on most intimate terms for many years.

If these last years were a tragedy, it was a tragedy full of nobility, worthy of a man who was essentially great and whose like I have rarely met with, though I have seen many people in many provinces. Probably he was greatest in his self-imposed trial, his long vow of self-effacement, his undimmed determination to put aside everything that had attracted him. The few strangers who knew him slightly spoke of him as a saint and a holy man, and I lay my humble tribute at the shrine of his memory.

Lectureships in the Calcutta Post-graduate Department in Arts

The present Vice-chancellor of the Calcutta University earnestly desires to improve educational conditions in its Post-graduate classes. With that object in view, he wished that, instead of lecturers whose main occupation was not teaching but the practice of law and who were only part time teachers, there should be only two classes of teachers, viz., teachers who worked only in the University post-graduate classes and teachers

who gave some of their time to teaching in colleges and some to teaching in the University classes. Of course, he is not opposed to making an exception in the case of a subject for teaching which a competent whole-time lecturer or a part-time professional teacher cannot be found.

The principle laid down by the Vice-chancellor is obviously quite sound. The work of professors, lecturers and teachers in the post-graduate classes is intended to be partly of a different kind and entirely of a higher order than the work of teaching done in colleges for undergraduates. Men in charge of any subject in the post-graduate classes should be persons of high attainment who have both the time and the inclination to keep pace with the advance of knowledge and thought in their subjects and who have also the capacity to do research work and to guide young students in the work of research by taking them as apprentices as it were in their own work of research and in other ways. Evidently all this implies entire devotion to some branch of learning and to education. It may be thought we are out-lining too high an ideal. But the ideal is not ours, but of those who took away the work of post-graduate education from the affiliated colleges and made it a monopoly of the University. The higher ideal indicated above was the only or main justification for such a monopoly.

The principle of doing away with or discouraging pluralism came before the Senate last month. There were acrimonious, undignified, and unedifying debates, and insulting remarks and unjustifiable insinuations were indulged in against the Vice-chancellor even by some old men, not to speak of younger persons. But the more important point to note is that the Senate did not appear to know its own mind. If all lawyer pluralists who were lawyers and lecturers in the law college were re-appointed lecturers in the post-graduate art classes, it could be understood that the majority of the Fellows had thrown the Vice-chancellor's ideal overboard. But no; some were re-appointed, some not. One gentleman was not re-appointed who was certainly not at all inferior to another who was. So it cannot but be concluded that many of the Fellows do not understand what post-graduate teaching means, or, if they do they have no regard for principles. We are glad, however, that practically the

Vice-chancellor's principle has been partially accepted.

Much stress was laid on "efficiency" and regularity in attendance on the part of the lecturers. These are certainly indispensable qualifications. But what are the criteria of efficiency? Who tested it in the case of the persons whose cases were before the Senate? According to what standards was it tested, if it was at all tested? A post-graduate teacher cannot be considered efficient, merely because he passed university examinations with credit, or because he was regular in attendance, or because he is fluent and pleasant of speech.

Many Senators appear to have erroneous notions of what constitutes a teacher an authority in the subject he teaches. He can be called an authority only if he has done such original work in his subject as has been generally accepted to be valuable and free from error. Translations of German or other books, whatever their number, cannot make a man an authority in a subject.

Equally laughable and presumptuous was then implied or openly expressed assumption of many Fellows that this part-timer, or that was indispensable for a particular subject. Do these Fellows know the professors in the Universities of India (not to speak of foreign Universities) who teach this subject and some of whom are doing research work in connection with it? Was any post advertised and an qualified man was found among the applicants except the present incumbent?

Some Senators seemed to consider it very unjust that men who had held a lectureship for so many years should not now be re-appointed. But the employment of lawyer part-timers in posts for which plenty of quite competent whole-time teachers or teacher part-timers could have been found any day; was a piece of jobbery. That it had not been knocked on the head earlier is no argument for not knocking it on the head now or in the near future. Moreover, the mere fact that the lectureships were for fixed terms, though renewable, has in it the implication that at the expiry of the period, it is open to the University to make better arrangements, if necessary and possible.

During the debate the grievance or complaint or criticism was given expression to by a certain party that it was for the most part the relatives of Sir Asutosh Mukherjee among the pluralists who were being sought to be deprived of their jobs. That was a rather

self-revealing complaint. If that distinguished man was distinguished also for nepotism in connection with the University, surely that was not the fault of Professor Jadunath Sarkar or of those who stood up for the same principles as he.

Another objection put forward was, why were lawyer part-timers alone objected to, not medical and journalistic ones also? The reply is, the lawyer part-timers in question were practising lawyers, law lecturers and lecturers in the postgraduate arts department to boot. Surely such "triple" pluralism does not make for ideal or even ordinarily good teaching. But even if the lawyer-lecturers, besides being practising lawyers, had been lecturers only in the post-graduate classes, and not in the law college also, such pluralism would have been objectionable.

And medical pluralists are, in principle, as objectionable as lawyer pluralists. Only if a medical man is engaged by the University to teach a subject for which a non-medical whole-time or part-time professional teacher is not available, that comes under the exception mentioned in the opening sentences of this note. We do not say that all the post-graduate lectureships held by medical men are of this description. We have gathered the terms of the principle, said to have been laid down by the Vice-chancellor, from the reports of the debates; we have not seen the statement on the subject made by him, if he made any. If there be no mention of other than lawyer pluralists in any such statement, the reason for the omission may have been that he did not want all at once to disturb too many hornet's nests. But that is a mere guess on our part.

As for journalist lecturers, there is no justification for employing any, as the university does not teach journalism.

A very regrettable feature of the debates was that the needs and welfare of the students were not thought of. The Senate seemed to be concerned solely or mainly with who were going to get or to lose the jobs. Not that the question of getting or losing jobs is an unimportant one. But when it is to be considered who are entitled to get teaching jobs, certainly those who have chosen teaching as their only profession—a profession which is not very lucrative—deserve to be thought of first.

We have not been able to understand why Dr. Chuni Lal Bose is reported to have left the meeting by way of protest against the Vice-chancellor's decision in the matter of the demand

of a poll. Surely, it is no breach of any rule if all the six men who must demand a poll do not stand up exactly at the same time, no one standing up a fraction of a second before or after some other person. We have heard that Dr. Bose did not leave the meeting by way of protest, but because he had urgent work elsewhere.

Practising Lawyers as Law-lecturers

It seems to be taken for granted in Calcutta that law can and should be taught only or generally by practising lawyers. Those who make that assumption either do not know or forget why the law-classes attached to the arts and science colleges had to be abolished (except in the Ripon and Cotton colleges.) Sir Asutosh Mookerjee wanted to improve law-teaching by "introducing scientific study of law and reforming the old system," and so created a huge monopoly for the University in the shape of a law college containing some thousands of students. But the new system in this college does not differ in any essential respects from the old system in the law-classes of colleges. Practising lawyers as part-time lecturers continue to be employed, and classes continue to be held in the mornings and evenings as before.

A better system would be to make the law college like other colleges and to employ whole-time lecturers alone, or for the most part. That is the system followed in the Allahabad University Law School. Only one teacher there is a part-timer, who is allowed to practise. The others do not practise, that being a condition of their service. Surely what is practicable in Allahabad is also practicable in Calcutta.

Patronage and nepotism must cease. Otherwise, from the primary up to the highest University grade, and in all kinds of education, Bengal is destined to be a back number at no distant date, if it is not one already.

An Explanation.

The character-sketch of Mr. A. V. Thakkar which appears in this issue has, we find, appeared in the *Bombay Chronicle* Congress Number also. It was sent to us for publication without our being told that it had been sent

to another journal also in India. Had we known that fact, we would not have printed it. We might have done something else to show our respect for Mr. Thakkar and our appreciation of his self-sacrificing labours.

"Can India Ignore World Opinion?"

An important memorandum, with the above heading, on the establishment of a permanent committee on Indian affairs in America, received from our countrymen in that continent, states in its first paragraph:

Katherine Mayo's book, "Mother India", has at least made one thing clear, that the enemies of India are at present most actively engaged in prejudicing world opinion against India at a critical moment of her history. The illudus in America have reason to believe that this book is a part of the anti-Indian propaganda now let loose abroad in all its violence and wickedness. They also wish it to be understood clearly by our countrymen at home that it is only the beginning of a war more virulent than any before, to vitify our country abroad. So we shall expect more of it in future. We are, however, glad to see that the public mind in India is roused to the importance of cultivating the opinion of the outside world in line with the national policies of India.

Various suggestions have been made in the memorandum for combating anti-Indian propaganda in America and other foreign lands, which deserve serious attention. As it has been sent to all Congress leaders, it is hoped that they will take such steps as their resources in men and money will permit. We particularly commend the following excellent suggestion to the attention of Mrs. Sarojini Naidu and the Congress:—

Should the Congress decide to act on these suggestions, it is urged that Mrs. Sarojini Naidu be selected as the first Congress representative to lecture in this country. Her personality, her reputation as a poetess, her eloquence, and her Presidency of the Indian National Congress are sure to win enthusiastic reception and ensure a very successful beginning of a vitally important work. Mrs. Sarojini Naidu is an Indian lady of international reputation and it must be remembered that American public opinion is very appreciative and enthusiastic of women speakers in general.

A note to the memorandum states that it has been "sent to the Congress leaders." That is quite proper. But as unfortunately the Congress has ceased for some years to be the only non-communal mouthpiece of politically-minded India, the memorandum ought to have been sent to the leaders of the national Liberal Federation also. The of its adherents is, no doubt, less

than that of the Congress, but it counts among its leaders and supporters men who have ability as well as the sinews of war.

In our opinion the Congress and the Liberal Federation should take joint action. Railing that, they should make their separate arrangements for fighting anti-Indian propaganda.

The Visit of King Amanullah

The visit of King Amanullah to India is noteworthy from various points of view and suggests many reflections.

His Afghan Majesty is undoubtedly a man of outstanding ability who wishes to do his utmost for his country. But it cannot be said that India does not possess any man of his intellectual calibre, strong will and desire to do good. Why then this difference between the treatment which he receives from the British Government and foreign governments and that accorded by them to the greatest of Indians? One reason is that King Amanullah is independent and has an efficient army, which no Indian is and has.

Perhaps the comparison between the treatment of an independent monarch and that of private individuals, however great, is not quite apt; for there is in the nature of many or most men an element of snobbishness which makes them obsequious to men who have both might and money, irrespective of other considerations. So let us take the case of our princes.

There is no question that many of them are as intelligent and well-meaning as King Amanullah. We need not name any. Let us take some examples without any reference to intelligence, ability or benevolence.

The population of Afghanistan, according to the latest estimate, is about eight millions. The total revenue is estimated at about fifty million rupees or 5 crores. In India Hyderabad has a population of 12,471,770 and its revenue (estimate) for 1926-27 was 747 lakhs. So in both population and revenue Hyderabad surpasses Afghanistan. But the Nizam can be and has been threatened and coerced, whereas King Amanullah is feared and respected;—he is reported to have said: "if we are attacked we can, and will, defend ourselves, and if we are threatened, we may threaten." Think of a man who rules over only eight millions of people and has a revenue of only five crores of rupees saying that. What are the reasons? One is that the Afghans are

a free and independent people and their king is an independent king. Another is that he is a thoroughly patriotic king who has absolutely identified himself with the honour and welfare of his people, considering himself their humble servant. Another is that he is free to train his people to fight in the most up-to-date fashion with the most up-to-date weapons, munitions, and equipments like aeroplanes. Another is that out of the 40 lakhs of the male population of Afghanistan, at least eight lakhs, aged 20 up to fifty, know how to fight and would fight in case of need. Moreover, at a pinch many men below 20 and above fifty can and will fight; and even many women will fight in an emergency.

The population and revenue of every one of the other Indian States are less than those of Afghanistan, but are not absolutely inconsiderable or insignificant. Those of a few are given below:—

State	Population	Approximate Revenue
Baroda	2,126,522	244 75 lakhs
Gwalior	3,195,476	210 "
Jammu and Kashmir	3,321,000	206 "
Mysore	5,859,452	342 "
Travancore	4,006,062	200 "

But however progressive, enlightened, and beneficent the administration of any of these States may be in comparison with that of Afghanistan, the ruling princes cannot command a tithe of the deference shown to the Afghan monarch, because of the reasons indicated above.

We have not been able to appreciate the reasons why King Amanullah could not be presented with an address at the Gate of India in Bombay. It seems to us that the Government of India has made some distinction between the King of Belgium and the King of Afghanistan, though the people of India, whatever their religion or race, welcomed the latter with far greater warmth and enthusiasm. The really independent Asiatic Kings are few in number, and King Amanullah is the first Afghan King of recent times who can claim to be really independent. His visit was, therefore, bound to evoke enthusiasm.

In his utterances in India His Majesty laid great stress on religious toleration, and declared that in his Kingdom no distinction was made between Hindus and Muslims. This has been the case there at least for more

than a century. For we read in Walter Hamilton's *East India Gazetteer*, published in two volumes in 1828 and dedicated by permission to the Court of Directors of the East India Company:

Afghanistan: Brahmanical Hindus are found all over Cabul, specially in the towns, where they carry on the trade of brokers, merchants, bankers, goldsmiths and grain-sellers (I. p. 12). Cabul: Many Hindus frequent Cabul, mostly from Peshawar, and as by their industry they contribute greatly to its prosperity, they are carefully cherished by the Afghan Government (I. p. 307).

Candahar: Among the inhabitants he (Seid Mustapha) reckons a considerable number of Hindus (partly Kanouje Brahmans) both settled in the towns as traffickers, and cultivating the fields and gardens in the vicinity... with respect to religion, a great majority of the inhabitants are Mahomedans of the Soanni persuasion, and the country abounds with mosques in which, Seid Mustapha asserts, both Hindus and Mahomedans worship and in other respects nearly assimilate (I. p. 311).

Perhaps this tolerance towards Hindus has not been always extended to heretical Moslems, for the stoning to death of a member of the Ahmadiya sect by order of the Afghan Government is too recent an occurrence to be forgotten. Probably at the time when it occurred, Amanullah was not strong enough to oppose the will of the fanatical Mullahs.

That probably also is the reason why he more than once spoke against the mischief sought to be made by Afghan and Indian fakirs and repeatedly warned his Indian Moslem audiences not to be misled by the Mullahs. That was a much-needed warning. We in Bengal know that many ignorant and fanatical Mullahs, known as "kath mullahs," are the inspirers of many nefarious practices and calculated to stir up communal hatred and dissension. Even those Musalmans who are not interested in cultivating or maintaining good relations with their Hindu neighbors would do well to beware of and counteract the influence of these Mullahs, as the latter divert the energies and wealth of their community to channels which cannot lead to its prosperity, enlightenment and progress.

His Afghan Majesty did well to impress on his Indian co-religionists the duty of respecting the faith and feelings of their Hindu fellow-countrymen. The latter are also in duty bound to reciprocate this neighborly consideration, and to always strive to set the example of religious toleration first.

King Amanullah can be very frank and outspoken when the occasion demands. With

reference to a complaint laid before him by the Pathans of Bombay that they were harassed by the police, he said that he was sorry that they had been the recipients of so much police attention, but advised them also to behave better, and if even after they had reformed themselves the police did not cease to trouble them, he promised to speak to the Governor.

His respectful and polite attitude towards women, as evidenced particularly by the honour he did to Mrs. Gandhi, has attracted attention. He is really attentive to the true interests of Afghan women, as proved by the arrangements made in his country and in foreign countries for the education of Afghan girls and women. He has set the example in his own family. His sister is in France receiving education. Other ladies of the royal family are receiving education at home and abroad. It is clear, too, that he does not like the purdah system. *The Week* writes:

Here is an item of interest regarding the Royal ladies of Afghanistan: "It is understood," says the *A. P. J.* of the 10th, "that the ladies will wear veils while in India, but will emerge from purdah on the steamer *Rajputana*, which leaves Bombay on December 17th."

May we invite our Moslem fellow-countrymen to put this "compliment" into their *hugas* and smoke it?

A correspondent (of some paper, not "our own") writes from Paris on Dec. 3, 1927, that Princess Kohra, sister of Amanullah, "wants her countrywomen to adopt Western dress, and her brother may decree that they may be allowed to appear in public unveiled." That is not unlikely when by feeling the pulse of his people he finds that the time has come for such associatively revolutionary decree.

His advice that Indians should use country-made goods, whatever their quality or price, which principle, he said, is followed in Afghanistan, had prepared us for the following passages in the above-mentioned correspondent's letter:—

The King, I gathered, hopes to consult well-qualified engineers regarding the exploitation of mineral resources. He wants to build a railway to ship ores and oil.

But he has determined not to float a loan in foreign countries. His country's resources only should pay for improvements, and he is determined that Afghanistan modernised shall be for Afghans only.

And, of course, it is no news that he has undertaken his European tour to make a serious study of Western civilization and

to introduce all that he thinks will be for the good of his country.

In India all Britishers and even non-British occidentals, official and non-official, barring possible exceptions, consider themselves masters of all Indians. They may not learn a lesson from Amanullah's declaration that he is a humble servant of his people; but the lesson is there. It is there for Indian princes, hakims and pashawallahs also. And it is there for any and every Indian who considers himself superior to any other Indian.

D. G. Upson writes in *The Pioneer*:

As to India, the [Afghan] King proceeded to assure me that he and his people had every sympathy with the "national aspirations" of Indians. He spoke of a League of Eastern Nations as a greatly cherished project.

Pan-Asiatic League

Such a league or federation, inaugurated formally or informally, met two months ago at Shanghai. Its next meeting has been proposed to be held at Kabul. That would chime in with the desire of the Afghan monarch. Japan is strong enough to be the most powerful supporter of such a league, but she is also the greatest obstacle to its pursuing and realizing any high political ideal. Just as the League of Nations cannot possibly do anything for the liberation of the subject and unorganized peoples of the world, because the most powerful League Member States profit by the subjection and exploitation of these peoples, so in Asia Japan follows the imperializing and exploiting methods of the West. Unless Japan sets herself right with Korea and Formosa, and with China as regards Manchuria, how can she honestly and sincerely protest in one voice with the other countries of Asia against the policy, methods and deeds of the West in this vast continent?

Even if this objection did not exist, a Pan-Asiatic Federation could mean only a federation of the peoples of Asiatic countries, not of their governments. Some of these peoples who are free may be able to influence their governments, but those who are not free cannot do so. The former cannot, however, influence their governments to the extent of actively helping any dependent Asiatic country to be free. But the independent Asiatic governments may be influenced not to enter

into treaties like the Anglo-Japanese treaty by which Japan bound herself to help Britain in putting down possible popular risings of independence in India.

For the reasons indicated in the above two paragraphs, there cannot be a really

Hakim Ajmal Khan

Though Hakim Ajmal Khan had been suffering from illness for some time past and was advanced in years, the news of his sudden and unexpected death from heart-

Hakim Ajmal Khan

effective political league or federation of Asiatic peoples. But a cultural federation there may be, and informally the foundations of such a federation have been already laid by Rabindranath Tagore.

failure has been received with a shock of painful surprise all over the country. He was a perfect gentleman and an ardent lover of his country in whom people of all communities had confidence. He dies at the moment of India's sorest national need, leaving to his countrymen the legacy of his character,

personality and activities for their guidance and inspiration.

The Indian States Committee

In the composition of the Indian States Committee the British Government has followed in one respect the same policy as that followed in the constitution of the Simon Commission. Those who are most interested in the solution of the question to be considered and reported on by it, are to have no part or lot in it. The work of the Committee would be to investigate the relations between the Indian States and British-ruled India. But neither the princes and the people of these States nor the people of the provinces of India are represented in the Committee;—in fact, there is no Indian in the Committee. In justifying the purely parliamentary personnel of the Statutory Commission the Viceroy said that if Indians were appointed members of the Commission their conclusions would be coloured by their "natural and legitimate desire" "to see India a self-governing nation," and if British officials connected with India were appointed its members, their judgment would be affected by their "long and close contact with the questions to which they would now be invited to apply impartial minds." If this "principle" had been followed in the constitution of the Indian States Committee, the consistency and sincerity of the Viceroy's plea would have been apparent, though its weakness would have remained undiminished. But Sir Harcourt Butler, an ICS man who was Foreign Secretary to the Government of India and has governed two provinces of the Indian Empire and had dealings with some of its Indian states, certainly has had "long and close contact with the questions to which they (the members of the committee) would now

be invited to apply impartial (!) minds. How, then, has he been appointed Chairman of the committee? What has become of the Viceroy's arguments, which he evidently borrowed from Birkenhead, Baldwin, Rending, MacDonald & Co.?

So much for the difference in the constitution of the two bodies. There is also a difference in the position of the parties chiefly concerned in the investigation and conclusions of the two. The people living in British-ruled India have at least the right to protest against the constitution of the Simon Commission and to say either that they will boycott the Simon Commission or co-operate with it, and they have been exercising this right. But the ruling princes are tongue-tied. They can pronounce no free opinion either way. And their subjects are assumed to have no *locus standi* at all.

Yet the ruling princes are supposed to occupy a position of great dignity in relation to the British-Indian Government and are said by their British bureaucratic and journalistic sincere well-wishers, trustees and conscience-keepers to be very anxious at the thought of losing this dignified position in a self-ruling India. Our conviction is that they will be persons of greater consequence in a self-ruling India and will be thought more highly of than now in foreign countries, too. And whether India be able to win self-rule or not, and whatever the treatment the princes receive from the British Government, they will be more highly loved and respected by their subjects if they concede the demand made at the last Indian States' Peoples' Conference for "the establishment of representative institutions on an elective basis for the purpose of legislation, taxation and control of general administration, and the elementary rights of free speech and a free press."

THE MODERN REVIEW

A Monthly Review and Miscellany

Edited by
Ramananda Chatterjee

Vol. XLII, Numbers 1 to 6
July to December, 1927

THE MODERN REVIEW OFFICE
91, Upper Circular Road,

SIAM

While I stood before thee, Siam,
I felt that love's signet ring had pressed thy name on my mind
in life's unconscious dawn,
and that my traveller's hasty moments were big
with the remembrance of an ancient meeting.

The silent music of centuries has overflowed
the brink of the seven short days
that surprised me with the promptings of an immemorial kinship
in thy words and worship, thy offerings to beauty's shrine,
in thy fragrant altars with candles lighted
and incense breathing peace.

To-day at this hour of parting I stand in thy courtyard,
gaze in thine eyes
and leave thee crowned with a garland
whose ever-fresh flowers blossomed ages ago.

RABINDRANATH TAGORE

INDIA'S ILLITERACY: SHOULD IT BAR SELF-RULE?

By THE REV. DR. J. T. SUNDERLAND

ONE of the arguments used much as a proof that the Indian people are not fit for self-government, and need to be ruled by others, is their "illiteracy."

If by illiteracy we mean ignorance, there is undoubtedly some force in the argument, for no one questions that a reasonable degree of intelligence is necessary in a people if they would rule themselves wisely and safely.

But this argument seems strange as coming from the British. For who are responsible for the illiteracy of the Indian people? There is only one possible answer. The chief responsibility rests on the British themselves. One would naturally suppose, therefore, that they (the British) would try to cover up and hide from sight a fact so damning to themselves as this illiteracy is. Instead of being a proof that they ought to stay in India, its existence there after more than a century of their empire and unhindered domination, would seem to be a clear evidence that their rule has been a failure, has been an evil, and ought not to be continued.

The responsibility of the British for India's illiteracy seems to be beyond question. All the people of India except the very lowest (and many men of them) prize education highly, they earnestly desire it, and for fifty years their leaders have been pleading for it as for almost nothing else. Moreover, there is plenty of money to give India universal popular education—education equal or superior to that of Japan, if only the resources of the country, instead of being consumed on unnecessary salaries and pensions to Englishmen, and on worse than unnecessary military and other outlays for the benefit of the British Empire, were expended in the interest of the Indian people.

I say universal, popular education, equal to that of Japan. It is true India has a much larger population than that of Japan, to be provided for; but it is also true that she has vastly larger resources, resources which, in proportion to her population, are much larger than Japan's. So that, if her

resources were not taken away from her by foreigners, she could not only equal, but actually outdo, Japan, in giving education to her people and thus nearly or wholly wiping out the illiteracy of India. The British hide these facts, the world does not know them, but the Indian people understand and realize them in all their bitterness.

Let us study India's illiteracy, to see exactly what it is, and to find out whether bad as its effects are, it is of such a nature that it ought to prevent her from having self-rule. Even if we grant that literacy, a much greater amount of literacy than exists in India, is necessary for self-government in our Western world, where everybody depends for knowledge upon reading, where there is little knowledge or intelligence except what is obtained from books and newspapers—does it follow that there is the same need for literacy in a country like India, where the people are so much less clavis to books and papers, where they depend so much less upon these for their intelligence, and have so many other sources of knowledge besides the printed page?

Is it true that nations in the past which have been self-governing have always been literate? Have there not been nations many, in Asia and Europe and other parts of the world, with very much less literacy than India possesses to-day, that have ruled themselves, and done it well,—much better than any foreign power could have ruled them?

In the first place, it should be borne in mind that not all the people of India, by any means, are illiterate. The literate elements, while small in comparison with the 320,000,000 of India's entire population, are really large. Let us see how large.

Beginning with those who are literate in English, how many of these are there? Turning to the Statesman's Year Book of 1937, we find the number of persons literate in the English language given as 2,500,000. Do we realize that this number actually exceeds that of the population of any one of thirty-nine of the forty-nine states which

compose the American Union? In other words, do we realize that there are more persons in India who read, write and speak the English language than the whole population of Virginia or Tennessee, or Kentucky, or Wisconsin, or Iowa, or California, and more than the combined population of Maine, Vermont, New Hampshire and Rhode Island? Should such an amount of literacy as this count for nothing in estimating the fit men of India for self-rule?

But this is only a beginning. India has a literacy of another kind, many times larger than this, and for purposes of Indian citizenship much more important. I mean, literacy in the vernaculars. What is the number of persons literate in one or more of the languages of India? Turning again to the Statesman's Year Book, we find the answer to be 22,623,651. These figures may well be a surprise. Add this great number to that of the literates in English (making allowance for all duplicates), and we have in India actually more than one-half as many literate persons—persons who can read, write and speak some important language—as the total population of England, Wales and Scotland, more than one-half as many as the whole population of France, more than one-third as many as the total population of Germany. With all these not fewer than twenty-four or twenty-five millions of literates distributed throughout the whole of India, one wonders with what consistency the British Government can refuse self-rule to the Indian people because of illiteracy.

But this is by no means all that is to be said. In a country like India, why should the question of literacy or illiteracy, as related to self-rule, be given anything like so great importance as the British give it? Literacy is important, very important, in connection with culture, for enlargement and enrichment of life, and for need in many directions; but in a country like India is it not possible for men to be good citizens, valuable citizens, intelligent in nearly or quite all matters fundamental to citizenship and yet be technically illiterate? Even if we say that ability to read and write is indispensable to good citizenship in *America* and *Europe*, are we quite sure that it is so in lands with different civilizations from ours? We in the Western world almost universally regard literacy as always and everywhere necessarily identical with intelligence, and illiteracy as necessarily

identical with unintelligence or ignorance. But a mistake could hardly be greater. A man who does not know a letter of the alphabet and who cannot sign his name may be a person of large intelligence, and, on the other hand, a man who can read and write half a dozen languages may possess very little knowledge of any practical value, indeed may be almost a fool.

The truth of this is well-illustrated by the case of a prisoner in the State Prison at Auburn, New York, in the year 1926. The intelligence tests of the 1,300 prisoners in that institution showed that the very highest intelligence of all was found in a man (45 years old) who had come into the prison wholly illiterate, unable either to read or write. His intelligence was proven to be higher than that of any of the high school or college graduates. And this by tests the most rigid.

The truth is, there is amazing ignorance in our whole American and European world as to the real relation of literacy to intelligence. The reason we identify the two is because we of the West are fed on books and other reading from our babyhood, and get almost all our knowledge from the printed page. Thus our minds become artificialized, our conception of knowledge becomes narrowed down to that which we get from reading, and other avenues for obtaining knowledge, outside of reading become largely closed to us. And yet these other avenues are of enormous importance. Taking the great past as a whole the intelligence of mankind has very little of it been obtained from books or letters. Books and letters are comparatively modern things, and relatively very artificial. The great means of gaining intelligence throughout bygone ages, and the far more natural means, has been speech, not writing, has been personal contact with others—children learning from their parents, knowledge slowly gained by observation and experience, and handed down by word of mouth from generation to generation, wise sayings and teachings of sages committed to memory by the people and transmitted orally, and thus preserved from age to age as intellectual gold.

Up to very recent times the great teachers of mankind have never been teachers through books or reading or writing, but always through personal contact and speech. Jesus taught his disciples orally. Buddha devoted himself to teaching all his long life,

but so far as we can find out his instruction was mainly, if not, wholly, oral. Socrates, Plato, Aristotle and the great philosophers and teachers of Greece communicated their knowledge and thought by speech,—gathering their pupils and followers into groups and small companies, in gardens, groves or temples and there instructing them through conversation, with probably little or no use at any time of anything so artificial as a book or a manuscript.

Many of the greatest men of the past, even since writing and books have been known, (to say nothing of the long ages before letters were invented), have been illiterate,—kings, statesmen, commanders of armies, governors of provinces, managers of great business enterprises, discoverers, inventors, leaders in every department of life. Nobody ever dreamed that these men, or the nations to which they belonged, were incapable of ruling themselves and needed to be held in subjection by foreigners because of their illiteracy. Then why does anybody say that the illiteracy which exists in India (especially when it is remembered that by its side there exists the very large amount of literacy which has been mentioned) make it necessary for the Indian people to be governed by aliens from beyond great oceans, most of whom come to their governing tasks in almost absolute ignorance of India, indeed, with far, far less knowledge of India's history, civilization, institutions, customs and real needs, than is possessed by millions and millions of the Indian people who are stigmatized and looked down upon by their, egotistical British masters as illiterate?

Up to within a century or so of the present time, the literacy of Great Britain was very low. When she wrote her Magna Charta, and when she established her Parliament and made her Kings answerable to it, only a small minority of her people could read and write. But that did not prevent her from ruling herself. Large numbers of the early pioneers of America, who penetrated its wildernesses, subdued its forests, and laid the foundations of its governments, were nearly or wholly illiterate, according to our present understanding of the word. But what men they were! How many of us with all our book-learning are their equals in intellectual and moral strength? It has been estimated that less than half of the people of the thirteen American Colonies at the

time of the Revolution could read and write. Yet how nobly they wrought for freedom, and what a nation they founded!

Americans should not forget that the staunch and virile American stock from which Abraham Lincoln came was largely illiterate. The great Appalachian Mountain region of West Virginia, Kentucky, Tennessee, the Carolinas and Georgia, contains a white population of about 6,000,000, nearly all native Americans for six or seven generations. The statistics of the draft at the time we went into the European War indicated an illiteracy in that region of nearly 80 per cent. Would it not be possible to find six millions of graduates from our schools, including many graduates of our colleges and universities, that could be better spared from the nation than those independent and sturdy mountain people, so large a portion of whom cannot read or write?

The large South American Republic of Brazil, according to a recent census, has an illiteracy of over 80 per cent. Yet Brazil is self-ruling and well-governed. Several other South American nations have a rate of illiteracy nearly as high, and yet have reasonably good governments, far better than any foreign rule could be.

Many of the people of India who cannot read and write not only possess large knowledge of things outside of books, but actually have an amount of knowledge of books (obtained by hearing them read or recited by others) which amazes the Westerner and often puts him to shame. The last time I was in India they told me that the lyric poems of Tagore were known by heart (had been committed to memory) by millions, and were recited and sung all over Bengal and far beyond.

I suppose it would not be beyond the truth to say that a larger proportion of the people of India, even of those who are called illiterate, are reasonably intelligent about the two great national (and almost sacred) Epics of their country, the Mahabharata and the Ramayana, and have large portions of them committed to memory, than the proportion of Europeans or Americans who are intelligent about our Bible and have relatively equal portions of that committed to memory. It is not uncommon for Hindu men and boys who have never been to school a day, to be able to repeat actually by the hour passages from these two great national poems or other esteemed Hindu literature,

and hardly less is to be said of the Moham-medans as to their knowledge of the Koran and other Islamic literature.

Max Muller (in his "What India Can Teach Us") says: "There is such a thing as social education and education outside of books; and this education is distinctly higher in India than in any part of Christendom. Through recitations of ancient stories and legends, through religious songs and passion plays, through shows and pageants, through ceremonials and sacraments, through fairs and pilgrimages, the Hindu masses all over India receive a general culture and education which are in no way lower, but positively higher, than the general level of culture and education received through schools and newspapers, or even through the ministrations of the churches, in Western Christian lands. It is an education, not in the so-called three R's, but in humanity."

Mr. Romesh Dutt, than whom there is no more trustworthy authority, says: "There are few if any groups of ten or twelve villages in India that do not contain men of influence, men of intelligence and some education,—men who are respected in their neighborhoods,—cultivators of the soil on a large scale, village priests, village physicians, village schoolmasters and others. These men are the natural leaders of the people. In political affairs they are usually willing to come forward for election, to represent their communities, and to serve the Government."

Facts like these should be pondered by Englishmen or others who so lightly and ignorantly declare that the great historic nation of India is not fit to rule itself, but must remain subject to foreigners, because of its so-called "illiteracy."

In conclusion: The whole subject of illiteracy in India as related to self-government, may be concisely and fittingly summed up in the two following questions, which, it is believed, in the very putting of them answer themselves:—

I. Should India be ruled by a small body of foreigners, who are in the country only temporarily, whose supreme interests are in a distant land, a majority of whom are haughty and overbearing toward the Indian people, and unsympathetic toward India's Civilization and Ideals, whose knowledge of India and its needs, in the very nature of the case is and can be, only very imperfect and superficial? Or,

II. Should India be ruled by her own natural leaders, namely:

(1) the 2,500,000 Indians who are literate in English; plus (2) the 22,600,000 Indians who are literate in one or more of the languages of India; plus (3) the still larger number of millions of Indians, who although technically illiterate, are men of large practical intelligence, whose home is India, who love their native land as Englishmen or Americans love theirs, whose whole interests are in India, and whose knowledge of their own country and the needs of its people is incomparably greater than the knowledge of these possessed by any transient foreigners can possibly be?

I say, which of these are best fitted to rule India? I am sure the questions answer themselves.

Let nothing that has been said in this article be understood as meaning that the writer estimates highly the value of reading, writing and books, or the importance, for many uses and in many directions, of the knowledge to be gained through them. As has been pointed out, India deeply needs and craves, and has long been pleading with her rulers to give her, this knowledge. The crime of her rulers in withholding it has been very great.

But, notwithstanding the illiteracy which is India's unfortunate lot, she unhesitatingly and earnestly declares that she is *fit for self-rule*, and by every principle of human justice is entitled to it. Furthermore, she wants the world clearly to understand that *one of the very strong reasons why she demands self-government is, because only through it can she see any hope of ever getting rid of her illiteracy.*

MEGALOMANIA IN LITERATURE

By NAGENDRANATH GUPTA

PHYSICIANS diagnose megalomania as a disease, sometimes symptomatic of a terrible malady. Apart from a medical prognosis, megalomania, or the delusion of power and greatness, such as that possessed by William I of Germany and was the cause of his undoing, is not uncommon. It may be a very aggravated form of egoism, a hypertrophy which is colloquially known as a swelled head. It has been hardly noticed that this disease of the mind has been finding free vent in literature for a considerable time.

The part that literature plays in human affairs and human thought is a considerable one. It is not merely an intellectual stimulant. The highest creative literature has been known to permeate life itself. The great epics, dramas, romances and works of fiction often exercise a powerful influence on human conduct and human ideals. Our judgment of such works is limited by our knowledge. It is comparatively recently that European scholars have become aware of the existence of an important literature outside Europe. Even now such knowledge is confined to a very few people. Man's quest for all things that appeal to the higher faculties is narrow. To Europeans Europe represented the whole world just as the Aryans thought there was nothing worth knowing outside India. The Greeks looked upon Hellas as the land favoured by the gods and the Romans proudly declared Rome to be the hub of the world. Homer was and probably still is regarded as the greatest epic poet of the world. I am not sure whether the majority of Englishmen do not regard Milton greater than Dante, or the Germans do not look upon Goethe as greater than Shakespeare. It may be due to a similar weakness that we Indians retain the conviction that Valmiki and Vyasa are the greatest poets that the world has yet known.

There is, however, a touchstone for literature as well as for gold, and any great book may be put to the test. When a book or the author of that book is designated immortal, it means that the book exercises

a living influence upon living men. The epics of Homer are as well-known to-day as when they were sung or chanted by the wandering bard in the streets and homes of some forgotten town in ancient Greece. From Greece they have passed to the possession of the world. The names of Agamemnon and Achilles, Hector and Patroclus, the wanderings and adventures of Ulysses are now known in every part of the world. Not great as the poems undoubtedly are, they are valued mainly as high literature with all the grandeur associated with true epic poetry. The *Iliad* and the *Odyssey* are beyond question the beginning of all literature in ancient and modern Europe. It may be noted in passing that among the many theories about the personality and identity of Homer one is that the word is derived from *homeros*, which means a collector. Turning to ancient Sanskrit literature we find that the author of the *Mahabharata*, Vyasa, is also believed to have been a collector because of the multiplicity of the works attributed to his authorship. The speculation itself is unprofitable, because nothing can be accurately ascertained about Vyasa and Homer, and whether they were the authors or compilers of the great epics they have left a heritage which is as real as it is priceless. But if we compare the epics of Homer with the *Ramayana* and the *Mahabharata* we can at once realise that the ideal of the Aryan poet is higher than the Greek ideal. Penelope is certainly an ideal wife, faithful to the wandering Ulysses, and the inventor of a womanly and ingenious device to put off her importunate suitors. Sita was placed in a much worse position, but she passed through the ordeal without scathe. To millions of women in this country she is not only a goddess, but the highest paragon of a true and faithful wife. It is only in India that we find the legends and myths of early Sanskrit literature interwoven into the web of Indian life and thought. In Europe the interest in ancient literature is detached and impersonal; there is no continuity of tradition; the modern Greeks or

Italians have nothing in common with the ancient Greeks and Romans; the most important break is the change of religion, and probably the good Christians in Greece and Italy designate Homer and Hesiod, Virgil and Ovid, pagans. In India men and women still cling to the ancient faith. Religion has passed through various phases, but there has been no radical change. The heroes and heroines of the Sanskrit epics are still the ideals of the Hindu race; many of the legends have been put to practical application. The birth anniversary of Krishna is still a national festival throughout India. Hindu women still perform the *Savitri Vrata*, in memory of the faithful Savitri, who won back the life of her dead husband from King Yama (Pluto) himself. The stories of the two epics with the numerous minor legends intertwined with them have been sources of perennial inspiration to later poets and dramatists. There is no other literature in the world which has filled so large a space in the life, religion and thoughts of a nation.

Evidence of a sense of racial superiority has been sought in the *Ramayana* in that part of the narrative in which an aboriginal race inhabiting the southern part of the peninsula has been designated a race of anthropoid apes. These formed the allies of Rama and the army with whose help he vanquished and killed Ravana, the demon-king of Ceylon, and rescued Sita from captivity. It is impossible to judge what was at the back of the poet's mind, but certainly there is no contempt for the monkey-army and the leaders among them. Hanuman was the most devoted and zealous follower of Rama. He discovered Sita in the wood where she was kept a prisoner, and he is worshipped as the monkey-god to this day. Others were gallant fighters and their unselfish devotion to Rama and the part they played in the rescue of Sita were beyond all praise. There is not a word anywhere to show that these heroic and generous friends and followers of Rama, at a time when he and his brother Lakshmana were exiles and wanderers upon the face of the earth, were despised or treated with contumely. Any race or tribe would be proud to have such a record.

In later times when the age of the drama appeared in Sanskrit literature the consciousness of the superiority of the Aryan race became manifest. Sanskrit drama is singularly free from coarse or vulgar language or

expletives. Oaths cannot be found in the dialogues, even when the speakers belong to the lower ranks of society. The severest term of abuse is either a son or a daughter of a slave. These ancient Aryans were clearly a clean-minded people who never used foul language. But there is a sharp distinction between an Arya and an Anarya (non-Aryan). When a woman is addressed in indecorous language she flashes out the retort, 'you speak like an Anarya!' Contempt is concentrated in that one word. An Arya must be incapable of anything unworthy, undignified or unbecoming. He must be true to the teachings and traditions of his race. One who is not an Arya may be different. But it is only rarely that we come across such remarks and only in some dramas; there is no insistence on the superiority of the Aryan race, no obsession of greatness, no universal contempt for other races. The great poets and dramatists were full of their own high art and seldom treated of trivial things or feelings.

Ancient Greek literature is also free from any insistence on the superiority of the Greek race. The great epics treat of war and adventure, the famous tragedies of Aeschylus, Euripides, Sophocles and Seneca mostly treated of the mythologies of the different parts of Greece, while the comedies of Aristophanes lashed the vices of the age with the band of a master. Literature was not used as a medium for the assertion of national superiority, and even the Helots, who were slaves, were let alone. The Romans were the proudest among the ancient nations, but their best literature is not tainted by expressions of contempt for other peoples.

The bar sinister of colour was first introduced in literature by Shakespeare but without the slightest reflection upon the man of colour. If Othello was a Moor he belonged to a race which had left its stamp of sovereignty upon parts of Europe. In the beginning of the eighth century the Moors invaded Spain and they overran the whole country except the Asturias and it was not till the end of the fifteenth century that they were expelled finally from the country. The remnants of their splendid architecture are still to be seen in the south of Spain. A whole nation of Europe was conquered by a Negroid race and the white people had to live under the rule of a black race. It is not ancient history even now and it was quite fresh in the time of Shakespeare. The

he had answered that a stupa should be of the shape of a inverted alms-bowl. The earliest examples of Buddhist and Jain stupas are really hemispheres. Such is the shape of the great stupas at Sanchi and that at Manikyala near Rawalpindi. The Barhut stupa has not survived up to our time but the specimens we find on its bas-reliefs are hemispheres placed on a round pedestal or a drum, the north-western frontier of India abounds with ruins of stupas of all sorts beginning from the 2nd century B. C. to the 5th century A. D. when Buddhism was practically destroyed by the repeated invasions of the Huns and the Gurjaras. The evolution of the stupa at the Chaityas can be studied at best in the north-western frontier or Gandhara; and at Bodhi Gaya, where numerous Votive stupas were erected from the 3rd century B.C. to the end of the 12th century A. D.

In Buddhism stupas and Chaityas came very early to be divided into two different classes, the solid Chaitya built as a monument to commemorate a certain event and the hollow Chaitya, which contained some relic. The nature of the Jain Chaitya or stupa is less familiar to us. One such stupa of the first century B. C. or A. D. was excavated by Dr. Fuhrer at Kankali Tila in Mathura and the remaining specimens are known to us only from bas-reliefs. Buddhist Chaityas and stupas of all ages are far more numerous. The earlier stupas at Sanchi, Sonari and Sattdhara (near Sanchi) and Manikyala were hollow or Garbha-Chaityas. The Sanchi Sattdhara and Sonari stupas were the tombs of great Buddhist missionaries. The second stupa at Sattdhara contained the relics of the saint Sariputra, the contemporary and the favourite of Gautama Buddha and that of his companion Mahamandgalyayana. The second stupa at Sonari contained the relics of the celebrated saint Majjhima and of Kanndiniputra the missionary to the Himlayan regions. The reliquary found in the stupa at Manikyala contained a number of relics. Many later stupas, such as the great Dhamek stupa at Sarnath were solid

monuments built to mark the position of a particular site. Yuan Chwang has mentioned many stupas that were erected by pious Buddhists to mark special spots connected with the life of Gautama Buddha.

The small votive stupas in the courtyard of great temple at Bodhi Gaya and the larger stupas of the North-Western Frontier Province afford us sufficient examples for the historical treatment of the architecture of the stupa. The stupa whether hollow or solid was always a structure with a circular base. The super-structure differed at different times, the earliest specimens being hemispheres on a low rectangular platform. In many cases the outline and appearance of the oldest stupas was changed by the addition of other layers of masonry over the old one such as stupa No. 1 at Sanchi. This became a much larger hemisphere built on a higher pedestal with the passage of time. Another typical example is the Dhamek stupa, the lower part of which is built of stone but the upper part of bricks. The lower part, which remained unfinished, is an irregular hemisphere built on a large round pedestal. It was most probably built in the 5th century A. D. the brick structure was added to it in the 7th century when the entire structure lost its original character and became oval in shape. The Dhamek stupa, when the facing of the brick portion was intact, resembled the stupa of the goose at Giriyak, 10 miles from ancient Rajgir in the Patna district.

The gradual evolution of the stupa from the primitive hemispherical burial mound to the stately stone or brick structure of Buddhists is a process of five different stages;—(1) the primitive stupa placed on a pedestal, (2) the addition of a circular drum above the pedestal, under the hemisphere, (3) the increase in the height of the drum making the structure a thick round pillar with a curved top, (4) the addition of different tiers in the pedestal and the drum e.g. the stupa at Paharpur in the Rajshahi district of Bengal and (5) the alaping of the side walls below the drum but above the pedestal which we find in the Burmese and Siamese stupas.

In three earlier classes the evolution is gradual and the stupa does not deviate from its original character. For example in the case of stupa No. 1 at Sanchi or the stupa at Manikyala we see that the pedestal is round instead of being square and the lower portion of the hemisphere rests on a round

Stupa No. 1, Sanchi, Bhopal State
(2nd. Century B. C.)

'tradition of the Moors as a nation of warriors and conquerors appealed to the imagination of the dramatist who knew no distinction between black and white, but who knew that human nature was the same everywhere, whatever the colour of the skin. Othello is a noble and chivalrous character, but there is a weak joint in every armour and the green-eyed monster of jealousy blinded Othello and led him to the crime of wife-murder. His Ancient, Iago, who wrung him against jealousy while feeding that passion with diabolical cunning, was a Greek, a 'Spartan dog' as Lodovico calls him in passionate anger at the end of the double tragedy of the deaths of Desdemona and Othello. We feel pity for Othello's weakness and sympathy for the wreck of his newly-wedded happiness, but no contempt for his essentially lofty character. He was descended from a royal line as he said, 'I fetch my life and being from men of royal siege' and some of the noblest words in the drama are put into his mouth. When accused of having won Desdemona's love by witchcraft he made a straightforward, soldierly statement showing how he had unconsciously wooed his wife by recounting to her his deeds of valour and how her admiration had melted into love:—

She lov'd me for the dangers I had pass'd.
And I lov'd her that she did pity them.
This only is the witchcraft I have us'd.

Tortured by the venom of jealousy injected into his veins in ever-increasing doses by the arch-poisoner, Iago, Othello exclaims in the ascending intensity of a dramatic passion that his martial occupation is gone:—

Farewell the tranquil mind; farewell content!
Farewell the plumed troop and the big wars
That make ambition virtue! O, farewell!

The Royal banner, and all quality,
Pride, pomp, and circumstance of glorious war!

Farewell! Othello's occupation's gone!

And when the fair Desdemona lay before him, the breath of her life stifled by his own hands, and Othello was convinced of her innocence by the whiplash of Emilia's tongue, how magnificent and despairing is the outburst of his grief!

O! cursed, cursed slave. Whip me, ye devils,
From the possession of this heavenly sight!
Blow me about in winds! roast me in sulphur!
Wash me in steep-down gulfs of liquid fire!
O Desdemona! Desdemona dead!
Oh! Oh! Oh!

Finally, there are the great words uttered just before the self-inflicted blow that laid him by the side of Desdemona in death:—

I pray you

Speak of me as I am; nothing extenuate
Nor set down aught in malice.

Iago had a white skin but the blackest of hearts. He calls Othello 'an old black ram' behind his back but admits to Roderigo the nobility of Othello's nature:—

The Moor, howbeit I endure him not,
Is of a constant, loving, noble nature,

So great a poet as Shakespeare cannot be ewayed by considerations of race or colour, for his genius is a mirror in which the whole range of human nature is impartially reflected. The highest creative art is invariably impersonal. Moreover, England never dreamed of an Empire in the lifetime of Shakespeare. He died in 1616; in 1614 Sir Thomas Roe was sent as an ambassador to the court of the Great Moghul and the dazzling magnificence of the Moghul Empire must have convinced him of the insignificance of the little island kingdom to north Europe. Shakespeare was merely universal; the young imperial idea was taught to shoot much later.

In a Victorian poet like Tennyson the pride of race finds full vent in a poem like "The Defence of Lucknow" and the heroic character of the British defenders is extolled to the skies. To this no exception can be taken, as it is natural for a poet to feel pride in the gallantry of his countrymen. In the heroic defence of the Residency at Lucknow the Indian soldiers took an important part and this has been gracefully and gratefully chronicled by the English poet:—

Praise to our Indian brothers, and let the dark
faces have his due!

Thanks to the kindly dark faces who fought
with us, faithful and few.

Fought with the bravest among us, and drove
them, and smote them, and slew.

That over upon the topmost roof our banner
in India blew.

The power of the East India Company was founded by men who were as unscrupulous as they were able, and as a servant of this Company Macaulay indited his wholesale and unfounded calumny against the Bengalis as a people. I celebrated with his own rhetoric, which sounds hollow and untrue in every one of his laboured periods, this writer wantonly defamed a people whose salt he had eaten

without a single thought that the worst among the Bengalis who had dealings with English servants of the East India Company were angels of purity compared with many who condemned them. Robert Louis Stevenson, himself one of the finest and truest stylists in the English language, has unreservedly denounced the meretricious artificiality and the false ring of Macaulay's style. Truth was to him of no consequence so long as an effect could be achieved by heaping up simile and antithesis. This disregard for the truth and contempt for other races were the early symptoms of the disease which has now appeared in epidemic form in literature. Who with any respect for the truth could have described the battles of Chillianwala and Sobran in the Sikh War as drawn when the British rout in both battles was complete? One ceases to wonder that Indian history is so carefully Bowdlerized before being put in the hands of Indian students.

This attitude of the superiority of race became more and more noticeable in western literature until it found triumphant expression in Rudyard Kipling, who was hailed as one of the immortals and was promptly awarded the Nobel Prize for Literature. As a young man he served as an assistant on the editorial staff of the *Civil and Military Gazette* and the *Pioneer*, at Lahore and Allahabad. He had never anything to do with Bengal or the Bengalis and yet his most venomous writings were directed against people belonging to that race. He has been rightly dubbed the Poet of the Empire, for the imperialist is an insufferable egotist whose head strikes the stars and who looks down upon the world as peopled by pigmy races, he alone and his countrymen lowering over the rest as giants. No imperialist can ever be a true poet or a great dramatist, for real humanism cannot be bounded by race or colour, and it is the privilege of supreme geniuses to obliterate all narrow limitations. The designation of the Poet of the Empire carries its own condemnation for such a poet can never be a world-poet. It is only an imperialist that can outrage human nature by such a sentiment as 'the East is East and the West is West, and the twain shall never meet', or the apparently sanctimonious but really blasphemous doctrine about the White Man's Burden. If the lawless possession of another man's liberty and his property can be called a burden, why does the white man squeal

out in terror when his liberty and property are in jeopardy? The memory of the four years ending in 1918 is not yet so far distant that there is any difficulty in recalling it. The only fine note that Rudyard Kipling has struck is in "Recessional."

The perpetual amusement that is found in the manufacture of 'Bible English' made in England or Anglo-India shows a woeful lack of the sense of humor in literature. If specimens of Anglo-Indian Bengali or Hindostani could be collected the laugh would be on the other side; for Englishmen spend thirty or forty years in India without ever learning to speak any Indian language decently, and as to writing, they never learn anything at all. As linguists the purveyors of Bible English are nowhere.

Overwhelming evidence of a boundless racial vanity is to be found in the literature and periodicals of the West, particularly among the English-speaking races. If you wish to see the double of a reigning sovereign in Europe, one who can pass for the king himself, unrecognized by his ministers and subjects, you have only to look out for a likely Englishman. The fact that these conceits are to be found in works of fiction makes no difference in the habit of the mind, the viewpoint of the writers. If an Egyptian or Turkish beauty living in the seclusion of the pardah happens to fall in love, who is the fortunate individual favoured by her? Why a European, of course. If there is a damsel in distress, captured by a Sbeik, or abducted by savages, the knight who rushes to her rescue is invariably an Englishman braver than Bayard or the knights of King Arthur's Round Table. If one wishes to see a single man scattering a whole crowd as chaff before the wind, he has merely to read a story in an English monthly magazine. And this perpetual self-exaltation goes hand in hand with the most withering contempt for other nations mingled with wholesale and sweeping calumny. If the hero is invariably a European, the villain is either an Asiatic, an African or a Mexican. A frequent foil to a noble and heroic Englishman is a Chinaman. To judge by the pictures presented in the shilling shockers and accounts of sensational adventures in the magazines, a Chinaman would appear to be the last word in crime and law cunning. One of Rudyard Kipling's books is devoted to grossly maligning a Bengali. The law is being amended to

tradition of the Moors as a nation of warriors and conquerors appealed to the imagination of the dramatist who know no distinction between black and white, but who knew that human nature was the same everywhere, whatever the colour of the skin. Othello is a noble and chivalrous character, but there is a weak joint in every armour and the green-eyed monster of jealousy blinded Othello and led him to the crime of wife-murder. His Ancient, Iago, who warned him against jealousy while feeding that passion with diabolical cunning, was a Greek, a 'Spartan dog' as Lodovico calls him in passionate anger at the end of the double tragedy of the deaths of Desdemona and Othello. We feel pity for Othello's weakness and sympathy for the wreck of his newly-wedded happiness, but no contempt for his essentially lofty character. He was descended from a royal line as he said, 'I fetch my life and being from men of royal siege' and some of the noblest words in the drama are put into his mouth. When accused of having won Desdemona's love by witchcraft he made a straightforward, soldierly statement showing how he had unconsciously wooed his wife by renouncing to her his deeds of valour and how her admiration had melted into love:—

She lov'd me for the dangers I had pass'd,
And I lov'd her that she did pity them.
This only is the witchcraft I have us'd.

Tortured by the venom of jealousy injected into his veins in ever-increasing doses by the arch-poisoner, Iago, Othello exclaims in the ascending intensity of a dramatic passion that his martial occupation is gone:—

Truth was to him of no consequence so long as an effect could be achieved by heaping up simile and antithesis. This disregard for the truth and contempt for other races were the early symptoms of the disease which has now appeared in epidemic form in literature. Who with any respect for the truth could have described the battles of Chillianwala and Sobrana in the Sikh War as drawn when the British rout in both battles was complete? One ceases to wonder that Indian history is so carefully Bowdlerized before being put in the hands of Indian students.

This attitude of the superiority of race became more and more noticeable in western literature until it found triumphant expression in Rudyard Kipling, who was hailed as one of the immortals and was promptly awarded the Nobel Prize for Literature. As a young man he served as an assistant on the editorial staff of the *Civil and Military Gazette* and the *Pioneer*, at Lahore and Allahabad. He had never anything to do with Bengal or the Bengalis and yet his most envenomed writings were directed against people belonging to that race. He has been rightly dubbed the Poet of the Empire, for the imperialist is an insufferable egoist whose head strikes the stars and who looks down upon the world as peopled by pigmy races, he alone and his countrymen towering over the rest as giants. No imperialist can ever be a 'true poet or a great dramatist, for real humanism cannot be bogged by race or colour, and it is the privilege of supreme genius to obliterate all narrow limitations. The designation of the Poet of the Empire carries its own condemnation for such a poet can never be a world-poet. It is only an imperialist that can outrage human nature by such a sentiment as 'the East is East and the West is West, and the twain shall never meet', or the apparently sanctimonious but really blasphemous doctrine about the White Man's Burden. If the lawless possession of another man's liberty and his property can be called a burden, why does the white man squeal

out in terror when his liberty and property are in jeopardy? The memory of the four years ending in 1918 is not yet so far distant that there is any difficulty in recalling it. The only fine note that Rudyard Kipling has struck is in "Recessional."

The perpetual emulства that is found in the manifiesto of 'Bibbo English' made in England or Anglo-India shows a woeful lack of the sense of humour in literature. If specimens of Anglo-Indian Bengali or Hindustani could be collected the laugh would be on the other side; for Englishmen spend thirty or forty years in India without ever learning to speak any Indian language decently, and as to writing, they never learn anything at all. As linguists the purveyors of Bibbo English are nowhere.

Overwhelming evidence of a boundless racial vanity is to be found in the literature and periodicals of the West, particularly among the English-speaking races. If you wish to see the double of a reigning sovereign in Europe, one who can pass for the king himself, unrecognised by his ministers and subjects, you have only to look out for a likely Englishman. The fact that these conceits are to be found in works of fiction makes no difference in the habit of the mind, the viewpoint of the writers. If an Egyptian or Turkish beauty living in the seclusion of the purdah happens to fall in love, who is the fortunate individual favoured by her? Why a European, of course. If there is a damsel in distress, captured by a Sheik, or abducted by savages, the knight who rushes to her rescue is invariably an Englishman braver than Bayard or the knights of King Arthur's Round Table. If one wishes to see a single man scattering a whole crowd as chaff before the wind, he has merely to read a story in an English monthly magazine. And this perpetual self-exaltation goes hand in hand with the most withering contempt for other nations mingled with wholesale and sweeping calumny. If the hero is invariably a European, the villain is either an Asiatic, an African or a Mexican. A frequent foil to a noble and heroic Englishman is a Chinaman. To judge by the pictures presented in the shilling shockers and accounts of sensational adventures in the magazines, a Chinaman would appear to be the last word in crime and low cunning. One of Rudyard Kipling's books is devoted to grossly maligning a Bengali. The law is being amended to

penalise newspaper attacks on prophets and saints, but there is no law to prevent or punish the calumniation of whole nations in books and stories. There has been a recent instance of such a book being made part of a propaganda for political purposes, but the deliberate and conscious offender may not be a victim of a malady of the mind. A book like "Mother India" may be a cold, calculated thing, perpetrated with deliberation and deflected with brazen effrontery, the vinegary output of a shrewish mind combined with sterility of all notions of justice and appreciation.

Much of this literature of beating the big drum on one's own door step is fugitive. Most of it is turned out by the printing press to be thrown into the bottomless wastepaper-basket of oblivion, but the mind at the back of it persists. So irresistible has become the obsession of race and colour that the phrase 'a white man' has become a synonym for every virtue under the sun. You may read in any trashy story in a periodical that Dick, Tom or Harry proved to be a white man; in other words, he had not only a white skin, but he was truthful, honourable, chivalrous and possessed of all the virtues. It might just as well be said that he had descended straight from heaven, nimbus and wings and all! It is megalomania, stark and unashamed, finding outrageous expression in language. The coiners of this phrase never paused to think, because they had lost the power of discrimination, that if a white man possessed all the virtues the converse also must have been true, namely, that the brown, black or yellow man had no virtues. No man in the possession of his senses would dare to make such a preposterous statement, and the assertion that a white man is proof positive of literary megalomania.

As a student and admirer of all that is best in English literature I wish to make it clear that I have dealt with a certain class of writers only, who have brought the noble aim and purpose of literature into disrepute. The pride of race and skin and the intoxication of imperialism have unhinged the mind and upset the balance of judgement and the catholicity of sympathy inseparable from high class literature. So far have this obliqueness of vision and the warping of the intellect advanced that they have encroached upon legitimate literature, I have recently an occasion to see a book entitled 'Rabindranath

Tagore, Dramatist Poet', by E. J. Thompson. It is a thesis which has won for the writer a Doctorate in Philology from the University of London as well as a chair in the Oxford University as a Lecturer in Bengali. It is outside my purpose to attempt a review of this book or to examine the writer's knowledge of the Bengali language. He has read the Bengali poet in the original and translated several of his poems. He has attempted an elaborate and detailed criticism of several works of the poet, whom he ranks among the world poets. Since he owes both his degree and his appointment to his criticism—whatever may be its value—of the writings of the Indian poet, it would be absurd for him to assume an attitude of superiority towards the poet. In the main, his attitude is generally correct, but there are lapses which can only be explained by a mental price of superiority. I do not say it is conscious or deliberate, but there is unmistakable evidence that the English critic, who spent several years in India as the Principal of a missionary college, thinks that he can teach the Indian poet a thing or two. It may be that Mr. Thompson is somewhat handicapped by the habit of toadyism in the class-room, for habit has an awkward tendency to become second nature, but in several passages of the book the schoolmaster seems to be very much abroad and to have lost his bearings. As an illustration I shall quote a single passage from Mr. Thompson's book:—

If he (Rabindranath Tagore) had been able to study such work as (say) Dr. Bradley's discussion of the reasons for the failure of the long poem in Wordsworth's age, or Dr. Bridges's careful appraisal of Keats's *odes* relative among themselves, I think he might have been an even greater poet and avoided faults which flow and crack his beauty far more deeply than mere repetition does, accompanying though that fault is.

I shall not insult Mr. Thompson by asking him whether he has read a certain effusion entitled 'English Bards and Scotch Reviewers' written by Lord Byron when that poet was a very young man and his critics were seasoned veterans of the *Edinburgh Review*. Here the case is reversed, as the poet happens to be an older man than his critic, and, being a mild Hindu, is not accustomed to reply to his critics. But the phrase Indian Bards and Anglo-Indian Reviewers would be aptly suggestive of the English precedent. It may be even conceded that the critic in this case means well and that he is innocent

of any intention of belittling the greatness of the poet. But I have grave doubts whether Mr. Thompson ever realised the full significance of the sentence 'quoted above. If the poet had not been an Indian would an advice of this kind have been tendered to him? The implication is clear that if the Indian poet had gone to school to two obscure English critics, whose names are unknown outside a small circle of English readers, he would have become a greater poet and avoided some faults. Can the impudence of presumption go beyond this cool suggestion? Who are the two famous critics, anyway, who can make great poets? Who at this distance have scarcely heard of Dr. Bradley, and if Dr. Bridges is the King's canary who refused to chirp in America, he does not seem to have succeeded in making himself a great poet for all his careful appraisement of Keats. No one can claim perfection for all the works of any poet, for even Homer was seen to nod, but critics can no more make or unmake poets than a peasant can have sunshine or a shower of rain at will.

It did not occur to Mr. Thompson that some of the works of Rabindranath Tagore have been translated into other languages besides English, and French, German, Italian and Scandinavian critics may offer the poet the same sort of advice as that given by Mr. Thompson. A French critic may commend the poet to study some distinguished French critics, a German may urge the claims of German poet-makers, and so on. All this advice would be thrown away for the simple reason that the Indian poet is not familiar with all European or Asiatic

languages. With a naive complacency Mr. Thompson has in most instances tried to discover the source of the Indian poet's inspiration in the writings of some English poets and, from this point of view, it seems natural that he should advise the Indian poet to turn to English critics for guidance. The influence of earlier poets must necessarily be found in later poets. All the books written by Kalidasa, with the exception of the *Meghaduta*, are based upon incidents in the *Ramayana* and *Mahabharata*, but that takes away nothing from the greatness of Kalidasa. Rabindranath's debt to English poets is very small compared to what he owes to Vaisnava and Sanskrit poetry, but that does not affect his own position as a poet at all. Poets make critics; critics do not make poets or help them in any way. A poet follows his own light and serves his own genius as best he may. What does it matter to Wordsworth or Keats what Dr. Bradley or Dr. Bridges may write about them, and how is their reputation as poets likely to be affected by any criticism of to-day? The world has judged Rabindranath by his work, and his critics have followed the path blazed by his fame. His triumphs are his own, so are his weaknesses, but his work has been treated as a whole, and the world ranks him as a poet whose achievement is not bounded by race or country. Any critic is welcome to follow his own judgment, as a poet must be free to pursue the bent of his own genius, but in Mr. Thompson's book there is a distinct trace of that obsession of superiority which has degenerated into megalomania in less reputable writings.

STUPAS OR CHAITYAS

By R. D. BANERJI

THE word *stupa*, which means a mound has now come to denote a Buddhist temple or shrine of a particular type. Originally the term and its equivalent both signified a tomb, from the word *Chita*, a funeral pyre. The word *stupa* was applied to a mound in which the ashes of a Arya or a

Asura have been buried.¹ They were either round or square. The word was in common use in the 6th century B. C. when Gautama Buddha had begun to preach Hindu religion. When asked by a disciple

¹ *Memoirs of the Archaeological Survey No. 31, p. 13.*

he had vowed that a stupa should be of the shape of a inverted alms-bowl. The earliest examples of Buddhist and Jain stupas are really hemispheres. Such is the shape of the great stupas at Sanchi and that at Maikyala near Rowalpiadi. The Barhut stupa has not survived up to our time but the specimens we find on its bas-reliefs are hemispheres placed on a round pedestal or a drum, the north-western frontier of India abounds with ruins of stupas of all sorts beginning from the 2nd century B. C. to the 5th century A. D. when Buddhism was practically destroyed by the repeated invasions of the Huns and the Gurjars. The evolution of the stupa or the Chaityas can be studied at best in the north-western frontier or Gandhara and at Bodhi Gaya, where numerous Votive stupas were erected from the 3rd century B.C. to the end of the 12th century A. D.

In Buddhism stupas and Chaityas came very early to be divided into two different classes, the solid Chaitya built as a monument to commemorate a certain event and the hollow Chaitya, which contained some relic. The nature of the Jala Chaitya or stupa is less familiar to us. One such stupa of the first century B. C. or A. D. was excavated by Dr. Fuhrer at Kankali Tila in Mathura and the remaining specimens are known to us only from bas-reliefs. Buddhist Chaityas and stupas of all ages are far more numerous. The earlier stupas at Sanchi, Sonari and Sattghara (near Sanchi) and Maikyala were hollow or Garhiha-Chaityas. The Sanchi Sattghara and Sonari stupas were the tombs of great Buddhist missionaries. The second stupa at Sattghara contained the relics of the saint Sariputra, the contemporary and the favourite of Gautama Buddha and that of his companion Mahamandalyayana. The second stupa at Sonari contained the relics of the celebrated saint Majjhima and of Kaundiniputra the missionary to the Himmalyan regions. The relic box found in the stupa at Maikyala contained a number of relics. Many later stupas, such as the great Dhamek stupa at Sarnath were solid

monuments built to mark the position of a particular site. Yuen Chweng has mentioned many stupas that were erected by pious Buddhists to mark special spots connected with the life of Gautama Buddha.

The small votive stupa in the courtyard of great temple at Bodhi Gaya and the larger stupas of the North-Western Frontier Province afford us sufficient examples for the historical treatment of the architecture of the stupa. The stupa whether hollow or solid was always a structure with a circular base. The super-structure differed at different times, the earliest specimens being hemispheres on a low rectangular platform. In many cases the outline and appearance of the oldest stupas was changed by the addition of other layers of masonry over the old one such as stupa No. 1 at Sanchi. This became a much larger hemisphere built on a higher pedestal with the passage of time. Another typical example is the Dhamek stupas, the lower part of which is built of stone but the upper part of bricks. The lower part, which remained unfinished, is an irregular hemisphere built on a large round pedestal. It was most probably built in the 5th century A. D. the brick structure was added to it in the 7th century when the entire structure lost its original character and became ovoid in shape. The Dhamek stupa, when the foliage of the brick portion was intact, resembled the stupa of the goose at Giriya, 10 miles from ancient Rajgir in the Patna district.

The gradual evolution of the stupa from the primitive hemispherical burial mound to the stately stone or brick structure of Buddhists is a process of five different stages:—(1) the primitive stupa placed on a pedestal, (2) the addition of a circular drum above the pedestal, under the hemisphere, (3) the increase in the height of the drum making the structure a thick round pillar with a curved top, (4) the addition of different tiers in the pedestal and the drum e. g. the stupa at Paharpur in the Rajshahi district of Bengal and (5) the sloping of the side walls below the drum but above the pedestal which we find in the Hormese and Siamese stupas.

In three earlier classes the evolution is gradual and the stupa does not deviate from its original character. For example in the case of stupa No. 1 at Sanchi or the stupa at Maikyala we see that the pedestal is round instead of being square and the lower portion of the hemisphere rests on a round

base. The real stupa of the first class which does not rest on any drum is therefore to be found among votive stupas only e.g. the big stone hemispheres in the courtyard of the great temple at Bodh Gaya and in isolated instances in the North-Western Frontier Province e.g. in the stupa at Chakpatin the Swat valley.* These older stupas can be recognised at a glance as they are totally different in form from later specimens, for example, the stupas at Ishpola, Bhallar, Bariket or Topdarra. The earliest reliquaries were modelled after the stupa. The best example is that discovered by General Gerard in a stupa at Burj-i-yakdereb to the east of Kabul.⁷ In this specimen the pedestal forms the base, the drum and the hemisphere, the lid and the five umbrellas one over another the handle of this peculiar reliquary.

In the second class of stupas we see the following divisions; (1) the pedestal surrounded by a railing, (2) the circular base and drum surrounded by another railing, (3) the hemisphere and (4) the square base above the hemisphere for the reception of the umbrellas. The number of umbrellas were never fixed and thus we find one only on the stupa in the great Chaitya hall at Karla but two in the bas-relief on the Barhut stupa.

The third stage can be better studied in the rock-cut Chaitya-halls of western India. The Chaitya in the great Buddhist cathedral at Karla is placed on a round but low pedestal over which is the drum, the height of which is a little less than half of that of the pedestal. But the abacus and the square receptacle for the umbrella are abnormally large and disproportionate to the hemisphere. If we compare the stupa in the Chaitya-hall in cave No. 10 of the Pandulena group near Nasik with that in the Karla Chaitya-hall then we shall find that the pedestal has become a thick dwarf column near the top of which is carried a Buddhist railing separating the hemisphere from the pedestal. In fact, in this case there is no drum unless we take the railing to be one. In the great Chaitya-hall at Kanheri the stupa or Chaitya bears almost the same proportion to the pedestal as the Karla specimen. The increase in the height of the drum first of all seen in the Pandulena Chaitya-hall is evident in many later stupas the dates of which can

be approximately fixed. Thus we find that in the majority of stupas depicted on tablets of homage discovered at Mathura, the drum of the stupa, wherever there is one, is proportionately as high as that in the Pandulena Chaitya-hall, e.g., the Jain stupa on the tablet dedicated by the courtesan Yasu, the daughter of the courtesan Lonasobhika at Mathura.⁸ A similar development can be

The Chaitya in the Chaitya-hall
(Cave no. 10) Kanheri Purna Dist.

seen in Amaravati sculptures where the height of the drum above the pedestal is only too apparent. To return once more to the Gandhara country we find that the increase in the height of the drum was gradual. Such is the case with the Ishpola stupa where the height is still moderate.⁹ In the case of the stupa at the mouth of the passes of Cherat and Gunivar it has increased to a certain extent¹⁰ but in later cases it suddenly increased disproportionately. The stupas at Bariket¹¹ and Topdarra¹² in the Swat valley show the imposition of three separate drums over the pedestal for the reception of the hemisphere. Such is the case of the stupa in the 6th century Chaitya-hall at Ajanta, cave No. XXVI. This evolution in the form of the stupa can be seen in sites excavated at Taxila, by Sir John Marshall. The great Dharmarajika stupa is one of the best examples of the earliest forms of the stupa.

The dilapidated condition in which it was discovered was extremely favourable for a study of its method of construction. It became apparent to the discoverer that the vast mass was retained in position by dividing the circumference into a number of sectors each separated from the next by a radial wall connecting the periphery with the centre. The name probably indicates that it was a stupa built by Asoka but subsequent additions left it untouched in form. In the courtyard of the Dharmarajika stupa as well as the different sites such as Sirkap, Jandial, Mohramoradu, Sirsukh and Jaulian one can see the gradual increase in the height of the drum in Gandhara stupas also. This can also be seen in the little stupa discovered in the interior of the supposed stupa of Kunala where the pedestal is square, the drum almost as high as the hemisphere and the latter irregular in shape.¹³

Connected with the increase in the height of the drum of the stupa is the beginning of a very important development in Indian plastic art, *n. g.*, the decoration of the stupa and its component parts with bas-reliefs representing the Jatakas and the story of the life of Gautama Buddha. These decorations of stupas or Chaityas originated with the creation of the Buddha image by artists of the Gandhara school, and consisted of two classes;—(1) a series of images of Buddhas or Bodhisattvas inside Chaitya-windows or horse shoe-shaped arches and (ii) bas-reliefs on drums or their square pedestals representing scenes from the life of Buddha. Therefore among Gandhara sculptures we find two classes of bas-reliefs;—(a) bas-reliefs on carved slabs and (b) those on straight slabs. Among the former may be mentioned the famous bas-reliefs from the drum of the stupa discovered at Sirkap¹⁴ but now in the Lahore Museum and the small stupa from Lorian Tangai represents the 'second class'.¹⁵ Another development in stupa architecture was the additions of a shrine in the form of a niche or still on one side of the drum of the stupa. Numerous examples have been discovered in the Gandhara stupas¹⁶ and later on a niche or shrine was placed on the

four cardinal points of each stupa.¹⁷ The single niche or shrine against the drum of the stupa can be seen in stupas from Sindh, *eg.* the stupa at Mirpur Khas¹⁸ in the Thar and Parkar districts discovered by Mr. H. Cousens and that discovered by me on the highest mound at Mohenjodaro in 1922-23.¹⁹ The addition of four niches or shrines on the cardinal points can be seen in stupa No. 1 Sonchi and among the remains still lying at Bahrut in the Nagod district between the stations of Uncherla and Satona on the Itarsi—Allahabad section of the G. I. P. Railway.

The addition of Buddha and Bodhisattva figures to the basements, pedestals, and drums of Gandhara stupas concerns the history of the Indian plastic arts much more than that of Indian architecture. But the addition of the shrines on one side and later on the four cardinal points led to a transformation of the form of the stupa in mediaeval times. The earliest example of such niches as four sides is a specimen from Mathura of the Kushana period (N. 1)²⁰ In this specimen the drum is round but on four sides of it are four little niches each containing a little figure of Buddha seated cross-legged in the same attitude. The round part of this stupa is larger than a hemisphere and its base is shorter than the circumference of the drum. This is the earliest example of this type of the stupa which, from the fourth century A. D. till the final extinction of Buddhism in India; was the common form of the stupa of Chaitya in Northern India. In the Kushan period bas-reliefs depicting stories from the life of Buddha continued to adorn the drum of the stupas carved by the artists of the Mathura school of sculpture; *cf.* the stupa-drum from Dhruva tila in the Mathura Museum.²¹ With the example of the earliest stupa of this type we must proceed to consider the evolution of the stupa in later period. Sir John Marshall's excavations at Sarnath have proved that in later times, *i. e.*, from the 4th to the 12th century A. D., this form

¹³ *Ibid.* p. 183 fig. 70.

of the stupa became stereotyped. The stupa now becomes a monument placed on a square or rectangular pedestal, the angles of which very often consisted of a number of recessed corners, over which was placed a cylindrical drum on four sides of which were four niches or shrines containing figures of Buddhas or Bodhisattvas over which, again, was the drum, which is still retained the form of a hemisphere slightly flattened at the top. Over the hemisphere was placed a square abacus or *harmika* for the reception of the pennon of the umbrellas. The square pedestal was called the *medhi* and in larger specimens it was approached on four sides by four flights of steps, the drum and the dome were known as the *Anda* or the egg and the abacus, *harmika*. The seven umbrellas were often called *Chhatravali*. In almost all cases of larger stupas the umbrella was placed on a metal rod which ran through the centres of all of them.

The niches on the sides of the stupa were in the majority of cases occupied by images of Buddha in the same posture; but gradually the poses changed and four Buddhas had their hands placed in the four conventional postures of Buddhism;—(1) *Bhumisparsa* or "the attitude of touching the earth", indicating that Gautama Buddha was in the act of touching earth in order to call the earth-goddess to witness his attainment of perfect enlightenment, (2) *Dharma-chakra* or the attitude of "turning the wheel of law," a technical expression used in Buddhism to denote the first sermon preached by Buddha at Benares, (3) *Abhaya*, the grant of assurance to the mad elephant or the robbers employed by Buddha's cousin and rival Devadatta to murder him in the narrow streets of Rajagriha, the capital of Magadha in the 6th century B.C. (4) *Varada*, or the posture of blessing used by Buddha to bless the people after his return from heaven where he went to preach his own religion to his mother.

With the change in Northern Buddhism came a great change in the Buddhist pantheon. The seven past Buddhas and the future Buddha Maitreya gave place to a regular pentarchy of five celestial Buddhas, five terrestrial Buddhas and five Bodhisattvas. The stupas were then decorated with the figures of four out of the five celestial Buddhas;—(1) Akshobhya, (2) Amitabha, (3) Amoghasiddhi (4) Ratnasambhava and (5) Vairocana. It is in these later phases of Buddhism that we find a variety of deities

occupying the niches. In certain cases at Bodhi Gaya, the niches of the votive stupas are occupied by Bodhisattvas and their divine female energies, in another case they are occupied by four principle incidents of Gautama Buddha's life. This particular specimen belongs to the eleventh century A.D. and was discovered amidst the ruins of Raja's Garh in the Dinajpur district.²² Late in the 12th century the stupa or the Chaitya developed into a four-faced image or an elongated temple like mediaeval Indian temple with spires. In a specimen discovered at Bodhi Gaya we find four figures of Buddha occupying four sides of a pillar with a Chaitya at the feet of each of these figures. This type resembles a modern Chanmyathazi or the *Pratima-sarvatobhadrika* of the Jalas. In another specimen discovered at Bodhi Gaya we find four niches on four sides occupying the entire area near the bottom and over them on each face a row of four miniature stupas, the top only being fashioned like a stupa. It was the Magadhan type of the stupa which was borrowed by the Mahayanists of Arakan and Pegu as we see in the stupas of Pagan.²³ The early Buddhists of Arakan, Pegu and Upper Burma were Tantrian Buddhists who are called "An" in Burmese sacred literature and the present-day Buddhism of Burma and Siam²⁴ was introduced into those countries from Ceylon. But with the change in the form of the religion the sacred architecture of these countries did not change and the bell-shaped drum and the hemisphere of the Burmese Pagoda is a direct development of the old Prome stupas²⁵ in which the sides of the drum became sloping instead of being perpendicular in order to enable them to bear the additional thrust of the brick in mud masonry of the later dagabas.

The form of the Tibetan Chorten as well as the name is derived from Magadhan or Bengali prototypes. Buddhism was introduced into Tibet from Bengal in the 11th century A.D. when Atisa or Dipankara Sri-jasna went to Tibet. Tibetan alphabet has preserved

²² It is now kept in the Maharaja's palace at Dinajpur. See *Journal of the Asiatic Society of Bengal* Vol. LXIV, Part I, 1875, pl. X.

²⁴ For a Siamese Cambodian stupa see Foucher *L'Art Grec-Bouddhique*, p. 91 fig. 26.

²⁵ *Annual Report of the Archaeological Survey of India 1909-10* pl. XLV-1-4.

the 11th century form of the north-eastern alphabet of India with great correctness. All Tibetan Chortons retain the form of the stupas of Bengal and Magadha in the 12th century²⁶ and the later modifications in stupa architecture of the 12th century in those country did not affect Tibetan sacred architecture.

Of the larger stupas in Bengal and Bihar the temple at Paharpur, is the only example now known to us. In this temple we find prototype of the Anandn temple at Pagan²⁷ but it is slightly different in plan from the great Borobunder temple in Java. It is a Garbha-Chaitya or a hollow stupa as indicated by the long narrow window in its drum. It was built in three different tiers, the lowermost of which was cruciform in plan. One arm of the cross was occupied by a long staircase, the other three being represented by small projections. In the second tier there was a broad open walk for circumambulation around the shrine. Above this open path a Cruciform peristyle hall went round the entire temple. In the arms of the second cross there were four balls on four sides which were the outcome of the evolution of a niche or shrine on one side only of the great stupas of Sindb, e. g., those of Mirpurkhas and Mohenjodaro. The contents of these halls have been destroyed. On the

northern side at least there was a ledge or small platform above the height of the roof of the peristyle hall. The unexcavated roof of the main structure indicates that it was of the shape of a Chaitya.²⁸ Most probably it was one of the chaitayas in Pundravardunna the pictures of which have been discovered by M. Foucher in the illuminated Buddhist Sanskrit manuscripts found in Nepal.²⁹

Along with large stupas and medium stupas miniature stupas were used in large numbers in all Buddhist shrines. Numbers of them made of stone and metal have been discovered at Nalanda, a few at Bodhi Gaya and quite a number in the ruins of the Uddandapura monastery (Modern Bihar Sharif in the Patna district). One of these Bihar miniature stupas shows the beginning of the modern Buddhism of Nepal. It possesses five Buddha figures instead of four ordinarily represented around stupas and on four sides of the abacus are represented the three eyes of the Gods. In the Svayambhu Chaitya in Nepal four celestial Buddhas are represented around the drum and the presence of the fifth, Vairochana, is indicated by three eyes on the abacus.

INDUSTRY AND POLITICS

By K. N. CHATTERJI, D.Sc. (London), A.R.C.S. (London)

SIR Alfred Mond's unique position, both as a politician and as a captain of industry, carries promise enough that a book by him, on subjects such as are dealt with in the present work, would repay careful perusal. And we find the promise amply fulfilled, although we may differ—and differ we do, most strongly, with him on certain

propositions of his, such as an Imperial Union of Industries—and in many other matters, both with regard to the soundness of his premises and the rigidity of his deductions.

This book may be regarded as a sort annotated history of the problems of industry and labour in Britain dating from the Post-Napoleonic period to the present day, with appendices on such matters as Socialism, Empire policy, Taxation, etc.

It must be remembered that this book is

* *Industry and Politics*. By the Rt. Hon. Sir Alfred Mond Bart. LL.D., M.P., Macmillan & Co. Ltd. Lond. Price 12s. 6d. net.

written from the viewpoint of one who was born, so to say, with the reins of an immense group of industrial enterprises in his hands. This would explain the apparent astigmatism in certain matters—as in his presentation of cartels, trusts or combines as *unqualified blessings*, coupled with the immense depth and clarity of vision as displayed in other subjects, especially in the matters of organising and efficiently conducting industrial enterprises.

Most of the sections and subjects dealt with in this book are of peculiar interest to Indian industrialists and practical economists, as they go very deeply into the following questions:

- (i) The factors essential for the efficient conduction of an industrial enterprise
- (ii) Why is the foreign competition so formidable and successful (in the case of India, foreign means British, too)
- (iii) How to market goods in the face of foreign competition.
- (iv) What is meant by an efficient industrial organisation, taken individually and in groups as in Cartels.

Besides the above, the 'problems of labour unrest and the policy of the state with regard to industry are discussed in a highly interesting manner. The conditions that obtained in Britain during the post-Napoleonic period together with the efforts made by the state to combat the troubles, with all their failures and successes, and the final coming of stabilization, are presented in order to draw a parallel to the present depression.

Indian conditions are nowhere discussed, even in connection with the Empire. Indeed, India is only twice mentioned in a cursory way—which means that it does not count; but the problems discussed are also the problems of present-day commercial and industrial India. Only here they attain a magnitude undreamt of in any Western country. And the picture drawn of what is being done—let alone what is proposed in the way of improvement—in the way of industrial progress in Britain and elsewhere, in all its staggering reality should act as an eye-opener to those complacent arm-chair economists and industrialists who consider that India is well on the way towards industrial and economic development and dream of complete "modernization."

The following extracts, express as they do the considered opinion of a successful and experienced industrialist, should show what is meant by the above.

"The demands which are made on technicians for new processes to improve the efficiency of existing plants in cost reduction, are little realised by those not in contact with the daily working of a great enterprise."

Here the very idea is unthought of.

It can no longer be stated that "necessity is the mother of invention", but I think it may truly be said that the steady methodical investigation of natural phenomena is the father of industrial progress.

And this from Dr. Ludwig Mond (Sir Alfred's father) in 1889! No wonder England progressed. Then follows a whole host of examples of the successful application of Science to Industry, through the prolonged and painstaking efforts of scientists who ventured to apply laboratory methods to the factory.

"Theories become the tools of industry."
"The General Electric Company of America giving £200,000 a year to American Universities for the promotion of electrical research, quite apart from the research department of their own works. Messrs Brunner Mond and Company decided some time ago to set aside £100,000 for such purposes."

How much have the great industries of this country, with the sole exception of the Burma Oil Co., given to the Indian Universities? How much for instance, have the jute, tea, coal and oil industries given to the Calcutta University, how much have Iron and steel to Patna, how much has cotton to Bombay and how much has manganese given to the Nagpur University? *Nil*, we believe, is the sum total of all these donations!

"It is a curious and sad fact that when industry is depressed, many of those directing industry have only one idea of economy and that is to cut down research. This is based on a profound fallacy. Research and better scientific methods of production can do more than any other factors to help industry out of difficulties."

"The history of some of our great industries has been a history of a long, discouraging but eventually triumphant struggle to make the original laboratory discovery applicable."

Here in this country, a dividend of at least 12 per cent. being expected from the very first year, such attempts would be regarded as sheer lunacy by the directorate and summarily put a stop to. In any case, we have not heard of any such attempt, with the exception of those done in the Forest Research Department.

"There is a popular but erroneous idea that great discoveries are the results of brilliant but haphazard guess work....On the contrary they are usually the well-earned reward of a series of

long, careful and often tedious and monotonous experiments."

"Research is not the royal road, it is the ordinary, daily hard working road—almost the only road—to final prosperity."

"As a result of technical research the Germans have reduced the consumption of coal in Iron and Steel industry by 15 per cent." (as compared with 1919), "How little is the economic advantage of learning understood."

These statements are amply borne out by the facts cited.

"Contented workers may balance to the employer the competition of cheap labour."

"The relationships of those engaged in industry must be rendered of a stable and permanent character."

"There must be a just and broader recognition of the worker in industry. He must be made a co-partner."

"The terms 'employer' and 'employed,' 'master' and 'man' are inapplicable to our modern industrial conditions."

We draw the attention of the Burra Sahibs and Burra Huzura, both Indian and European, of our Mills, Factories and Railways to the above statements of a very Burra Sahib. We mention Indian Burra Sahibs, too, because we remember the case of an Indian director of a Company who got up from his chair in high dudgeon because a "servant" of the Company was sitting at the same (directorial) table! The servant in question was not an ordinary labourer, but a technical man, of good family, trained in America, and in every way—excepting in the weight of his purse—the superior of the idiot who refused to sit at the same table with him. And, of course, even an ordinary labourer should be treated with courtesy.

"Higher wages must carry with them a greater degree of production and efficiency."

"Industry to-day is over-burdened by excessive overhead charges....direct and specific subsidies granted by the Treasury would increase these burdens and make our position in the competitive markets still worse."

The above remarks might have been specifically directed against the Iron and Steel, and other Indian industrial companies that are enjoying or want to enjoy such subsidies. Has the efficiency of those who constitute the "overhead" in such concerns been ever thoroughly examined? Sir Alfred advocates profit sharing and not "production bonus." What would happen if such a system were adopted, in place of the present arrangements, at concerns like the Tata Iron and Steel Co., Ltd.?

As previously noted, International cartels,

mergers, etc., are strongly advocated in this book and the bright side of such things well-painted. The question of the weak, individually and collectively, going to the wall, and that of all the iniquities of such combines, that led to the Anti-trust legislation in U. S. A., are not discussed.

Still the sections on those subjects are of great interest to us, as they show what these things mean and how their power and capacity, already extremely formidable, are increasing steadily. Indian industries must face this monaco with eyes open and that immediately, as mere abstract theories, like nationalisation, or sentimental jeremiads, as those uttered in connection with "cottage industries," would not save us from being industrially—ruthlessly and utterly—wiped out, leaving only hovers of wood and drawers of water in this country.

Similarly the plea for a closer economic bond, contained in the section on "The British Empire as an economic unit", should be carefully studied. Under the present circumstances such a bond would spell bondage for India.

The views expressed on other subjects, such as state control, socialism, etc., should be examined by others who are better versed in such matters than the present reviewer. All we can say, after reading Sir Alfred's statements, is that a thorough examination of these exotics is desirable before they are planted here.

In short, this book would help to answer many questions regarding industry, such as, "why do they succeed and why do we fail?", and as such we recommend it to all who are interested in the economical, technical and political problems of industry. We dare not recommend it to our politicians, as they, with very few exceptions, have a sublime disregard for such problems. Heaven only knows whether such things are really beneath their notice or are only beyond their brains. For instance, the coal-mining industry is slowly dying in Bengal; the Match Industry in India is being crushed out of existence in its infancy in the coils of a foreign owned and directed trust; cement, paint and varnish, and lastly, cotton is being similarly menaced; but no one seems to be losing any sleep over these matters, either in the Councils or in the Assembly or even in the various 'National' Congress Committees.

A PLEA FOR EDUCATIONAL REFORM IN INDIA

By MISS KAMALA HOSE

THE urgent need of India today is not more of education, but also of *better* education. The improvement of educational methods must keep pace with the extension of its domain if the best results are to be obtained. This aspect of the problem should be recognised without further delay. In fact, it has been too long delayed already, and the country is suffering from its ill-effects. If the education imparted to the people has been seriously lacking in quantity, it has been still more sadly wanting in quality. This fact impresses me more and more as one gets a closer acquaintance with our educational system. It is specially true about the early stages of education from the primary to the high school standard. The sooner the remedy is found, the better will grow the prospect before the nation.

I have been in educational work in different parts of the country during the last 15 years, and my experience extends to such diverse places as Calcutta, Eastern Bengal, United Provinces and the Punjab. I have been in charge of the Modern High School at Delhi, which is conducted on new methods, since its inception seven years ago. I have taken part in the education of boys, girls and pradhanashin women through their school and college courses. So I have had ample occasions for studying and observing the methods and results of our educational system at close quarters, and may fairly claim to have an intimate knowledge of our educational problems. I have also recently had a unique opportunity of studying the educational systems in vogue in Europe, and of seeing the improvements which have been brought about in different places by changes in the school methods. After attending the World Con-

ference on New Education which was held at Locarno in August last, I was able to visit quite a number of schools in Italy, Switzerland, Germany, Holland, Belgium, England and Scotland, including some of the most up-to-date and improved types. It was, therefore, possible to compare the newer methods with the older ones, and to find out the difference in the results obtained. These visits have helped me also to compare the educational methods followed in India with those in Europe, and to realise more vividly the deficiencies under which we labor here.

The most prominent fact which stands out from a comparison between the progress of education in India and Europe is the utter illiteracy of the masses here. It hangs as a millstone on the neck of India's progress, and must be removed as soon as practicable. As the distances of time and space disappear

The main building of the Modern School, Delhi

with improvements in the means of communication, the economic competition between the peoples of the world grows keener every day. India has to enter this arena with a serious handicap. She bears a solid block of 300 million people, i. e., over 90 per cent of her population in a state of absolute

ignorance. They do not even possess the rudiments of knowledge, and are, therefore, bereft of any means of self-improvement. Her place in the struggle is almost a hopeless one. Unless a radical and rapid change is brought about, there is great danger that her people will be left far behind in the race. Already the lowliest forms of manual work with the scantiest remuneration fall to the average lot of her industrious workmen. The people might in the end become a nation of hewers of wood and drawers of water—held in the grip of an economic slavery under the advanced nations of the world. In fact, outside India they are already regarded as such by the capitalists in the different parts of the Empire. And with the rapid industrialisation of India by foreign capitalists, the process is going apace within the borders of India her-

sity results have shown that their intellectual powers, when given proper scope, are in no way inferior to those of the men.

Universal primary education is the one thing needful for the uplift of India. In order to ensure its rapid progress, it should be made both free and compulsory at first. As a serious matter which concerns the continuance of the Indian people within the civilised circle of the world, the cost of such education should be made the first charge on the revenues of the country. But this education must be something quite different from what is imparted at present. Education, to be effective, must help in creating an alertness of all the senses. This can only come through a very careful development of both the body and the mind of the child. Under our present system in India, a child of tender age is

daily confined in a badly constructed and ill-ventilated *pathshala* for long hours without any arrangement for tidiness. He is cramped into a little space and made to acquire a smattering of the Three R's under the shadow of the teacher's birch. He finds no real interest or pleasure in his studies, and simply goes through them as a result of cruel intimidation, which almost shatters his nerves and damps his lively juvenile spirit. There is hardly any effort made to draw out and develop the natural intelligence of the child. No scope is given him for self-expression. Most of his lessons he has to learn by rote, and has to repeat them to his teacher

Specimens of handiwork produced in the Montessori Department of the Modern School, Dethi

self. Thus the illiteracy of India has proved a real menace unto herself. The situation is a tragic one, but its intensity is further heightened by the fact that in spite of their illiteracy, the intellectual capacity of the masses is of a high order. Even the peasants and the backward classes have given repeated proofs that they are capable of receiving the highest education that can be given them, and of showing splendid results. The same can also be said about the women, who have, with very few exceptions, been almost entirely left in the darkness of ignorance. The Univer-

sity is in a state of nervous fear. No attempt is made to encourage or develop his aesthetic ideas. The curriculum takes no notice of that side of his life. His moral and religious training is left out altogether. Little or no encouragement is given to sports, as being detrimental to study. Physical culture receives no attention. A training in practical co-operation among the boys is never attempted. No real esprit de corps is created. Instead of teaching the dignity of labour, a spirit of contempt for manual work is often fostered. Weak in body and depressed in mind the

child passes through the different stages of his school life, without finding in them much difference as regards method or scope. The higher grade schools are as backward in all these essential matters as the primary ones. On the other hand, as the medium of instruction is changed from the vernacular to a foreign language, the difficulties are further accentuated. When at last the boy comes out of the high school grindmill, there is little of initiative or zest for work left in him. It is no wonder that the Indians have been charged with a lack of originality and initiative. These faults, if true, must be laid at the door of their system of education, which is eminently suited to crush out such qualities. The result of

such education has been far from helpful in really building up the nation and has even proved a hindrance in some respects. A good percentage of the primary scholars, finding no incentive to self-culture, gradually forget their lessons, and drift back into illiteracy. The trouble taken to educate them means so much labour lost and money wasted. Others who are able to continue their studies in high schools come out of them merely crammed with some book knowledge, fitted to become petty clerks in offices and shops. They often find their life a failure because their education has not been a preparation for life as all true education should be. While their memories have been sharpened, no serious endeavour has been made to develop the creative faculties of their mind. Such students, even when they get into the college cannot fully recover their powers, which are stunted during their childhood the most sensitive period of their life. Thus the miserable apology for a school which has been put up in this country, in contrast to the well-planned and fully equipped institution as one finds it in England and elsewhere has retarded the vigorous mental growth of the people. The deficiencies of our system become at once manifest to us as one visits the splendid schools of the West, specially

the modern ones, and comes across the healthy alert and active students there.

If we desire to see our people reach a status equal to that attained by the people of Western countries, we should reform our schools on modern improved lines in order to do so the following considerations should be specially kept in view:—

(1) A school, in order to be an efficient nursery for the physical and mental growth of its pupils, must be located on ample grounds. The study of dead records called books, unless accompanied by a simultaneous study of Nature around us, fails to sharpen the faculties of the mind. It leads to a tendency for cramming without a real

Nature Study Class of the Modern School, Delhi

understanding of the contents. The school grounds, when thoughtfully laid out, provide the children with a suitable field for such nature study. These also create a sense of freedom in the child mind which cannot be found in mere school-rooms. The growing self-consciousness of the child finds scope for development in a little world of its own. Here Nature supplements the education of the child with many valuable lessons which cannot be provided by any human agency, and which bring real joy to the youthful heart. The sceneries, the birds and small animals, the plants and trees, the leaves and flowers, the music provided by some rivulet or the songs of birds—all these make valuable contributions to the intellectual and emotional culture of the child. The child is led gradually to modes of self expression through arts, such as music and painting. An

interest in creative activities is fostered through gradeniug etc.

Besides, extensive school grounds are absolutely necessary for maintaining the health and developing the physique of the children. Open air life and outdoor games are essential if a healthy mind is to be preserved in a healthy body. It is only the open fields which can give birth to the spirit of 'sportsmanship'—a term which includes many moral qualities. In Italy, Germany, England and other countries of Europe the utility of extensive school grounds has been fully realised. All good modern schools have large areas of land attached to them. I

A Class in Manual Training Modern School, Delhi

have there come across schools with less than a hundred pupils which possess a hundred to two hundred acres of land. Much emphasis is placed on this matter, and it is held that the first heavy outlay on it is fully repaid by the improvement in the health and the proper mental growth of a succession of students.

In India there is as much need for school grounds as in Europe, specially in the towns and cities. In rural areas, however, where natural sceneries abound, a smaller quantity of land will generally suffice.

(2) The study of Nature should be further encouraged by means of well arranged excursions to places of natural or historical interest. Such outings form a regular feature of school life in Europe. These are very

helpful in quickening the minds of the pupils. Visits to the seaside, hills and lakes etc., prove useful for the study of elementary geology and geography, while a vivid interest in history is created by seeing places of historical importance. The benefit to the health of the students is also seen in a greater activity and buoyancy among them.

(3) The knowledge of a still wider world should be conveyed to the children through carefully selected magic lantern and cinema exhibitions. These tend to expand their minds very quickly, and enable them to realise the facts regarding other lands more easily than through the medium of books.

In Europe such means are widely adopted for the spread of mass education, and for developing the minds of children. The importance of such methods has hardly yet been realised in this country. Here we have a potent instrument for the rapid extension of education among the masses.

(4) A school should pay proper attention to the health and physique of the pupils. They should undergo medical examination at regular intervals, and be treated for their defects and diseases. The physical exercise of the students should be considered a subject of prime importance in every school, and not a matter of indifference as at

present. This should be a regular part of the school curriculum. Gymnastics, athletic, sports, swimming, boating and other healthy games, both indoor and outdoor, should be encouraged. The spirit of sportsmanship should be carefully developed. One care should also be taken that the food given to the children be suitable and sufficient. It would be desirable to make provision for tiffin for all pupils. It is idle to expect proper mental work on an empty stomach. A school should at least supply free tiffin to all poor students who cannot afford it.

(5) The spirit of co-operation and social service should be inculcated among the pupils from their early childhood. It is wonderful to see how quickly they pick up this training and genuinely fall in with such

ideas. Once learnt, the spirit grows with the life of the students, and permeates the whole school. It engenders toleration, and creates a bond of fellowship among them. The school life affords many opportunities for undertaking co-operative and social work among the students themselves.

(6) The students should, apart from their studies, daily engage in some creative activities, viz, gardening, carpentry, smithy, printing, drawing, painting, pottery, photography, weaving, etc. Such work develops the powers of initiative and thought. It also reveals the direction in which the taste of a pupil lies. The scope for manual work which it gives is a healthy corrective against a sedentary education. It further establishes the connection of education with the practical side of life, and makes education more complete than it would otherwise be.

(7) Every effort should be made to develop the æsthetic sense of the pupil, which often lies dormant in him. The realisation of a sense of the beautiful, whether in music, painting, or natural scenery, is essential, and should always be kept in view. Subjects which encourage this process should form a regular part of the curriculum. Thus only can the full mental growth of a child be assured.

(8) As much of the early education as possible should be imparted through object lessons. This will not only make it more interesting, but will keep it from growing purely abstract and from encouraging cramming.

(9) To obtain the best results it is necessary to connect the home of the pupil with the school in the matter of his education. Therefore, the guardians should be properly interested in the education of their wards. Their active co-operation should be secured to see that the child's study at home is a real continuation of the work done in the school.

(10) Suitable text-books must be provided. This is a matter of the utmost importance. A good deal of the primary education in our country has been spoilt by the use of bad text-books requiring the use of wrong methods of instruction.

(11) There should be a proper correlation of the subjects taught. A great deal of harm is done by teaching the subjects as if these formed separate watertight compartments. It seems that even very few of our teachers really appreciate this point. Special efforts

should be made to convince them of its importance.

(12) As character is the foundation of life, character building must have a prominent place in the scheme of education. The influence of the teacher should be the chief factor in moulding the character of the student. Therefore, personality and character in a teacher should be as much sought for and valued as his intellectual qualification. A course of moral and religious instruction should certainly be included in the school curriculum.

If the above points are consistently kept in view, it should be possible to build up a school system which will meet with the needs of our country. Following the example of some European countries, it would be

Miss Kamala Bose, Principal, Modern School

an advantage to have separate schools for children of 6 to 10, 10 to 14, and 14 to 18 years. But perhaps this is not quite feasible in a poor country like ours, and it will be better to have only two sets of schools for children up to 10 and 18. In that case co-education of both boys and girls could be carried on in the elementary schools, and the wide employment of women teachers to conduct them would not only result in some economy, but would also open out to educated women a large avenue of useful and congenial work.

It will be a glorious day for India when universal primary education of the proper type will prevail in the land. Broad-based

on this, it will then be possible to rear a sound system of secondary education, culminating in university education of a very high type. It should be so arranged that students who do not wish to go up for university education might be released at the age of 14 or 15 with sufficient general education to undergo special commercial or technical training.

At present with over 90 p.c. of the people locked up in eternal ignorance, many an unknown Hampden or inglorious Milton is altogether condemned to blush unseen. Who

shall dare to estimate the moral and material advance of India when once the masses are educated, and the best intellects among her vast population are churned up to the top to lead, guide and serve their motherland? The task is no doubt the mightiest in the world, but its reward will also be the greatest. Then, and not till then, will the full significance of Indian culture and civilization be manifest to the world and its influence felt by the human race. The nation, should, therefore, bent its utmost energies and resources to accomplish this glorious task.

THE MILWAUKEE JOURNAL: A NEWSPAPER FOR SERVICE

By Dr. SUDHINDRA BOSE

Lecturer, State University of Iowa

IT was a lovely autumn afternoon at Milwaukee on the western shore of the Lake Michigan. The shopping crowd was surging through the business sections of the city: but nowhere was life beating faster than in the office of The Milwaukee Journal.

Blocks away one can see the tall and magnificent Journal building, which has been erected at a cost of six million rupees. On a nearer view, he appreciates the beauty of this five-story structure better. It is faced with large, smooth-surfaced pieces of pink limestone with narrow mortar joints of a neutral color. The great arches, which form ornamental windows for the second floor, present an impressive appearance. Up near the roof, there is a frieze which illustrates the growth and development of newspaper. Extending entirely around the two front sides of the building just below the top coping of the walls, is a curved frieze of life-size figures which artistically depict the evolution of news and its dissemination, from the earliest ages of man to the present time.

The passer-by can also see from the street the huge press room where the Journal presses print, cut, fold 135,000 forty-two page paper an hour. The press room floor is so constructed that the entire press operation is visible from the street. No other

large newspaper plant in America has this feature.

Stepping into the main lobby through one of the imposing entrances, I realized that it was press time. Reporters and messenger boys were rushing in and out. Late advertisers were bringing in their last-minute ads. There was din and bustle.

Presently I was shot through the lift to the fourth floor, where the editorial department offices as well as the busy news room are located. I saw the editors, reporters, re-write men, and copy readers working at break-neck speed. Work and more work. Hurry and more hurry. Telephones were ringing, telegraph keys were buzzing, and a phalanx of fifty typewriters were clanking away. Electricity was in the air. The scene was busy, exciting, even thrilling. I was almost stunned and carried away by the noise and the movement. Soon there would be in the street an extra edition of the paper—paper which is "the Voice of Now—the incarnate spirit of the Times—monarch of things that Are."

The Milwaukee Journal, which is reckoned as one of the seven or eight foremost dailies of America, has many unique features. I am not now thinking particularly of its most up-to-date machinery, its many excellent devices and improvements in operating

methods, nor of its elaborate newsgathering agencies. What impressed me most about The Journal was its public service. It is of a quality which is perhaps unexcelled by any other newspaper plant in the United States.

A few years back, when I was in England I went to the office of the London *Times* and asked to see one of its editors. I was then connected with one of the most important American dailies. An attache showed me through the *Times* building, and informed me that editors were not accessible. May be that, after all, was excusable in England. Native editors with their walrus mustaches I suspect, are inaccessible because they are English and because they consider themselves above common courtesy to a visitor. They are the prize snobs of Christendom. How very different are English journalists from their fellow-tradesmen in America!

In order to better acquaint myself with *The Milwaukee Journal* and to get intimate glimpses behind the scenes, I called at the sanctum of the Vice-President, Mr. H. J. Grant. He is a Harvard man, and a capable Journalist. He was at the moment busy; but I never found a man more cordial. He seemed to have all the time in the world to talk to me about *The Journal* and its forty-five years of progress. Here is a characteristic story of his paper, which is worth repeating.

"Shortly after the signing of the Armistice in 1918," remarked Mr. Grant as he lighted his cigar and handed me another, "*The Journal* decided that the interests of education in our State of Wisconsin would be greatly furthered if a number of representative teachers in Wisconsin were to tour the European battlefields, observe conditions growing out of the war and inform the public regarding them."

"How did you select the teachers," he was asked.

"Teachers were chosen by popular vote. No condition looking to increase in circulation or other material advantage was imposed. In all about a million and a half votes were cast, and the eleven teachers thus chosen

and a special representative of the paper constituted a touring party. The entire expenses of the trip were met by *The Journal*."

"How long did the trip last?"

"The party sailed the early part of July, 1920, toured England, France, Belgium, Scotland and Switzerland, and returned in the middle of August. They enjoyed exceptional opportunities for study, and received official attention and courtesies."

"All that is very interesting; but in what way did these tourists benefit America?" I inquired, anxious to get at practical results.

"The Journal furnished each member of the party with a set of stereopticon slides,

Home of The Milwaukee Journal, Wisconsin

showing ninety of the most interesting views photographed during the tour. All of the teachers have delivered illustrated lectures on what they saw and learned, some of them having spoken in public as many as a hundred times. So far as is known, it is the first enterprise of its kind conducted by any American newspaper."

Mr. Grant was cheerily conversational, but he talked facts. He also invited me to go along with him and make a tour of the Journal building for a few hours. Needless to say that I accepted the invitation gladly because I always prefer exact data to glittering generalizations, accurate appraisal to highfalutin' tosh.

The building is a veritable hive of activities; but there are ample facilities for serving the public. Exclusive of the space

occupied by the press room, practically the entire remainder of the first floor in this model plant is given to the convenience of the general public. Here is located the lobby, The Journal Public Service Bureau, The Journal Tour Club, rest rooms for men and women, information desk, a public library branch, a telegraph office, telephone booths, and a branch Post Office.

I was wondering what the Tour Club was meant to do. Just then one of the girl clerks at the Public Service Bureau handed me a neat little folder which read:

"Take full advantage of the many helpful services of The Milwaukee Journal Tour Club in planning your trip, for the coming season. Get the habit of phoning, wiring, or calling at Tour Club headquarters before you start a trip for last minute reports on road conditions. It's your club. Use it! Make The Journal Building your meeting place."

On enquiry I learned that touring information is given free throughout the year by a trained staff of experts to all who apply by mail, telephone, or in person. In addition to planning trips, the Club dispenses authoritative hunting, fishing, and vacation information. Altogether, the Tour Club serves a quarter of a million people annually.

On the second floor of the building, I entered the Public Lounge. This room is attractively furnished in the manner of a luxurious club lounge. Large chairs and davenports, pretty carpets and hangings in pleasing soft tones, lend an atmosphere of hospitality and restfulness. The comforts of this room are enjoyed not only by visitors but also employees of The Journal, who of course, have a separate lounge of their own. The Public Lounge is an ideal place, especially for out-of-town business visitors to rest, meet friends, or write letters.

While on the second floor, I was attracted by the Journal's Gallery of Wisconsin Art. The purpose of the Gallery is to open to artists of the State of Wisconsin an all-year exhibition room for the display and sale of their pictures. The exhibition space consists of four rooms, although only the largest is regularly used.

So far, sculpture has been excluded. Exhibitions are limited to paintings, etchings, and drawings. Exhibits are completely changed every three months. The Gallery opens to Wisconsin artists an exhibition room for their current work. Moreover, it combines the advantages of a sales room with the publicity resources of a constructive

newspaper. It is estimated that about 25,000 persons viewed the pictures in two of its recent exhibits. These persons were attracted to the showing, without a doubt, largely by the dignified publicity which The Journal gives the pictures.

During the week I was in Milwaukee, there was a flower show in the Public Lounge. I was told that flower shows and food exhibitions are common and regular occurrences.

Close to the Public Lounge are two Lecture Rooms for the use of the public. Neither of these rooms can accommodate more than an audience of 200; but both Lecture Rooms are furnished to provide comfort and convenience to speakers and audiences. The Journal has set these rooms aside for the use of clubs and organizations of a civic nature. They are welcome to use them upon request.

In addition to those two meeting rooms on the second floor, there is, on the fifth floor, an Auditorium. It seats about 500 people. The stage is of ample size, and acoustics are good. The Journal also provides a piano for the room. There is no charge for the use of the Auditorium, or any of the other rooms. They are absolutely free to the people.

In the list of its public services, mention should be made of The Journal's new high powered radio station. From this great station one can easily get America's finest broadcasts in any weather and without interference. The Journal also augments these outstanding broadcasts with its own high class programs from its own studio. The radio has been the means of widening the range of popular education and raising the cultural level of the masses of the population. The Journal is in living contact with the people it serves. Its radio programs include, beside music and entertainment, subjects which are vital to public welfare and of immediate concern to all.

As I was being piloted from one floor to another, I saw the many interesting processes followed in making a modern metropolitan newspaper, from gathering the news from all parts of the world to the actual printing of the finished product. Now and again my thoughtful guide, Vice-President Grant, stopped to introduce me to editors, reporters, and other employees of The Journal.

It was interesting to find that the welfare of men and women who work for this paper

has not been neglected by the management. A completely equipped first-aid hospital on the fourth floor stands ready, in case of emergency, for service. Every new employee is given a free medical examination at this hospital. There is also on the same floor an employee's cafeteria where good wholesome food can be had at a slightly less than the cost price.

The Milwaukee Journal costs sixteen million rupees a year. Of this vast revenue,

fully one-third comes from advertisements. Isn't that enough to pop the eye of an Indian publisher? The Journal is frankly proud of its prosperity; but it is no less proud of its achievements as a civic institution. Beneficent public services, which space has permitted recounting but a fraction here, almost cover whatever aims one might lay to the charge of the Journal. It is a paper of quality and for service.

THE INTERNATIONAL SOIL SCIENCE CONGRESS

Dr P. O. KRISHNA

THE First International Soil Science Congress was held at Washington D.C. from June 13 to 22, 1927, under the Chairmanship of Dr. J. G. Lipman, Dean and Director of New Jersey College of Agriculture and Experiment Stations.

The first international gathering was held at Budapest, Hungary, in 1909 under the patronage of the Royal Minister of Agriculture. This was followed by a second conference held at Stockholm, Sweden, a year later. It was decided at Stockholm to hold the next conference at St. Petersburg, Russia; but this was not possible. The third conference was called together at Prague, Czechoslovakia, in 1922. In 1924 the fourth conference was convened at Rome under the patronage of the King of Italy and under the auspices of the International Institute of Agriculture. It was at this meeting that it was decided to hold a worldwide conference at Washington D.C. in 1927 to be known as the First International Soil Science Congress and Dr. J. G. Lipman was elected the President. Soon after the Rome conference, preparations were undertaken to organize the congress under the auspices of the American Society of Agronomy, and worked through an American Organizing Committee which consisted of at least one prominent soil scientist from each state in the U.S.A., and each province in Canada. The co-operation of the United States Government was secured through the United States Department of Agriculture, and through an act of

Congress the President of the United States was authorized to extend invitations to the nations of the world to send official delegates. So, this congress was made possible through the co-operation of the International Soil Science Society, the American Society of Agronomy and the United States Department of Agriculture.

Thirty nations responded to the invitation sent by the President of the United States. Some countries like Russia, Germany and England sent quite large delegations; Russia sent twenty, Germany ten and England eight. Most of the European countries were well-represented. Only a few Latin-American countries were represented. Of the oriental countries only Japan was officially represented by three delegates. It fell to my lot to represent India, being the only representative and was delegated by the Andhra Janaseva Kalasala of Masulipatam. There was no official delegate (Govt. appointee) either at this Congress or at the International Botanical Congress held at Ithaca N.Y. in September 1926. There were about six hundred delegates in all of whom about one hundred and forty were foreigners.

President Coolidge welcomed the delegates and pointed out that international goodwill and understanding could be attained only through such gatherings and that the problems of soil science are international in that the whole of the human race is directly dependent on the soil for food and clothing. During the ten days of the congress the

various problems of soil science were discussed and papers were presented by the delegates before the following commissions: Soil Biology and Biochemistry, Soil Mechanics and Physics, Soil Fertility, Soil Classification and application of soil science to land cultivation.

Besides the technical discussions, there was arranged a rather elaborate program for the entertainment of the delegates, including receptions, banquets, dances and sight-seeing tours in and around the vicinity of Washington.

After the adjournment of the congress, all of the foreign delegates and some Americans started out on an extensive tour of the United States and Canada. This transcontinental tour was given complimentary to the foreign delegates. This was made possible by the contributions of private individuals and corporations. The credit is mostly due to Dr. J. G. Lipman who first conceived the idea and later worked to secure the financial backing necessary for such an undertaking, and also to the American Organizing Committee for so efficiently conducting the tour and for arranging the receptions and entertainments offered to the delegates throughout the itinerary.

The purpose of the tour was to give to the foreign delegates an opportunity to study the great soil regions of the North-American continent, the crop zones and some of the agricultural industries. The study of the soil types under the able guidance of Dr. O. E. Marbut, head of the Soil Survey Department of the United States Department of Agriculture, was in itself a contribution to the international soil science for no other country affords such a varied and interesting soil types. As many delegates had expressed, such an opportunity should not be had again. For it is inconceivable if this could be made possible again.

A fair idea of the extent of the tour could be had only if one realizes that about 10,000 miles were covered by train and some 2,000 miles more by automobiles, and that 23 of the 48 states in the United States and the four great prairie provinces of Canada were visited. The cotton belt, the corn belt, the wheat belt, the dry, the arid, the desert and the mountainous regions of the United States were visited. In brief, the United States were completely covered and the various aspects and interests of the North-

American continent were impressed on the foreign minds. The delegates had the best opportunities to observe the conditions in the farming districts. Among the agricultural industries the following were visited: The Fertilizer Industries at various centres; the Agricultural Printing Establishments at Des Moines, Iowa; the Plough Works at Moline, Illinois; the International Harvester Company's manufacturing plants of agricultural machinery at Chicago; and the Meat Packing Industries in Chicago.

The agricultural colleges and experiment stations along the route were visited and the delegates were informed about the problems which were under investigation and were profusely entertained everywhere.

The delegates were enthusiastically received in all the localities and over a hundred automobiles were furnished for the whole party for visiting the various points of interest in each of the places visited.

All along the trip I received very many enquiries, and most of them were regarding Mahatma Gandhi and hardly any regarding the agricultural conditions in India. The dramatic incident which I am to narrate occurred at Joplin, Missouri. The delegates were entertained at luncheon by a millionaire Mr. Charles D. Orr. While we were luncheon, I was surprised by an elderly gentleman of about seventy, who came rushing towards me and bowed ceremoniously to the amazement of all around me and to my own embarrassment. This was our host. The ceremonious bow, as he later explained, was to honour the Mahatma, whom he admires very much and whom he expects to meet some day. This and many other incidents during this trip convinced me that Mahatma Gandhi can do a very great service by visiting this country.

This trip also enabled me to come in contact with many of our countrymen residing in the various parts of this country and in Canada. Most of these men who have made this continent their permanent abode are located on the Pacific coast, mostly in California and British Columbia. Smaller groups are present in the Chicago, Detroit and New York City. The students are scattered all over the northern part of the country. However, they seem to be concentrated in the following universities: California in the west; Illinois, Wisconsin, Michigan, Chicago and Iowa in the midwest; and New

York, Massachusetts and Pennsylvania in the East.

In California there does not seem to be much of a co-operation between the various elements that make up the Indian community. The Sikhs and the Mohamadians seem to be at loggerheads all the time. It is an unfortunate thing that there should be such dissensions among these groups in a country so hostile to their very presence. Then there is a further split into the student group and the non-student group. While I was at Berkeley I heard that a unity meeting to bring all these factions together, was arranged at Sacramento and that Mr. Syed Hussain was to be one of the main speakers. There are just a handful in Oregon and Washington states. In Portland, where there are only six of them, the turbanwalas (Sikhs) and the non-turbanwalas do not seem to be getting along well with each other.

There seem to be more than 2,000 in

Vancouver, mostly Sikhs. They do not have any religious factions as there are just a few besides the Sikhs. Most of these are engaged in lumber business and seem to be prospering well. Some of them employ as many as three and four hundred men in their lumber camps. As in other places the whole group is engaged in about the same business pursuits. I spent a whole morning trying to get as much information of them as I could but I could not learn very much because of their suspicion and distrust. It seems to me that there is a lack of intelligent leadership among this group. With an efficient organization and proper leadership they could do much to improve their lot. Some of the men with whom I was talking were anxious to know about Dr. Hardikar. It is my impression that Dr. Hardikar was one of those few workers who had won the confidence of these men in British Columbia.

OPIMUM •

Habit-forming Drugs—An International Menace

By TARAKNATH DAS, Ph. D.

THE so-called opium problem of today is not what it was during the last century or even two decades ago, when western philanthropists and missionaries used to think about saving the people of the Orient from the curse of opium, which was a source of tremendous profit for governments as well as traders. Morphine, heroin and other derivatives of opium and cocaine, codine and other habit-forming drugs, manufactured mostly in the laboratories of the West, are far more dangerous than "raw opium or prepared opium" used for smoking purposes. The fast spread of the consumption of these deadly habit-forming drugs, among the people of all countries of the East and West forms a serious international menace.

According to the estimate of the League of Nations Opium Advisory Committee, about 400 tons of opium will be sufficient to meet the medicinal need of the whole world. But to-day the lowest estimate of the world production of opium is more than 4000 tons and some experts held it to be 8000 tons. Thus it is beyond dispute that the surplus is produced for revenue, profit and illicit trade.

* Opium : By John Palmer Gavitt : Published by Brentano's. New York (1927). Price \$3. 50.

Mr John Gavitt, former Managing Editor of *New York Evening Post* and Chief of the Washington Bureau of the Associated Press, feels that "It is not enough that the world should realise, as it does not yet, that narcotics—however, invaluable under proper medical control—have got entirely out of hand ; that the first indispensable on the hearth has become a conflagration. In order even to that preliminary realization, there must be information" (P. 235). To impart information and to bring together the main threads of the problem as a whole for the benefit of the ordinary reader, has been the prime motive of the author of the volume entitled "Opium." However, the book covers (a) the fundamental and basic factors of the Opium problem—the history and the sordid motive of profit at the expense of human lives ; (b) Opium problem in India and China, the largest opium producing countries of the world ; (c) an excellent summary of the Geneva Opium Conferences, which are logical developments of the International Opium Conference of 1909 held at Shanghai and the Hague Opium Conference of 1912-1913 ; (d) valuable appendices containing the texts of the Hague Opium Convention of 1912-13, the First Opium Convention of 1925 and the Second Opium Con-

vention of 1925, held under the auspices of the League of Nations; and (e) an index. The book is not a compendium of dry statistics, but it contains indispensable and accurate information on the subject, the author's frank, bold and unbiased criticism and suggestions which may not be agreeable to and acceptable by all. To unprejudiced inquirers who wish to be familiar with all phases of the intricate problem of the narcotic menace, it may well serve as a reference book, not burdened with too many foot-notes.

II

Unlike others, Mr. Gavit suggests that "no theory can drug addiction, in any of its forms, be regarded as a thing of domestic concern... It is more than probable that even in the primitive fashion of addiction of the Far East Opium plays a sinister part in making these regions—India for example—hot-beds of infectious diseases which at times spread out all over the world." (P. 4).

A barbaric ethical standard governs the opium policy of some of the great Christian powers which held hundreds of millions of orientals in subjection. This policy, according to Mr. Gavit, is the assumption of racial superiority by the white men who think that "the main excuse for living on the part of the Oriental is to contribute to the welfare, financial and otherwise, of the said European." (P. 55)

There is an evident double standard of international morality regarding the opium policy of great Christian nations. Mr. Gavit writes:— "There is nothing inadvertent in the absurdity that the Chinese who attempts to smoke opium in London puts himself in peril of the law, while in the Far East the same British Government not only will permit him to do it but will itself furnish—at no comfortable profit—the opium with which to do it; will salt away that profit for Government revenue (in the Straits Settlements some 45 per cent of the whole) and in official documents stoutly maintain that it does not hurt him—that he cannot get along without it. Gave man, concerned in the enforcement in Great Britain of the British Dangerous Drugs Act, said to me quite frankly of this inconsistency:—

"Of course, it is illogical. But you must understand that it is not so much that we do not want opium-smoking in London; it is that we do not want the Chinaman in London. We do want him—we must have him—in Straits Settlements and North Borneo." (P. 59)

The attitude that governs the Opium policy of many western people has been expressed in the following extract of a letter from an Englishman written in all seriousness:—

"It is only inferior and degenerate people who resort and succumb to this drug vice; therefore, it would be a good thing not to interfere with but encourage the commerce in narcotics deliberately, in order to kill off the riff-raff of the population and generally to thin out the inferior races." (P. 62)

The discussion of the Opium problem in India is probably the most important part of the book, as it gives the correct view, which is diametrically opposed to the views, spread by the British officials and such propaganda literature as 'Facts About Opium in India' widely circulated during

the two Geneva Opium Conferences. According to the most competent medical authorities "opium eating", which is practised in India is much more injurious than "opium-smoking". In the light of modern medical researches, "it is a superstition that opium is in any proper sense either a remedy or a prophylactic; anything, except anodyne against pain" (p. 117). Use of opium is not a prevention for Malaria, Cholera, Yellow Fever, as it is claimed by the British officials of India, but on the contrary its use destroys the power of resistance of a person suffering from any disease of infection. (p. 118). So Mr. Gavit indignantly writes:—

"No intelligent person honestly believes, however much he may pretend to believe, that the effect of any of the narcotics is in any important respect different or in the long run less injurious upon an Oriental than upon a Knight Commander of Bath, a Chevalier of the Legion of Honour or a son of American Revolution. Indeed, I can produce responsible testimony from authorities familiar with medical practice in the Far East to the effect that the white person shows, if anything, the greater tolerance" (p. 63).

Owing to the pressure of American and world criticism, the British Government has suddenly changed its position regarding the export of opium and has pledged itself "to diminish the export of opium by ten per cent a year until in 1936 it shall have discontinued it altogether". This is certainly very hopeful. But the British Government in India is unwilling to restrict the production of opium only for medicinal needs of the people of the land. The following account from the *British Medical Journal* for July 16, 1927, proves that the production of opium and opium revenue in India are increasing:—

"The latest figures available from India show that while the area under cultivation has been reduced from 131,500 acres in 1923-24 to 114,198 acres in 1924-25, the amount of opium produced increased from 2,122,000 lbs in the former year to 2,314,000 lbs in the latter, while the revenue of the Government of India from Opium, which was 1,66,02,695 rupees in 1923-1924, amounted to Rs. 2,93,52,437 in 1925-1926."

Although Indian religious and political leaders such as Gandhi, Rabindranath Tagore, Ramdas Chatterjee and members of the All-India National Congress are persistently demanding the limitation of production of opium only for medicinal and scientific purposes, the British Government is reluctant to pursue this policy.

Since 1929 China has been fighting the opium policy of the Western Nations. Great Britain in particular. But whenever the question of suppression of opium traffic is brought for discussion in the recent international opium conferences, British officials invariably try to shift the whole blame on China as the greatest sinner. During the recent years of civil war, some of the Chinese provinces have begun to cultivate poppy for the production of opium, in defiance of the existing national legislation which prohibits it. The amount of opium produced in China is probably not more than the quantity produced in India, which is mostly consumed in China. However, the most menacing fact is that tons of narcotics—Morphia, Cocaine etc.—are annually being smuggled into China by the nationals of Powers who enjoy extraterritorial jurisdiction and the Chinese authorities

cannot punish them according to Chinese laws. In this connection it must be noted that "it is unjust however to fix all or most of the blame for the smuggling into China or elsewhere upon the shoulders of Japan or the Japanese" (p. 159). In some cases the Japanese may act as middlemen to distribute narcotics, but the most of the narcotics are being produced by factories in countries other than Japan. It once compares the Japanese policy of dealing with the narcotic traffic and the addicts in Formosa, it becomes evident that the Japanese Government has adopted far more efficient methods and making more sincere efforts for the eradication of the menace than the European colonial Powers of the Far East.

III

America's withdrawal from the League of Nations Opium Conference is a genuine calamity to the cause of international co-operation. One cannot agree with Mr Gavit that this was largely due to fearless and out-spoken attitude of Hon. Stephen O. Porter and Bishop Brent against the policy of Great Britain and the British Indian Government represented by Sir John Simon Campbell. The real fact is that the British and American policies on the opium question differed for more than a century. Great Britain fought Opium Wars and America enacted laws forbidding American citizens from engaging in any form of opium traffic in China. American policy has been to restrict the production of narcotics to "legitimate medical and scientific purposes." In the Shanghai Opium Conference, British representative Sir Cecil Clement Smith opposed American representative Dr. Hamilton Wright's resolution and said:

"To put it perfectly plainly, and to be entirely frank the British delegation is not able to accept the view that opium should be confined simply and solely to medical uses."

In Geneva Conferences the Powers forming the "Opium block" adopted the tactics of even weakening the results achieved in the past and thus the United States and Chinese delegates left the conference. It can be safely asserted that although the United States may not participate in the League of Nations, yet she will be willing to do her share to promote the cause of suppression of narcotic traffic through international action.

The General Opium Conferences have not accomplished much. "The net gain, whatever its theoretical value, as yet is and probably for a long time will continue to be only in paper.—Nothing has been set in motion. Something very important has been lost" p. 219. The following extract from the statement of Sir John Campbell, made in the ninth session of the Opium Advisory Committee of the League of Nations, throws some light on the situation:—

"There are at most fifty—perhaps not more than forty drug factories in the world. By the Hague Convention the individual Governments assumed definite obligation to limit the manufacture, sale and use of these narcotic drugs to legitimate purposes, and to co-operate in the fulfilment of these obligations. The Governments have not done this. The solemn international obligations have not been fulfilled."

The remedy for the narcotic menace lies in restricting the production of raw materials (Opium, coca leaves, hashish etc) as well as manufactured drugs and perhaps in Government monopoly of production, storage, distribution, in every phase of the traffic, from the beginning to the delivery of the finished drug to the patients under strict medical control and particularly in the elimination of the element of private profit, so far as possible (p. 249). Mr Gavit thinks that to create, clarify and focus international public opinion on the menace of habit-forming drugs it is necessary that a private international organization, outside and independent of the official machinery of the League of Nations be perfected.

Such an organization would bring together in common purpose and endeavour and with a view of economy of expenditure in money and effort, the existing organizations such as International Anti Opium Association, the Chinese National Anti-Opium Association, the White Cross Association of America, the English Society for the Suppression of the Traffic in Opium, etc, and should encourage the organization of similar societies in other countries" (p. 249).

It seems that the time is ripe for bringing about the suggested type of international organization into existence, to promote an effective and united international action towards the suppression of the menace of habit-forming drugs.

New York City

A REVIEW OF THE INDIAN PROBLEM IN SOUTH AFRICA

By P. S. AIYAR

Editor "African Chronicle"

THE civilised world at large looked forward to the Indo-Union Agreement for a settlement of the longstanding controversy between India and South Africa in respect of the status of Indian Nationals in the Union and since it came into operation in last February, there has been a tendency on the part of the public to look upon the question as a closed chapter, because the seriousness of the position is officially stated to have been eased by this Agreement. In order to enable the public to form an accurate judgment of their true position I propose to make a survey of the Indian question since the introduction of Duncan's Class Areas Bill in 1924 terminating in the India-Union Agreement and leave the readers to form their own conclusions as to the effect of the present Settlement on the future of the Indian Race in South Africa, it not in all other parts of the British Empire. Although the Asiatic Question was, as it were a festering sore, when the great war was raging, yet it really assumed the dimensions that it took since the termination of hostilities between the Great Powers in Europe. Therefore, the seriousness of the Asiatic Question, could well be stated to commence from the time when England emerged from the Great War a Victorious Nation and South Africa reached a higher status akin to that of a Sovereign Independent State, and it is from 1924 that the Asiatic Question in the Dominions has become a subject of deeply absorbing interest.

I believe the first alarmist note against Indian invasion was sounded by Natal in 1896; since then a persistent anti-Asiatic agitation has been continuously kept up culminating in the introduction of the first Class Areas Bill during General Smuts's Ministry. Mr. Patrick Duncan, the then Minister of the Interior, in moving the second reading of the Bill said in part:—

"We intend, Sir, in regard to this Bill to deal with what is sometimes called the Asiatic or the

Indian Question in South Africa. We intend to deal with it in accordance with the peculiar requirements and conditions of South Africa. We have here a state of things which I do not think exist in any other parts of the world, where the European race and the Asiatic Race have come into conflict or come into relation with each other. We have here a state of things which is far more complicated than exists either in the state of California, where a similar conflict is taking place or in the province of British Columbia, Canada, where the same thing is obtaining. Our condition in South Africa is different from all of these, because we have here a European Population who have brought Civilisation of this Country, on whom the maintenance of the Civilisation of this Country depends, and who are surrounded by a much more numerous native Population—not imported—who have to be educated and directed from barbarism into Civilisation by that European Civilisation.... We intend to legislate on this matter and to deal with it with every consideration for the alien people who are being affected by this Legislation.

"...At the same time we do not intend to be deterred by any threats of resistance in South Africa or by any threat of political action outside South Africa or by any retaliation which may take place outside South Africa.... When the Immigration Act of 1913 was passed, it was generally understood, and the representatives of the Indian Community at that time accepted that position, that the Immigration of Asiatics into South Africa should cease. It was understood when that Law was passed they should not be discriminated against by name; that there should be no bar put up against them by name but that by Administrative Action under the powers conferred by that Statute an end should be put to the Immigration from Asiatic Countries and particularly from India into South Africa.... Every one knows the circumstances which have given rise to the introduction of this Bill, I may say solely by the pressure, the friction—racial, social and commercial—of the Indian Population which is felt here, in Natal and the Transvaal.

"I want to be perfectly frank and say that this Bill has been brought into this House because of the pressure of the Indian inhabitants on European Population.... Many people in this country talk about the "Menace" with which the European People is faced by the competition, by the pressure of the Indian Population in South Africa. I want first to ask the House to look calmly and soberly on this so-called Menace." What is it? What is it in its effect now, and in its effect in the future? In a matter of this kind we are not justified in thinking only of what is happening to-day; we have to think of these problems not as they are

to-day, but as they are going to be, as far as one can see in the future..... I regard this so-called menace as arising not from the increasing number of Indians or Asiatics in South Africa, and which form the most part, has been brought here by South Africans for their own purposes, is now arriving at a state of civilisation and education when it is coming to make itself felt in competition, not with the unskilled labourers of the land, but with the skilled trades and with commerce and professions generally.

Then followed Col. Cresswell, the Leader of the Labour Party, now Minister of Defence, and propounded the principles of his Party on which the Asiatic Question was expected to be solved and which he laid down in the following language :

"We all agree up to the hilt with the principle which the Hon. Minister expressed when he laid it down that it was our duty, not only our right but our duty in this country to maintain the European Civilisation with which we in a measure, though not completely, have redeemed, and which we have stamped upon this country. We all agree that we must do our utmost to provide an expanding opportunity for European life in this country.....Public opinion will never be satisfied until you have got rid by force or some other way, irrespective of any humanity; until you have got rid of every Asiatic in the country, and that you have a clean bill of health.....The first line of attack should be by means of Municipal Regulations and rigorous enforcement of the Public Health Laws. Let us also insist on Standards of Civilisation, on economic standards compatible with life according to European Standards, standards such as we look upon as civilised. Let us begin at the bottom and insist upon making an economic living standard compatible with our civilisation. When you have done that, I verily believe that it would diminish the difficulties and the competition and the troubles of the European Trader. By so doing, there will be many men who will find that serious hardship will be inflicted upon them. I say that you must make the most liberal financial provision to help them to repatriate to their racial homes who find that these regulations place upon them difficulties which are hard, almost impossible for them to surmount."

General Smuts, the Prime-Minister, dealing with the Asiatic Question made the following declaration of policy :

"I have nothing against the Indians or against any other good people of this earth, but a great task has been committed to us, a great banner is being carried forward by the White People of South Africa, a great torch has been put in our hands by providence. Let us carry it forward, let us stabilise the basis of a White Civilisation in this country."

Although the principle underlying the Class Areas Bill was acceptable to all parties in the country, yet as it did not go far enough to solve the problem, Smut's Ministry apprehending a defeat in the House,

advised the Governor-General to dissolve Parliament. In the general election, a combination of labour Nationalist Ministry, under the leadership of General Hertzog came into power.

The first Question that the Pact Ministry attacked was the Asiatic Bill. Dr. Malan, the New Minister of the interior, introduced his Bill in a revised form which is a compound mixture of the subtle principles of Smut's Ministry, while socialistic doctrines of Cresswell and Boydell and the unrelenting Anti-Asianism of the Boer Nationalists. In essence, the Bill contained all the important ingredients, in order to make South Africa a White Man's Country and to make life intolerable for an Asiatic to live in the country. In introducing the Bill, Dr. Malan the Minister in Charge said :—

"The Bill frankly starts from the general supposition that the Indian as a Race in this country, is an alien element in the Population and that no solution of the question will be acceptable to this country unless it results in a very considerable reduction of the Indian Population.... and the methods of dealing with this question will not be by any forcible means but by the application of pressure (economic) to supplement the inducement, which is held out to Indians to leave the country."

There seemed to be a consensus of opinion in the House to pass the Bill in the form presented by Dr. Malan, but owing to strong pressure from Simla, it was suspended pending negotiations for an amicable settlement of the problem through diplomatic channel. Thereupon the Paddison Deputation visited this country and in accordance with the Formula agreed upon between the Indian and Union Governments, the subject matter was referred to the Round Table Conference, which was enjoined to effect a Settlement on the following basis :—

"The Government of the Union have impressed on the Government of India that public opinion in South Africa will not view with favour any Settlement which does not hold out a reasonable prospect of safeguarding the maintenance of Western Standard of Life by just and legitimate means. The Government of India are prepared to assist in exploring all possible methods of settling the Asiatic Question and have offered to enter into a conference with the Union Government for the purpose."

It would indeed be obvious that without reference either to the people of India or Indians in South Africa, the basic principle of the settlement of the Asiatic Question having been conceded to by a mutual agreement of the two White Governments, the Round

Table Conference formally met at Cape Town at a subsequent period and simply sealed the details already chalked out for them. In effect the Union of South Africa attracted from India all that she required under the Class Areas Bill in order to fulfil her ambition to make this a *White Man's Country* and to find an "expanding outlet for European Settlement," while India not only lost her title to be recognized as a civilised Nation, but also those of her resident Nationals have lost all hope of ever being recognised as a civilised free person, under the terms of this settlement as will be noted hereafter.

In effect, this Agreement is a tentative arrangement just to feel how far it would work to get rid of the domiciled Indian population, and if it does not have the desired effect in reducing the Indian Population to a 'Manageable Compass,' then the Minister has freedom of action to take further drastic steps which has been foreshadowed thus by Dr. Malan when speaking on this subject in the House Assembly:—

"It will be obvious that the Agreement which has been reached is more in the nature of an honorable and friendly understanding than of a rigid and binding treaty. By this decision not to proceed with the particular legislation which was contemplated last year, the Union Government has not in any respect or to any extent surrendered their freedom to deal legislatively with the Indian Problem whenever and in whatever way they may deem necessary and just."

The Government of India was cognizant of the innumerable hardships and difficulties to which domiciled Indians have been subjected by Laws that have no reason behind them, and yet, for them, to become a consenting party to the "Western Standards of Living" one cannot help but being amazed at their incomprehensible attitude. However, let us consider the formula agreed upon by both Governments and examine whether any advantage has been gained for us? Nothing. The policy now enunciated, which wrought untold harm to Indian interests has been in existence for a considerable length of time. And by putting the seal of approval to the self-same policy, through this "Gentleman's Agreement" the Government of India have given an irrevocable general power of attorney to the Union Government to pursue their traditional policy of oppression and economic strangling of the Asiatic population in the Union. Let me quote a few concrete instances.

Ever since the promulgation of the Immigration Act of 1913, all Asiatics throughout the whole world, irrespective of race or country, have been declared unsuited to the Union of South Africa and styled "Prohibited Immigrants" on account of their 'Standard of Living' and "economic habits"—a decision which has been upheld by the highest courts in the land, and as such, not a single newcomer is allowed to put his foot on the sacred soil of South Africa. Even domiciled Indians are being weeded out of the country—a process which has gained great impetus by recent supplementary legislation under the "Gentleman's Agreement". No Indians are allowed to enter from one province to another without a permit, and recently, Dr. Malan, the Minister of the Interior, announced in Parliament that "The exit for the Indian is across the Ocean and not towards the hinter-land". In so far as fresh arrivals are concerned and in so far as migration from one Province to the other is concerned, it is all closed to the Indians. Segregation in their respective provinces has been the order of the day without giving them an opportunity for development in any sphere of activity; still the Union Government imposes a formula for "Safeguarding the Maintenance of Western Standard of Life", which the Indian Government have naively accepted as if it is a trifling matter that concerns nobody.

It is an accepted theory by all those conversant with contemporary politics that the "Maintenance of Western Standard of Life" is conditioned on material wealth. If no individual or a community was denied economic rights and opportunity to acquire wealth, they could not possibly develop on the lines of European Civilization and they certainly could not maintain "Western Standards of Life", however, ardently they may wish to do so. In other words, it is the opportunity that people get through commerce and industry and the amount of wealth that they acquire thereby that would enable a community to maintain "Western Standard of Life". This is a truism that the Indian Government should know as much as any common citizen.

Let us see how the Indians are situated and how they fare in this country under the present "Agreement". Traders' Licensing Laws in the various provinces have been operated so harshly that it is impossible for an Indian to carry on even long established businesses,

not to speak of opening up new businesses. Although Sect. 4 of the Indo-Union Agreement provides for a revision of the existing licensing Laws yet, it seems to be now inoperative in view of the fact that it is only last week additional power has been given to the licensing Boards even to refuse renewal of existing licenses on receipt of opposition from any quarter. Again, though Section 3 provides for Indian workers to take their places on the basis of "equal pay for equal work", it will in practice be found to be more illusory than real. In order to grasp the real nature of this clause, one has to closely study the operation of the Industrial Legislation in this country. When this suggestion was first made before the Asiatic Commission, after a searching inquiry into the whole scheme, the commissioners rejected it and placed on record their considered opinion in the following language:—

"The Object of a Minimum Wage is to ensure that wage-earners are paid sufficient to enable them to live in decency and reasonable comfort and in circumstances that will make them good citizens. It is not infrequently advocated with a view to preserving certain occupations for Europeans. To fix a Minimum Wage with the European Standard of living only in view is in effect to exclude from employment other classes with a lower state of efficiency and earning capacity. Minimum Wage scales to be just to all classes and to give effect to their primary object, should therefore be adjusted with due regard to the economic requirements of each of these classes and to their earning capacity. A Minimum Wage based on the needs of the highest types employed must either lead to unemployment or to the extravagant pay of people not approaching that standard. These considerations run counter to the idea underlying the proposal put forward by the European Traders, and sufficiently explain why we refrain from making any recommendation on a subject which has ramifications far beyond the Asiatic Question."

It would indeed, be obvious that, even the Asiatic Commission was gracious and high-minded enough to see through the game of a uniform wage for all and although they made no recommendations, General Smuts took the clue, and in 1921, the Industrial Conciliation Act was passed on the principle suggested by the Anti-Asiatics. Then Hertzog's Ministry followed; the Colour Bar Act and the Minimum Wages Act were supplemented in order to complete the legislative programme for the consummation of an "all white labour policy."

In reality the motto of "equal pay for equal work" means, in the absence of racial equality and equal economic opportunity, clearing the way for a considerable reduction

of the Indian population by means of giving a stimulus to throwing out of work every large number of Indians through a strict enforcement of the Regulations governing "White Labour policy." It would thus be seen that the operation of the Industrial Legislation is an extremely slim method of forcing out of the country the mass of the Indian Community coerced by a prospect of starvation or repatriation.

Let us see how and in what manner the Law operates. Our readers should bear in mind that with the exception of a comparatively small number of Indian store-keepers who depend for their subsistence on the poor Indian labourer and farmer, the rest of the Indian population in Natal, belong to the working class. Since the enforcement of Industrial Legislation based on "White policy," a studied and elaborate campaign is being carried on with the avowed object of establishing Trade Unions for the respective branches of trade, of course, taking particular care to exclude Indian workers from the benefit of Trade Unions.

Owing to prevailing colour and race prejudice the Indian is not in practice eligible to become members of the General Trade Union Organisations; neither the Statute allows non-Europeans to form their own parallel Trade Unions. While the Law and custom thus restraining them in their legitimate evocations, it enjoins them to conform to Industrial conditions formulated by Trade Unions which are not intended for their benefit but to cripple them and legally incapacitate them from leading an industrious life. In a word, the Trade Unions formed by the whites, intended for the whites, but to the detriment of the Non-Whites, wield such power, that any decision emanating from them is legally binding on all, whether the worker and master is black or white! The Trade Unions thus formed enter into an Agreement with their masters, which is ratified by the Minister and proclaimed to be binding on all irrespective of the fact whether a particular class of tradesmen has been a party to it or not. The effect of this procedure being that hundreds of Indians have lost their means of livelihood and are too anxious to get out of the country to escape starvation!

Not long ago the Minister of labour fixed minimum wages in several other industries with the result that the small employer and employee could not comply with the Law

and both will have to take the "Voluntary Repatriation Boat."

While such is the scheme made for throwing out of work present-day employees the stratagem the Minister has made through the Apprenticeship Act for preventing Indian youths from learning any skilled and semi-skilled trades is very ingenious indeed, and according to this order, it would be impossible for the rising generation to attempt to learn any trade! It would be obvious from the foregoing statement of facts, that the Union Government, in their effort to give effect to their "White Policy," is neither sparing in money nor pains. They go about their business in a methodical manner and the latest move on the part of the Labour Minister is likely to revolutionise the outlook in so far as the Indian is concerned.

Not long ago the Labour Minister issued a circular letter to all employers to assist the Government in employing Europeans and he submitted certain proposals to Municipalities for replacing coloured and Native Labour with European Workers, through the inauguration of a committee consisting of representatives of Labour Department, Provincial Administration and the Municipality the object of the committee being the following:—

"To scrutinise the various unskilled and semi-skilled occupations in the normal activities of their respective bodies with a view to replacing more and more Europeans in their respective ordinary service; and to assist in giving effect to the policy of extending legitimate avenues of employment on an efficient organised basis for suitable unskilled and semi-skilled Europeans."

The inauguration of White Labour Policy and its rigorous application having brought about disastrous consequences to the working class Indians, the agricultural section of the community and labourers in sugar industry have not been left alone. It is in the farms and sugar estates that a great majority of Indians depend for their means of subsistence. Originally when the Indians were introduced specially for these sugar plantations, it was understood that after the completion of their indenture, they should settle down on small patches of land where they served their indenture; subsequently they became small agriculturists, their descendants working in sugar mills in various capacities. Although from time to time efforts were made to turn these Indians out and substitute White Labour, it was found impracticable because the local sugar industry could not compete

with the world market, especially with the neighbouring Mozambique sugar industry where coloured cheap labour is a predominant economic factor.

General Hertzog and his Labour Colleagues, soon after they came into office, promptly took steps to erect a tariff wall against outside competition in order to protect and foster the primary industries of the Union with the ultimate object of manning them by European Labour alone. The Board of Trade has been paying its attention to engaging more and more White Labour not only in industries, but also in farms, and a circular letter was addressed to all the planters and millers inviting their opinion as to the feasibility of imposing a protective tariff and also employing European Labour. Thereupon the Board of Trade made certain recommendations; subsequently through the initiative of the Board of Trade a Conference of the millers and planters was held at Durban and after a protracted discussion, the conference reached an Agreement acceptable to both parties in addition to complying with Government's White Labour Policy.

The most important feature of this Sugar Agreement is the centralisation of the Sugar Industry under Government control and also extraordinary power given to the majority of European planters to carry out this white Sugar Industry and white labour Scheme. The Sugar Agreement is on all fours with the Industrial and Conciliation Act and will in all probability prove disastrous to the entire body of Indian planters and workers in process of time the former having invested considerable sums of money in lease-hold and free-hold sugar farms. Under the Sugar Agreement, the millers have absolute power to decline to crush canes grown by Indians, the latter having been altogether excluded from the scope of the Sugar Agreement; and the Indian workers altogether prohibited from employment in Sugar factories so soon as White workers are trained and made available to take the place of Indians.

While such is the plight of the farmers and workers, let us see how the Indian Settlers fare under the upliftment clause. This clause provides for better housing and sanitation, but the Municipalities now endeavour to avail themselves of the opportunity to segregate the Indians under the guise of "Housing Scheme". The Durban Municipal

Corporation have purchased 200 acres of land in order to establish an Indian village about 4 miles from Durban.

In regard to better sanitation, the Indians living in suburbs, though they pay excessive rates and taxes to the Health Boards, they have been repeatedly agitating for better sanitation and for reforms in Health Boards. A representative deputation that waited on the Natal Administrator recently described their woes, and requested relief, but the Administrator politely told them to pay up the taxes and not to question the right of the White man as to the manner in which their money is being spent.

It would thus be seen that the complaints against the Indian on sanitary grounds is frivolous, and if the taxes received from them were spent in the direction in which it was intended, there would be no grounds of complaint at all against the Indians; but instead, they utilise the revenue for giving doles to poor Whites in unproductive line, while doing nothing for the Indian taxpayers.

Notwithstanding the advent of the Paddison Deputation and the signing of the Indo-Union Agreement, there seems to be no finality on the part of the Union in their policy of oppressive legislation against Indians. After signing of the tentative Agreement by Sir George Paddison and his colleagues, the Colour Bar Act was passed which has prohibited Asiatics from being employed in any industry run by mechanical power.

The Liquor Act is now on the Legislative anvil, which, if it becomes Law, would incapacitate Indians from being employed in the Liquor Trade as well as in the capacity of cooks, waiters, and hotel-servants. However, under clause 1 of the Indo-Union Agreement the Government of the Union have undertaken to "adhere to the principle that it is the duty of every civilised Government to devise ways and means and to take all possible steps for the uplifting of every section of their permanent population to the fullest extent of their capacity and opportunities and accept the view that in the provision of educational and other facilities a considerable number of Indians who remain part of the permanent population should not be allowed to lag behind other sections of the people." After putting their signature to this solemn covenant, the Union Parliament passed the South

African Nationality Act, which has been gazetted on the 15th. November, 1927. Section 1. of the Act defining a South African National as follows:—

"A person born in any part of South Africa included in the Union who is not an alien or a prohibited immigrant under any Law relating to immigration."

Although the definition apparently looks simple and inoffensive, one should dive a little deeper and ascertain who is a "Prohibited Immigrant"? And an "alien"? The following ruling given by the Appellate Division of the Supreme Court of South Africa in *E. M. Seedat vs. Appeal Board* proves in unmistakable language the intents and purposes of the Immigration Law which should be read in conjunction with the South African Nationality Act of 1927. His Lordship the Judge-President of the Appellate Court in an elaborate interpretation of the Law said thus:—

"The Regulation is no doubt an act of administration of a nature on a scale which can seldom, if ever before have been entrusted by a Legislature to the discretion of an individual. As was said in the case of *Diva Rajasee* 1913 N. L. R. 407: 'The Minister without distinction of Nationality, class or circumstances, has simply declared the whole Asiatic population of the world... to be unsuited on economic grounds to the requirements of the Union and therefore restricted.' But while that is so, we are unable to say that in so doing he has gone beyond the enormous powers conferred upon him by paragraph (a) of sub-section (1) of Section 4 of the Act. The words of that enactment taken in their ordinary and grammatical sense are wide enough to cover the Regulations and we find nothing elsewhere in the language or scope of the Act to render such an interpretation repugnant or to force us to a more limited one.

"What are economic grounds and who are to be deemed unsuited on such grounds are matters, which, in plain terms, are committed entirely to the discretion of the Minister; and whether he exercises that discretion by prohibiting each Asiatic person separately and individually who attempts to enter the Union as it was conceded he might do—or by prohibiting 'Every Asiatic person' as a class, by declaring them unsuited on economic grounds, make no difference. He is left to classify as he pleases."

The ruling given by the Appellate Court as to the status of an Asiatic abundantly demonstrates that there is not even a remote possibility for him to be recognised as a South African National unless, the Immigration Act of 1913, is amended removing the ban on the Asiatic race as a whole. Therefore, it necessarily follows that those who are not legally recognised as South African

Nationals are by implication "aliens" and as such "Prohibited Immigrants."

However, there remains only the question of declaration of the rights and status of those of the Indians, who were brought to this country under indenture at the express invitation of the White Settlers for the development of the country and their industry. This Section and their descendants form the bulk of the Indian population; out of a population of 150,000, about 140,000 come under the category of the indentured system. About a year or so ago, the Provincial Division of the Supreme Court of Natal, in the course of an exhaustive judgment, made the following interpretation in reference to the position of the Indentured Indians and their descendants in this country. When delivering judgment in the case of Jussodia, Justice Tatham said:—

Law 12 of 1872 erected a Department of State called the "Protector of Immigrants", whose duties are defined by the law, and are designed to safeguard the welfare of the Immigrants in a manner compatible with the theory that their residence in Natal was of a temporary character and their welfare was the concern of the Government of India, whose subjects they continued to be. The Law provided for the registration of Indian Marriages by the Protector and made Registration *Prima Facie* proof of a Marriage.....

'Section 65, of Law 25, 1891, and Law 7, 1896, though passed at dates later than 1883, read with Sections 13 and 14 of Law 12, 1872, all of which validate, in Natal, Marriages which by the common law of Natal were invalid, lend weight to the view that it was the intention of the Legislature all through to apply to Indians who came to Natal as labourers their own marriage system, on the theory that they are birds of passage whose real domicile was India.

The trend of all the legislation was to keep Indian Immigrants introduced to Natal as were the plaintiff and her husband as far as possible under the system of law to which they were accustomed as inhabitants of India upon the theory that their residence in Natal was of a temporary character."

While such is the interpretation of the status of that section of Indian Immigrants who came to this country under Acts from 1857 to 1891, subsequent legislation by the Natal Parliament has been expressly made on the theory that "Indians were required as labourers but not as settlers." Act 17 of 1895, enacted that any Indian brought under indenture, should, after the expiry of his or her five year's indenture either perpetually re-indenture or return back to India failing which they should pay an annual Poll-Tax of £3 per head for the privilege of prolonging his stay in

this country, which penalty the Act of 1914 waived. And the Immigration Regulation Act provides that "a person shall not be deemed to have a domicile within the Union or any other province for the purpose of this Act unless he has resided therein for at least three years, otherwise than under terms of conditional or temporary residence permitted by this Act or any other Law."

Section 8 (1) of the same act provides further that "No prohibited Immigrant shall be entitled to obtain a license to carry on any trade or calling in the Union or (as the case may be) in any province wherein his residence is unlawful or to acquire therein any interest in land, whether household or freehold or any other immovable property. (2) Any such license if obtained by a prohibited immigrant or any contract, deed or other document by which any such interest is acquired in contravention of this section shall as from the date that the holder of the license or interest is dealt with as a prohibited immigrant under this act be null and void."

From a brief survey of the situation in this country as interpreted by the highest authorities on the status of both indentured and free immigrants, it must be transparent that their prospects under this Indo-Union Agreement, is anything but re-assuring and that in all probability it may lead hereafter to an interminable wrangling in interpretation of this "Settlement" leading perhaps to a High Court Tribunal or to another London Convention.

Indeed, nothing has created a more profound ill-feeling in the mind of the South African Indian Community than section 2 of the upliftment chapter of the Indo-Union Agreement, which provides for Higher Education at the South African Native College at Fort Hare. From the very commencement, the local Indian community has been objecting to this clause not only on racial but also on ethical and political grounds. Now, in the face of this universal disapproval of the clause, it is difficult to understand the motives actuating the Government of India in endeavouring to give effect to the terms of this clause, since the Indian Agent has proceeded to Fort Hare to make the necessary arrangements with the college authorities. If it is an astute political move on the part of the authorities at Simla to bring down the Indians to the level of the native-born aboriginal tribes of Africa, and classify all-

non-European races under the category of "Blacks," it could have been announced in a more straight-forward manner than the circuitous methods now adopted. At all events, the Fort Hare Scheme for providing Higher Education for Indians is not commanding public approval and in practice it is not likely to prove of any value to the Indian Community.

In order to demonstrate the intensity of Indian public feeling on this matter, let me quote the following from the communication dated the 19th November 1927, addressed to the Rt. Hon. V. S. Sastri, the Agent-General by Mr. Habib Motan, the Hon. Secretary of the Government Indian School Committee, on behalf of the Transvaal, and the rest of the Union Indian Community:—

"At that time we never had an idea that the deputation would try to herd us together with the natives at the Native College at Fort Hare. After the publication of the Cape Town Agreement, my Committee thought that we would go into this matter thoroughly upon the arrival of the Agent-General from India. However, much of your time was spent in Natal, and as your stay in the Transvaal was very short, my Committee could not make arrangements to meet you in deputation and bring all these matters—into your notice.

"It has been a condition with the Government from 1913 and the Government has accepted the principle, that the Indian children would be given separate facilities as from Natives and Coloured. Instead of showing better progress, however, after a period of 12 years, it is humiliating to the Indian sentiment, and to the Indian National Honour, and Civilisation to think that our Agent-General is trying to bring us down to such a low level.

It was in about 1918 that Mr. Andrews tried to persuade the Indian Committee in the Transvaal to take advantage of the facilities for education at the Fort Hare College. The Indian Community then strongly resented such assimilation and said that the Indian Community would only take advantage of the Education facilities quite separately or in any European College.

"My Committee therefore herewith records its emphatic protest against any arrangements for Indian students at the Fort Hare Native College, and it in spite of our protest, you make arrangements, and if even one student, not only from the Transvaal, but even from any part of the Union of South Africa attends the said College, the Indian Community will be greatly upset, and it would then be the duty of my Committee to come out openly and record our protest against such degradation at your hands.

"Personally, I look to you with respect and honour, but when the question of national honour arises, I feel that you should duty consult the Indian Educational Leaders, and responsible members of the Indian Community in South Africa, before any arrangements are made in this connection.

"It is true that we have been voteless and voiceless in the Union of South Africa, but we would be able to record our voices with the Government through you, and be able to ameliorate our Status in the Union of South Africa.

"I feel that the days of Czarism and total autocracy are gone, and as the world is progressing on Democratic lines, I feel that it is essential to hold an Educational Conference in the Union of South Africa immediately."

In regard to Primary Education, it is true that it is provided for under section 1 (a) to "Advise Provincial Administration to appoint a Provincial Commission of inquiry" into the question of primary Education, but according to the Natal Provincial Gazette dated the 17th November, 1927, we find that it is not a Provincial "Commission" that has been appointed, but a "Committee" consisting of the Provincial Council Executive together with two other Anti-Asiatics has been appointed in order to ascertain "the financial basis of Indian Education, having regard to the resources of the Province, the various demands upon them and the adequacy or otherwise of the existing Union Government subsidies in so far as they affect Indian Education." Such being the terms of reference of this "Committee" not "Commission", it is not unnatural for the South African Indians to be dubious of beneficial results from this "Committee." Moreover, it is understood that Dr. Matan, the Minister of Education is not prepared to sanction any money on Indian Education in Natal, in terms of the "Settlement" until sufficiently qualified teachers are available. The condition now imposed by the Minister is quite a novel one. If the professions of acknowledging a "considerable part of the Indian population as part of the permanent settlers" in the country be true, then obviously it is the duty of the Union Government to find the teachers as well as to provide education for the Indians directly. Should the teachers be inadequate to meet the present demands, then why not import teachers from India? If there was any legal difficulty in the importation of qualified teachers from India, is it not possible for the Union Government to get over the difficulty? Will the importation of a handful of educationalists upset the equilibrium of the white race?

Now, Dr. Malan contends that Indian Education should wait until a training College for Indians be established, and Indian teachers trained. It will take several years

before the local product would be ready for imparting Education, in terms of the Agreement, but by that time, in view of the economic and other pressure brought to bear on the Indians, a very large portion, if not the whole lot would have looked for pastures new, and repatriated themselves! In a word, when the teachers would be ready, there might possibly be no children left for imparting education in Natal! Under these circumstances, one may with justification question the sincerity of the Ministers in their interpretation of this "upliftment clause!"

In conclusion, when one calmly studies and considers the implications of the "Western Standard Formula", which has gained the approval of the Indian Government, he cannot help, but being driven to the conclusion that the Indian authorities have in explicit terms agreed to a "squeezing out policy" in order to make this a White Man's Country and that the Indian Government are facilitating that process.

1. In accordance with the original demand of Dr. Malen for a considerable reduction of the Indian population, the Indian Government have accepted the Repatriation of Indians (Voluntary) and through their Agent-General in this country, they are expediting the exodus of Indians.

2. In compliance with the original request of Mr. Patric Duncan, Dr. Malen, and Col. Cresswell, for putting economic pressure on the Indian, to Repatriate himself, and also to safeguard the "Maintenance of Western Standards of Life," the Government of India have placed their seal of approval on the Industrial and Conciliation Act, Wages Act, and Colour Bar Act, and all Regulations thereunder, which are all based on the principle of an "All White Labour Policy."

3. As for segregation of the remnant Indian population, which was laid down in the Class Areas Bills of both Mr. Patrick Duncan and Dr. Malen, it is now an admitted fact that it is in the process of inauguration in Natal in terms of the Indo-Union Agreement, which provides that Indians "shall accept the limitation of the sale of Municipal land to restrictive condition" under the guise of "Housing Scheme."

That much for the debit side. When we consider the credit side, it would be obvious that the clause relating to the upliftment and education of the Indian Community is a mere smoke-screen just to hoodwink the

credulous and simple-minded folks, because it is a patent fact that the bulk of the Indian population will have to repatriate themselves under extraordinary circumstances arising out of economic pressure and prevailing race autogonism. Indeed, it is difficult to imagine whom this upliftment and education clause is intended to serve. Therefore, it is manifest that this clause is more a snare than a valuable portion in so far as the Indians are concerned.

It has been maintained that the mere fact of the Union Government having undertaken to adhere to the principle of upliftment of the Indian permanent population is a *Magna Charta*, in so far as the averment goes, it is very good, but the point is, having regard to the definition given by the South African Nationality Act and having in view the judgment of the Appellate Division of the Supreme Court in respect of the status of Asiatics as a race and in respect of the position of Indians and their descendants who were brought under indenture, whether the law recognises any Indian as part of the permanent population of this country; whether the Indo-Union Agreement affords scope to consider that the Legislature and white people of this country have changed their angle of vision and rectified their opinions, amended their repeated pronouncements in respect of upholding their ideals of White Civilisation and White Labour Policy so as to make room for assimilating the Indian Population of South Africa in their organic whole. These are moot points which should engage the thoughtful attention of the people and leaders of India.

From the presentation of the foregoing facts, readers of the *Modern Review* may now be in a fair position to judge whether the present 'GENTLEMEN'S AGREEMENT' is an honourable compromise or whether it is a moral victory for India or both! In whichever direction the public opinion of the cultured mind of India may bend, the fact remains that the present oppressive legislation is grinding down its victims slowly but surely, and that there is not a glimmering of hope for a better future, despite this or any other agreement which the bureaucracy may make. Therefore, it is imperative on the part of the people of India to endeavour to obtain similar rights if not more than the Union of South Africa to safeguard the rights of the Indian race and

their civilisation. Therein lies the salvation of India and her children across the sea. But so long as India is a dependency to England, she is necessarily a dependency to other White Dominions also being partners in the British Empire; therefore, in the present status of India, it is inconceivable to expect a status for our Nationals in the Empire and foreign lands, better than those of serfs in economic, political, and social spheres of activity.

In conclusion, I venture to submit that

Leaders of all parties in India, at least out of regard for the future of our race and our common civilisation, should combine, call a National Convention just as the Boers and Britons did in this country in 1910, draft out a constitution that would enable India to guard against wanton encroachment on the rights of Indians and their civilisation and insist on the British Parliament ratifying it—a constitution that the exigencies of our race and country demand.

THE GERMAN WANDERVOGELS

By DURGA PRASANNO RAYCHAUDHURI, P.H.D. (Goettingen)

A group of young travellers from Germany has just arrived in India. They belong to the famous Wandervogel movement in that country. In the following lines an attempt will be made to give a short history of the genesis and wonderful development of this very interesting and significant movement in modern Germany.

The Wandervogel is a youth movement that lives in clear conflict with the generation of elders and seeks its life and strength in wandering in natural surroundings. In order to understand this movement properly, we must trace it back directly to the social conditions that helped to bring it into being. During the latter years of the nineteenth century, when the relations between man and man in society had become very stiff, narrow and exclusive, the class distinctions were sharp, and the aristocracy of wealth and intellect generally held aloof from their less fortunate fellowmen. Not that they always lived this sort of life. But being born and brought up in such exclusive traditions, they often found it hard, if not absolutely impossible, to break away from them. It was a sign of "good breeding" to go to the church, whether you believed in its dogmas or not. And there was plenty of snobbery and hypocrisy all around.

Now the children of the age could hardly be expected to feel themselves in their element in such society. But where, then,

should they seek refuge? At school? It was but a counterpart of the home. And there was no relief for them, from that

Karl Fischer, the Founder of the Wandervogel Movement

quarter either. The child that is growing must needs have many questions suggested to him by the life outside of school, to each of which he wants to find an answer. But this answer was denied to him at home. Nor could he get it from his stern schoolmaster, who was determined to mould him according to the classical type. The pedantic schoolmaster was there to teach and of course he taught. Goethe and the ancients were the order of the day. And the child certainly learnt, but there was no community of feeling between him and his teachers.

mountains of Bohemia. Among those who accompanied him on this occasion was Karl Fischer, a grammar school student, afterwards destined to be the founder of the great Wandervogel movement. It was in the course of these travels that Karl Fischer first got into his head the idea of forming a brotherhood of select students who would be prepared to wander during holidays and vacations over hills and dales for the simple pleasure of it. The idea was well-received. And he lost no time in starting week-end excursions with his fellow-students. Some-

The Wandervogel

So the time was ripe for a movement that should change the old order of things. About this time there lived in the neighbourhood of Berlin a number of teachers who had a broad vision and who had already raised their voices against the attitude most schoolmasters used to adopt with regard to their pupils and the way they brought them up. To this small group of sympathetic teachers belonged one, named Hermann Hoffmann who gave private lessons in Shorthand. He loved to make long excursions on foot with his pupils in the neighbouring hills and woods. During the year 1898 he undertook a long journey extending over four weeks, in the course of which he wandered mostly amongst the beautiful

A Rest in the Tent after Bathing

times they would seek out an old ruin, and, as night approached, would make a fire and lie down on the bare ground. If the night was clear, they would look on the stars and slowly fall asleep. But the moisture and the cold, and not unoften the insects, would soon wake them up. And then they would begin to recite verses and speak to each other of their little joys and sorrows till morn. Getting up with the lark they would make a small fire and prepare the morning coffee. Bread and butter they used to carry always in their Knapsack. A dip in the brook hard by and, if possible, a swim followed; and after drying themselves in the sun, the necessary preparations would be taken in hand for a modest lunch. The lunch over, they would start on their return journey home.

It often happened that the food in the

pot got burnt near the bottom, was fairly well-cooked in the middle, white at the top it remained something like half-boiled. But they minded not such trifles, for they were at least under "the blue sky, wide and free", away from the tyranny of home and school. If they returned home tired and breathless, or even if they "dezed" at school on Monday morning, still they had the satisfaction of having learnt a good many new things which they could never forget.

Wandervogel Youths at Cooking

For some time Karl Fischer and his companions kept wandering about the hills and dales dressed in shirts, soft-felt hat or school cap, with a Knapsack containing the cooking-pot and other necessary kit on the back, in high boots and with a heavy knotty stick in hand. They were a sort of Bohemian lot and were often rather coarse and rustic in their manners. This was but a natural reaction against the heartless "discipline" of the time. As a matter of fact the conditions of society at the period resembled to a large extent the social conditions prevailing in Germany in the seventies of the eighteenth century, and produced almost similar results. During the earlier period the abuse of autho-

rity at home, in the school, Church and State led to a reaction which manifested itself principally through literature, in the form of the so-called "Storm and stress Movement". This movement was started in Munich and drew its chief inspiration from Rousseau's famous doctrine of "Back to Nature". The same abuse of authority throughout the latter years of the nineteenth century, however, directly gave rise to the youth movement as a protest, while the literature of the period also did not fail to give signal of the coming storm (comp, e.g., "Before the Sunrise", a drama by G. Hauptmann, 1889).

Be that as it may, Karl Fischer and his youthful friends shouted lustily whenever a new idea crossed their minds and sang songs like "O old glorious College days" and "Fita hospitals." But they talked gently or even kept quiet when the romantic spell of a moon-lit night worked upon them. At last on the 4th of November 1901, Karl Fischer formally inaugurated the Wandervogel movement. The name, which literally means a wandering bird, was suggested to him by one of his school-mates. Some elderly people who were in sympathy with their ideals, kept them supplied with money, and what is more, took them under their protection against any persecution by society, home or school. The Wandervogel is not a touring organisation, as some people

A Favourite Haunt of the Wandervogels

might think. It is, as its very name implies, a wandering brotherhood of young men, who are, as it were, so many children of nature. Those who stood at the head of affairs were

called the Oberbaccanten (Latin, Vagans—a rambler.) Then followed the Burschen or youngsters. And the new recruits were styled Fuechse or Foxes. The whole thing was advertised by means of public lectures and pamphlets.

An old Wandervogel tells his story

Everything was perfectly unconventional about them. An air of freedom prevailed among the youths, who would at times loak even wild. They deliberately imitated the life of the vagrant scholars of the Middle Ages, and even took up their vocabulary and mode of speaking. The Wandervogels did not care much about aesthetic observances, their chief passion being freedom in the lap of nature. And what they wanted above everything else was to be rid of the artificial rules of society life. They used to sing many songs, especially the old simple folk-songs of their country. And every song was sung to the accompaniment of the guitar, of which almost each one of the Wandervogels possessed one. These were mostly love-songs, songs based on some old legend perhaps, sometimes a ballad, a martial air, or commonplace folk-songs to be heard in the street, or even psalms from the Bible. Occasionally songs were sung of which nobody could possibly make any sense. And it also happened sometimes that at the sight of some beautiful piece of German landscape their hearts would be touched with feelings of

exalted patriotism and then they would sing in chorals—"O fatherland, how beautiful thou art with thy cornfields."

When the Wandervogels make an outing, their motto is to see as much of the country as possible and to travel as little by train as is practicable. When they start from a big town, they generally cover a short distance by rail early in the morning, just to avoid being held up too long in the city. During the small hours of a morning when most people are still asleep, you could sometimes hear individual Wandervogels with their customary tri-colored band and in heavy boots stamp through the lonely streets towards the station. With a rough stick in hand and two flashing eyes in the head, their mutual salutation are neither "Good Morning" nor "Good Day"; but always "Good Luck." They travel fourth class and sometimes start singing even in the waiting rooms

The Wandervogel Folk-dance

of the stations. Alighting from the train, once more they talk briefly over the day's programme, look at the map of the country they are going to explore, and fall to singing as they begin their march. After having wandered for three or four hours they set

themselves to rest a while on the hill-side or by a brook. Some are tired and go to sleep; others probably begin a sham fight; while the rest tell tales. Sometimes you could hear one of them say: "I can hardly get on with my father." When refreshed, they continue their march through fields and meadows till some rivulet or lake is reached and they plunge into it in a body. As the hour of lunch draws near, a small fire is made either in the wood or on a clean spot in the field for preparing the food. There must be water hard by. Some go to look for fuel, others fetch water, and

Washing the Plates after a Meal

A Wandervogel Folk-dance

some others unpack the bundles. The Wandervogels are pledged to the utmost simplicity of life. Ordinarily they prepare a kind of *KHUCHURI* from rice, sausage and wild fruits, which remains, as often as not, half-boiled, because they have not the patience to spend too much time on cooking. For desert they try to make a kind of pudding from some powder, etc., which generally remains quite watery. Afterwards some of them eat bread and butter. Lunch over, the pots and the plates are scraped and washed and they resume their

journey in high spirits. Normally they cover about 25 miles a day. And when the night falls, they sleep either out in the open or in the hay-stacks of some farmer or in some tents improvised for the occasion. Of late Wandervogel nests have also been set up in different parts of the country, where the wanderers may spend the night free of all charges. If they sleep out in the open, they make a fire, sit round it under the star-lit sky and tell ghost-stories and recollect old legends. Sometimes they sing individually to the accompaniment of the guitar or together in

chorus till one by one they fall asleep. So they wander for days and weeks together over hills and dales, through woods and meadows, and by lakes and streams; and when they return home after such an excursion, they often look quite wild and savage, but the spirit of youth and the love of nature shine forth from their eyes. It is not true that the Wandervogels never visit any towns. During holidays and vacations, it is a common sight to come across groups of Wandervogel youths in their characteristic costumes promenading the streets of such

historic towns as Hildesheim, Weimar, Mueich, etc., visiting objects of interest and singing old folk-songs.

By the year 1903' the Wandervogel movement had spread over Germany and Switzerland, and local organizations were set up in most of the important centres. But this was also a year of crisis in the history of the movement. The membership increased by leaps and bounds, and a Wandervogel periodical was started. Among the new members were many who did not possess the wandering spirit of Karl Fischer and his followers, but were rather ease-loving and given to travelling mostly by rail in higher classes and putting up in rich hotels. Karl Fischer and his followers, therefore, seceded from these rich dilettante Wandervogels and eventually came to be known as the Old Wandervogels. And they have maintained

the Wandervogel movement that have both men and women members. And the women members belonging to these branches have also their characteristic costumes like the young men and grew their hair in long tresses.

Historically the Wandervogel is the oldest of any youth movement in Germany. The others youth movements are but its offshoots in one form or another. The Wandervogel has been called "the purest and at the same time the wildest protest" against the artificial social customs and the sharp class distinctions of the late nineteenth century. Be that as it may, its influence on German life and society has been phenomenal. We have seen that in the beginning the movement signified only "a return to nature." Still it is not easy to indicate what this influence of nature in the life of the Wandervogel exactly was or

A Band of Wandervogels on the March

where it directly came in. It was not certainly in the cooking of food or in the open air dance or even in the hardening of the body by means of free sallies. Probably it was, as a German writer observes, like a certain indistinct melody which remains unheard but which nevertheless pervades the whole being and rejuvenates it. Anyway, there is no gainsaying the fact that this new movement brought about a tremendous renaissance in the whole life of the German youth, as will be evidenced by the following two songs which the Wandervogels are never tired of singing during their weekend outings.

L

When we stride along side by side,
Singing the old songs,
Until the woods reecho,
Then we feel the dawn has come,
And a new epoch marches with us.

One week of hammer-beating,
One week of stone-cutting
Leave us still with trembling veins:
But none dares to complain,
For Sunday smiles on us so gloriously.

See the birchwoods and the green fields,
Which in an offering mood
O'd mother earth holds up before us,
Giving them from her full hands,
That man may be her own.

Word and song and look and step,
As in the good old days of yore,
They will all go hand in hand,
Carrying with mirthsome frolic
Our own souls in their strong arms.

Wandervogel Youths Playing on the Giant

II.

When the working-time is over
On Saturday all busy hands
Fit out after youthful fashion
For the gay wanderin' excursion.
Singing we go out of the small town,
The heart is free and the mind is light,
Boys on the left and girls on the right,
And I myself in the middle.

Ah! this is a delightful ramble,
Meadows and fields pass swiftly by.
One says gladly to the other:
Today, brother, we are free.
The little town lies already behind us,
And we wander with a light heart on and on.
Boys on the left and girls on the right,
And I myself in the middle.

We sing and we play in groups,
And rest in the cool shades of the woods,
And in the bright moon light
We wander back to our homes.
Singing we come back to the small town,
Our heart is free and our mind is light,
Boys on the left and girls on the right,
And I myself in the middle.

It may be asserted without any fear of contradiction that the Wandervogels have restored to their proper place the old folk-songs which were all but forgotten. Of course, a few of them used to be sung always by primary school children and possibly on that account the general public thought it beneath its dignity to take any notice of them. It must be said to the credit of the Wandervogels, however, that they have popularised these folk-songs among all classes of the people to an extent unknown before. And the result is seen in these popular folk-songs forming a part of the University curriculum on German literature to-day.

Wandervogel Girls Engaged in Cooking

The profound love of simplicity and of natural beauty which is such a marked feature of the Wandervogel movement has led to important results in other directions as well. In collaboration with the members

of other contemporary youth movements the Wandervogels began to "stage" in their own way upon the public places the mystery plays of the Middle Ages and the carnival plays of Hans Sachs. Their success was immediate. The masses flocked enthusiastically to such performances. Not only did it mean a revival of the old religious plays but the modern theatre also had to adopt itself to some extent to its requirements in order to be able to meet halfway the newly-created tastes of the theatre-going public.

There are now several Wandervogel periodicals and it is quite safe to say that a considerable literature has grown up round

A Typical Wandervogel Nest

this movement by now. The various Youth movements in Germany have given rise to a distinct school of poetry of which the mouthpieces are Hermann Loens, Waldemar Bonsels, Stefan George and Frank Werfel.

Retiring to rest in a Hay-loft

The first of these is known chiefly as a Wandervogel poet.

Exception has been taken to the circumstance that the Wandervogels are not always properly dressed; that they often bathe naked and are by no means better clothed when after a bath they bask in the sunshine on the hill-side, or on the brink of a stream. Gustav Wyneken, one of the modern Wandervogel leaders, has given a decisive reply to these objections. Referring to the ancient Greeks, he quotes from Gerhart Hauptmann the well-known words:—"From the grounds of the stadium sprouted forth quite naked the athletic stocks of a godly and intellectual race." Then he goes on to say:

"Nothing protects the ugliness of the race so effectively and makes for hiding this ugliness so well as the way in which the European now completely covers his body. But nothing can lead to the physical growth of the race so quickly as habitually keeping the body naked. In the education of children this nakedness must be made to play quite an important part. Youths

THE GANGES BY MOONLIGHT
By Mr. Mukul De

Printed by

most see each other's body and compare notes; and they must in this way develop a new organ to appreciate the beauty as well as the defects of the physique. They must learn to take pride in their own health. This will be the safest guarantee against dissipation and will insure self-respect.

We no longer know any nakedness except undressing and this again is strongly associated with sexual ideas. This must be done away with. To fight shy of the naked body is the great bane of our civilisation. It is not the eyes but the souls of our youths that we have got to protect."

AN INDIAN PAINTER-ENGRAVER

By PROF. SUNITI KUMAR CHATTERJI
(Calcutta University)

JUST a few weeks ago has returned home to India after eight years of sojourn in Europe a young Indian artist whose work and achievement are as remarkable as they are significant of a real advance of art among Indians. Mukul Chandra Dey, born in 1895, is just thirty-two, and he has had quite a notable career. He was trained at the Santiniketan School of Rabindranath Tagore, and there he developed his artistic powers, and working both at Santiniketan, and at Calcutta under Abanindranath Tagore, the inaugurator of the new Indian School of Painting, he found himself as an artist, and early gave great promise. His water-colours in the new revived style of Indian art showed a force and a tenderness which are entirely his own in the treatment of Indian subjects,—romantic themes from Sanskrit and Bengali poetry as well as scenes from the everyday life of the people—episodes from the Krishna legend and from the mystic poetry as well as the love-poems of Rabindranath Tagore, and *genre* pictures from Hindu domestic life and from the life of the primitive Santal people of West Bengal, colonies of whom are to be found round about the school of Santiniketan where he spent his boyhood and early youth. At several annual exhibitions of the Indian Society of Oriental Art where the work of the artists of the New Indian School is shown from year to year, Mukul Dey's pictures were easily among the most virile and powerful and sincere of the exhibits, and he acquired quite a distinction in the rather restricted circle of artists we have in this part of India, and lovers of Indian Art interested in the progress of the new school came to know him. The present writer

remembers vividly at least three of his miniature water-colours—one of Radha and Krishna, another of an early morning bathing scene on the Ganges depicting some Indian girls and an old Indian lady, and a third one of a girl in ancient Indian dress waiting for her lover illustrating the lines of Rabindranath from the *Gitanjali*—"Light, Oh where is the light? Kindle it with the burning fire of desire." Quite a number of his pictures have found appreciative buyers, and several have been reproduced in the Bengali *Prabasi*, in the *Modern Review* and in other journals from 1911 onwards. Then there were his charming sketches of Santal life.

Mukul Dey was fortunate in accompanying the poet to Japan during the latter's visit to that country in the year 1916. This visit was of very great importance in his artistic life. Trained in the ideas and methods of the revived Indian School, he could come face to face with the artistic life of Japan, which through the endeavours of the Nippon Buitsuin Society had emerged from a period of cold neglect into one of renewed and vigorous life and activity. Japan like India had neglected her own ancient art. The intoxication of Western civilisation which seized the heart and the brain of Japan when the thought and the culture world of the West poured into the country as an overwhelming flood as soon as Japan was opened up to the world, in a way clouded Japan's vision for some decades and prevented her from realising the true greatness of her national art based as it was on that of China and largely also (although in a rather distant way) on that of India. As it has happened in India, it was the curiosity and the better trained artistic sense of

Europe and America that discovered the abiding worth of Japanese and Chinese art as a great heritage of man, and the famous American art critic and collector Fenellosa began to collect in Japan specimens of Japanese and Chinese art, some of the choicest examples of which could thus be easily secured for the Boston and other Museums of America, at a time when Japan was treating them with contempt as useless lumber, not having learned as yet their supreme value. It was at this time, in the nineties, that a Japanese art lover and writer, Kakuzo Okakura, a name to be ever remembered with honour in the history of the cultural revival of Asia, was Fenellosa's friend and collaborator in the study and rescue from neglect of Japanese and Chinese art. He sought to rouse the national consciousness of his people to an understanding of their art, and in 1897 founded the Nippon Bijutsuin which by training artists along the traditional Japanese lines and by holding exhibitions sought to preserve for Japan her soul in this matter. This society has been instrumental in doing a great service to the people of Japan, and incidentally also to the people of other Asiatic countries. Kakuzo Okakura and the Nippon Bijutsuin had something to do with the artistic revival of India by giving the latter country a direct object lesson, and Okakura was a friend of and an honoured guest in the Tagore family of Calcutta which became the centre of this revival. Sister Nivedita, that selfless spirit of service to the cause of India, was an enthusiastic supporter of this new movement in India of which Japan in the Nippon Bijutsuin gave an exemplar to the whole of Asia. Bijutsuin artists like Yokoyama Taikwan, K. Arai, Shunzo Hishida, Shimamura Kwanzan and others came to India, after the Indian movement had been well-established and was gaining in strength, and these artists studied the Ajanta frescoes and other ancient relics of Indian art, and worked in some cases with the new school inspired by Tagore,—the charm of Hindu mythology and romance very often seizing their imagination and inducing them to make experiments at painting Indian pictures, and some of their experiments in spite of their unavoidable Japanese quality which added a certain quaintness and sincerity were decidedly remarkable. The Japanese artists were thus in direct touch with the Indian movement, and this extension of the range of their artistic experience was apparently

of help in broadbasing and strengthening the work of the Bijutsuin which they had taken up. It was necessary for some Indian artists to go and see what was being done in Japan, and in this way receive a sort of reflex impetus, and Manku Dey was the first Indian artist who was privileged to see with his own eyes the new Japanese revival that was an active force in the artistic life of Japan. Several years later, another Indian artist, the greatest of the pupils of Abanindranath Tagore, namely, Nandalal Bose, a personality in art who, the present writer is convinced, ranks with the greatest in the history of the art of the world, had the privilege of the same experience when he too accompanied Rabindranath in his third visit to Japan in 1924. Manku Dey worked for some time with Taikwan and Kwanzan, two of the greatest members of the Bijutsuin group. This experience was of the nature of a sustainer and a strengthener of his own powers, and it made him surer of himself as a draftsman. Manku Dey's work was very much appreciated in Japan. After visiting Japan he went to America, and it is here he learned the art of etching, in which he has now attained such mastery. In America his studies were quite fruitful and his talent was recognised by his being made a Member of the Chicago Society of Etchers, and he is the only Indian to receive this distinction so far. After his return to Calcutta he exhibited some of his etchings, his whole output being sold off in a short time. Some of his pictures were very fine. In addition to some portraits, notably of Rabindranath Tagore, he had a few exquisite studies of Indian womanhood and groups of Santal types, which evoked general admiration.

Manku Dey was not content to remain in the path which was already well-beaten by the feet of too many pilgrims in the sacred land of Art in India—namely, that of romantic pooling and idealising of the life around. His sketches had showed a robust hand which chafed under the restraint of what would seem to curb it and draw it back to the finical. In the midst of his experiments he soon found what his vigorous brush could do. He realised his powers in executing convincing sketches in bold strokes, and found in the execution of portraits a most characteristic expression of his genius. He sketched a number of telling portraits in pencil from single sittings, and in 1917 he published his well-known *Twelve Portraits*

of twelve of the living great men of Bengal—Rabindranath Tagore, Jagadish Chandra Bose, Prafulla Chandra Ray, Bipin Chandra Pal, Asutosh Mookerjee, Motilal Ghosh, Gooroodass Bannerjee, Brajendranath Seal, Abanindranath Tagore, Ramananda Chatterjee, Surendranath Banerjee and Lord Sinha—with an introduction from Sir John Woodroffe. This portfolio of portraits has for some time been out of print and it at once established what a dashing force and vitality as well as a telling sureness of hand and eye for character he had. Many years ago a similar album of pencil portraits of members of the Tagore family by the late Jyotirindranath Tagore, the third elder brother of Rabindranath, was published from England with an introduction by William Rothenstein the artist, and the harmony of contrast between the spirits and the styles of these two great Bengali artists we can feel at once. There is a certain nervous vigour and elegance about the lines of Jyotirindranath which seem to caress the portraits of his subjects, who are all near and dear to him and whom he seems to coax to make a self-revelation to him in the midst of the family circle—these family portraits seem never to have been intended for publication. This is quite different from the broad and strong sweep of Mukul Dey's pencil, seeking to catch the character of the man who in his own sphere had made his mark in life and stands out before the whole world. And yet the two groups of portraits are singularly successful, and are like twin groups, in their fidelity and in their convincing qualities as being the true representations of the men being the persons.

This trait of his artistic genius Mukul Dey seems to have developed to the fullest, and judging from some of his recent etched portraits one cannot but fail to feel a sort of enthusiasm at the sure hand of a master with which he just with a few telling strokes, has given us the entire man, in his etchings of Eliotstein, and W.W. Pearson, for instance. One would feel confident that given the opportunity we would be sure to have in this first etcher of our country one of the eminence of an Anders Zorn in this department of art—at least in the portrait line.

After a short spell of work in Calcutta, Mr. Dey went on a long visit to the cave temples of Ajanta, Ellora, Nasik, and Bagh, studying the ancient paintings and other

artistic remains there. He spent some time copying the frescoes at Ajanta and at Bagh, and to him we owe the first sketches of the unique frescoes at the latter place, which were later on copied by Nandalal Bose, Asit Kumar Haldar, Surendranath Kar, A. B. Bhonsle, B. A. Apte, M. A. Bhand and V. B. Jagtap at the instance of the Gwalior Durbar, and these copies have since been published by the India Society of London. Mukul Dey's copy of the famous group of the Mother and Child at Ajanta makes the mystery and the religious background of this great picture come home to us deeply by the inclusion of the colossal standing figure of the Buddha which forms part of the entire composition. This picture he has published in the frontispiece to his well-known book on Ajanta, *My Pilgrimage to Ajanta and Bagh* (London 1925), and Lawrence Binyon, who has written an introduction to this book, draws our attention to the value of the picture. This book of Mukul Dey's on Ajanta and Bagh forms a popular and extremely readable work on these far-famed cave temples and their paintings, and a special value of their work is the large number of reproductions of the Ajanta paintings, making it an extremely useful and convenient handbook.

January, 1920, found Mukul Dey in England, where he had been staying for the last eight years. Here he worked in the Slade School of Art and at South Kensington. In 1922 he won the diploma of the Royal College of Art, with the first prize in tempera painting and in engraving. These are distinctions won for the first time by an Indian in the person of Mukul Dey. The Royal Academy accepted his paintings in tempera for their annual exhibitions for 1922 and 1923.

Mukul Dey's period of study and work in London was not a smooth and easy one. Staying in London and working in his vocation was not exactly a bed of roses for a struggling young artist, and the greater part of these eight years were years of hard struggle for him. During this period of hard work he had executed a portrait sketch of the late W. W. Pearson of hallowed memory, teacher at Santiniketan, and the relations of Mr. Pearson offered him a handsome price for it, but Mukul Dey would never hear of taking money for a picture of one who loved India and the Santiniketan School as his very own and gave his best to the country he chose for his love and

service; and at that time Mr. Day was far from being in easy circumstances financially. At the Wembley Exhibition he received a commission to decorate a portion of the Indian Pavilion, and he executed his decorations in a strikingly original way which greatly helped him to be accepted as an artist of repute.

For a while he set up as an artist in London with a studio in Knightsbridge, working at his etchings and his paintings, and participating in the artistic life of London, with the friendship of a number of artists of distinction in the metropolis.

In October 1927, shortly before his return home to India, he held an exhibition of his etchings and drawings at his own studio, which was a great success. The little list of his works had an appreciative foreword by Campbell Dodgson, keeper of Prints and Drawings in the British Museum, who speaks of his mastery over the technique of the drypoint with his skill in wielding pencil and brush, and says that he "reveals with what sensitive and delicate lines he has interpreted on copper romantic legends and mystical subjects from Indian poetry and religion." Mukul Day's great picture, *The Tree of Life*, is an acknowledged masterpiece in the etcher's art, and this picture, reproduced in the present number of the *Modern Review*, is something unique in the complexity of its mystico-religious suggestions, in its remini-

scences of the great art of Ajanta and of medieval Rajput India, in the subtlety of its composition, and in the supreme mastery over technique in its execution. His other work also demonstrates his power as an etcher. The British Museum has bought a complete set of his engravings available for its collection, and at the command of their Majesties the King Emperor and the Queen Empress, Mr. Day had sent his engravings and his pictures for their inspection at the Buckingham Palace, and their interest in his work has indeed been a great honour and an encouragement for him.

Mukul Day is now back in Calcutta. He intends to introduce the art of etching and to teach it specially in India, and at a considerable expense he has brought with him the necessary outfit for an etcher's studio. He wants only the opportunity to work and to teach, and thus to stay on in his native country and to be of service to it. His qualifications and his achievement certainly deserve support from all quarters, whether from Government or from private patrons of art. He has come back with many projects, and is full of enthusiasm. Should not there be some response in his own mother-land, to take the service he proffers, and to make it possible for him to help to enable our country to achieve a unique distinction in the domain of art?

VIRIYA

VIRIYENA DUKKHAN ACCETI
Sorrow Ceaseth By Exertion

By SILACARA

"Would I were strong as Hercules,"
A weak one weakly cried,
As, from the couch whereon he lay,
With his free and manly stride
He saw the Hero pass his way—
Such a hero; such shoulders wide I
"Well wished!!!" said Hercules who heard,
"But 'twas I of with a plaintive song
That I earned these brawny limbs and thighs
And the strengths that to them belong;
I slew a lion, I tamed a bull;
Struggled, so am I strong!"

—From the *British Buddhist*.

SONG

By MARIE DE L. WELCH

What shall we remember when we are old?
What shall we remember even when we are wise?
Softly, softly we shall remember
Love and Love's mouth and love's eyes.
What shall we remember more beautifully than wisdom?
What shall we remember in our cold years?
What shall we remember, we shall remember
Love and love's laughter and love's tears.
What shall we remember when we are lost in quietness?
What shall we remember? What shall we keep?
We shall remember forever, forever
Love and love's sigh and love's sleeping,
—From the *Nation*.

REVIEWS & NOTICES OF BOOKS

6.

[Books in the following languages will be noticed: Assamese, Bengali, English, French, German, Gujarati, Hindi, Italian, Kanarese, Malayalam, Marathi, Nepali, Oriya, Portuguese, Punjabi, Sindhi, Spanish, Tamil, Telugu and Urdu. No criticism of book-reviews and notices will be published.—Editor, M. R.]

ENGLISH

THE VEDANTA PHILOSOPHY: By Sridhara Mojumdar, M. A. Published by Surendranath Bhattacharya Prof. of Sanskrit, U. N. College, Bankipore (with two portraits). Pp. 26+770+XXIV. Price Rs. 5.

The book contains (i) The original Sutras of the Brahma Sutra, (ii) Meanings of the words in the Sutras in English and (iii) English explanations with quotations from Upanishads, Bhagavad Gita and other books.

The exposition is mainly based on the commentary of Nimbarkacharya, the Vaishnava theologian, who flourished about 800 years ago. He composed the Vedanta-parajata-Saurabha, in which he expounded the Brahma-Sutras from the standpoint of Dvaitadvaita द्वावैत, i.e., dualistic monism. His

philosophy has thus been summarised in 'the Foreword' to the book under review by Professor Koksawar Sasiri:—

"In this school Brahman is regarded as both the efficient and material cause of the universe. Brahman is both Nirguna and Saguna, as it is not exhausted in the Creation, but also transcends it. The universe is not, according to this view, unreal or illusory but is a true manifestation or Parinama of Brahman....The present state of its existence is not self-sufficient and it has no separate existence from Brahman. The universe is both identical with, as well as different from Brahman, even as a wave or bubble is the same as, and at the same time different from, water. The individual souls are parts of the Supreme Being and are controlled by it. The emancipation lies in realising the true nature of the spirit and it is attainable by true devotion or Bhakti.

The individuality अविनाश of the finite self is not dissolved even in the state of Mukti' (vide also R. G. Bhandarkar's Vaishnavism, Saivism and Minor Religious Systems, pp. 62-66; and the history

of the Vedanta Philosophy by Prajnanananda Sarasvati in Bengali Vol I, pp 375-390).

The Vedanta Philosophy as expounded by Nimbarka is worth studying; but it has been much neglected. It is now hoped that the publication of this book will facilitate the study of the subject.

Our author's exposition is clear and at the same time brief. The book should be widely read.

There is, in English, no other book on the subject. Bengali readers are referred to Tarakishore Sarma Chowdhury's Vedanta Philosophy with the Sanskrit Text and translation of the Nimbarka Bhashya. (অবিনাশ, দ্বৈত বৈত: ঐ নিবাকারদ্বৈত ভাষ্য ও ব্যাকরণ সহ লেখাও করি)

AITAREYA-UPANISHAD: By Swami Shivananda. Published by the Ramakrishna Math, Mysore. Madras. Pp. 43. Price six annas.

It contains Sanskrit Text, paraphrase with word-for-word, literal translation, English reading and comments.

The principal part of the Upanishad is in 1 (pp. 37-43) but the translator has, it seems to us, failed to catch the meaning of the Rishi. According to him (कतम्) Katarah (कतम्) means "of what kind".

whereas its literal meaning, as well as the meaning here is "which of the two?" Consequently the first two mantras have been mistranslated. Its Translation is:—

'Who is this Atman whom we worship? What is that Atman by which (man) sees form, hears sound, perceives smells, utters speech, and knows the tasteful and also the distasteful. What is the heart is the same as mind. The consciousness.... attachment,—all these are (but different) names of the consciousness'.

The correct translation seems to be:—

'Who is this whom we worship as the self? Which of the two is that self? (Is it that) by which one sees form.... (Or is it that) which is

this heart and mind, i.e., consciousness.....desire and will? (The answer is)—All these are, indeed, names of consciousness."

SHRIMAD BHAGAWAD GITA : A STUDY : By S. D. Budhiraja, M.A., LL.B., Chief Judge, Kashmir. Published by Ganesh & Co., Madras. Pp. 540. Price not known.

It is a scholarly publication : the plan on which it is written is excellent and the introduction is masterly. In the introduction (pp. 1-69) the author discusses the following subjects : (i) The Gita and the Samkhya, (ii) The Gita and Patanjali's Yoga-Sutras, (iii) The Gita and the Early Buddhism, (iv) Are there any interpolations in the Gita? (v) The Gita and the Upanishads, (vi) The Gita and Saivism, (vii) The Gita and Bhakti and (viii) A Bird's-eye-view of the Gita thought.

It is followed by the Text, (in Devanagari character) and a literal translation of the Gita. Throughout the book there are profuse and scholarly notes. The principal feature of the book is that the author has taken a comparative view of the whole subject. To elucidate the subject he has quoted largely from the Buddhist canonical scriptures and also from the Upanishads, Aranyakas, Brahmanas and the R̥gveda Samhita, as well as from the Samkhya and the Yoga Philosophy.

One may or may not accept all his conclusions of the author but no Gita-student should be without a copy of Budhiraja's edition.

The get-up of the book is excellent.

THE REALM OF ESSENCE : By George Santayana. Published this year by Constable and Company (Indian Agents, Oxford University Press). Pp. XXIII+183. Price 12 shillings.

Realism is gaining force in the philosophic world. It is represented in England principally by G. E. Moore, Russell and Whitehead ; and in the continent by Meinong and Husserl. In America it is associated with the Six and the Seven. The Six are Holt, Marvin, Montague, Perry, Pitkin and Spaulding. Their co-operative studies were published in 1912 under the name "The New Realism". The Seven are Drake, Lovejoy, Pratt, Rogers, Sellars, Strong, with Santayana as their guiding spirit. Their co-operative study in the problem of knowledge was embodied in a book published in 1920 under the name "Essays in Critical Realism". In this book Santayana has given "Three Proofs of Realism." The principal feature of critical Realism is the doctrine of essence formulated by Santayana and accepted and elaborated by others. Santayana has himself developed this theory in his "Scepticism and Animal Faith" (1923). It is now further developed in the book under review.

There are three types of realistic views of perception. According to one there are three elements in perception : according to another two elements and according to the third there is only one element. Critical Realism belongs to the first type, its three elements being (i) the subject, (ii) the object and (iii) the data. The data are not the mental states of the perceiver ; nor are they the physical objects or any selection from or aspect of those objects. They are character-complexes taken to be the characteristics of the existing outer objects. These character-complexes have been called "Essences" by Santayana. By these

essences we know what the objects do as distinguished from what they are. The objects themselves do not get within our consciousness. Their existence is their own affair—private and incommensurable. In the book under review there is a valuable preface called "Preface to Realms of Being" in which the author has described, 'The Realm of Matter,' 'The Realm of Essence,' 'The Realm of Spirit' and 'The Realm of Truth.' Then he elaborates and develops the theory of essence in eleven chapters. The subjects discussed in these chapters are (i) Various Approaches to Essence, (ii) The Being Proper to Essences, (iii) Adventitious Aspects of Essence (iv) Pure Being, (v) Complex Essences, (vi) Implications, (vii) The Basis of Dialectic, (viii) Essences as Terms, (ix) Instances of Essences, (x) Essences as Primary and (xi) Comparison with some Kindred Doctrines.

In the 'Postscript' the author writes—"Three recent descriptions of the realm of essence, one English, one German and one French, lie at this moment before me. Perhaps a brief report of them may serve to convince the reader that in all this I am not dreaming alone, but that on the contrary, I am introducing him to an eternal background of reality, which all minds when they are truly awake, find themselves considering together." (p. 169). The authors referred to are A. N. Whitehead of England, Edmund Husserl of Germany and Rene Guenon of France. He gives a short description of the views of these thinkers and finds therein corroborations of his own views.

Those who wish to know the trend of contemporary epistemology should read carefully the "Essays in Critical Realism" (1920), Santayana's "Scepticism and Animal Faith" (1923) and "The Realm of Essence" (1928).

We may not accept the conclusions arrived at in these books but we cannot ignore them. In speaking of the "New Realism" of the Six, Bosanquet once wrote, "They strike me as better informed outside philosophy than in it." (The *Distinction between Mind and its Objects* 1913, p. 11) and tried to ignore them. But a change came over him and he could then ignore neither the New Realism of the Six, which he meant to do, nor the critical Realisms of the Seven. He elaborately discussed these theories in contemporary "The meeting of Extremes in contemporary philosophy." These realists may or may not gain adherents but they are sure to gain attention. For years to come Realism will be a central topic of discussion. Santayana is a voluminous writer and his style and treatment are charming. He is a literary artist and philosophical critic of poetry (vide his "Interpretations of Poetry and Religion, Three Philosophical Poets and his Essay on Shelley in his *Winds of Doctrine*). He is a poet also and his poems have been much admired. He is the author of the 'Sense of Beauty, a book on Aesthetic Epitaphism in German Philosophy, The Unknowable,' 'Platonism and the Spiritual Life,' 'Soliloquies in England' and the 'Dialogues in the Limbo.' He has written delightful books on contemporary philosophy (vide his *Winds of Doctrine* and *Character and Opinion in the U. S.*) He has popularly but philosophically described the phases of human progress in his "Life of Reason" (The

volumes). Whatever he writes is brilliant, delightful and worth reading.

One wonders why such a powerful writer has not exercised so much influence as he is expected to have done. In accounting for this fact Arthur Kenyon Rogers, writes:—

"George Santayana's lack of influence in proportion to the weight of his contribution to philosophical sanity and clarity, perhaps due in part to the academic distrust of literary gifts, is also not unconnected with a tone of condescension which he is apt to adopt toward competing views, as calling rather for indulgence than for serious argument. In consequence his work is more impressive as an imaginative picture of a certain outlook on the spiritual life of man, than for its explicit dialectical grounding" (English and American Philosophy Since 1800: p. 351). It may be remarked here that these remarks were written in 1923 and Santayana's latest book *The Realm of Essence* has been published this year (1925). This book is not only artistic but also rigorously dialectic.

MANES CHANDRA GHOSH

THE BACH CAVES IN THE GWALIOR STATE: Published by the India Society in co-operation with the Department of Archaeology, Gwalior, for His late Highness Maharaja Sir Madhav Rao Sindha Aiyah Bahadur, G.C.S.I., G.C.V.O., O.B.E., etc. with text by Sir John Marshall, M.B., Garde, Dr. J. Ph. Vogel, E. B. Havell, Dr. James H. Cousins, together with a Foreword by Laurence Binyon.

The publication of this book has removed a long-felt want. The India Society's method of publishing a collection of short essays on each subject by eminent authorities is hardly satisfying enough either to the student of Archaeology or to the art-lover, in the way that monographs are, inasmuch as much ground is trod over and over again and other parts are hardly touched. But all the same, a great deal of information is given and the subjects dealt with by Sir John Marshall, M.B., Garde and Dr. J. Ph. Vogel are of great interest. The illustrations, diagrams, and reproductions in colour are excellent and of immense value. The general printing and get-up of the book are of a high standard. In all, the India Society is to be congratulated on this publication.

K. N. C.

A SHORT HISTORY OF MARRIAGE: By Edward Westermarck Macmillan and Co. 1926. Price. 10s. 6d.

This small volume is based on the fifth edition of Prof. Westermarck's famous History of Marriage but in no sense is it to be regarded as its abridged edition. It is an independent work dealing with marriage as a social institution though incorporating many of the arguments found in the larger work. To Prof. Westermarck, more than any one else, belongs the credit of bringing the study of the institution of marriage to its present scientific level. His greatest defect, namely want of a firsthand acquaintance with primitive people, he has greatly removed by his important investigations on the social and religious rites of the Moroccan people, among

whom he has spent the greater part of the last decade. This newer outlook, also helped by the researches of Baldwin Spencer, Rivers and others, is responsible for the much more reasonable and correct attitude that he has taken with regard to the question of the origin of marriage, though in its main features, it remains essentially what it was in his first edition. Coming as it does from such a distinguished scholar and so admirably written, we have no doubt that the present volume will prove eminently suitable as a text-book for students of sociology and anthropology in our universities.

Sociology: By Ramgopal, Bar-at-law and G. R. Josyer, M.A. Bangalore. 1926. Price Rs. 2.

This is supposed to be a sort of introduction to sociology and in the words of the authors "it throws a light on the origin, development and decay of Societies" (p. 1). In spite however of the good opinion of the authors of their own work, as well as those they have enclosed, including those of the Vice-Chancellors of the Calcutta and Andhra Universities, we are forced to remark that the authors are not acquainted with up-to-date literature on the subject. Their knowledge of the origin and development of human society does not evidently extend beyond the writings of Herbert Spencer and Morgan, for they still believe in the original stage of promiscuity from which modern institutions are supposed to have developed by natural selection (pp. 86-87). On going through the book we are convinced that instead of attempting to write the present volume, which they regard as "the book for the millions", the authors should have taken a course in the subject themselves, and they could not have done better than by beginning with Prof. Westermarck's work reviewed above.

B. G.

TEACHERS OF INDIA: By C. A. Kincaid, C.F.O., I.C.S. Officer de L'Instruction Publique, Published by Oxford University Press, 1927.

India has produced many teachers from the earliest times, who should have a place in the history of Indian thought. In the book under review, Mr. Kincaid treats of some of the teachers of mediæval and modern India, "who although they led strictly religious lives, yet played, unknown to themselves, a great part in the History of India." It is strange that though Mr. Kincaid has sketched the careers of the Maratha saints, of Kabir, of the Sikh gurus and of the Gujarat poets—Murali and Narinhi Mehta, yet he leaves alone Bengal. Though he writes about the saints and poets of the Deccan, Northern India and Gujarat of mediæval India, he omits Bengal and her poets like Vidyaapati and Chandidas, and her saints like Chaitanya, and Rup and Saadan. He must be a bold man who would deny the great influence exercised by Chaitanya on the religious life of India of the Middle Ages. One can safely rank him with Kabir, Nanak, Tukaram and other saints of this period. Mr. Kincaid would have done well to include a sketch of the Bengal Saint Chaitanya.

Again, though Mr. Kincaid treats of the Sikh gurus, he does not take his materials from the original Sikh scriptures. He takes Mr. Macauliffe's *The Sikh Religion* as his authority. He does not

seem familiar with the original Gujarati songs of Mirabai and Narsinh Mehta, but takes help from a most valuable work "*Milestones in Gujarati Literature*," for as Kabir also, he does not rely on the Hindi verses of Kabir, but on Mahipatir's *Bhaktavijay* and the introduction to Kabir's poems by Rabindranath Tagore. Thus in all these cases, Mr. Kincaid does not rely on original sources, but on second-hand information. As a scholar he should have read the verses and songs of these saints in their original, as in the case of *Bhaktavijaya* he says that he has "repeatedly read it in the original Marathi."

In speaking of Keshab Chandra Sen, Mr. Kincaid says that his "family claimed descent from the ancient Sen Rajas, semi-mythical monarchs, who ruled at the time of Alexander the Great." We wonder from where Mr. Kincaid got hold of this curious information. It is really news to us to learn that Keshab Chandra Sen's family claimed descent from the ancient Sen Rajas. We do not know of any Sen king ruling at the time of Alexander the Great.

Mr. Kincaid also says: "In 1870 Keshab Chandra Sen resolved to go, as Ram Mohun Ray had done, to England." But he does not mention that the idea came from Lord Lawrence, who was a great patron of Keshab Chandra Sen, and who had been greatly impressed by his lecture on "Jesus Christ, Europe and Asia." So Lord Lawrence helped him while he was in England. Mr. Kincaid himself says: "Lord Lawrence was by that time to retirement in England and helped Keshab as well as he could."

The book will prove useful to those Westerners who want to know something about the teachers of India in the Middle Ages. The get-up and printing of the book is excellent.

PRASINDRANATH BOSE

BENGALI SELF-TAUGHT by the Natural Method with Phonetic Pronunciation: By Professor Suniti Kumar Chatterji, M.A. (Calcutta), D.Lit. (London). Crown 8vo. 200 pp. Cloth, 4s. net. Blue wrapper. 3s. net. E. Marlborough & Co. Ltd., 51 and 52, Old Bailey, London, E.C.4.

Marlborough's "self-taught" books are meant, first, for tourists and travellers, and then also for students. The present work is also meant for the same two classes of people. Hence the author says in his preface:

"Bengali may be said to be the most important language in India after Hindustani (Hindi or Urdu). Although it is confined to the province of Bengal and certain contiguous tracts, the literary and cultural influence exerted by Bengali on the other languages of India during recent years has been quite remarkable. Apart from the ancient and medieval literatures of India in Sanskrit, Pali, Old Tamil, and Early Hindi dialects, Bengali has the largest and most original literature of any Modern Indian language; and it counts among its votaries numerous poets, novelists, and other writers, of whom one, Rabindranath Tagore, has become a world-fame in literature.

The commercial value of the language is increasing more and more; Bengal is the land which has monopolised the production of jute, and its foreign trade both export and import is quite extensive. As a language spoken by some 49

millions of people—nearly one-sixth of the population of India—its importance in administration can be well imagined.

"Like many other languages, both in India and outside India, Bengali has two forms, one literary, the other spoken. Most grammars and handbooks of Bengali following traditions which were current fifty years ago take notice only of the literary speech, ignoring the colloquial as spoken in everyday life by even the most cultured classes. The result of this has frequently been ridiculous—at the expense of the foreign student or learner of Bengali—who would quite unwittingly overwhelm an illiterate villager or servant with a highly Sanskritised and archaic Bengali, in a strong foreign accent, which would make the latter only stare. To learn to speak *colloquial* Bengali has as a consequence remained a difficult task, to be achieved by long years of personal observation and practice, with very little help from a printed grammar; and most foreigners have to be content with a smattering of "*bazaar Hindustani*," which, of course, generally goes a long way in any part of Aryan-speaking India. In the present work, the colloquial side has been constantly kept in view; and in these conversations, colloquial forms alone have been employed. The literary forms, however, are necessary for reading the language and for properly understanding the phonetic and other changes in the colloquial, and as such these have not been ignored, but have been given their proper place in the grammar."

Professor Chatterji is the author of the standard work on "The Origin and Development of the Bengali Language" and his present work is so excellent one. Those who want to learn Bengali may well begin by mastering this book.

GROWTH OF THE INDIAN CONSTITUTION: By N. N. Ghosh, M.A., L.T., History Department, Presidency College, Allahabad. The Hindi Press, Allahabad. Crown 8vo., pp. X+119. Cloth, Rs. 1.

In this small book the author states clearly and concisely the growth of the Indian constitution, such as it is, from the days of the East India Company to the passing of the Government of India Act, 1919, by which the Montagu-Chelmsford Reforms were given effect to. He recognises that "we have not yet a Constitutional Government in the true sense of the term." His book is meant to be purely informative, and he has not therefore indulged in criticism. It will serve the purpose he has in view.

The printing is clear and neat.

THE FOUNDATIONS OF NATIONAL PROGRESS: A scheme of constructive work for an Indian Province With an Introduction by the Rt Honble Baron Sinha of Raipur, P.C., A.C. By J. N. Gupta, M.A., C.I.E., I.M.S. The Elm Press, 63, Brandon Street, Calcutta. Price not mentioned. Demy 8vo. Pp. 282+XVII. Cloth, gilt letters.

So far as "high politics" is concerned, many persons, ourselves included, will not endorse all the opinions expressed in this book. But the main theme of the work is not "high politics." The author deals mainly with what ought to be done to make Bengal progressive in health and sanitation, education, agriculture, industrial development, and other kinds of activity implied in rural reconstruction. In all these matters the author speaks from

experience. For that reason the book may be read with profit by all who are engaged in village work or want to take up that kind of work. In fact, we should say, that, whatever the political creed of our village workers—be they 'No Changers', Swarajists, Independents, or Liberals—they would do well to read this book.

In the details of what is not "high politics", we have some differences with Mr. Gupta. Mr. Gupta suggests that sufficient funds should be placed at the disposal of the District Officer to enable him to take an active part in the development of his district. One object of this suggestion is to restore part of his lost prestige to the District Officer. What we want is that more funds should be available to the District Boards. Simultaneously there should be strict and vigilant independent audit, and all who spend the money should be held strictly responsible for malversation.

The author has pointed out one of the main causes of Bengal's want of progress or rather of her retrogression. He says with perfect truth that "there is complete unanimity of opinion in the Province that with the present financial resources of Bengal it is barely possible to keep the administration going, and there is no possibility whatsoever of undertaking any comprehensive remedial measures for the moral and material advancement of the people. It is felt that in this matter the Reforms, instead of easing the situation in any way, has made the position of Bengal, still more hopeless than it was before the Reforms." "While Bombay, for instance, has been able to more than double her expenditure on mass education within the last ten years, in Bengal the expenditure on this all-important sphere of rural welfare has remained almost stationary."

YOUNG INDIA, an Interpretation and a History of the Nationalist Movement from Within; By Lajpat Rai. With a Foreword by Josiah C. Wedgwood, D.S.O., M.P. Serants of the People Society, 2 Court Street, Lahore. 4th Reprint. 1927. Rs. 3. Cloth, gilt letters. Pp. XVI+262. Big clear type.

This book was originally written and published in America and England more than a decade ago. On its first publication the Government of India proscribed it and prevented its importation into India. That ban having been recently removed, the Serants of the People Society of Lahore has published it with the author's preface to this fourth reprint, in the course of which he says:—

"India has considerably changed since the book was written in 1915. Some changes have been made in the constitution which have transferred a certain amount of power to the representatives of the people. But the real power remains where it was. The economic condition is to-day even worse. But the greatest and most noticeable change is to be seen in the mentality of the people. We have passed through a wonderful period of political awakening. The movement for freedom is no longer confined to the intelligentsia but has spread among the masses. Mahatma Gandhi's non-co-operation movement was a unique thing in the history and life of the Indian people. It is too early to speak of its success or failure. Movements

of this kind cannot be judged by their immediate results; they are among the forces which once created continue to operate until they have had their full play. Whatever be the verdict of the historian on the non-co-operation movement as a whole, it must be credited with the greatest possible share in rousing the political consciousness of the people and in bringing about a radical change in the outlook and mentality of the Indian National Congress."

Lala Lajpat Rai has been an active worker in the national cause for decades. He has been in the thick of the fight. He possesses knowledge of the movement for freedom both from outside as an onlooker and from within as an active worker. Moreover, as he has not been a mere politician—as he has striven to bring about religious, social, and educational reform and reconstruction also, his survey cannot but have a depth and breadth and comprehensiveness in which a history of the national movement written by the ordinary run of politicians would be lacking.

We have read the book from cover to cover with sustained interest and profit. It should be read and kept for reference by all Indian publicists and students of Indian politics—particularly of the younger generation. We eagerly look forward to the publication of the author's second volume bringing the history of the national movement up-to-date.

THE BRITISH CONNECTION WITH INDIA; By K. T. Paul. With a foreword by the Earl of Ronaldshay. Student Christian Movement, 32 Russell Square, London, W. C. 1. Pp. 224. Crown 8vo. Paper cover. Rs. 2

The very first sentence in the author's "Prefatory Notes" is a question—"What does India Want?" As indicating the kind of answer given in the book we select a few sentences from the last chapter of the book.

"(1) India wants to perfect her nationhood. 'India is one and indivisible' is an impassioned utterance with which more than one Congress President has thrilled the assembled thousands from the many regions of our Motherland. Amid and below all diversities there is the cultural unity which for centuries has cut its channels deep down into all life, individual and social. This culture is so distinctive of India, it brings with it such memories of glorious achievement, and it holds so many promises of still further victories, that it is eminently the foundation on which should be stabilised our nationhood in accordance with modern categories...."

"(2) India wants not only a perfected nationhood; she wants an international position. She dreams of an empire in rule, she wants no commercial dominance over any part of the world. She just wants a place, an assured place and a place which is her own, among the nations of the world. She is making it steadily through the industry of her millions of humble toilers and spiritual traders, and through the intellectual and spiritual discipline of her more gifted children. In these matters the world thinks of 'India', and not of 'a distant dependency of the British Empire'." ("As Lord Curzon said in contempt in the House of Lords on that occasion which led to the resignation of Edwin Montagu.—Author's footnote.)....."

"(3) All (this only means that nations like India and China really desire a better world. They want to preserve the integrity of their national identity, they want an international recognition of such identity, and they want freedom for all sorts of commerce with other nations, economic and intellectual; and still they deliberately do not seek any special political or economic advantage as a safeguard for the recognition and freedom which they demand. They want just to live and let live, to serve and be served....."

In details there are several inaccuracies in the book; as, for instance, the date of the partition of Bengal is given as 1907, whereas it was on the 16th of October, 1905 that the old province of Bengal was partitioned by Lord Curzon.

There are many things in the book which call for criticism. But as it would be easy for well-informed Indians to correct them themselves, we need not dwell on all of them. If non-Indians, for whom probably the book is mainly intended, read it they will be misled in many respects. As neither the author nor Lord Ronaldsday in his foreword show what advantages Britain has derived from her connection with India, except here and there indirectly and by the way, as it were the non-Indian reader may carry away from a perusal of the book the impression that Britishers came to and remain in India merely as philanthropists. Mr. Paul dwells in several passages on the economics of the British connection, but nowhere mentions the tragedy of the ruin of India's indigenous trade and industries under British rule and the consequent throwing of millions of her children on the land and on unskilled labour and their lifelong semi-starvation. He complains that the people of India do not adequately appreciate the military defence of India. We wonder how an educated Indian like Mr. Paul can be blind to the fact that this "defence of India" can be appreciated only if the army is thoroughly Indianised. Does he not know that Indians are practically excluded from military leadership, from training in artillery, naval fight and fighting in the air? He speaks of the British bureaucracy in India as "the most efficient and benevolent ever developed in human history." He repeatedly refers to "its traditional attitude of scientific benevolence administered in official efficiency and safeguarded by a halo of prestige." Is he by any possibility quietly sarcastic? Every one knows or ought to know the totally inadequate character of the medical and sanitary services as well as of the educational and other "nation-building" services rendered by the State in India. Yet

Mr. Paul talks grandiloquently of "curative and preventive medical work to reach the ordinary ill as well as the emergency needs of a population as large as that of Europe (barring Russia)"; an over-increasing supply of schools and teachers to overtake the illiteracy of a people whose net increase per annum is some two millions." In how many centuries will this illiteracy be overtaken? It is difficult to appreciate a statement like the following: "The [British] administrative connection [with India] has been by design worked out in detail with a thorough attention to practically every need of the people which a state can possibly reach."

All these needs receive just enough attention to prevent critics from condemning British rule wholesale. But we have neither the time nor the space to comment on all the provoking things which Mr. Paul says in the passages devoted to economic, administrative and other similar matters.

According to Mr. Paul:

"The Brahma Samaj was the first-fruit of the British connection. It was an attempt to express religious life and thought afresh in assimilation of some of the ideas and usages presented by the West."

With the above passage Mr. Paul should try to thoroughly harmonize the following passage from his book:—

"First arose the Brahma Samaj. The founder of it, Ram Mohan Roy, came from an orthodox Kulin Brahmin family, but one which had come into frequent and intimate touch with the Government of the Mohammedan state of Bengal. For his studies he went to Patna, one of the really living centres of Islamic culture. It was what he imbibed there that constrained him to become a reformer of religion and society, and he not only proclaimed his views but also suffered persecution before he ever learnt a word of English...It is well to realise this...If Britain had not been there, he would probably have been a prophet in the secession of Kabir and Nanak, establishing a new sect of Vaishnavite Hinduism coloured by the theism of Islam and the devotional life rendered richer by the experiences voiced by the Sufis. As it was, these influences prevailed with Ram Mohan Roy to the end of his life." (Italics ours. Ed. M. R.)

As Ram Mohan Roy derived some of his doctrines and ideas from the Tantras and was neither a vegetarian nor a teetotalist, he could not, "if Britain had not been there," have founded a new sect of Vaishnavite Hinduism.

The author assumes (p. 43) that Devendranath Tagore was in favour of confining the office of minister in the Brahma Samaj to men of Brahmin birth. This is not a fact. Baba Rajnarain Bose, the first president of the Adi Brahma Samaj, who was by birth a Kayastha, performed divine service in that Samaj with the approval and encouragement of Devendranath.

Similarly when the author says with reference to Sasipada Banerji that "unlike Keshab or the converts, he refused to break with Hindu religion, he is mistaken. Sasipada Banerji was a member of the Sadharam Brahma Samaj and, though "Brahmin by birth," got some of his children married to non-Brahmins.

Mr. Paul writes: "Mr. Gandhi's appeal to the Sermon on the Mount as the supreme criterion of private and public conduct is even more openly significant of the same process."

That Mr. Gandhi holds the Sermon on the Mount in great reverence is true, but as far as we are aware, it is not that Sermon but the Bhagavad Gita which the Mahatma places specially before himself and others as the supreme guide to private and public conduct.

The author perpetrates something akin to anachronism and pious romancing combined, when he says that "if Asoka dreamt a dream for India and Asia, Jesus Christ dreamt a dream for Britain and mankind, when he thought that, by methods which are a negation of force, man can raise his world to the status of the Kingdom of God."

Asoka was born in India and ruled over the greater part of this country and sent emissaries and missionaries to various parts of Asia outside India. So it may be considered historically true that he dreamt a dream for India and Asia. Jesus Christ was born in Palestine, which is perhaps not the same country geographically as Britain, though Britain may be the Holy Land of some Indian Christians. There is no proof in the Gospels or outside them that Jesus was aware of the existence of the British Isles. How could he then dream a dream for Britain—and particularly for Britain above all other countries in Christendom? Is Britain the most Christian country in the world that Jesus should have dreamt a dream specially for it, supposing that he knew of its existence and had fore-knowledge of some country becoming the most pious in the world in the days of Mr. R. T. Paul? Was it known to the contemporaries of Jesus or to Jesus himself individually that by the British man alone or by the British man above all other men his world would be raised to the status of the Kingdom of God in the year 1927 by methods which are a negation not only of force but of treachery, chicanery, perjury, forgery and fraud as well?

In spite of the many things which are open to criticism in Mr. Paul's book, it is evident throughout that he is patriotic, not merely in the political sense, but in other matters also. He is proud of and has respect for India's religions, cultures, literatures, etc. Even in modern India, he does not omit to mention where Indians have set an example to the British; e.g. he writes:—"It ought to be impressed on the attention of every student of modern India that in 1881, four years before the first Congress, Dewan Rangsachari had established the Representative Assembly for the Mysore State." He did this before the British bureaucracy had thought of inventing a method for even indirectly "bringing the people themselves into some real contact with the ever-stiffening machinery of Government." Similarly, Mr. Paul also mentions the fact that "years before the British Government had even thought of investigating the power implicit in the great waters of India, Mysore had tapped the Kaveri River and was working its gold mines and also lighting two great cities from the electricity derived from the Sivasamudram Falls."

As a Christian it is natural for Mr. Paul to assume that to all non-Christian religions "the test of Christ's values" should be and is being applied. But it is something that he has to admit that "in the vast stores of Hindu thought and experience there is practically everything of every grade of value," obviously including the highest.

Mr. Paul gives much interesting information relating to the maritime adventures and enterprises of the Dravidian peoples. He shows that "To the Dravidian peoples the sea was in all ages a connecting link with the islands to the south and south-east of India, and also to the mainland adjoining them from Burma all round to Siam and Cambodia. Even Africa was, unbelievable as it may seem, a frequent resort....In a Greek papyrus of the second century, found at Oxyrhynchus, in Egypt, occurs a conversation which Dr. Hultsch has identified with Kanarese. Even Imperial Rome itself was familiar with the Indian merchant and the Indian scholar." "Even the

Mohammedan conquest of Java was the missionary enterprise of the Tamil Marakayars of Negapatam and Karaikal. Islam was preached in Java in Tamil, and in many particulars it is sustained there in that language."

Mr. Paul mentions in a footnote, p. 38, that "a fellow-passenger of mine on this boat, a Javanese, who is a very good Mohammedan, bears the name Sastravidagha." While the religion of practically the whole of his nation is Islam, he tells me that the literature studied is still Ramayana and Mahabharata, and that a recent production of high merit is on 'Agastya'."

In the concluding chapter of his interesting book the author states:

"The principle embodied in the preamble to the India Act of 1919 once more emphasises Britain's faith in the eternity of British dominance over India. But that was seven years ago, and these seven years of suffering and discipline have brought much light to all parties concerned. Will the preamble to the next India Act, which the statutory Commission of 1927 will draft, indicate some of the principles which will henceforth enshrine the continuance of the British connection in the hearts of India?.....If it were merely a politico-economic problem the obvious limitations of human nature would rather point to total political separation in the first place as indispensable for an honorable alliance afterwards. But viewed as part of a widely comprehensive phenomenon of truly human values there is more room for faith."

The book was finished in April, 1927. After observing the way in which the Simon Commission has been appointed in spite of protests from Indians, even a man like Mr. Paul might be disposed to have less faith than before.

R. C.

—
ANCIENT INDIAN COLONIES IN THE FAR EAST: CHAMPA. By Dr. R. C. Majumdar, M.A., Ph.D. Greater India Society Publication No. 1, pp. XXIV + 277 + 6 + 6 + 227. Price Rs. 15. To be had at the Punjab Sanskrit Book Depot, Lahore, India; and at the Greater India Society Book Depot, 91, Upper Circular Road, Calcutta.

The history of the colonial culture of India will someday revolutionise our conception of Hinduism based as yet mainly on Indian records, ignoring the grand transformation in Asiatic culture brought about by India. The Greater India Society had been trying to rouse up public attention to this much-neglected chapter of Indian history and it is a matter of congratulation to Dr. Majumdar, a distinguished member of the Greater India Society and an Indologist of renown, to have published this sumptuous survey of the political, social, artistic, and religious life of the ancient Hindu colony of Champa. Scrupulously historical in his method and outlook as he is, Dr. Majumdar has based his monograph on a painstaking analysis of the original Sanskrit inscriptions of Champa and on the interpretation of the pioneer workers in the field, the French savants, to whom he had with characteristic justice dedicated the work. It is to eminent French epigraphists and archaeologists like Barth and

Bergaigne, Finot and Parmentier, Cabaton and Aymonier that we are indebted for the slow recovery of this chapter of our history from oblivion. But as all their publications are in French, they were sealed books to most of our scholars. Moreover the "made-in-England" books on Indian history and art (not excluding the Oxford History and the Cambridge History, etc.) betray a curiously unhistorical tendency to ignore this positive aspect of Indian cultural expansion. This has resulted in a lamentable lack of interest in the history of "Greater India", in most of our academic circles, not excluding the Universities. Thus Prof. Majumdar has rendered a great service to the cause of Indology by making the researches of foreign scholars accessible to our Indian archaeologists and epigraphists, who are sure to profit by this widening of their historical outlook. The survey of a single colony—Champa—has occupied over five hundred pages! So we can imagine the magnitude of the task that is lying before us and we congratulate Dr. Majumdar on having boldly come forward to grapple with it. The Punjab Sanskrit Book Depot also deserves all praise for undertaking to print the volumes that are being prepared by Dr. Majumdar. The inscriptions have been printed in Devanagari script for the benefit of the Indian scholars and the price is very reasonable, when the cost of production is taken into consideration. The members of the Greater India Society will get a special concession rate for which application should be sent to the Society's Office, 91, Upper Circular Road, Calcutta.

A DICTIONARY OF HINDU ARCHITECTURE: By Prasanna Kumar Acharya, M.A., Ph.D., D.Lit., Professor of Sanskrit, Allahabad University. Published by the Oxford University Press. Pp. XX + 561.

While Hindu Painting and Decorative art were hovering between hope and despair as to the chance of gaining "occidental" recognition (the only recognition that carried weight!) Hindu architecture, attracted the notice of all experts by its undeniable grandeur and originality. Ever since the publication of the "Essay on the Architecture of the Hindus" by Ram Raz, published in London (1833), there was a steady increase in the appreciation of the Hindu style and of the stone epics of India. The monumental studies of Rajendralala Mitra on Orissan architecture, followed by the work of Manomohan Gansuli, have demonstrated that the interest in the subject was growing. The enormous documentation of Cunningham, Burgess, and others of the Archaeological survey challenged the attention of artists and archaeologists all over the world. But the indigenous tradition of India with regard to the science and art of Architecture did not receive the serious examination long overdue, before Dr. Acharya came forward to devote years of his academic studies to the elucidation of the problems of the Hindu Shilpa-shastra. Accidentally coming across a copy of Manasara he plunged deeper and deeper into the intricacies of Hindu constitutional science; the more baffling were the problems of the texts preserved in the "most barbarous Sanskrit," the more intense became his zeal which ultimately

led to the development of this splendid Dictionary—the first of its kind—of Hindu architecture. Thanks to the comprehensiveness of Hindu masters of the science, Architecture in the work has been treated in its broadest sense, implying practically everything that is constructed,—from buildings religious and secular to town-planning, laying out of gardens, making of roads, bridges, tanks, drains, moats, etc., as well as the furniture and conveniences. Thus the dictionary of Dr. Acharya gives us for the first time in a handy volume a rich vocabulary hitherto unknown or only vaguely known. Dr. Acharya has earned the permanent gratitude of all Indologists by collating and collecting not only manuscripts (largely unpublished) but also the epigraphic data scattered in the bewildering documents of Indian inscriptions which have given a surfeit of touch and a precision of connotation that are admirable. Dr. Acharya has spared no pains to put the meaning of the terms as much beyond doubt as possible, for he has placed the terms invariably in their organic context by quoting in extenso from the generally inaccessible texts. Thus the dictionary will not only react in a wholesome way on our accepted notions of Hindu art and archaeology but also on the future compilation of a comparative lexicon of the Hindu technical terms—our future *Paribhashendu-Shekhara*.

As a pioneer work, it will hold its place high amongst the recent publications of Indology. As a pioneer work again the author, let us hope, will take constant note of friendly suggestions with a view to enhance the scientific value of this lexicon. While comparisons with European treatises on Architecture (e.g. Vitruvius) are interesting, it is more useful to make each term shine indubitably out of a comprehensive juxtaposition of pertinent texts found, published or noticed anywhere in India, with a special eye on local peculiarities and their correlation with regional styles. Rich materials are still lying idle in the latest publications of the Trivandrum Sanskrit series (e.g. Manjushri-Mula Kalpa or Tantra, translated into Tibetan) and in the Gaekwad Sanskrit series (e.g. Samaranganasatradharm and Manasollasa, etc.). So Lanier's Monograph on Chitralakshana seems not to have been utilised. But the more serious omission is perceptible in another field which has furnished some of the noblest specimens of Indian architecture. I mean the field of Greater India where we meet even today *Shrotrudhar* proclaiming the titanic architectonic genius of the Sailendra sovereigns of Srivijaya (Sumatra, Java) and Angkor-Vat, the soaring Vimana of Vishnu constructed by King Paramavibhaktaka of Cambodia and designed by the master Architect Dvakara. Let us hope that in his next edition Dr. Acharya will enrich his lexicon by incorporating the data imbedded in the epigraphic and monumental documents of Greater India.

Two appendices containing enumerations of the important Sanskrit treatises on Architecture and of historical architects, enhance the value of the book. May we request the learned lexicographer to add a special appendix of the technical terms and names scattered in the various living remanufactures of India where we find, as in *Chitra-ai-Nirupak* Boce; *Kerasak* native architects and constructing according to their *tantrika* Vastu

Shastras or even conserving a rich tradition in *bhasa* vocabulary (oral or textual)?

INDIAN ARCHITECTURE ACCORDING TO MANASARA-SHILPA-SHASTRA: By Dr. Prasanna Kumar Acharya. Oxford University Press. Pp. IV+268.

This volume incorporates the general problems, historical as well as textual, that form the introduction to Dr. Acharya's Dictionary. In the first thirty pages the author gives a tantalising survey of the popularity of Architecture evinced by the Vedic, the Buddhist and the classical literature. We hope that the author will make the treatment more exhaustive. The next hundred pages are devoted to a very useful summarising of the contents of the outstanding *Shilpa-shastras*, e.g. *Manasara*, *Mayamata*, and such manuals ascribed to Visvakarma, Agastya, Kasyapa, Maudana and others. The comparison instituted between *Manasara* and *Vitruvius* may or may not lead to a discovery of the order of that of a *Stomaka Siddhanta* and *Hora-shastra* yet the similarities are striking. But the most important sections are the author's discussions relating to the three styles or orders of architecture—Nagara, Vesara and Dravida—representing the three geographical divisions of India. We recommend the books of Dr. Acharya to all Indologists and expect eagerly the publication of the two supplementary volumes now in press.

PTOLEMY'S GEOGRAPHY: Edited by Prof. S. N. Mazumdar M.A. Published by Chakravarti Chatterjee & Co. Price Rs. 15.

This is a reprint of McCrie's English translation of the Greek text of Ptolemy, the famous geographer of Alexandria. It is an indispensable guide to the study of early trade routes and inter-oceanic commerce of Asia with India as its centre. The editor and publisher had spared no pains to make the new edition attractive and readable.

Kalidas Nag

ASPECTS OF BENGALI SOCIETY FROM OLD BYGONE LITERATURE: By Mr. Tamonash-Chandra Das Gupta M.A. Ramanujan Lahiri Research Scholar, Calcutta University. C. U. Press, 1937.

The author who has given several years for his labours as a Research worker in the Bengali department of the University of Calcutta has produced this monograph on his special subject. He has patiently and faithfully collected the materials on eleven topics, and those who depend on and are in need of such materials will derive much benefit from the work under notice. The author has done his bit so far as the materials are worth, but we are at a loss to endorse the opinion of Dr. B. M. Barua, who says in the Foreword contributed by him, "I think Mr. Das Gupta has done well by not launching upon an ambitious scheme." The evidences of old Bengali literature for the reconstruction of the social history of Bengal on a synthetic principle are mostly insecure, and one cannot accept them without correcting or corroborating them by other collateral materials derived from more trustworthy sources. Our author follows Rai Dr. D. C. Sen Bahadur in historical matters and is thus led astray. The dates of

some compositions, e.g., "Manikchandra Rajar Gan", as the 11th-12th century cannot be accepted. This book is in the line of those of Dr. Sen and possess the same merits and defects—it is full of descriptions which are often long drawn, and devoid of constructive and comparative criticism. Dr. Barua does not hit the right point when he says that Bengal Vaishnavism reigns in Pastoral and Agricultural region and the mountainous or hilly regions formed the centre of Saivism.

RAMPS BASU.

HINDI

HINDU (हिन्दु)—A book of Hindi poems, pocket edition pp 333, price Rs. 1. Somnat 1984. Published by the author Mr. Mathihisaran Gupta, Churagaon (Dist Jhansi), U. P.

Mr. Mathihisaran Gupta is the premier Hindi poet. Yet below 41, Mathihisaran has already carved out a niche for himself in the gallery of the poets of India. In this little book he has surpassed even his former compositions. Selecting a metre so popular in Hindi as to be known to every woman, child, and rustic—"Hara Ganga", which is famous from its age-long recitation in the early morning by a class of Brahman beggars (called singers of *Sarajan's* life) the poet has composed short poems on various patriotic and social topics. He employs, as in all his last pieces, the spoken language, and a style of which he is practically the father. The orthodox Hindu will read in the lines of *Hindu* his own self, while the radical Arya-samajist will feel reading the poems that Mathihisaran is fast becoming a *Gurukul* reformer. His sentiments are traditional, yet reforming, rightly full of fire and love for this land of Rama and Krishna, Buddha and Kapila, Gaudhi and Rabindranath.

K. P. JAYASWAL

PALLAVA: By Mr. Sumitra-nandan Pant, Published by the Indian Press Ltd., Allahabad, 1926.

This nicely got-up book of poems is surely a rare literary treat in modern Hindi poetry. We had occasion to express our opinion showing the merit and promise of this young poet several years ago. In the meantime his muse has gained fresh powers of imagination and expression. We at once mark here a new departure both in the form and spirit of Hindi poetry. The entire attention of the poet is not as usual, taken up by the cares for metrical perfection. The natural flow of poetry retarded by the froth and fumes of over-ornamentation. The courage of conviction on the part of the poet as regards breaking some cherished and unalterable laws of versification in Hindi has been amply repaid, and here we have a number of lyrics which have not lost their music. Experiments on these and similar lines will help a great deal in raising Hindi poetry to the level of really advanced literature capable of voicing new ideas and ideals.

The introduction which is rather long ally discusses the verse-forms, and several metres of Hindi, and compares them with those of Sanskrit

and eightles, how much of it was derided by them as "Early Victorian" or "Mid Victorian". The whole of the period was marked by movement, what they described as "progress", progress in science, in philosophy, in politics, in literature. The people of the fifties took pride in this progress and yet detested it from the bottom of their hearts. After the stress of the foreign wars and the political struggle of the thirties they wanted to have rest and peace, but this they could find nowhere. Their incomparable scientists and philosophers would not let them pause and before they could fully adjust themselves to one settled scheme of life they were rushed along to another. They honoured and adored these super-men who at least were not akin to the ape,—the scientists might explain the evolution of the body but they could not yet claim to have solved the evolution of the soul,—they offered their homage to the geniuses but they turned to literature for the soothing calm which they could not find elsewhere. As the *National Review* of October, 1855 put it, they wanted literature to "transport them from the cankering cares of daily life, the perplexities and confusion of their philosophies, the weariness of their haunting thoughts, to some entirely new field of existence, to some place of rest, to some 'clear walled city of the sea' where they could draw a serene air undimmed by the clouds and smoke which infest ordinary existence." They looked to the artist for "passionless calm and silence unproved", for an apprehension of life "in its innermost significance and its fairest aspect."

They wanted literature, in other words, to negative life, rather than to reproduce it; they desired to dwell on happy marriages and comfortable homes, placid country-life and quiet appreciation of nature. Their novelists and poets gave them what they wanted, the "message" of the triumph of love and the "happy ending" of marriage bells. If a Dickens by any mistake forgot to unite his Pip and Estella at the end of the story, they insisted on a new concluding chapter which would reveal life in its "fairest aspect", its "wisest significance" as they took it to be. Modern psychologists might describe the process of emotion represented in their novels and dramas as unreal, but they attempted to convince themselves of its reality through the device of external accuracy and an appeal to senti-

With the seventies we notice a few rebels in the field, a few literary intellectuals who would not rest content with an admiration of science and philosophy from a distance but wanted to illustrate their truths in practice. They could not shut their eyes to the inconvenient realities of life, its ugliness, its evil, its miseries and sorrows. What was worse, they could not always explain this pain and suffering by the vice and wickedness of the sufferer, they could not make the innocent responsible for their unhappy destiny. Matters were further complicated when they began to discover that in this world of mixed motives absolute moral value can be assigned to few human actions and what we call character is largely the product of environment, with the result that the "self-originating element" in human endeavour is comparatively small. The literature that neglected all these perplexities they began to find unsatisfactory and they craved for a truthful reproduction of life if not for an adequate solution of their difficulties.

It is the product of such a craving that we find in the literary output of Thomas Hardy, an attempt to illustrate the realities of life through an accurate analysis of the mainsprings of human action. He represents man in all his weakness, striving not always blindly, achieving not infrequently something positive, but with his ultimate destiny pre-ordained by a relentless fate. Happiness is not due to goodness or badness but to one's adjustment to environment. Heredity, upbringing, natural background and social environment,—all contribute to the development of character, but the fate of an individual is often determined by a chance coincidence, and apparently insignificant events lead to important and vital consequences.

To amplify these ideas a little more one may start with his statement in the preface to *Jude*: "This man does not act in a certain way by accident. His personality has been moulded, for better or for worse, by agencies far more potent than the individual will." Among these agencies one may first notice *heredity*. Tess's troubles are perhaps caused by the licentiousness of her ancestors, and all her innocence cannot counteract this evil that hangs over her. The illegitimate birth of Blonson and Dora was probably responsible for a good deal of their wickedness. But much more potent than heredity is the influence of home and upbringing. Tess's weak and foolish parents have not been able

to influence her character but are to a great extent, responsible for her miseries. The weakness and indulgence of de Stancy must have at least partly influenced his outlook on life and led to his extreme cynicism and selfishness. A good deal of Clym's hardness and Stephen Smith's character was moulded by their early life and upbringing, while with Angel Clare and Manston the implication is not altogether absent.

Equally potent is the part nature plays in human fortunes. Hardy often begins his novels with a lonely pedestrian on a road and his chapters with a reference to the weather and the season, the subsequent scenes or paragraphs being skillfully evolved out of the opening natural description. But sometimes as in "the Return of the Native" and "Tess" nature is more active: Egdon Heath influences and colours the whole course of human events in the story as to a certain extent Stancy Castle does in "A Laodicean", while at critical periods of Tess's life the inanimate objects seem to react to her condition. Thus we may think of the "brown face" of Ellotcombe Ash or of the hard monuments of Stonehenge or even of the mocking furniture of the room where she confesses her past to Clare.

The social surroundings of the leading characters are dwelt on with care. Hardy may not always be giving a photographically faithful picture of the Wessex peasantry, but the representation of manners and customs true in the main ingredients is of value with reference to the moulding of character, if not of destiny. Even where we come across the exceptional individual like Jude or Henchard or Eustacia we cannot regard the figure as absolutely removed from the influence of social surroundings. The peasants of the country side represented as semi-pagans, taken up with the superstitions and ceremonials of religion, diverted by primitive amusements, speaking a strictly provincial dialect, supply more than the local colour, for the individual cannot break away from his environment and society has its ultimate revenge on the rebel. In the tragic story that Hardy unfolds before us we rarely come across a "hero" or "villain" in the accepted, conventional sense. His heroes have often some trait or other which repels us, some hardness or inflexibility which may not bring about his ultimate misery but which nevertheless prevents us from accepting him as our ideal. Knight

and Angel Clare are of course extreme instances; but even with Clym or Gabriel Oak it is not possible always to sympathise, while Jude and Tess are so very much the victims of destiny that the term "hero" or "heroine" seems curiously inapplicable. There is practically no whole-hearted villain either,—the exceptions like Derriman or Dare, Durberville or Troy being conventional types.

Thomas Hardy

This absence of "hero" and "villain" is mainly due to the desire to reproduce life in all accuracy, but this combined with the emphasis on chance and fate introduces a tragic story which produces an effect on the reader different from that produced by Shakespearean or Greek tragedy. Chance is surely prominent in every novel: Take "A Pair of Blue Eyes" for instance it is an odd coincidence that Elfrida while returning from her fateful journey should meet her one real enemy, Mrs. Jethway, that Knight should

and Bengali. The paragraphs on the use and modulation of the dialect to be used are also lucid and shows his knowledge of the real music of his mother-tongue. We have never come across any such attempt in finding out the *rationality* of Hindi versification.

There are several pictures in colours together with a portrait of the poet.

TARNA-SASTRA—Pts. I & II: By Mr. Gulabray, M.A., LL.B. Published by the Nagari Pracharini Sabha, Benares.

The science of Western Logic has been dealt with in this work in a lucid style. This work is principally meant for the students and exercises are given at the end of chapters. It is interesting that on some points there are comparative discussions from the standpoint of India and Western Logic.

TAMIL VEDA: Translated by Kshemananda 'Rahat.' Published by the Sasta-Sahitya-Prakasak Mandal, Ajmer. 1927.

Trivalluvar was an untouchable (?) faint of Southern India, and his work called Tri-K-Kural (now translated into Hindi) can rightly claim the epithet of the Tamil Veda. "If one wishes to understand aright the genius of the Tamil people and their culture one must read Tri-K-Kural. A study of this book is necessary to complete a scholar's knowledge of Indian literature as a whole." The original which is a collection of wise aphorisms relating to religious, domestic, social, moral and political affairs, is said to be characterised by a peculiar depth, simplicity, and directness which are all its own. The translator has done a service to northern Indians by publishing it in Hindi. The publishers are also to be thanked for including such an important work in their series which is being priced very low.

HINDI-GADYA-MIMANSA: By Prof. Ramakanta Tripathi, M.A. Published by Hindi-Sahitya-mala Office, Calcutta.

It is a common characteristic of the Indian vernaculars that they were almost devoid of prose writings in mediaeval times. The spirit and exigencies of modernism have driven us to develop prose as a powerful medium of expression. In this connected attempt of presenting the history of prose writings we have specimens of the different styles also. In the long introduction the compiler discusses about the rise, development, diction, style and future of Hindi prose.

RAMES BASU

SANSKRIT-ENGLISH

SAMMATA TARNA PRAKARANA OF SIDDHASENA-MVA-KARA WITH THE COMMENTARY NAMED TATTVAODHAR-VIDHYAYINI: By Abhayadeva Suri, edited by Pandits Sukhalal Sanghani and Decharadasa Dasia, published from the Gujarat Puratattvamandira, Ahmedabad, Part II.

On another occasion I had great pleasure in noticing the first part of this great work. I am glad also to have before me the second part of it.

It contains three *gathas* of the original together with the commentary. In the course of explaining the second *gatha*, the commentator, Abhayadeva Suri, discusses at great length the inter-relation between a word and its meaning, refuting different views of teachers of other schools and establishing his own conclusion according to the stand-points of the Jains. For criticism he quotes profusely two great works, the *Shlokaritika* of Kumarila and the *Tattvasamgraha* of Santiraksita published recently in the *Gaekwad Oriental Series*. Occasionally other Buddhist authors, such as Dinnaga and Dharmakirti are also quoted. For example, on p. 176, the *Karika* beginning with 'na jati' is from Dinnaga's *Pramanasamuccaya* (Tibetan version) verso 171 (Chapter V). On p. 309, "paratibhas" etc. is found in Dinnaga's *Nyayapravesa* (Sanskrit text), *Gaekwad Oriental Series*, p. 6, and Dharmakirti's *Nyayabindu*, Bibliotheca Buddhica, p. 73, besides in the works mentioned by the editors. In the last two *gathas*, 3-4, the subject dealt with is the different kinds of *nyayas* 'view-points' as known in the Jain philosophy.

The book reflects great credit on the editors. Our thanks are due to them and the Puratattvamandira of the Vidyanpitha from which such works are being published.

VIDYUSHEKHARA BHATTACHARYA

THE LIFE OF SRI VYASARAJA: By Somanatha. With a Historical Introduction in English by V. Venkoba Rao, B.A. Published by Mrs. M. Srinivasa Murli, 'Chandrika', Basavangudi, Bangalore.

The History of Vijayanagar is a most glorious chapter in that of mediaeval Indian history and the most glorious reign was that of Krishna Deva-raja of the line. It was during this period that there lived Sri Vyasaraja, the guru and guide of this great king. He was also at the head of the Hindu University at Vijayanagar. He was a great Vaishnav apostle and belonged to the school founded by Madhvacharya. It is also to be marked that Chaitanya, a younger contemporary, took *Sannyasa* from an ascetic of Vyasaraja's line. This great saint was not a mere ascetic; he was not blind to the practical affairs of life. He was a power behind the throne, and effected a sort of Hindu-Muslim amity. "Sri Vyasaraja obtained... the green flag on the camel, as an honour from Mohammedan sovereigns." His life was depicted in a *Champu Kavya* in Sanskrit by a contemporary poet named Somanatha, the MS. of which has been unearthed and ably edited by Mr. Rao. The introduction which runs to 184 pages fully discusses the life and times of the saint. The work under notice is a valuable contribution to biographical literature in India. There are several illustrations, one being an old-picture of the saint and another an old image of his patron.

RAMES BASU.

ORIYA

ORIYA BHASA ITIHASA: (History of the Oriya Language) By Pandit Binayak Mishra, Asst. Lecturer in the Department of Indian Vernaculars, Calcutta University. Printed by V. Kar, The Utkal Sahitya Press, Cuttack. 1927.

A systematic study of the Indian Vernaculars has not yet been taken up by the educated men

of India. In Bengal we have a few eminent scholars like Dr. Sanjib Kumar Chatterjee, who have made a special study of the origin and growth of the Bengali Language. But there are very few scholars who have devoted their time and energy for the study of Oriya, Hindi and other vernaculars of India. We, therefore, welcome the present book from the pen of Pandit Mishra, who is an Assistant Lecturer in the Department of Indian Vernaculars of the Calcutta University. The book opens with a chapter on the geography of Orissa, its present situation, its boundaries, its natural divisions and its population. It is followed by an account of the antiquity of Orissa. From the third chapter onwards, the author discusses the origin and development of the Oriya alphabets, its phonetics and the Oriya nouns, pronouns and verbs. In the eleventh chapter, the writer gives some examples from the old Oriya literature. In the last chapter, he puts in a strong plea for the introduction of reform in the Oriya language. The book is dedicated to Lieutenant Maharaj Purna Chandra Bhanj Deo of Mayurbhanja. We congratulate the author in his success.

P. B.

GUJARATI

THE WHITE SIDE OF DARK KRISHNA AND THE TWO PARTS OF GUJARAT NO VENT NAD.

These are books written by Yakil Balwantrao Raghunathji Desai of Baroda. They are substantial

volumes showing the deep study of the subject on the part of the author. The poems and Bhajans in the two parts of the *Venu Nad* betray great labour and perseverance.

THE LIBRARIES AND LITERATURE OF THE BARODA STATE; Published by the Library Sahayak Sahakari Mandal at the Khashtriyas Printing Press, Baroda. Cloth bound. Profusely illustrated. Pp. 110 Price Rs 3. (1927).

This book, the first of its kind, in Gujarati is full of information and readable matter. All sorts of activities of the public Libraries of the State—which as every one knows are State-aided—are set out here, and illustrated by charts, maps and pictures. What the Libraries have done to enliven the dark lives of the villagers can be seen here as in a mirror. It was highly necessary to publish such a book as very few people outside the State know the beneficial work it was doing to educate its own subjects in this commendable way.

SHRI BUDDHI-SAGAR SONI MEMORIAL VOLUME.

The late Buddhi-Sagar Suriji was a revered Jain Saint, noted also for his literary work. This volume contains many tributes to his good work as a literary man and a religious preceptor.

YOU WILL NOT UNDERSTAND IT: By Manu K. Desai.

This is a pleasant translation or rather adaptation of Count Tolstoy's "The wisdom of Children". We do not doubt that children would like it.

K. Y. J.

THOMAS HARDY

By PROF. N. K. SIDDHANTA M.A. (Cantab.)

THE passing of the last of the Victorians" is how Hardy's death is being described in various quarters and if one looks at it from the mere matter of dates one would find little to quarrel with it. Born three years after the accession of Queen Victoria to the throne he started his literary career with the anonymous publication of "Desperate Remedies" in 1871, followed the next year by "Under the Greenwood Tree". The first novel to be published under his name, the one to reveal his peculiar powers for the first time, was "A Pair of Blue Eyes" (1873); and then followed a busy twenty-five years of activity, with "The Return of the Native" (1878), "The Mayor of Casterbridge" (1886), "Tess of the D'Urbervilles" (1891) and "Jude the Obscure" (1896) as landmarks. His career as a poet may be said to begin with

"Wessex Poems and Other Verses" (1898), followed by "Poems of the Past and Present" (1902), both volumes containing poems written before 1871 but unpublished for thirty years. With "the Dynasts" (1904-08), "Satires of Circumstance" (1914) and "Late Lyrics and Earlier" (1923) he established himself as a modern poet, but as a novelist he belongs wholly to the nineteenth century.

These dates may help one to make up a melancholy phrase like "the last of the Victorians", yet in literature one can never be too cautious of thinking in periods. We in the present age may sneer at things Victorian; Victorian morality, Victorian theology and Victorian literary ideals; but before doing so we ought to pause and consider how much of this Victorianism was to the taste of the people of the seventies

be a connection of these two Mrs. Swancourt and that he should be asked to review Elfrida's book. It is chance which leads to the loss of Durbeyfield's horse and chance again which delivers her helpless to Alec on the first occasion. The death of Mrs. Yeohright and of Mrs. Manston are similar chance happenings which influence the destiny of numerous people who come into contact with them. Now when we find man as the passive victim of fate the sight of his sufferings raises in us the sense of the pathetic rather than what we usually describe as tragic, fills us with pity and depression but not with terror. The element of conflict, conflict of men with his fellow-man or with social and moral forces which is the essence of Shakespearean tragedy is not too evident. The leading character is the victim of circumstances which overwhelm him and in this there is more of kinship with Greek tragedy with a play of the type of *Oedipus* where man is helpless against fate. But there is a difference between Hardy's tragic story and Sophocles' in this that in the former the sufferer is weak and of humble position in life. He is not a prince or ruler of the land and his fall does not involve an entire state. Moreover, the forces which bear him down are not supernatural but social, the forces of law or wealth or class-distinctions.

The fact remains, however, that the human being suffers powerless and helpless, and are we to deduce from this an essentially pessimistic outlook on life? When we remember the sufferings of Jude, blows fast following one another, when we think of the comment on the "President of the Immortals" in the description of Tess's death, it is hard to describe the attitude as other than pessimistic. Yet the aid of the poems has to be sought before a final judgment can be pronounced, for a conclusion drawn from objective narratives about the author's personal ideas may always be mistaken.

Hardy's poetry has been variously judged, but there is unanimity in this that on the purely technical side it always lacks mastery. Hardy is deficient in his appreciation of the "Potential" energies of words as distinct from their mere meaning. He can weave patterns of accent and rhyme but there is the constant danger of a lapse into prose. There are fine dramatic tales like *The Supplanted* or *The*

Well-Beloved, where between lines of the highest poetry we may come across perfectly flat lines like :

"O fatuous man, this truth infer,
Brides are not what they seem."

The poems most worth reading seem to be those with a philosophical or psychological interest, particularly the latter; but the "Late Lyrics" have often a purely lyrical note apart from all logic and metaphysics. Take for example the very first lines of the volume. "This is the weather the Cockoo likes and so do I" etc. or "Going and Staying." "The morning sun-shapes on the Spray. The Sparkles where the brook was flowing" etc.

But here we cannot expatiate on the purely poetical qualities of Hardy; we have to examine his poems to see if they would supply any key to his outlook on life. Take a poem like "The Child and the Sage" where as a child he protests against the philosopher's idea that there must be sorrow in a life of pleasure :

"You say, O Sage, when weather-checked,
'I have been favoured so
With cloudless skies, I must expect
This dash of rain or snow.'
And thus you do not count upon

Continuance of joy;

But when at ease, expect anon

A burden of annoy.

But Sage—this Earth why not a place
Where no reprisals reigo,
Where never a spell of pleasantness
Makes reasonable a pain?"

This is a prevailing note to Hardy's work, he is often protesting against the judgments and conditions of the world, desiring and hoping for something better. But it is not always that, for at times the hope for something better seems utterly futile. This alternation of optimism and pessimism is best expressed through the "Pities" and the "Ironies" of the *Dynasts*, a work too vast in its scope and too complicated in its structure to be more than incidentally referred to here: to the Pities the world appears as a terrible tragedy and to the Ironies as an entertaining comedy. But the sight of the tragedy convinces the Pities that there must ultimately be some good, while the Ironies detect an innate malice at the basis of human affairs and enjoy the world because it is guided by this "purpose of deliberate

crnelty." They go on suggesting to the spirit of the years who sits unmoved, aloof that this or that "shows signs of eventual good or continual malignity," but the spirit of the years placidly answers that "the purpose of existence is neither good nor bad, but simply to exist." So we are left where we started from and find that Hardy offers perhaps the best explanation when he says :

"If way to the Better there be
It exacts a full look at the Worst."

So he looked at the Worst and could make
up his own epitaph in the following strain :

"I never cared for life : life cared for me,
And hence I owed it some fidelity.

It now says, 'cease : at length thou hast
learned to grind

Sufficient toll for an unwilling mind,
And I dismiss thee—not without regard
That thou didst ask me no ill-advised

reward,—

Nor sought in me much more than thou
couldst find."

SHADOW OF EARTH

There is immortal day :
What we call night
Is not the fault of light—
Earth gets in its own way.

Night is mere shadow of earth.
We should not blame the sun
If Shanghai shades Verdun:
No, blame the world's own girth !

Far now America . . .
Now Asia . . . reaches up,
A child for a gold cup—
Both greedy for one star.

Each tramples down the other
And snatches at the sun
In turn : night for each one
Is shadow of his brother.

And, shadowed, each forgets—
Beyond the obtuse clay—
Haloed with deathless day,
The sun that never sets !

E. MERRILL ROOT.

—From "The World Tomorrow."

THESE THINGS SHALL BE

These things shall be ! A loftier race
Than e'er the world hath known shall rise,
With flame of freedom in their soul
And light of science in their eyes.

They shall be gentle, brave, and strong
To spill no drop of blood, but dare
All that may plant man's lordship firm
On earth, and fire, and sea, and air.

Nation with nation, land with land,
Unarmed shall live as comrades free ;
In every heart and brain shall throb
The pulse of one fraternity.

New arts shall bloom of loftier mould
And mightier music fill the skies :
And every life shall be a song
When all the earth is paradise.

—JOHN ADDINGTON SYMONDS.

INDIAN Womanhood

The holding of the All-India Women's Educational Conference at Delhi from the 7th February next under the presidency of Dowager Begum of Bhopal will be an event of outstanding importance of this month. Lady

passage of Mr. Harbilas Sarda's Hindu Child Marriage Bill which is on the legislative anvil.

Srijukta Golapsundari Devi

The Late Annapurna Devi

Irwin will open the Conference which will be attended by eminent lady delegates from all parts of India. The presence of representative women from every province of India at Delhi during the Assembly session will, it is hoped, indirectly help to secure the

From the women's point of view the most notable event during the Congress week at Madras was the celebration of a Women's Day, when Indian women expressed their opinions on problems concerning India. The

unity of Indian womanhood was fully demonstrated on this occasion by the Presidents and speakers. Mrs. P. K. SEN (wife of Justice P. K. Sen of Patna High Court), a talented Bengalee lady, opened the proceedings on the first day, which was presided over by Mrs. Jankibai Bhat of Poona. Mrs. Kihe of Indore opened the second day's meeting held under the presidency of Dr. Muthulakshmi Ammal, M. L. C. Another event worthy of note in connection with the Indian National Congress was the organisation of lady-volunteers under the captaincy of Mrs. Kamala Devi Chattopadhyaya and Mrs. R. Lakshmiipati, who, clad in orange-red *Khaddar Sarees*, rendered splendid service. *Stri-Dharma* pays them the following well deserved tribute:

(Mrs. R. Krishna Bai

"They seemed to glow like flames from a sacrificial and purificatory fire in the public life. Charge of sixty such young women night and day amid such crowds was no light task. That they were able to move freely about their duties without worry from any race of men present is a proof

that sex fear is an exaggerated relic of a militarist age, at any rate in an atmosphere where the service of the nation is a unifier of all differences"

We are glad to learn that *SRIJUKTA OOLAPSUNDARI DEVI*, widow of the late Babu Harimohun Roy, grandson of Raja Rammohun

Miss K. Accamma

Roy, has expressed her readiness to establish an up-to-date Girls' School and Widows' Home in connection with the Radhanagar Rammohun Memorial, making an endowment for its maintenance. Mr. D. N. Pal and Prof. Dr. K. D. Nag went to Radhanagar recently to

inspect the progress made in the construction of the building and they took the opportunity of approaching this charitably disposed lady while they were her guests. This lady has recently established the Golapsundari-Harimobna Charitable Dispensary in her village at a cost of over Rs. 25,000, and given away property of the value of over Rs. 75,000, for its upkeep. The opening ceremony of this beautiful building will soon be performed. Besides she has excavated a number of tanks for the use of her villagers. Dr. Nag explained to Mrs. Roy that her memory would be well perpetuated if she would make a suitable endowment for the education of the girls in her village and impressed on her the necessity of creating good mothers for the regeneration of India. She at once expressed her

Bengal in whose cause Raja Rammohun Roy fought so valiantly while he lived." Steps will immediately be taken to carry out her intention.

Miss SAKUNTALA RAO, M.A. (English and Sanskrit), adopted daughter of Mr. Hemchandra Sarkar, M.A., Missionary, Sadharan Brhama Samaj, Calcutta has been awarded by the Director of Public Instruction, Bengal, a Post-Graduate Research Scholarship of Rs. 100 a month. She is working under Dr. D. R. Bhandarkar, M.A., Ph.D., Carmichael Professor, University of Calcutta, and the subject of her research is "Women in Ancient India." Miss. Sakuntala Rao is an adept in housekeeping also.

Miss KAMALA BOSE, B.A., whose picture we reproduce elsewhere in this issue, participated in the World Conference on New Education held at Locarno in August

Miss Sakuntala Rao

Malur Lakshmi Amma

willingness to place a decent sum at the disposal of competent trustees to carry out this noble object. "It is quite in the fitness of things", writes the *Indian Messenger*, "that she as the *pautrabadhu* (wife of the grandson) of the Raja should come forward to ameliorate the condition of the womanhood of

last. Miss Bose is the daughter of the late Rev. Mathuranath Bose, M.L., of Faridpur (Bengal). After graduating, with Honours in Philosophy, from the Bethune College, Calcutta she took to educational work in which capacity she has been working for the last fifteen years in several provinces

in India, *eg.*, Bengal, U. P. and the Punjab. She received a Certificate of Honour from Government in recognition of her educational work in East Bengal and was awarded a medal for services in connection with the War.

SRIMATI ANNAPURNA DEVI, author of a number of Telugu books and founder of the Mohandas Khaddar Parishramalayam at Ellore died recently at the age of 27. She had received her education at the Brahmo Girls' School, Calcutta. She spoke English fluently and assisted Mahatma Gandhi in connection with collection of funds for Khaddar work. She kept herself in touch with the Non-cooperation movement—in fact dedicated herself to it. She rendered valuable services as the captain of lady volunteers at the Coconada Congress. In an obituary note in *Young India* Mahatma Gandhi says of her :

Indeed I have lost more than a devoted follower. I feel like having lost one of my many daughters whom I have the good fortune to own throughout India. And she was among the very best of these. She never wavered in her faith and worked without expectation of praise or reward. I wish that many wives will acquire, by their purity and single-minded devotion the gentle but commanding influence Annapurna Devi acquired over her husband.

We learn that attempts are being made to perpetuate her memory by establishing a National Girls' School, starting an Adult Education School for women through Zenana Mission and by founding a medal in her name in the Andhra University.

Miss. R. KRISHNA BAT B.A., L. T. of Rajahmundry is the first Naidu lady graduate to take the L. T. degree. She is besides a painter of great promise and her paintings have won a certificate of merit at the Madras Exhibition and praise at the Poona and Bombay Exhibitions. She is also a good musician and a master of the violin and the Veena—the queen of the South Indian Musical instruments. She takes part in public life and recently opened the Non-Brahmin Youth Conference at Madras. As befitting her varied talents, she has been entrusted with the editorial charge of the "Art and Woman" section of the Journal of the Non-Brahmin Central League of Madras.

We learn that MRS. PATAVARDHAN has recently been appointed by government as an Honorary Magistrate for Madras.

From how long ago, we do not know, almost every village has possessed elderly Hindu ladies having a knowledge of simples, and some ladies belonging to the Vaidya (physician) caste have been known to practise the art of healing according to the ancient Hindu Aynredic system medicine. From the last quarter of the last century, Indian women have been taking to the practise of the western system of medicine.

Mrs. Patavardhan

surgery and midwifery in increasing numbers. They hail from every province of India. Dr. K. ACCAMMA M.D., B.S. is the first medical graduate from the little province of Coorg. Another Indian lady of high caste, Miss MALINI LAKSHMI AMMA, of Mysore who has just arrived in India after 5½ years' stay in Scotland was among those who received the degree of M.B., Ch B., at the Glasgow University Convocation. She is the first Indian woman to receive a medical degree at Gilmorhill.

[This section is intended for the correction of inaccuracies, errors of fact, clearly erroneous views, misrepresentations, etc., in the original contributions, and editorials published in this Review or in other papers criticizing it. As various opinions may reasonably be held on the same subject, this section is not meant for the airing of such differences of opinion. As, owing to the kindness of our numerous contributors, we are always hard pressed for space, critics are requested to be good enough always to be brief and to see that whatever they write is strictly to the point. Generally, no criticism of reviews and notices of books is published. Writers are requested not to exceed the limit of five hundred words.—Editor, *The Modern Review*.]

Calumniators of Muhammad (A Rejoinder)

About three weeks ago the August issue of *The Modern Review* came into my hands. In the correspondence column "A sympathiser draws attention to some *hadiths* about the relationship of the Prophet of Islam with women. As he suspects the interpretation of the passages put on them by the non-Muslim author and asks their true interpretation, I take this opportunity to give briefly my views on this point. Of course, I do not claim myself to be anything but an ordinary student of Islam.

At the outset it should be known that from their very character the *hadiths* (Traditions) cannot be absolutely reliable, depended as they on oral transmission for several generations before they were finally codified. In fact, there is no consensus in the Muslim world about the authenticity of the particular *hadiths*. For example, the shi'ahs do not accept the *Sahih* Bukhari and the other collections of Traditions of the sunnis. It is also well-known that there were many fabricators of the traditions. From internal evidence also a number of the Traditions are unacceptable on the ground of their mutual contradictions and of their supernatural element against all reason and science. These matters are known to every student of the *Hadith* literature.

On the above grounds I would have summarily passed over the Tradition reported by Hadrat A'ishah, had it not contained a verse of the Quran translated as: "Thou mayest decline...Crime in thee." The correct translation as given by Maulana Muhammad Ali, M.A. of Lahore, will stand as follows: "Thou mayest put off whom thou pleasest of them, and thou mayest take to thee, whom thou pleasest, and whom thou desirest of those whom thou hadst separated provisionally, no blame attaches to thee." I should here quote also the continuation of the same verse: "This is most proper, so that their eyes may be cool and they may not grieve, and that they should be pleased, all of them, with what thou givest them and Allah knows what is in your hearts and Allah is knowing, forbearing."

Here there is nothing "damaging to the Pro-

phet's reputation" as has been imagined by the learned Professor, for the verse in question simply gives some regulations about the dealings of the Prophet with his own wives. This is agreed by all and is also clear from the context. All the wives of Prophet (he had married them according to the custom of his country before the revelation of the Quran curtailing polygamy to four wives and recommending monogamy) were anxious to live with him constantly, they loved him so much (see the last portion of the verse quoted). This would have been a serious interruption to the religious pursuits of the Prophet in which he was engaged and at the same time he was keenly conscious of his responsibilities towards his wives. It was, therefore, necessary to have a revelation (to an apostolic, the voice of his conscience) touching this matter. Maulana Muhammad Ali comments on this verse as follows: "This verse must be read along with vv. 28 and 29, where a choice is given to the Prophet's wives to remain with him or to part. A similar choice is given here to the Prophet. And when his wives preferred to lead simple lives with him rather than seek worldly goods by leaving him, the Prophet was no less considerate to their feelings for notwithstanding the choice given to him to retain such of his wives as he liked, he did not exercise this choice to the disadvantage of any one of them, but retained them all, as they had chosen to remain with him. A reference is, indeed contained to vv. 28 and 29 in the words that they should be pleased, all of them, with what you give them,—which indicates that this was altogether a new arrangement in which both parties were given free choice and both sacrificed all other considerations to the sanctity of the marriage-tie. (p. 829). I quote here the verses referred to. 'O Prophet I say to thy wives: if you desire this world's life and its or nature then come, I will give you a provision and allow you to depart a goodly departing. And if you desire Allah and His Apostle and the better abode, then surely Allah has prepared for the doers of good among you a mighty reward.'"

To one not conversant with Arabic or Islamic literature the words "the women who gave themselves to the apostle of God" quoted by "A Sympathiser" may convey an objectionable impres-

slation altogether. They are in fact a literal translation of the Quranic words *wa habat nafsaha li-nnabiyyi* contained in the previous verse. The meaning is simply *one who offers herself in marriage to the Prophet without any dowry (mahar)*. This is the interpretation of Imam Abu Hanifah and is borne out by the life of the Prophet and by the context which has just after those words "if the prophet desired to marry her".

For those who are really anxious to know more about the private life of the Prophet I refer to the works of Sir Sved Ahmad, Mr. Amir Ali, and Maulana Muhammad Ali (of Lahore). In conclusion I should observe that it is highly desirable to have religious discussions for the sake of truth; it is equally desirable that while speaking of the great men of other nationalities or religions, we should be cautious in our expressions, so as not to appear irreverent. For example, I may not believe in Srikrishna, but I have no right to be irreverent to that great personage of India. It will be well if all religious controversialists remember this.

"A SERVANT OF MOTHER INDIA"

Mr. Thompson's "Curse at Farewell"

I have read with interest an article entitled "Mr. Edward Thompson and Rabindranath Tagore" by Mr. Priva-Ranjan Sen in the January number of your Review. Though agreeing in the main with Mr. Sen, I wish to lay the following before the readers of your Review.

(a) "কোথা হেব অবশিত দুঃ হৃদয়লদার"

Mr. Thompson has translated the above as :
"Where see the laughing countenances again of
heaven's coquettes?"

Mr. Thompson has translated "বলনা" by "coquette". But "বলনা" is always used in a good sense, and "coquette" always in a bad. So Mr. Thompson's version has lost much of the seriousness of the original. Mr. Sen has not clearly pointed it out.

(b) "এর পরে নাহি মোর অনাদর—তিরিশ্রীতিহরে তিরিশ্রি করি হৃদয়।"

Mr. Thompson's translation is extremely inadequate. But Mr. Sen also might have been more faithful to the original. He translates thus : "To this I am not indifferent—I will cherish its memory lovingly and for ever." Mr. Sen's translation does not contain the significance of "তিরিশ্রীতিহরে" in "তিরিশ্রি করি হৃদয়" shows the depth of feeling, as the "তিরিশ্রি" shows the length of time; and so we cannot afford to omit the former figure. I would like to translate as : "I will cherish its memory with infinite love, and for ever."

(c) "দেখি নাই আমি মন তার? হাবি না কি প্রেম অব্যাহাতি? বিবশিত পুষ্প থাকে শব্দে বিলী, যক তার দুকায়ে কোণার।"

Mr. Thompson translates :
"Your heart I never read?
You do not know love rules it? Even when
dead the flower overblown clings to its

withered spray—But where has gone the scent?"

Mr. Sen has taken exception to the translation of বিবশিত and শব্দ by 'over-blown' and 'withered spray' respectively, but has spoken nothing of the other 1000 miracles. Mr. Thompson, translates "হাবি না কি প্রেম অব্যাহাতি" by "you do not know love rules it?" Though in Sanskrit "অব্যাহাতি" means "he who controls from within," yet in Bengali it is used in a secondary meaning, viz. "who knows the heart." The translation of বিবশিত by "to clog" and of "দুকায়ে" by "to go" are not satisfactory. Moreover, there is nothing in the original corresponding to Mr. Thompson's, "even when dead" used as an adjective to flower. I think the following is more correct :—

"Your heart I never read? You do not know, love knows the (lovers) heart? A full-blown flower may be lost in green sprays, but where will the perfume conceal itself?"

The replacement of "you do not know love rules it" by "you don't know love knows the lover's heart" continues the idea suggested in the first line, "your heart I never read?" and gives a better meaning.

(d) "কেন পাঠ পরিহরি পালন করিতে মোর দুখশিতটরে।"

Mr. Sen takes exception to Mr. Thompson's translation of পালন by "pet." পালন here means "to tend," or "to nurse."

Satindra Kumar Mukherjee

About "Strange Coincidences"

Re : Mr. Ganapati's comment in the *Modern Review*, December 1927 the description of the skill of the Dacca hand-spinner is borrowed not from Watt's Commercial Products of India, which is a dictionary of the extant literature on various topics, but, so far as I remember—my book was published 12 years ago—from the old monograph of N. N. Bajerjee, who is quoted in the sentence that immediately follows, and who is an authority recognised by Watt himself. Perhaps a Dictionary might be used more freely as I have done. My Index of references at the end of the book shows my constant use of this Dictionary.

In the chapters on the Industrial Problem of India (b) and (c), the case for workshop and cottage production follows closely through all the pages of the famous book on the subject by Kropotkin, who is frequently mentioned, pp 372 (note), 374 and 375. The treatment ends with a string of long quotations (p 372 to p. 378) from the book, which is still the principal source of evidences on the subject; and it is observed "Kropotkin has come to the following important conclusions after thorough investigations into the conditions of small industries in Germany, in France and in Russia." The exact passages (p. 364 and p. 370) referred to bear unfortunately no reference, but when the indebtedness to Kropotkin's thorough analysis is acknowledged throughout the discussion the intention might possibly make amends for my negligence.

Radha-Kamal Mukerjee

Editor's Note

The explanation given by Professor Radha-Kamal Mukerjee is thoroughly satisfactory. *Ed. M. R.*

Paper Raincoat Weighs Little and Keeps Wearer Cool

For steamer voyages, and on other occasions when a great amount of walking through heavy traffic is not necessary, raincoats made of water-proof paper have been introduced. As they do not cling so closely as those of rubber, they afford

adjustable visor of transparent material to shield the eyes from the wind. It can be made of colored goods to afford protection from the sun as well and is considered a useful addition to the prevailing style of brimless turbans.

—Popular Mechanics

Paper Raincoat

more ventilation and hence are cooler, weigh but little and can be folded up in small space. Modern methods of water-proofing paper have been developed to such a high degree of efficiency that swimming suits have been made of this material.

Wide Visor For Women's Hats Shields Eyes From Wind

Especially suited to airplane travel or motoring a woman's hat introduced in Paris has a wide,

Wind-shield on a Hat

Eight Miles-Straight Up

How does it feel to soar more than eight miles into the air, higher than man has ever gone before, up where the air becomes too thin to support life; where the thermometer, headed for the absolute zero of outer space, has already reached nearly seventy below zero?

A few weeks ago I did it, reached 42,470 feet above sea level, and broke every world's altitude record for any kind of craft—airplane or balloon. Within a few weeks I am going up again, confident of making more than 43,000 feet. An 80,000 cubic-foot balloon took me up from Scott's Field, Belleville, Ill., and once I had reached its ceiling, it brought me back so fast that I had to

leave it and step off in space with a parachute to check my descent.

At 42,000 feet, I was kept alive by compressed oxygen for the last four miles.

Far below, cruising along the top of the cloud banks at 13,000 feet, two escort planes, one with a movie photographer aboard and the other, with the post surgeon as passenger, hovered and watched me, though I could not pick them out of the mist. Below, them, the clouds covered the land except for an occasional rift. Once, through such a crevasse, I caught a magnificent view of the Mississippi and the Missouri, tracing their winding course for miles and miles to the north and the south.

Up above, the cloudless sky was a deep, almost cobalt, blue. The dust particles that turn

Capt. Gray at 8,000 ft. above Sea Level

sunlight white were all below me and in the thin and rarefied air above, the sky was magnificent in the depth of its coloring.

At 40,000 feet I had released the last of my 4,700 pounds of sand ballast and came to a stop. But I had prepared for that by having special parachutes built to carry the weight of each piece of equipment. One was attached to an oxygen cylinder which had been emptied on the way up, and the cylinder, a twenty-five-pound one, was dropped over the side. In the rare air, and weakened by breathing oxygen for some time, it seemed to me to weigh at least 150 pounds as I struggled to lift it over the basket rim. The release of its weight was sufficient to send the balloon up another couple of thousand feet—which broke the last world's record, the air-plane mark of slightly over 40,000 feet claimed by a French pilot last fall.

Comparative Records from the Tallest Building to the Highest Mountains and the highest Airplane and Balloon flights

At that height, though still distended, I knew the gas bag above contained less than one-eighth of the gas I had started with. As the balloon had

climbed into lighter air and the pressure against it was removed, the gas had rushed out through the big appendix in the bottom, keeping the silvered fabric from bursting. So long as I stayed up, the balloon would be full but once I started down the gas would begin to contract under the increasing air pressure, so that if I could keep all the gas I had, there still would be less than 10,000 cubic feet when I reached the ground.

It was time to start back and a slight pull on the valve cord, which passes up through the inside of the bag to the valve at the top, was sufficient to start the bag downward, and once started, it began to drop faster and faster, as the statoroscope, which records the rate of ascent or descent, indicated. To check it, I began to attach parachutes to other articles of equipment and drop them over the side. The parachutes were designed to fall at sixteen feet a second, the same rate as the large chutes used by fliers, but the bag was falling so much more rapidly that when I dropped things over the side they appeared to fly straight up in the air, because I went past them so fast. It was queer to see twenty-five-pound steel bottles apparently flying upward. Two more oxygen tanks, the storage battery used to run the electric heater in my oxygen mask, my radio batteries and loud speaker, and finally the wooden frame work which supported the sand-ballast bags, with all empty bags still attached were released to lighten the balloon. They served to check the descent somewhat, but not enough. Ordinarily a badly deflated balloon will flatten out and "parachute" as it comes down, but for some reason mine didn't. At 8,000 feet I got a sight over a tree top on a small marsh beyond, and discovered that the spot I was looking at kept right in line with the tree top, sure proof that my rate of descent and drift before the wind were just right to land me in the swamp. The bag was still falling 1,800 feet a minute, which is twice the safe landing speed in a parachute, so I finally was forced to leave my ship.

Climbing up on the side of the basket, I held into the load ring above, in which all the rigging is concentrated, reached for the valve line, pulled it down and tied it to the ring, so that the bag, when it reached the ground would deflate itself. Then I jumped and pulled the rip-cord ring of my chute, and drifted downward, while the movie plane circled around and filmed the final chapter.

Revolving Funnel to make Wind Generate Power

Mounted on a circular track so that it can always be pointed toward the wind, a huge funnel has been constructed by a California inventor for harnessing the breezes to generate electricity. The entire apparatus weighs about eighteen tons and is intended to so compress the wind that it will operate ten turbines as it rushes through the tunnel. These, in turn, would be made to actuate generators for making electricity.

The inventor has calculated that as much as 1,415 horsepower can be derived from the wind with this outfit and, if it proves a success, he will erect others in localities where strong winds prevail.

Turnable funnel to generate Electric power from the Wind

—*Popular Mechanics*

Edison's Greatest Invention Half Century Old

Fifty years ago, on Aug. 12, 1877, Thomas Edison scrawled four crude little diagrams on a scrap of paper, wrote across the bottom the laconic message, "Kreusi, Make this. Edison," added the date, and—the phonograph was born!

Almost half a century later, on his eightieth birthday, the greatest inventor the world has probably ever known picked up a scrap of paper on which a reporter had written, "By what would you prefer to be remembered?" and, with the same laconic brevity, wrote beneath the question two words—"The phonograph."

The reason why the man who conceived the carbon-filament light, created central-station generating systems, invented the non-acid storage battery, brought out multiplex telegraphy and gave a host of other inventions to the world, should pick the phonograph, whose greatest development has been in the field of entertainment, as his premier achievement is twofold. First, he believes the surface of its sphere of usefulness has hardly been scratched. Secondly, as probably the most impelling reason, the phonograph was not a discovery but a true invention. No man had ever conceived recording the human voice for mechanical reproduction.

Curiously enough, Edison did not set out to invent "frozen speech and music," but was trying to perfect a telegraph repeater to record incoming messages and later repeat them mechanically to another station. Having started in life as a telegraph operator, his first interests were in that field and the phonograph was more or less of an accident. The repeater with which he was experimenting bore a remarkable resemblance to the modern disk phonograph. In his notebook for that day he wrote:

"Just tried experiment with diaphragm having an embossing point and held against paraffin paper moving rapidly. The speaking vibrations are indented nicely and there's no doubt that I

shall be able to store up and reproduce automatically at any future time the human voice perfectly."

The telegraph repeater was forgotten. In his mind he could see exactly how a phonograph should look. The only question was the best material to use. Paraffin was too soft; the record wore out too quickly. A hard wax would have been ideal, but would require months of research,

Straight on to the end it went, not a word missing!

It was a memorable day, and night, too, at Menlo Park. Nobody went home. Hour after hour they stood around the machine, taking turns at speaking, laughing, whistling and singing, and then listening to their voices repeated back to them.

The next day Edison carried the first phonograph under his arm to New York and demonstrated it in the office of a friend. The demonstration was a success, and the papers were filled with reports which were cabled all over the world. Orders poured in from every quarter, and Edison, without stopping to perfect and improve, was forced to begin making machines immediately, to supply the demand. The phonographs were used for exhibition purposes. So great was the interest aroused that one enterprising exhibitor cleared \$1,800 in a single week in Boston.

The craze lasted for a year and a half, then gradually died out. Edison had become interested in the electric light, and for nine years let the phonograph languish. Yet he realized its possibilities and in an article published a few months after the invention, he listed no less than ten fields of development in which it would prove a boon to mankind.

Young Edison with his first Phonograph

and he wanted immediate action. Tinfoil suggested itself—something soft and pliable, yet more durable than coated paper. On Aug. 12, the rough diagram was drawn, with a note to John Kreusi, his instrument maker, to "make this." The mechanic also was told he could spend up to \$18 on the model!

The model was completed within a few days and carried to the "old man," as the thirty-year-old inventor was even then called. The laboratory staff, curious to see the outcome of what Kreusi had freely branded as a "crazy idea," gathered around. Edison turned the crank to test its friction, wrapped a sheet of tinfoil on the cylinder, fastening the ends down with a strip of lead, laid in a groove cut for the purpose, and adjusted the mouthpiece.

He grasped the crank, for the first phonograph was hand-operated, and began to turn, at the same time shouting into the mouthpiece:

"Mary had a little lamb,
Its fleece was white as snow,
And everywhere that Mary went
The lamb was sure to go."

The laboratory wits were convulsed with laughter at the picture of Edison shouting childhood rhymes at a revolving piece of tinfoil. Amid their shouts and jokes, Edison calmly substituted the reproducing diaphragm, turned the cylinder back to the starting point and spun the crank. Back to the starting point, in a high, thin voice came the words:

"Mary had a little lamb—"

Edison and his pupils with one of his first Phonographs

It wasn't until 1887, ten years after the original invention, that he went back to the phonograph. His first step was to revolutionize the machine, substitute a permanent cylindrical wax record for tinfoil, and a battery-driven electrical motor, which was very shortly replaced by a spring motor.

Until radio came along to challenge its supremacy, the phonograph held the center of the stage as a music and speech reproducer. Radio made a temporary dent in its prestige, but the various manufacturers; who saw their profits threatened, responded with a series of notable inventions that again revolutionized the canned music art.

The company which had been founded to

develop Berliner's disk inventions produced, in co-operation with the Bell telephone laboratories, an entirely new type of reproducing horn. About the same time radio and the phonograph were combined, using radio tubes and electrical power to pick up and amplify the vibrations of the needle traveling over the record.

Two other notable inventions involving phonographic records quickly followed. The first was the perfection of talking motion pictures, utilizing large phonograph records and radio amplifiers to furnish the sound. Talking pictures were not new. Lee DeForest had brought them out several years before, with the sound photographed on the edge of the film.

The new idea involved using an ordinary phonograph record which should be recorded in perfect synchronization with the movie film, and the projection of the film and the reproduction of the sounds in perfect tune, which is achieved by operating both from the same electric motor, on their speed in relation to each other cannot vary.

The latest application of Edison's original phonograph principle is in the recording of motion pictures on wax disks from which they can later be reproduced by playing the record on the phonograph. The idea is the invention of an English experimenter with television. The movie scenes are picked up, not by the usual camera, but by a photo-electric cell, which records them as pulsating electric currents, that in turn operate the cutting tool making the record. When the record is played, the reproducing needle is used to create another pulsating current, which operates a neon light to sweep bands of light and dark across the screen, creating the pictures again.

Prayer For Independence And Sincerity

Dr. Glenn Frank, President of the University of Wisconsin, is reported to have delivered at the opening session of the Wisconsin Senate the following prayer:—

"Almighty God, Lord of all governments, help us, in the opening hours of this legislature session to realize the sanctity of politics."

"Save us from the sin to which we shall be subtly tempted as the calls of parties and the cries of interests heat upon this seat of government."

"Save us from thinking about the next election when we should be thinking about the next generation."

"Save us from dealing in personalities when we should be dealing in principles."

"Save us from thinking too much about the vote of majorities when we should be thinking about the virtue of measures."

"Save us, in crucial hours of debate, from saying the things that will take when we should be saying the things that are true."

"Save us from indulging in catch words when we should be searching for facts."

"Save us from making party an end in itself when we should be making it a means to an end."

"We do not ask mere protection from these temptations that will surround us in these legislative halls; we ask also for an even finer insight into the meaning of government that we may be better servants of the men and women who have

committed the government of this commonwealth into our hands.

"Help us to realise that the unborn are part of our constituency, although they have no vote at the polls.

"May we have greater reverence for the truth than for the past. Help us to make party our servant rather than our master.

"May we know that it profits us nothing to win elections if we lose our courage.

"Help us to be independent alike of tyrannical majorities and trading minorities when the truth abides in neither.

"May sincerity inspire our motives and science inform our methods.

"Help us to serve the crowd without flattering it and believe in it without bowing to its idolatries."

—The Western Christian Advocate

SOVIET RUSSIA

By RAMANANDA CHATTERJEE

THE horrors of the French Revolution in the eighteenth century are known to students of history. But in spite of the atrocities of which some of the leading French revolutionists and their comrades and followers were guilty, history has recognised and recorded what was commendable in post-Revolution France. That has not been regarded as an attempt at white-washing the misdeeds of those revolutionists. The revolution in Russia also is associated with many atrocities and much bloodshed. And even now, it is reported that many reprehensible methods are used there by the officers of the Government. Nevertheless, it would be only fair to try to find out whether Soviet Russia is doing anything commendable—not with a view to white-washing the careers of the evil-doers, but for gaining some idea of how things are going on in that vast region of Europe and Asia. The Soviet Union Year-book for 1927* helps the reader to make an attempt in this direction.

The Union of Soviet Socialist Republics was formed on the territory of the old Russian Empire, with some shifting of some frontiers. The population of the U. S. S. R. is composed of more than one hundred different nationalities, speaking different languages and believing in many different religions. These different national and linguistic groups lived in one state under one emperor, the Czar of all the Russias. But it is found that even when the controlling hand of the

great autocrat is withdrawn, these various nationalities continue to live as one political entity in one state. Adverting to the diversities of race, language and religion in India, Britishers have repeatedly declared for our benefit that the yoke of the stranger is the only thing that holds together and can hold together the diverse groups of people living in India, and that if that yoke were withdrawn, it would be impossible for them to form one state. The example of Russia shows that our British friends, patrons and protectors may not be quite infallible as prophets. The diversity in Soviet Russia is, in fact, greater than in India. But there is so much enthusiasm for the Soviet State even among the comparatively backward and less civilised Asiatic nationalities forming part of its population that, for taking part in the tenth anniversary celebrations of the Soviet Republic, women delegates from distant Asiatic regions went all the way from their homes to Moscow.

The birth-rate for the whole Union in 1926 was 42 per cent, and the death-rate 26 per cent. The increase in population thus formed 1.6 per cent, i.e., the same as in the pre-war period, and greater than that in India.

"After the Revolution of November, 1917, fundamental changes were introduced in the political and economic life of the country. The natural resources of the nation and the big works and factories which were formerly privately owned became national property. Industry, transport, foreign trade, and to some extent the internal trade, were now administered by and in the interests of the State, while the land which was formerly the property of the landlords was distributed among the peasants engaged in its cultivation.

* Soviet Union Year-Book, 1927. Compiled and edited by A. A. Santalov and Louis Seard. Ph. D. M. A. London: George Allen Unwin Ltd. Crown 8vo. Pp. 453. Cloth, gilt letters. 7s. 6d. net.

Some of the Delegates from Distant Provinces of the Soviet Union Who Came to Moscow Recently to Take Part in the All-Russia Women's Conference

The government of the country passed into the hands of the representatives of the labouring population."

"The period of restoration of the national economy of the Soviet Union from the decline which was the result of the war and revolution is now nearing its end. The reviving national economy is fast approaching the level of pre-war standards, and a period of development and expansion is opening up before it. The restoration has required great efforts for its achievement, considering that the Soviet Union has stood practically isolated in the world during the last few years and has had almost no credits from foreign countries as a result of the adverse attitude on the part of foreign governments."

Turning to Agriculture, which is Soviet Russia's most important sphere of economic life, we find that the gross agricultural production, which in the year 1921-22 was 50 per cent. of pre-war production, reached 78.9 per cent. of pre-war in 1924-25 and 92 per cent. in 1925-26.

As regards Industry, in 1925-26 the value of the production of industry at pre-war prices was 92 per cent. of that of the pre-war period. At the commencement of February, 1927, the Council of People's Commissaries and the Council of Labour and Defence of the Soviet Union decided to increase industrial production in 1926-27 by 20 per cent. as compared with the previous year.

Industrial production in 1927 must thus have considerably exceeded the pre-war production.

The trade turnover has been increasing year after year. The railway transport system has been developing continually. In the pre-war year 1913 the total length of railway line amounted to 58,162 kilometres. At the end of 1926 the total length of the line was 74,429 kilometres. In future about 2,000 kilometres of new line are to be laid every year.

In the interests of British iron and steel magnates and suppliers of railway stock, etc., the inland waterways of India have been greatly neglected under British rule. Under the Soviet Government water transport has also been extended. In 1913 the length of navigable waterways was 39,942 kilometres; in 1925-26 it was 42,087 kilometres. Considerable work was also done for the reconstruction of the ports and mercantile marine and the improvement of highways.

The Soviet Union is also making progress in the accumulation and increase of basic capital. The number of workers employed in industry, transport and communications, education, health organisations, etc., is con-

stantly increasing; and the average wages per worker is also continually increasing.

The authors have devoted 22 pages of their useful work to agriculture, 51 pages to mineral resources and industry, 20 pages to the policy and practice of concessions, 79 pages to foreign trade, and so on.

The Co-operative movement in all its three branches, Consumers, Agricultural, and Home-Industries, has been making steady progress.

Expenditure for education and cultural purposes has increased by 22 per cent. and has risen to 290 million roubles. Expenditure for defensive purposes amounts to 692 million roubles and shows a comparative reduction in the budget. In India educational expenditure does not bear the same or even nearly the same ratio in military expenditure as it does in Russia.

In 1926-27 the total revenue of the Government of India amounted to Rs. 130,42,97,000, out of which Rs. 51,58,00,000, or approximately 42 per cent. were allotted for military expenditure, as against Russia's 143 per cent. If to the Government of India's revenue the revenues of the Provincial Governments for 1926-27, amounting to Rs. 94,01,16,000, were added, India's military expenditure would still be about 25 per cent. of the total Central and Provincial revenues. That would be about double the proportion of Russia. But is India's army thrice or twice as large and efficient as that of Russia?

In Russia in 1926-27 the state expenditure for education and cultural purposes was about 29 crores of roubles or 45 crores of rupees. In 1924-25 in British India the total public and private educational expenditure amounted to Rs. 20,87,48,319, of which the Government, municipalities and district boards combined contributed Rs. 12,91,27,690. This amount, spent for about double the population of Soviet Russia, is a little more than a quarter of that spent by the latter state for educational and cultural purposes.

"Of the local budget 40.7 per cent. is spent on the requirements of a cultural-educational character; economic expenditure absorbs 28.33 per cent.; administration and justice take 19.21 per cent.; other objects of expenditure take 8.10 per cent. As is seen, a considerable part of the local budget is spent on the educational and cultural needs of the country. This item of expenditure is moreover showing a continuous rise. In the 1924-25 budget it formed 31.7 per cent., and in 1926-27 40.7 per cent."

In the budgets of none of the provinces

of India does education absorb such a large, and administration and justice, such a small proportion of the local revenues, as in Russia.

In the local budgets of Russia about 40.7 per cent. are spent for education. With this let us compare the Bengal Governments' educational expenditure. In the years 1926-27 Bengal's revenues totalled Rs. 10,92,95,000 out of which Rs. 1,86,93,000, or a little more than 12 per cent. were allotted for education. If the Bengal Government spent more than four crores of rupees for education, the proportion would be about that in the local budgets of Russia. This can be done if Bengal gets the 375 lakhs from the jute export duty for education.

"The trade union organisations of the Soviet Union attach great importance to cultural and educational work, and devote much attention to it. About 10 per cent. of their income is devoted to educational work. In addition a special clause inserted in all collective agreements requires employers to pay about 1 per cent. of the total wages bill into the Union's cultural-educational fund."

Do our trade-unions in India have any cultural-educational fund? Do the employers of factory labour pay any amount to any such fund?

"The trade unions aim at satisfying all the cultural requirements of the worker, beginning with the need for acquiring knowledge and ending with the desire for rest and healthy physical exercise. Therefore, in addition to reading rooms, lectures and talks on political and scientific subjects, a prominent place is given to dramatic performances and concerts, sports and competitive games. To satisfy these needs workers are organising clubs, the membership of which is voluntary. There is now one such club to every 2000 trade union members, and the majority of the clubs are at the various factories and establishments."

About 33 per cent. of the members of the clubs are women workers. The trade unions have 6503 libraries with 84,14,040 books. How many, if any, of our trade unions have libraries and how many books have they?

"In 1925 the trade unions of the U. S. S. R. published twenty-two newspapers—six of which were dailies—and eighty-three magazines. There were in addition thirty trade union bulletins and a large number of minor publications and 'wall-newspapers' which are posted up in the factories. The circulation of the trade union newspapers was 9,81,275, of the magazines 9,07,600. This, of course, is quite independent of the circulation of the papers published by the Government, by local Soviets, by the Communist Party, etc."

"In addition the trade unions have undertaken the publication of books. This also is a rapidly growing activity. In 1923, three hundred books were published; in 1924, 791. Of these last 124—with a total edition of 10,41,000 copies—were issued by the Publications Department of the Central Council of Trade Unions."

What are the kinds and amounts of the literary activity, if any, of our trade unions in India?

There are sanatoria and health resorts in Russia, which now accommodate almost exclusively workmen and employees.

Literacy is far greater in Soviet Russia than in India.

"The 1920 census gave the following data in regard to the literacy of the population of the Soviet Union: For every 1,000 males, 617 were literate; 336 of every 1,000 women were literate; while the average number per thousand of the total population was 465. But during the intervening period illiteracy has been gradually reduced by the various campaigns carried on for that purpose."

The various kinds of adult schools form part of these campaigns. In 1924-25 the schools for adult illiterates numbered 42,000 with 21,50,000 pupils; in 1925-26 they numbered 49,804 with 15,99,755 pupils. "The decrease in the number of pupils attending the schools for [adult] illiterates, though the number of this type of school has increased, is explained by the fact that a large number of those receiving instruction have already learned to read and write." The number of those adult illiterates who become literate in one year was 5,50,245. What is India's record under British rule in this respect?

In India according to the census of 1921, among males aged 5 and upwards 139 per thousand among females of the same age 21 per thousand are literate; the figure for the total population of both sexes of that age being 82 per thousand. The proportion of literates in India is, therefore, about one-sixth of that of Russia.

The proportion of literate women in India is one-sixteenth of that in Russia.

According to Chambers's *Encyclopædia* (new edition):

"In 1900 only one-fifth of the [Russian] army recruits could read and write. According to the 1920 census 46·5 per cent of the population were literate (61·7 per cent. of males, 33·6 of females)"

Assuming that the army recruits came from the lower and comparatively more illiterate strata of the population in 1900, it would not be an underestimate to suppose

that for the whole male population of Russia of all classes the literacy figure was 300 per thousand in 1900. After 20 years we find that figure has advanced to 617—an increase of 317 per mille in 20 years. Of these 20 years, only the last ten belong to the Soviet regime—much of it being occupied with bloody revolutions. Let us now compare with these figures the advance in literacy under *par Britannica* (which means, the *Britannic peace*) in India from 1901 to 1921.

Here in 1901, 1911 and 1921, according to the census reports, 98, 106, and 139 per thousand males were counted as literate. The figures for 1901 and 1911 were arrived at by taking into consideration males of all ages; that for 1921 by taking into consideration only males aged 5 and upwards. Calculating the last by taking into consideration males of all ages, we find the figure to be 122 per thousand. So in India in 20 years literacy among males has advanced from 94 to 122 or 24 per thousand, against an increase of 317 for Soviet Russia, which like India includes many groups of people in various stages of civilization.

"According to the figures published by the Central Book Department, the number of books published in 1925 (in Soviet Russia) increased by 60 to 70 per cent. as compared with 1924. In the year 1925 the number of books, in separate titles, amounted to 36,416. This already exceeds the number of books published in the pre-war period. In 1912 the number for the entire Russian Empire was 34,630 books. The number of copies printed in 1925 was nearly twice as great as in 1912—24,20,35,801 as compared with 13,35,61,866."

This shows that in Russia under the Soviet education and the cultivation of letters have spread to a greater extent than under the Tsars. The population of British India is about double that of the Soviet Union. But in 1924-25 in British India only 17,030 books were published; in the Soviet Union 36,416 books were published in 1925. How many copies of the books were printed in the aggregate in India is not to be found in any book of reference, but it is certain that the editions were not as large as those of the books printed in Russia.

We will next consider the different kinds of books published in Russia.

"Of the books published the first place is occupied by social science—45·2 per cent; next come applied science—21·2 per cent; fiction and belles lettres—11·2 per cent; exact science—6·3 per cent; and 16·7 per cent. various other publications. Of the total works published in the Russian

language 945 per cent. were original works and 55 per cent. translations."

No reference book gives any such classification for India. But in Mr. Michael West's book on *Bilingualism*, published by the Bureau of Education, India, there is a table giving the number and classification of Bengali books published from 1910 to 1923 inclusive (pp. 98-99), which is reproduced below :—

Subject of Books.	Number	Subject of Books.	Number
Art	359	Miscellaneous	2383
Geography	533	Philosophy	17
Drama	738	Poetry	1245
Fiction	2123	Politics	63
History			
Geography	1115	Religion	2630
Language	4596	Mathematics	705
Law	80	Natural Science	127
Medicine	511	Travel	84
		Total	17,360

The population of Bengal is about one-third that of the Soviet Union. But in 12½* years 17369 Bengali books were published, and in one year in Russia 36,416 books were published. The figures as to the kinds of books in the lists given above should be noted. Mr. West observes in regard to the Bengali books classified above that Language is swollen by a large number of elementary text-books, that readers of Bengali books must be badly off in respect of Law, Philosophy, Politics, Natural Science, and Travel, and that both relatively and absolutely the output in scientific and technical subjects appears to be extremely meagre.

"The books in other languages than Russian issued in 1923 were divided as follows according to subject: peasant books—777 (53,50,000 copies), economics, politics, public affairs—602 (38,94,750 copies); school and text books—486 (87,67,000 copies); party literature—202 (16,83,500 copies)"

So in Russia even *peasants* required so many as 53,50,000 copies of books in 1925 !

Here are some statistics relating to Soviet newspapers :—

Date.	Number of Papers.	Circulation.
Jan. 1, 1923	507	15,32,910
" 1924	494	22,88,080
" 1925	570	69,56,093
" 1926	591	82,81,820

The increase in the circulation of the peasant papers published in Moscow is shown in the following table :—

* From 1910 to 1913 inclusive is 14 years. But in preparing his table from the Catalogue of the Bengal Library Mr. West could not get copies of it for five quarters.

Paper.

	April 1, 1923.	March 1, 1924.	May 1, 1924.
<i>Krestianskaya Gazetta</i> (Peasants' paper)	—	60,000	2,00,000
<i>Bednota</i> (Poverty)	49,000	49,000	55,000

Whilst in 1923 the circulation of peasant papers constituted 8 per cent. of the total circulation of papers throughout the Union, in 1924 it had risen to 15 per cent. and in February, 1926, to 22.9 per cent. The number of peasant correspondents also rose, and on March 1, 1924, there were 2,500 peasant correspondents working on 65 peasant papers.

During the years 1924 to 1926 the number of papers printed in the various languages of the nationalities throughout the Soviet Union had increased from 108 to 190, but the total circulation increased from 2,38,000 to 9,28,943, i.e., nearly four times. The various types of papers published in the Soviet Union may be classified as follows : Class of Journal. Number in Circulation in

	Feb. 1926.	Feb. 1926.
Peasant	131	19,13,000
National (in non-Russian Languages)	190	9,28,943
Worker	58	12,76,810
Red Army	16	95,980
Young Communist	53	4,71,453
Trade Union	17	8,70,500
Co-operative	53	75,322
General	135	37,25,131
Total	652	83,57,112

In most other countries except the Soviet Union political power is wielded mainly by the nobility or the middle classes, or by both combined. In the Soviet Union power has passed to the industrial workers and peasants. But it must not be supposed that (these classes there are as illiterate and ignorant of the affairs of the world outside their province or country as the corresponding classes in India. The proportion of literates among them is larger than even among our *bhadralok* (gentlemen) classes.

In this article I have compiled from the *Soviet Union Year-Book*, 1927, some of the things which may be said in favour of that State. Much can be said on the other side, too. In the *Labour Magazine* for November, 1927, Mr. Charles Roden Buxton, after showing the bright side of the picture, adds :—

"When one has said all this,—which is so necessary to insist on in view of the prevailing prejudice and ignorance on these important aspects

INDIAN PERIODICALS

About Women

The following paragraphs are taken from *Stri-Dharma* :—

ALL-INDIANISM

The unity of Indian womanhood was well demonstrated at the Women's Day by its Presidents and Speakers. A Bengali woman from Patna, Mrs. P. K. Sen, opened the proceedings. Mrs. Janakibai Bhat of Poona, speaking in Marathi presided at the morning session : Mrs. Kite of Indore, speaking in Hindi, opened the afternoon session, and Dr. Muthulakshmi Ammal, Deputy-President of the Madras Legislative Council presided over the evening session which was opened to men and women and held in the immense Congress Pandal. She spoke in English and Tamil. There were also speakers in Telugu, Tamil and Canarese, and a Mohammedan woman speaker in Urdu. The unity was further emphasised by the opening prayers, Hindu, Christian, Mohammedan and a universal prayer repeated by all together.

NORWAY EQUALISES WIDOW'S RIGHT

Under a law just enacted in Norway widows are given the same right in the property of the deceased husband as widowers have had in the property of the deceased wife. This includes the right to occupy the home. The law became effective on January 1, 1928.

Spread of Bengali Culture

Mr. Rames Basu writes in *The Vira-bharati Quarterly* :—

During the Muhammadan supremacy the Hindu chiefs were generally engaged in fighting their rivals near at hand, or their overlords of the imperial, or the provincial courts. They had practically no time or opportunity to give any attention to cultural expansion. The fundamental and cultural unity of Hindu India was therefore kept up against great political odds.

It was left to the religious leaders to bring the culture of Bengal to the provinces outside Bengal. They were not hampered by political or geographical disadvantages, and their itinerant included places far and near. The Vaishnavas and the Shaktas founded cultural colonies almost throughout north eastern India.

During the latter half of his life Chaitanya-deva himself lived at Puri where the King Pratapnanda Deva became his disciple. The whole of Orissa was roused to a spiritual activity which found expression in literature, art and life. The apostles

Rupa and Sanatan Goswamis were deputed by him, and did evangelical work in re-establishing the glories of Brindaban and writing *smritis* and *rasa-shastras* for Bengal Vaishnavism. Later on Krishnadas Kaviraj and Jiva Goswami took up the task of laying the philosophical foundation of this new school.

The later Goswamis of Bengal influenced the courts of Jeypur, Karauli, Bharatpur, etc. The worship of Radha with Krishna was introduced by them. Viawanath Chakravarty, the celebrated commentator of the Bhagavata, was a power in Brindaban. It is also known that the kings of Tippera adopted Vaishnavism. The disciples of the Advaitacharya preached in Manipur. It is said that the Malla kings of Bhatgaon in Nepal were disciples of Bengali Gurus.

The Vaishnavas preached in the West, the Shaktas in the East. Raja Nam-darayan of Cooch-behar and his brother Shukladhvaja repaired the Kamakhya temple and patronised Assamese literature. It was by the introduction of the culture of the plains that, during the reign of Rudra Singha of Assam, the people were brought to the cultural level of other provinces. Shaktism as practised in Bengal was adopted as the state religion, and the celebrated Krishnaram Nyayavagish, who was commissioned from Navadvipa, became the guru of the kings, and gave directions for the worship of Durga, the reading of the Chandi, etc. The *pandas* of Kamakhya also became his disciples. His descendants are known as 'parvatya gosains'.

Vidyadhar Bhattacharya who is known for his skill in town-planning was at the court of Sawai Jey Sing of Jaipur, and also aided him in equipping his observatory.

The Sarvas of Bengal were not behindhand in claiming their own outside Bengal. Benares the capital of Saivism had attracted the Bengalis from a remote past. According to the tradition of the gurus of the Sumeru Math of Benares, it is known that Santkaracharya elected Iswaracharya Brahmananda Swami who was a Bengali as his successor there. It is also known that the celebrated Sarvananda Thakur of Mehar later on became the *mahanta* (abbot) of his Math and was called Sastha-mahodev-anda-tritha Swami. In the 18th Century the *Kashi nars* became the disciples of this Math. Rani Bhavan of Natore did much for Saivism in Benares.

The peculiar Bengali style of architecture influenced the Hindus and Muslims outside Bengal to a certain extent. It is known that a Bengali architect was requisitioned at the court of Assam. Eastwards, near Maitang, the old capital of Kachar, a hut of this type has been carved out of a boulder and further north-east in Shubargar town a temple of Kali in the pancha-ratna type can

still be seen. Southwards, in Puri, a Bengali temple rises on the south bank of the Markanda tank. Westwards, in Bilhari, the old capital of the Chedi kings, a Bengali *pancha-ratna* temple has been lately discovered, and farther westward, in the tomb of Raja Baktrwar at Alwar, Rajputana, additions with Bengali curved cornices have been found" (J. A. S. B. 1909-P, 141). The new Bengali style of Indo-Saracenic architecture influenced the Muslims. "This style by means of its massive remains often of excellent workmanship, its big vaults, wide corridors, numerous domes, profusely carved brick panels and beautifully coloured glazed tiles, deeply influenced contemporary architects." Its influence is traceable in the works of Sher Shah's dynasty, and still more in Akbar's edifices. Speaking of "Agra, the royal residence", the *Ain* remarked: "It contained more than five hundred buildings of masonry after the beautiful designs of Bengal and Gujarat which masterly sculptor and cunning artists of forms have fashioned as architectural models." A part of Akbar's new palace in the Agra fort was called specifically the Bengali Mahal, presumably because it was built after that style" (J. A. S. B. 1909-P, 148). Bengali roofs are visible in the gates of Banka-bihari temple, the temple of the Seths, and the Alalynbai ghāt in Brindaban. The old temple of Madanmohan at Brindaban, erected by Ghasanada father of Basota Roy of Jessore, is of the early Bengali Math style.

Veterinary Science and Rural Reconstruction

We read in the *Indian Veterinary Journal* :—

We have heard much in recent times of 'Rural Reconstruction.' It is on everybody's lips. It seems to generate there and like many things born of the lips, it does not translate itself into action. The Viceroy talks of it, the Governor echoes it, the Politician advertises it and the Press retails it. The ryot with faded breath looks up to this great army of distinguished units for the promised millennium. He dreams of a new heaven, where he is promised a throne. But soon the realities stare him in the face and he realises that those who promise him a throne in heaven are not able to give him a stool on earth! He soon learns to scorn the well-spun theories, chalked out programmes and with a significant smile considers them as the hobby of those who stand in need of better occupation. He may be right or he may be wrong, but the fact remains that 'Rural Reconstruction' he is more than a reality. What is wanted is honest substantial work and not the bellicose verbosity of which the heaven is weary and earth is sick.

We have perused with good deal of interest the evidence tendered on rural reconstruction before the Lanthingow Commission. Many have spoken about the necessity of proceeding with the reconstruction work on a comprehensive scale. "To serve him (the ryot) simultaneously on every phase of life" has been the solicitation of witness after witness before the Commission. "Education, health, debt-redemption, arbitration, temperance,

agricultural improvements of all sorts, marketing produce, subsidiary industries" have all been suggested. But none has spoken about the expansion of the Veterinary Department as an important factor to preserve the cattle wealth of the ryot, under the new dispensation.

What will "debt-redemption" mean if the poor ryot is going to lose his cattle year after year from preventable causes? Will "Agricultural improvements of all sorts" mean much if the land is depleted of much of its cattle from the ravages of epizootics? Some witnesses have spoken about "the limited extent of success of the Veterinary Department." What more can be expected under the existing condition of one Veterinarian for every 700 square miles to treat nearly 1½ lakhs of cattle!

If ever any scheme on rural reconstruction is going to materialise at all, Veterinary Science should find an important place under that scheme. There ought to be Cattle Insurance Societies, a hospital for every tahsil or taluk, sera-producing centres for every province, preventive inoculation on a wider scale and Research Laboratories in all the provinces. All these mean expansion of the Veterinary department and science and unless and until that is done, the cattle wealth of our land is bound to be lost to the great economic distress of the ryot. His happiness under the promised "reconstruction" will be more a myth than a reality and we only hope that our voice will not be a voice in the wilderness.

Adult Education

Mr. T. V. Appasudaram writes in the *Indian Educator* :—

In view of the new phases of life through which India is passing, the need for adult education should receive special attention. It should claim a large share of attention in view of the new era of political expansion opening up before India in these days. A persistent continuance of illiteracy among the masses is obviously antagonistic to political advancement. Many of the adults are now voters and need education to understand the value of franchise and to exercise it in a direction which will contribute to national progress. Again, it is adults that control life. If education is to grow from strength to strength, these adults must be in sympathy with the new things their children learn at schools. Could you expect an illiterate parent to sympathise with the mass movement? No. On the contrary, it is the reaction exercised by the illiterate parent against sending his children to school that is a standing menace to the progress of popular education in India. When adults grow in illiteracy, it is hard to find any incentive to educating the children in schools. The general spread of literacy among parents would help to a large extent towards creating an atmosphere in favour of schooling.

Radhaswamists at Dayal Bagh, Agra

We read in the *Dayal Bagh Herald* :—

The communism of Dayal Bagh is inspired by a religious purpose rather than economic or politi-

cal. I do not of course, mean to minimise the importance of the system under which profiteering is made impossible, in so far as the industries of Dayal Bagh are concerned, (as the profits arising from manufacture will go to support the educational institutions of Dayal Bagh). Nor do I mean to underrate the significance of the ordinance under which those who are building houses in Dayal Bagh have only a life interest, as the houses they build pass on to the trust after them. For it is obvious that nationalisation of property, if carried on extensively and in the essentially peaceful way in which it is being done in Dayal Bagh, can have far-reaching effects. The experiment in religious communism (for that is what it comes to) which is being made in Dayal Bagh is, in any case, interesting and is reminiscent of similar experiments made before. There was, e. g., the institution of "Betul Mal" in the time of the prophet Mahomed, when the rich men gave up their wealth and lived the common life of their poor brothers-in-faith. Similar things have happened in the time of other great religious leaders.

In sharp contrast with the ancient religious tradition, however, stands out the fact that the ascetic vein, in the philosophy of life for which Dayal Bagh stands, appears to be very much less pronounced. They, in Dayal Bagh, it seems, are trying to strike a *via media* between what is called the modern materialistic civilisation and the ancient ascetic spiritual tradition. Thus they strongly discourage the tendency to retire from active life for purposes of religious meditation. On the other hand, they insist that the "*grihastha ashrama*" (the wedded and the family state) is, in many ways, suitable for *Sadhana* (spiritual culture). They do not of course underrate of self-control. But enforced celibacy (which in India is generally associated with the life of a "*Sannyasi*" who has generally renounced the world) is not always—in fact, is not often—the most effective way of being celibate in thought. On the other hand, one, keen on continence and self-discipline, can continue to have the temper of a "*Brahmachari*" (celibate) even though one is in the wedded state.

Decline and Future Possibilities of Indian Coal Industry

Mr. B. Mitter contributes to *Welfare* an important article on the above subject, well supported by facts and figures. He begins by saying:—

Coal is one of the five chief productions of India, the others being Jute, Tea, Rice and Wheat. Prior to the last Great War the Indian Coal Industry had been in a progressively prosperous condition. But since the Armistice which suspended the military operations and the subsequent Treaty of Versailles which ended the Armageddon position of the industry, at least so far as the Indian section of the business is concerned, has been getting darker and darker and at the present moment is shrouded in the deepest gloom unrelieved by even the faintest glow heralding the approach of its early revival. It is the second class collieries that have been

hit and hit very hard and have collapsed hopelessly. Indian colliery proprietors persistently complain that many of their collieries have been classed as second class most arbitrarily.

Various causes have operated to bring about this precarious position. A careful examination of the figures noted hereafter will reveal that the causes which contributed to effect this collapse are:—

- (1) The Reaction after the boom.
- (2) Competition of Foreign Coal in the home market.
- (3) Loss of the Export Markets.
- (4) Supplanting of coal by other kinds of fuel.
- (5) Utilisation of Electricity in place of Coal.
- (6) Owning of collieries by the Chief Consumers of Coal.
- (7) Apathy of the State.

He proceeds to examine each of the different causes item by item in order to try to find out what share each has had in bringing about this disastrous condition. He then suggests and examines the following remedies one by one —

- (a) State Aid
- (b) Centralisation of the Industry.
- (c) Culsation of coal in other more profitable manner.

Freedom for Hindu Women on Ancient Lines

Discussing the problem of Hindu Social Reform in *Vedanta Kesari*, Swami Iswarananda takes as an example the question of the free mingling of the sexes in India and the freedom of women.

The orthodox are terribly afraid to think of it, while the reformer wants it at any cost. What is the fear of the orthodox in this matter? That his daughter or son might lose her or his chastity and purity. That is the innate thought working in their minds. But why not our women combine the freedom of the Westerners with the chastity and purity for which the Hindu woman has lived and died? Did not Sita live in the midst of Rakshasas for months and years? Did not Savitri go from place to place in search of her mate? Did not the Brahmadans of old go from court to court fearlessly challenging the great savants of the time? Thus we find that the idea of freedom of women is not new to Hindu society, but then the reform party forgets that freedom had carried with it tremendous will-power and the fire of purity and self-control nurtured in the ancient schools of Brahmacharya. Where that is absent free mingling of the sexes becomes positively dangerous, as the Western nations are slowly finding it out for themselves. And when there is this necessary safeguard you will find that no orthodox will stand against the freedom of women. Thus we find that where the ideals of the race are kept intact, we can allow all other conditions to vary as much as possible. Therefore the first duty of

the reformer is to educate the women in the ideals of the race as in olden days and leave her to herself so that she may solve her own problems.

Indian "Political. Awakening" in the 19th Century

Lala Hardayal writes in *The Standard Bearer* :

Let us examine what the "awakening" was like. What were the antecedents of the "leaders" who had emerged from the colleges with the new gospel of political peurility and emasculation, which was to be preached from the platform of that small body with a big name, "The Indian National Congress."

Mr. Surendra Nath Banerjee, the orator of the "awakening," established a college for which he could not find the name of any Indian hero, and so had to fix on Ripon. He praised Alexander Duff, the Christian missionary in terms of warm appreciation. Then again he pleaded for simultaneous examinations, which should enable more Indians to ruin their country by joining an aristocratic service which holds itself aloof from the masses. Mr. Ranade was thrice invited to accept the honour and dignity of the Dewan of large Hindu States, but his denationalized proclivities led him to cling to his post under the British Government. This was the "new spirit" which taught Hindu scholars to prefer subordinate places under the British to honour and power under a Hindu Raja in a free State. Mr. Mehta was so great a friend of India that he called the British educational system "a great boon," while at the same time, he was convinced that this system would clear the way for Christianity. He was the man who uttered that blasphemous sentence which makes every Hindu burn with shame—"Lord Ripon, Lord Buddha styled on earth."

This champion of the "awakening" compared a Christian Vicar to a Hindu avatar, one of the greatest men; if not the greatest man indeed, that the world has yet produced. He also declared that "his faith was large even in Anglo-Indians." And last but not least, we had Mr. Gokhale, one of those patriots who could not choose a better name for the college which was supported by their noble self-sacrifice than of an that English Governor of Bombay.

So much for the apostles of this "new" dispensation, which has been the product of British schools and colleges and which postulates permanent subordination and inferiority to Englishmen as its ideal.

Historical Importance of the Puranas

Mr. S. Bhimasankara Rao observes in the *Quarterly Journal of the Andhra Historical Research Society* :-

For a long-time past, it has been the prevailing impression and also the accepted opinion of many orientalists that the puranas contain little or nothing of any real historical value and were merely fairy tales proceeding from the fertile imagination of grateful bards to glorify their royal patrons. The present attitude of the modern

scholarship towards these documents has been changed and it was reserved for a Bengal Civilian, High Court Judge the late Mr. F. E. Pargue, to rescue them from oblivion and to appraise their real historical value in 1913 by his publication of "Historical Tradition" which gives us the researches carried on by him into this neglected field of Puranas for many years. He has demonstrated that underneath the mass of legend there lies a fairly coherent skeleton of historical tradition mainly representing the standpoint of Kshatriyas and not seldom contradicting the orthodox Brahmanic texts and this he has with great skill endeavoured to reconstruct. It had been shown that these puranas contained valuable historical information and the description of ancient monarchs and their realms given in them are trustworthy and his publication of the *Drahyas* of the Kalage in accordance with the historical facts narrated in the puranas, has opened the eyes of all orientalists and a critical study of the puranas on modern scientific lines has been inaugurated. It appears that the ancient Indians had extensive commercial dealings with Africa and in the course of their commercial ventures they had to find out the very sources of the river Nile in Egypt and a lot of geographical information was embedded in the Puranas which nobody could discover till now. The discovery of the sources of Nile engaged the attention of many British explorers who could not succeed. It was only very recently Lt. Col. Speke was able to discover the sources of the Nile from a map which was constructed on the information given in the Puranas by Col. Wilford in his Asiatic researches. In his book on the discovery of the sources of the Nile, Lieut. Speke, the modern discoverer of the origin of the river Nile, stated that the information which the puranas contained about the sources of the river Nile was so accurate that when planning his discovery of the sources of Nile, he secured best information from a map reconstructed out of the Puranas based on a map drawn by Col. Wilford from the information contained in the Puranas. This map traced the course of the great river Nile-Krishna through Kusadipa, the ancient Indian name for Africa, from a great lake in Chaudrasthana. It has therefore been abundantly proved that the statements contained in the puranas with regard to the various places of the world, with which the ancient Indians had commercial dealings are geographically correct. Mr. P. T. Srinivasa Iyengar, the eminent South Indian historian referred to the fact in his article on South Africa published in the Hindu.

Chiefs' Colleges

The *Educational Review* writes :

We have referred, from time to time, to the unsatisfactory nature of the Chiefs' Colleges in India in so far as they tend to encourage a feeling of unhealthy separatism on the part of the sons of the ruling princes. The members of the royal family in England do not think it beneath their dignity to send their children to the Universities of Oxford and Cambridge, and there is no reason why the petty feudatory princes of India should think it obligatory on their part to have a separate

institution for themselves. Members of the families of ruling princes have everything to gain in the development of intellectual ability as well as character by association with the educated middle classes in India, and the huge white elephants of the Rajkumar Colleges had better cease to exist as soon as practicable. While European domination has practically ceased in many of the higher educational institutions of this country, it is perpetuated even to-day in all the Rajkumar Colleges, where the prospective ruler of an Indian State is, more or less, compelled to look upon only members of the European community as leaders and men of ability.

A Principal's Recreation

Principal H. E. Stapleton of the Calcutta Presidency College writes in the *Magazine* of that College:—

The first thing that comes into my head is to recommend to every one that if they wish to enjoy a holiday properly, they should do something which is utterly different to their ordinary occupation. Last time I was on leave, I devoted myself (needless to say at my wife's behest) to endeavouring to help in the production of pullets that—unlike the ordinary barn-door hen which only condescends to lay about 80 eggs a year—would lay three times that number. This time I found our homestead in Jersey being devoted more and more to that most admirable of all animals, the Jersey cow. An Indian cow is regarded as somewhat remarkable if it yields 5 seers a day, whereas every Jersey cow gives at least 10 seers, with 5 p. c. Butter Fat, and one of our cows for some time after it calved in June gave well over 22 seers of milk. Now if you are fortunate enough to own such cows they must be fed—preferably with food grown on the place to save unnecessary expenditure; so I soon found myself turned into a farmer, diligently supervising the ploughing of land to sow with oats, mangels and above all, that most useful of all fodder crops, lucerne, while experiments were also begun early in the spring with a new fodder crop, Marrow-stem Kale—a sort of glorified cabbage with a long thick stem which is much appreciated by cattle. A drought in April and May proved a severe handicap to operations, but fortunately the weather changed, and, with plenty of rain for the rest of the growing season, everything grew well, so that when I left Jersey in September, ample crops were available to carry our small herd (now increased by 3 young heifers) over the ensuing winter.

Keshub's Cure for Communalism

Mr. T. L. Vaswani observes in *The Kalpaka*:—

Communalism will not be cured by compacts nor by each community insisting on its "rights". A new understanding, a new spirit of reason, a new appreciation of the essential Call of Religion as distinguished from sectarianism will indicate that there are "rights" which are wrong. Not by insistence on but by sacrifice of wrong irrational

rights may the Hindus and Muslims attain to that unity which is our crying need to-day. Easy going "tolerance" will not take us far. The spirit of Humanism is needed. Its essence is a profound belief in the rights of man as man. These are right "rights". Religions were not meant to be cults of strife and murder. Religions were meant to be servants of Humanity. This realised Sri Keshub Chandra Sen. I bring to his blessed memory my flowers of love and reverence and I salute him as one of our greatest prophets of the Religion of Humanity and Harmony.

Caste in the Arya Samaja

Professor Ramesh Chandra Banerji expresses the opinion in an article in the *Vedic Magazine*—

The evils of the remnant of caste feelings are doing equal, if not more, mischief in the Samaja. Some time back, I read in *The Arya Mitra* of Agra, that a non-Hindu convert was experiencing great difficulties in getting his sons married, although he entered the Samaja some twenty years ago. Why do we do Shuddhi work at all, if we cannot at once confer all the rights and privileges etc., on the converts? If we cannot have inter-dining and inter-marriage with those who come to us, why this farce of Shuddhi? A single instance of such invidious social differences will do us more harm than any good one hundred much advertised Shuddhis can do. Caste prejudices are at the root of this evil that separates Aryas from Aryas. I know there are many Aryas who are liberal-minded, who have risen above provincial and caste narrowness. But what is needed is this that the mass of the Aryas should be freed from the bond of caste prejudices and provincial narrowness. Punjabi Aryas must be thanked for their comparative broad-mindedness in these matters; but much reform is needed in other provinces.

'Our Weak Physique'

We read in *The Volunteer*:—

It is not necessary to repeat that day by day we are going physically weak. That is one of main reasons why we should pay more attention to the physical efficiency of the Indian youths. Our weakness has made us dwarfs also. And we are afraid that if the state of things continues unchecked we will be wiped out.

The Hindu of the Panjab has the best all-round physique and comes nearest the European standard followed by the Mahomedan, the Hindu of Bengal and the Parsi. The Hindu of the Central and the United Provinces is heavier than the Parsi at the lower ages but at ages over 35 the latter becomes heavier than the Hindu and gradually draws away until a very marked difference in weight is observed at the higher ages.

There is little difference between the Hindu of the Central and of the United Provinces and the Hindu of Bengal, but it will be observed that at ages above 35 the Hindu of the Central and of

the 'United Province' is of a remarkably good build, if short in stature, but he does not maintain anything like the same standard at the higher statures, while the Hindu of Bengal is rather inclined to obesity at the higher ages.

'It is therefore, our primary duty to improve the physique of our people and make them strong to work and sacrifice for the nation which is yet to be built.

The Teaching of Patriotism in Christian Schools

Irene 'Mason' Harper observes in the *National Christian Council Review*:

Schools should teach life at every point. Education must not only prepare boys and girls for life in the future, but equip them for meeting the problems of life in the present. As nationalism and intercommunal strife are undoubtedly major present-day problems in India, which condition the lives of children and youths as well as adults, it seems impossible to ignore the need for teaching patriotism in Indian schools.

The desire and need for some teaching along these lines is growing. Some demands have been made of the schools by parents and educators for a fuller recognition of Indian culture and aspirations, but little has been done to meet these demands. Training in good citizenship is also an imperative need. It is difficult to understand how the citizens of this country ten or fifteen years from now can measure up to their greater responsibilities, unless they are prepared for them in the schools of today. Particularly in the Christian community does patriotism need to be fostered. In the past, Mission schools, especially boarding schools, have been criticised on the ground that they have tended to denationalise the Christian community. The present trend of the community, urged by Indian Christian leaders, is toward fuller identification with national life. No one who has watched the development of Christian influence in national affairs, and who considers the possibilities of consecrated, patriotic Christian leadership, can doubt the duty of Christian schools to train that type of leadership.

It may be easily admitted that something should be done, and is being done, along these lines in the colleges and high schools. But emphasis should be put upon the need of teaching patriotism and good citizenship in elementary schools as well.

The Mother in the Hindu Home

The following passages are taken from hitherto unpublished lectures of Swami Vivekananda delivered in California now Published in *Prabuddha Bharata* :—

There she is—the Hindu mother. The son's wife comes in as her daughter, just as the mother's own daughter married and went out; so her son married and brought in another daughter, and she has to fall in line under the government of the queen of queens, any mother. Even I, who never married, belonging to an Order that never marries would be disgusted if my wife, supposing I had

married, dared to displease my mother. I would be disgusted. Why? Don't I worship my mother? Why should not her daughter-in-law? Whom I worship, why not she? Who is she, then, that would try to ride over my head and govern my mother? She has to wait till her womanhood is fulfilled; and the one thing that fulfils womanhood, that is womanliness in woman, is motherhood. Wait till she becomes a mother; then she will have the same right. That, according to the Hindu mind, is the great mission of woman—to become a mother. But Oh, how different! Oh! how different! My father and mother fasted and prayed, for years and years, so that I would be born. They pray for child before he is born. Says our great law-giver, Manu, giving the definition of an Aryan: He is "He is the Aryan, who is born through prayer." Every child not born through prayer is illegitimate, according to the great law-giver. This child must be prayed for. Those children that come with curses, that slip into the world, just in a moment of inadvertence, because that could not be prevented—what can we expect of such progeny? Mothers of America, think, oh that I think the heart of your hearts, are you ready to be women? Not any question of race or country, or that false sentiment of national pride. Who dares to be proud in this mortal life of ours, this world of woes and miseries? What are we before this infinite form of God? But I ask you the question to-night: "Do you all pray for the children to come? Are you thankful to be mothers, or not? Do you think that you are sanctified by motherhood, or not?" Ask that of your minds. If you do not, your marriage is a lie, your womanhood is false, your education is superstition, and your children if they come without prayer, will prove a curse to humanity.

See the different ideals now coming before us. From motherhood comes tremendous responsibility. There is the basis, start from that. Well, why is mother to be worshipped so much? Because our books teach that is the pre-natal influence that gives the impetus to the child for good or evil.

The Dominion Status

In the *D. A. V. College Union Magazine* Prof. Sri Ram explains what the Dominion status within the British Empire means at present. After showing how the supremacy of the dominions has been recognised in their internal affairs, he writes, in part:—

That the British dominions enjoy representation in the league not simply as members of the British Empire to add to its voting power is now more than admitted. Its implications were brought home to the British Government when the Irish Free State representatives insisted on getting the 'Treaty' between the British Government and the Republic (Provisional) Government of Ireland transferred to the league office. This recognition has fortified the Irish constitution with an international law—'a treaty of the Treaty' by Great Britain can bring about an international crisis. Thus one of the dominion constitutions at least has now become an international instrument.

The power of crediting ambassadors and of receiving them has also been conferred upon the

British Dominions. Canada was again first in this field. In 1921 the Irish Free State was also given the same power of representation in the U. S. A. or even elsewhere if she so liked.

In another way also has the autonomous position of the dominions been recognized. The spoils of the last war were distributed among the victors as mandated territories. These territories are to be governed by the mandatory powers under the general supervision of the League. Here is a task in performing which the dominions are responsible not to the British government but to an international body, the League of Nations. Thus the Union of South Africa governs S. W. Africa, and Australia rules over New Guinea. This is another recognition of the international position of the dominions.

Look at it, however we will, we shall thus find that the dominions now fall very little short of the international position of independent states. They enjoy most of the amenities of independent states without many of their troublesome responsibilities. They are members of a powerful league which includes a very large area of the world. They need not to go out to seek allies, they need not trouble themselves to found and maintain ever-shifting ententes and alliances.

But does not the fact of being "without many of the troublesome responsibilities" of independent states prevent the Dominions from developing the strength to face such responsibilities, and thus keeps them weak?

The Educational Situation in China

Dr. T. Z. Koo writes in the *Young Men of India* :—

Earlier in the year, is looked as if many of our schools and universities, both Government and private, would not be able to open their doors this autumn. Educational institutions in North China were having a difficult time because they were suspected by the militarists as hot beds of revolutionary thought and propaganda. In Nationalist territory, all schools are undergoing a complete reorganization. But contrary to expectations, nearly all schools have opened. Government schools like the Tungh University in Yunnan the First Chongshan University in Canton, the Third Chinese University in Hangchow the Fourth Chongshan University in Nanking, the National University in Peking, the Tung Pei University in Moukden and others have commenced work. Private educational institutions like Amoy University in Fukien, Fuh Tan and Kwanghua Universities in Shanghai, and Nankai University in Tientsin are carrying on as usual. Christian schools like Canton Christian College Hangchow Christian College, Fukien Christian University, Soochow University, Shanghai Baptist College Nanking University, Qinghai College, West China University, Shantung Christian University, Yen Ching University are open and most of them are crowded to their utmost capacity with students. The only notable exception to this rule is Hipeh and Hinnan where all schools are ordered closed for six months in an effort to clean out communistic students.

The Future of Hand Spinning.

Mr. N. O. Ranga observes in the *Indian Journal of Economics* :—

To think of making "Hand Ginning and Spinning" as one of the prominent industries of the country as hand-weaving is, will be economically unsound. For whereas the hand-loom weavers have to compete only with the weaving mills; Khaddar has to compete with both spinning and weaving mills, and it is so quite a hopeless task. To sell Khaddar at the same prices as the mill made cloth is impossible, unless the wages paid to the ginner, cleaners, spinners and weavers are even much lower than at present, when it may not be worth while for the spinners and others to spend their time upon this work at all.

It is possible to argue that Khaddar can be and needs to be merely an auxiliary employment in the country to supplement the earnings of the ryots. It is also one of the chief industries which can be used to relieve the distress due to unemployment. If the State recognises the right of every worker, "who is able to work, willing to work, and unable to find work" to live and work, as it has done in England, then it would be worth while for the State to employ some of the workers on something rather than keep them idle and maintain them at its cost. Hand Spinning is the only prominent industry which can be organised on a national scale, and which can give employment to millions, and yet whose products can really find a market, provided the same prices as those of mill made cotton are charged. In that case, the Government would have to subsidise this industry; but it would pay considerably less than what it would have to pay on unemployment relief, if no work could be found for the unemployed.

We need not fear that khaddar will not be sold at all, for after all the country that is affected by railways and foreign imports is smaller than that which is yet uninfluenced by these things and it will be some generations all the country adopts finer kinds of clothes, since khaddar is more durable than the mill cloth and is more suitable to the needs of the peasantry and is therefore better liked by them.

The greatest achievement of the khaddar movement is that it has shown to the public and the Government that it is necessary to take urgent and effective steps to minimise the periods of unemployment. It has also demonstrated the economic potentialities of the spinning wheel and has provided a new means of relief for the famine-stricken areas. It is due to this movement that the Madras Ministry, the Mysore Government and the Bengal Government have accepted the Charka as one of the very effective means for relieving the unemployed.

Four Great Tamil Works

Pandit N. Chengalvarayan writes in the *Quarterly Journal of the Mythic Society* :—

Four great works of this period, viz. *Kural* by Thuvallavar, *Akathigal* by Nallan Thuvavar, *Chirappathakaram* by Ilanko-Adigal and *Manimekalai* by Chelvanar, are of outstanding importance. These furnish ample materials for studying the histories and civilization of the ancient Tamils.

In this literature we find a true and faithful picture of the social and political condition, the habits and manners of the Tamils, preserved in an enduring form. The monarchs of South India, besides patronizing education, took keen interest in developing the science and practice of fine arts, such as music, dancing, painting, sculpture and architecture.

There were several religions in South India in olden days. Among them Shaivism and Vaishnavism deserve special mention. Religious toleration was one of the most striking features of Tamil society.

"Can We Develop Mechano-Yogic Therapy?"

Yoga-Mimansa discusses the above question and writes in part :—

By *Mechano-Yogic Therapy* we propose to denote that system of treatment where the physiological advantages of Yogic exercises would be secured from mechanical contrivances used by patients who will themselves remain absolutely or at least partially passive.

Now the possibility of developing this new therapy will depend upon the possibility of finding out suitable mechanical contrivances which could be used on the same principles that underlie Yogic Therapy and which would lead to the same results.

Yogic Therapy proposes to give health to the degenerated organs by—

i. Improving the nerves, glands or muscles responsible for the health of those organs.

ii. Removing the offending matter causing pathological conditions therein; and

iii. Oxygenating the blood in general.

This is accomplished by—

i. Bringing a richer blood supply to the nerves, glands and muscles concerned, with the help of poses and the force of gravity.

ii. Massage automatic or otherwise.

iii. Muscle movements promoting blood circulation and giving massage.

iv. Respiratory exercises.

It is possible to invent mechanical substitutes for the different Yogic exercises. Although these substitutes can never have the efficacy of the original practices, yet they serve the same purpose on a humbler scale and in a few cases have some advantages over the original. So the answer to the question heading the article is clear and we unhesitatingly declare that we can develop Mechano-Yogic Therapy.

Possibilities of Eri-Silk in Bihar

Mr. M. N. De writes in the *Mysore Economic Journal* :

Assam is the home of Eri Silk. Eri silk is the product of an insect like mulberry, tasar and muga and other kinds of natural silk. It feeds on castor and is fully domesticated. Hitherto it has been cultivated in the Assam Valley, but now with the facilities for obtaining healthy

eggs from Bhagalpur and other places, its cultivation can be carried on in Bihar and Orissa from the beginning of July, as soon as the monsoon breaks out, to the end of February, when hot and dry winds do not begin to blow. It is unsuited during March, April and May, when hot and dry winds continue to blow and the atmosphere is laden with minute particles of dust. The rearing is very simple and can be done on a small scale when once it has been seen. The production of thread and cloth offers no difficulties to people accustomed to spinning and weaving cotton, and where there is a demand for light profitable work, such as can be done by women and children. With the favourable climatic conditions of the Province, the industry is capable of wide extension as a Cottage Industry where castor grows abundantly. The worms are strong and stand diseases and rough handling. It is pre-eminently suited as a Cottage industry and the work involved is simple and inexpensive and can be easily carried on in Tatti Houses. The cultivator can expect to derive an extra income by providing work for his family during the recess between agricultural operations. The margin of profit in the industry is however very small and the utmost economy has to be practised while rearing the worms. The rearing should be done on a small scale in one of the dwelling rooms, it will not pay if done on a large scale with hired labour. It serves as an excellent object lesson for studying insect life for children in schools.

The Telegraphs "Clerical Review."

The Telegraph Review writes :—

It is the irony of fate that the Government of India should have, after mature deliberation, thought fit to give effect to a scheme of revision of pay of the Clerical staff employed in Telegraph offices with the view, we are told, of equalizing the pay of the staff with that of the staff of similar status in Post offices. The logic or justification of this step remains quite a mystery and, passes all common sense. If the mere appellation "Clerk" was prehension. If the Government in the only criterion that guided the Government in equalizing the status of the Telegraph clerks with that of the Postal clerks or at least that section of Telegraph clerks designated as Signal Room Clerks we are afraid the Government of India are not correct and have inflicted a serious injustice on the helpless men and also given a rude shock to the sense of justice and equity. The nature of the duties and responsibilities and the conditions of service of the Signal Room Clerks are unique and there can be no comparison whatsoever with the Postal Clerks and yet we are told that their positions are similar. In the face of the facts that their hours of duty and nature of work are made equal with Postal clerks who have no night duties and have less hard work. Then again, supposing that this is so, may we inquire, with due deference, who might be the poor creatures on the Postal side with whom we are to compare the Clerks of the novel class III? Are we to find their peers among the Postal Delivery peons or among the ordinary sorters and mail-van drivers of the Railway Mail Service Branch?

Rulers of the Indian States

Mr. C. K. Patel writes in *The Indus* :—

The princes have their own ways and channels of spending. Thus rulers, in general require a larger privy purse than His Majesty George V. Out of the estimated revenue for the years 1922 of the British Government, put down at £1,216,650,000 (which can safely be taken as an average), £110,000 was set aside for Their Majesties' privy purse which is a percentage amounting to 0.09 of the total revenue. On the other hand the privy purse of Indian princes devours in several cases 50 per cent. of the total revenues of the State. So enlightened a ruler as His Highness the Gaekwar of Baroda requires 20 lacs of rupees for his privy purse, in addition to what is necessary for the heir apparent and other family members. Twenty lacs of rupees amount, roughly, to 10 per cent. of the whole of revenues; and besides that 2 per cent. of the revenues are set apart for the heir apparent and other members of the royal family. This is an exceptional case, but as a rule petty rulers in Rajputana and Kathiawar require almost half of the revenues for their privy purse. And how is this amount spent? It is spent, in most cases, in chicanery at the Court, and frequent pilgrimages to European countries. These facts are so open that they require no proof, but, as a proof, we may we adduce the Mumbaz case and the scandal known as "Mr. A's" case in England. Many Princes instead of looking after their Government spend their time in annual visits to European countries.

Birth Control

The Week thus summarises portions of an article published in the *Yale Scientific Magazine* :—

One is grateful to Dr. Huntington who has taken what we have called a self evident proposition and tested it scientifically in a given case, i.e. the careers of 1700 graduates of Yale University who left College many years ago, whose positions in life were ascertained and whose families complete," as he puts it in a survey of his investigations just published in the *Yale Scientific Magazine*. Now he found, first, that the most successful men "are married in much larger proportions than the least successful;" secondly, that the most successful "tend to marry somewhat earlier than the least successful;" thirdly, that "among the most successful, less than eighty per cent. have children, whereas among the least successful this falls to forty per cent. The net result is that the most successful on an average have about three times as many children as the least successful."

Dr. Huntington answers the question, "But what about the children in the larger families?" Studying 1,700 men who graduated at Yale brilliantly in the period 1922-1926, he found that "the classroom work for the entire four years of college shows a well-nigh perfect gradation from relatively low marks, on an average, among those who were the only children of their parents, up to a fairly high average among those coming from families of six or more." Nor was this superiority confined to the class-room. Students who had five, six, or more brothers and sisters "decidedly excel those from the smaller families, in literary, dramatic, religious and musical activities, in managing athletic teams, in student government, and the like." Finally, even the star athletes come from the larger families "That popular notion that children are benefited when families are limited to two", concludes Dr. Huntington, "is completely wrong as far as Yale College graduates are concerned. The bigger the family, the more likely a boy is to succeed in college."

Here are some facts, scientifically established at that. Unpalatable to birth preventers, no doubt. But facts.

White Men Advised to Dye Their Bodies in the Tropics

Mr. Steven Norris writes in *The British Empire Review* :—

It is actinic heat which is mainly productive of the symptoms of heat-distress.

Now, from the fair Norwegian (or "Nordic") type southward through the populations of Southern Europe, ability to withstand the effects of excessive heat is found to exist in direct proportion to the "index of nigrescence" (i.e. skin-blackness) prevalent among these people. The fair skin of the Nordic admits a maximum of these deleterious "actinic rays," whereas the dense black colouration of the Negro excludes the greater part of them. The freckles which appear on the fairest Northern skins are a feeble attempt on nature's part to call up a little pigmentation to protect the underlying nerves and tissues from the sun (possibly this attenuated pigmentation indicates a remote trace of southern race). The European of the Mediterranean basin, falling, as he does, midway between the Nordic and the Negro, is thus able to bear without distress considerable exposure to semi-tropical sunlight.

At present, attempts to combat the debilitating effects of exposure to tropical heat are made chiefly through the medium of clothing. White

is largely employed to reflect the "superficial" heat of the sun's rays. Thus we have the white pith helmet, reflecting the heat rays and protecting and shading the head and face, and the white drill suit. The use of red flannel sewn into the clothes, and covering the more vital centres of the body—e.g. the spine—has been found to diminish very considerably the penetration of the harmful "actinic" sun-rays.

We would suggest, however, that the next step in the search for immunity should be along the lines of "taking a page out of nature's own book." In other words, nature's own means of immunising her creatures should be studied, with a view to applying their principles to our own particular problem.

To achieve this end, the writer suggests that the custom should be introduced among white tropical populations of *dyeing* the body, by means of a bath taken in an indelible (or nearly so) and non-poisonous vegetable dye to a colour equalling in opacity the pigmentation of the negro. Requisites of such a dye will be: a fine, penetrative fluidity, having no clogging effect upon the pores; proof to perspiration, and permanent over a period of weeks or months—and renewable as often as the wearing effects of friction and washing make it necessary. Regarding the colour, research may show that in the case of Whites there are colours more effectually protective than nature's unvarying black. To ascertain the most suitable ingredients and colouration for the dye, research should be undertaken on this *Imperially important* question by one of the departments of tropical research situate on the spot.

In conclusion, we might mention that in deference to colour prejudice—which would hardly consent to the pigmentation by Whites of the visible parts of the body—it is probable that the face and hands might be immunised when taking the dye-bath were they previously rubbed over with oil or grease. The scalp however, it would in all probability be advisable to dye. The dye should be made commercially available, and bathing establishments provided, as ordinary adjuncts to every-day life.

Were it found possible, upon research, to introduce such a simple and effective method of combating excessive heat as we have proposed, the greatest bugbear of white life in the Tropics would have been removed. The knowledge that such a protective measure was available would awaken a new interest in tropical colonisation. And by its extensive adoption thousands of square miles of tropical British territory, now *desertic*, would become, automatically, eligible for white settlement.

The Public Library as a Factor in Education

We take the following passages from an article to *Current History* by Mr. George F. Bowerman, Librarian, Public Library, Washington, D. C.:

The free public library, still an under-developed educational agency, has the capacity for becoming a highly effective complement of all formal education and a universal supplement of all in-

formal education. The library as continuation school offers to people of all tastes, of all degrees of literacy and aptitude, of all ages, elective courses in every field of knowledge. Parallel with accelerating the growth to numbers of those who are prolonging their school life is rapid enlargement of the fraction who feel the need beyond school for further educational equipment to meet the problems of life. The function of the library is not only to stand ready, but to make the initial move to capture this swelling array of those who pass through the schools, to win them to the idea that education is a never-ending process, to place the world of print at their disposal and to supply the skilled guidance needed to make their adult lives efficient, interesting and sane.

In 1921 the American Library Association adopted as a reasonable minimum for good public library service, 11 per capita, with more than that needed for the development of a program of trained library service. A number of cities are spending considerably more than 11 per capita; among them Cleveland 11.54; Boston, 11.18; Portland, Ore., 11.13; Indianapolis, 11.01; Springfield, Mass., 11.07, and Evansville, Ind., Berkeley, Cal., and Davenport Ia., 11.04 each.

For the protection of society against the fruitless or vicious use of leisure time, for the avoidance of still greater expenditure on juvenile and other courts, charitable and correctional institutions for good citizenship insurance, will not "long-headed" Americans come to see the value of spending more money on their public libraries, and of insuring that their libraries measure up to opportunities? Even if not conceived as a moral obligation to make the whole body of citizens intelligent perhaps the good sense of our people will decide that general intelligence is a matter of necessary mental sanitation.

"Another Kind of Prohibition"

Abbott writes:—

In answer to a question put by Mr. Cecil Wilson, M.P., in the House of Commons arising out of the connection between the sale of liquor and communal riots in Calcutta, Lord Winterton refused to admit that such a connection existed, and added that he was unable to obtain any confirmation of the statement that liquor shops were prohibited from closing voluntarily. The first point has been dealt with in previous issues. With regard to the second, it is sufficient to quote from the "General conditions applicable to licences in Bengal," where we read:—

(Par. 8) "Every licensee shall keep his licensed premises open during the prescribed hours, unless their temporary or permanent closure is authorised. He shall, in respect of any article which he is licensed to sell, meet the demand of every customer."

Par. 23 provides for the payment of compensation where the premises are closed for more than six hours.

Exact information on this subject has now been obtained from correspondents in Calcutta and duly passed on to the Under Secretary of State by Mr. Wilson.

We need to appreciate that military preparedness is a language as well as physical fact. One thing that it says is, "I am seriously considering the possibility of going to war. It looks sufficiently probable for me to think it worth while to withdraw from much needed constructive use these millions of money and these hundreds of thousands of men."

Let a country once really undertake to become overwhelmingly strong on land or on sea, at once by a sort of polarization it evokes corresponding efforts on the part of that country or group of countries which it has in mind in so arming and on the part of others too. If it is very powerful it evokes, above all, counter alliances.

More and more clearly the stage is then being set for war. Then evolves the fatal state of mind and state of facts that are characteristic of the race in armaments. Two allies egg one another on, involve one another unreasonably and create a fatal division of responsibility. The situation becomes more and more tense and explosive.

Under such circumstances the crack is bound to come and if it comes again it will be the crack of doom.

Grazia Deledda

According to the *Nero Republic* :—

In making its award to the Italian author, Grazia Deledda, the Nobel Prize commission seems to have followed a practice of which it has furnished other examples : to recognize writers of unquestioned merit but of restricted or even local reputation. Signora Deledda's fame has not been confined to Italy. Especially her earlier works were translated into the principal European languages ; and five of her novels have appeared in America, the latest being "The Mother" (Macmillan) of 1924. Yet neither in Italy nor elsewhere has she enjoyed a clamorous success ; nor from among her forty or more volumes does any one stand out as a member of the world's immortals. This is due, probably, in the narrowness of her distinctive field—the portrayal of the manners, customs, and figures of her native island, Sardinia—and to a corresponding narrowness of the moods and sentiments she exploits. Holding aloof from the great currents of thought and feeling which have coursed through the world, or even through her own country, during her lifetime, Grazia Deledda has for the most part clung to the matters she knows and to the life she understands. Publishers have occasionally urged her into strange fields—the psychological novel, for example, but she has always sensed the falseness of the divergent route and hurried back to her familiar ground. If it would seem surprising that this year's award, it names were overlooked in hardly another Italian should be remembered that forty years of wear and tear has stood the test of time. There is a fine and coherent seriousness of art in all her bulky production. While other more spectacular geniuses have been now applauded and now condemned, Grazia Deledda has been content with the esteem of a small but loyal audience, in each of the many countries of the western world.

Grazia Deledda

World Conference on Education

Shri Narayan Chaturvedi writes in *The Hindustan Student* :—

The World Federation of Educators is one of the most hopeful signs of the time. In importance it is perhaps second only to the League of Nations itself. Its meeting at Toronto in August last should have satisfied the most exacting and skeptical critic. It had brought together over seven thousand educators from different parts of the world. About sixty nations were represented there. Australia, Persia and Mexico were some of the newcomers to the Federation.

The work of the Conference was divided into a number of sections. Besides the five Herman-Jordan committees, appointed to explore the means of educating the rising generation in the ideas of world unity, there were special committees on illiteracy, the social aspect of education, use of the cinema, etc. India is most vitally concerned with the question of illiteracy and we found the work of this committee most interesting and useful from our standpoint. Perhaps no other section of the Federation will do so much good for our country as this one.

The All-India Federation of Teachers Association was represented officially for the first time in the

The New Turkey

In the same magazine Ibrahim A. Khairallah gives a good account of the regeneration of the Turkish people to-day, from which we make a few extracts below.

It is indeed difficult to say which of the two is the worthier achievement, the demolition of the antiquated system of the old regime or that of reconstruction undertaken by the abolition of the Sultanate and the Caliphate, the closing down of *madrasahs* (reactionary centres of religious intrigue), the suppression of the privileged class of Uleamas or Hodjas (religious teachers) who in the past were represented in the Cabinet by the powerful Sheikh-ul-Islam, and lastly, by the abrogation of the Moslem law, which regulated domestic relations in general.

Graduates from medical schools are by law obliged to serve three months in malarial regions, and two years—at a fair stipend—as district physicians. Considering the insufficiency of qualified physicians, the total number being 3,000, the department opened two infirmary schools and made them accessible to graduates of secondary schools. Tuition in them is free, and special courses in infectious diseases and sanitation are given. Two maternities were opened at Angora and Konia to study the problem of infantile mortality and propose means for lowering it.

The hardest task of the department was its campaign against malaria. The epidemic is now under control, and in the regions of Angora and Adana eradicated altogether. In other regions it has been reduced appreciably. A systematic campaign has also been waged against trachoma in the region of Malatia. And if we except malaria, which is being successfully coped with, the sanitary condition is quite satisfactory. Since the disappearance of typhus, which raged after the war, there has not been recorded one case of an epidemic, and that in spite of the influx of a large number of indigent immigrants.

VII. Education.—The law of 1924, called "The Law of the Unification of Instruction," definitely abolished the religious and backward instruction given in the *madrasahs* of the old regime, and established the modern national lay school. This was supplemented by another in 1926, which proclaimed the principle of a unified primary education, suppressed religious instruction in lycées and secondary schools, and reduced it to the strictly necessary minimum in the primary schools.

When compared with education under the old regime, which aimed at educating a particular class of civil servants only, and was influenced by religious prejudices, the reforms of the Republic are impressive. Under the new regime education is impressed with a thoroughly national character and made accessible to all; it is completely freed from all religious constraint and rests fundamentally on the principle of freedom of thought and scientific progress. Primary education is free and obligatory, requiring an attendance of five years. There are now 5,883 primary schools as against 2,632 in 1914; 11,770 instructors as against 8,105, and 335,455 students as against 250,200. In some of the secondary schools co-education has been

introduced tentatively, and, if successful, will be generalized.

X. Cultural Efforts.—In the press, as well as in the fields of literature and fine arts, earnest efforts are being made to break away from the past and adopt Western culture. The rupture with Islam is complete. The seclusion of women is a thing of the past. So is the Moslem law, that consecrated polygamy and woman's inferiority. The emancipated Turkish woman in no way differs from her Occidental sister.

Has the rapid modernization of Turkey been too precipitous to be lasting? Is the reawakening of the nation due solely to the inspiration of the man who shook it back to life from torpor that bordered on death? M. Marchand firmly believes that the change is permanent. Among the *intelligentsia*, the modernization of Turkey is the logical conclusion of a leavening of ideas for over a century. Among the masses the rupture with the past which the Republic precipitated and the Kemalist regime confirmed is but a resumption of normal development, temporarily checked, but never stifled, by the adoption of Islam, which dashed itself in vain against the rock of Turkish tenacity, and never succeeded in giving it a permanent Arab character.

Industrialism and Indian Life

In the course of an important contribution on the above subject to *The International Review of Missions* Sir Atal Chandra Chatterjee writes:—

It is the purpose of this article to direct attention to one particular aspect of the many profound changes through which India is passing at present, in common with Japan and other progressive Asiatic countries. Until fifty years ago there were no power industries of any magnitude or significance in India. Even agriculture was organized on the system of small holdings, and the numerical proportion of landless labourers was practically negligible. During the last half-century an increase in the population and other economic factors have created a considerable class of landless labourers who serve the tenant farmers for money or grain wages. Large-scale agriculture in the form of tea, coffee and rubber plantations has come into being and gives employment to workers who live on the estates and depend mainly on the money wages earned by them. Large groups of labourers, men and women, are frequently brought together from distant villages and hamlets for the execution of great schemes of public works, such as railways, canals, irrigation barrages or even a city like New Delhi. They often spend years away from their homes before the work is finished and the labour force is disbanded. The railways and other transport organizations have collected in towns and cities a large population of workpeople who would otherwise have lived in the villages. Finally, mills, factories and mines in different parts of the country are employing a daily growing number of workers for the production of minerals or manufactured goods. Most of these labourers are drawn from areas hundreds of miles away from the scene of their present occupation. The consequence of

all this is the gradual evolution of a new social organization.

The man or woman who has lived in the new environment away from village and caste people unconsciously acquires a freedom of thought and action which remains even after the return to rural surroundings. Strange and unfamiliar ideas are imported into the countryside. The leaven works slowly but surely and the old order is changing.

Is this influence for good or for evil? It is not yet possible to give an answer. From the economic point of view the results so far have been beneficial. It has been indicated that the outlet provided by the urban industries and large-scale agriculture has eased the ruinous congestion in many rural areas. The returned emigrant provokes intellectual curiosity and is often instrumental in popularizing new agricultural methods and practice. Socially, he is a disintegrating factor. He is helping to break down caste and many evil customs embedded in caste. But is he contributing to the building of a new, saner, healthier, wider civilization with high civic and ethical ideals to replace the old outworn village and caste organizations?

The answer will depend upon the life and conditions that will eventually prevail in these new industrial surroundings.

It is thus of supreme importance that the influence exercised by his environment on the industrial worker of India should be of a nature which will promote his moral and ethical as well as his physical well-being. The future of entire India is largely dependent on these circumstances. How is this great end to be secured? In the view of the present writer the responsibility does not rest merely on the State and employers. It is true that a great deal can be and must be done by the State and employers. A great deal has to be done by the workers themselves. But there is also plenty of work for the general public and for all well-wishers of India and the Indian people.

European and Indian Interpreters of Indian Philosophy

Prof. H. W. Schomerus of Halle writes in the same *Review* :—

Among the younger generation of German indologists a certain scepticism is prevalent, a doubt whether it will ever be possible for us Europeans, who have grown up in quite different situations and who are accustomed to think according to laws of thought quite different from the Indian, to reach a true understanding of the Indian world of thought. The concepts of which our thinking is built, the words with which we give expression to our thoughts, have their clearly defined content which is seldom, perhaps never completely, covered by the corresponding Sanskrit originals. We must therefore be cautious in speaking of analogies and parallels between Indian and European thought.

My mind was dominated by this idea when I set out to read the first book mentioned above. I said to myself that Indian indologists have a great advantage over their European and American colleagues. It is much easier for them to understand the true spirit of Indian philosophy, and

easier also to set it down in literary form. I therefore hoped that the book would not only lay bare much new material, but that it would lead us deeper in our understanding of Indian philosophy. I must confess that in this respect the book disappointed me. The schools of thought treated are all known to us already through the work of European scholars. And the author does not compel us to make any considerable change in the picture which these writers gave us.

Is that a proof that the scepticism of the younger German indologists is unjustified, and that European indologists have on the whole reached a true understanding of Indian philosophy? I should not like to answer this question with an unqualified 'Yes.' It would be 'Yes' if the author were an independent student. But that he does not seem to me to be. All through the book it is apparent that he is to a large extent dependent on European scholars, not only with regard to the material he treats but above all in the interpretation of Indian philosophical concepts. I was repeatedly surprised to find with how little scruple he puts European philosophical concepts in place of Indian.

The Indian who speaks to us in this book has had too strong a European influence in his education to save him from the dangers which lie in the use of European parallels for Indian philosophical concepts.

So the German Professor insinuates that Professor Radhakrishnan is indebted to European scholars both for his materials as well as for his interpretations of Indian philosophy. This should be controverted by the Calcutta University.

Provision for Prolonged Unemployment

We read in the *International Labour Review* :—

Unemployment insurance which goes back to the beginning of this century, exists at present in nineteen countries and covers, either as a voluntary or as a compulsory measure, some forty-five million workers, who are guaranteed an indemnity during unemployment, specified in amount and usually for a limited period. The persistence of unemployment in recent years has, however, obliged most States to introduce provisions in their legislation for the extension of the period during which insured workers are entitled to benefit, either by prolonging the benefits of insurance beyond the normal statutory period or by substituting for insurance in the strict sense, at the end of this period, a system of relief with a different scale of benefits and on another financial basis.

Why is there no unemployment insurance in India?

Sovereignty in Abeyance

John Dickinson writes in the *Political Science Quarterly* :—

There will from time to time be periods of political development when sovereignty will be in abeyance; when force or compromise will dictate the outcome, not through law and in no orderly fashion, but irregularly and to the exclusion of law. These periods are the great germinal epochs of politics; but they are inevitably periods of disorder and confusion, and commonly also of bloodshed, and accordingly such periods must be occasional and infrequent if progress is to be orderly and if society is to enjoy the advantages of political organization as contrasted with anarchy. Men have not attained the unity of viewpoint, the tolerance of adverse opinion, and the breadth of understanding of the needs of other classes than their own which will enable them to live together fruitfully under a regime of voluntary compromise to the exclusion of positive law. A regime of positive law must, therefore, be accepted as the normal status of civil society; and a regime of positive law presupposes and requires the existence of juristic sovereignty.

Plants Put to Bed for their Help

Mr. Edwin Ketchum says in the *Popular Science Monthly* :—

Blue light cast a weird shade over our faces, as we stood in the "spectral greenhouse." Beyond, broad beams of yellow and orange-tinted sunshine bathed boxes of growing plants in an unnatural radiance.

Growing plants under colored lights to find out how they behave—that is but one of the strange experiments you can watch daily at the Boyce Thompson Institute for Plant Research, in Yonkers N. Y.

Here plant growers make their own weather and germinate seeds at freezing temperatures—oddly enough, in electrically "heated" ovens. They "scrub" coal gas clean and feed it to plants. They have shown that plants, unlike animals, get along splendidly without the ultra-violet rays of sunshine.

Why plants and seeds grow—how to raise and multiply them—these are the questions that experts at the institute are spending millions to answer. Nowhere else in the world is the duplicate of their "constant light room," where it has been proved all plants must have sleep, and that many need the full eight hours a season before require. In this room with twenty-five 1000-watt lamps are carts of potted plants, with numbers indicating how many hours they must sleep.

These plants never see sunlight. At specified hours they are "put to bed" in an adjoining dark room. Tomato plants become spindly and weak when their "working day" in the light is stretched to nineteen or twenty hours. Maryland tobacco and sweet require a goodly period of darkness in order to flower.

Turnips, salvias and coxcombs occupied one greenhouse I visited with Dr. P. W. Zimmerman, one of the experts. They seemed rather under-sized in the blue room; beneath the yellow plants' cheerful light they were vigorous and bushy, while under the orange they were tallest of all but spindlez.

Under the microscope, samples of stems showed that the blue and violet parts of sunlight are both necessary to plants. Without the blue, the plant is likely to seed or fruit imperfectly.

What Price Progress

We find the following in Dr. Lydia Ross, M. D.'s article with the above heading in *The Theosophical Path* :—

One may read some significant meaning in the reply of Commander Richard Evelyn Byrd, when Robert H. Davis, of the *New York Sun*, unexpectedly asked him: "What were you thinking about when you crossed the North Pole in the air? Byrd is reported to have said:

"I thought of the infinitesimal proportions of mortal man, of the frailty of the atoms that occupy the spaces, of the limitations of those who have taken over the conduct of civilization, I caught for the first time, as in a flash of understanding, the inadequate results of the effort to solve not the cogmms of space and duration, but the problems of mankind.

Today a shot fired in any country is not only heard but felt around the world. The distant tread of soldiers shakes the whole globe, affects all its inhabitants, disorganizes all classes, saps the vitality of every nation. A declaration of war is an earthquake that racks both hemispheres. We have remade the world, ripped it asunder and remade it time and again.

"We have improved and progressed and developed, but we have failed to make the most of ourselves. We have explored everything except our consciences. We are still a horde of pygmies, selfish, and envious, each striving for individual supremacy.

"We have come through the ages worshipping in our different ways the Supreme Being that best suits our multiplied faiths, but the sum-total of our occupation of this shrinking planet is a pitiful demonstration of weakness. It is not the geographical but the moral limitations of the world that must be charted, and the really great explorers will be those who find the way to universal reconstruction, the first step in which is the abolition of war and the needless destruction of human life.

"Those were the thoughts that occupied my mind on May 9th as I flew over the north pole and on the way back to my native land."

By BENARSIDAS CHATURVEDI

The East African Indian National Congress

The last session of the East African Indian National Congress, held at Nairobi under the presidency of Mr. Tayab Ali Bar-at-Law, was a great success. The speech of Mr. Hakim Singh, Chairman of the Reception Committee, was a dignified one. Here is an extract from the speech dealing with the question of franchise, the most important problem at present so far as the position of our countrymen in Kenya is concerned.

From the very first, we had no illusions whatever as to the harmful working and nature of this racial franchise, and we strongly protested against it at the time of its inception and have been protesting ever since. We knew the utter futility of taking part in the Legislative and other Councils of the country on a racial franchise, and we appealed to the Government of India for help and assistance. The Government of India, as you will recollect, advised us to send our members to the Legislative Council on a nomination basis as a temporary measure. They made it clear to all concerned, however, that the Common Franchise was the only correct solution of the problems which inevitably arise in a mixed Colony like Kenya, and that they would re-open the question with the Home Government at a later date. Since then five years have elapsed and it cannot now be said that the system of Communal franchise has not had ample trial—and, as you all know, it has proved a dismal failure. Not only it has not brought about peace and tranquillity to Kenya by unifying the various interests, but it has helped to emphasise and accentuate our differences more and more as time went on until today they look well-nigh irreconcilable.

We expected, gentlemen, when a Labour Government first held the reins of administration in Great Britain that the Government of India would re-open the question of Common franchise in Kenya and would meet with sympathetic assistance from the British Cabinet. I do not want to tell you that we were all sadly deceived. The Labour party practically went back on all that they had said about the position of Indians in the Empire, and Labour Ministers and members were loud in advising us to accept the communal franchise here and the

Reforms of 1919 in India. I shall rest content with saying that we were driven from corner to corner and from pillar to post and left without any anchorage. It is difficult to resist the feeling that we have allowed ourselves to be persuaded into a notion that we are really weak and inferior and have surrendered one position after another, till after a disheartening struggle for more than three years we succumbed in the December of 1920 to the wiles and threats of persons and authority and allowed ourselves to be tricked into accepting the Communal Roll. In view of the new situation that has arisen, Ladies and gentlemen, it is now for you to determine whether an occasion has not arisen for re-consideration of our position.

Mr. Hakim Singh was quite emphatic on this question. Concluding his speech he said "We must stick to the Common Electoral Roll and prove it to the hilt that we will have it or have nothing else."

The speech of Mr. Tayab Ali was strongly worded and he mercilessly criticised Sir Edward Glegg for his anti-Indian activities. The speech dealt with several important points e.g. part played by Indians in the development of East Africa, difficulties of Indian settlers in Kenya, Hilton Young Commission, Land policy in Kenya, Indians in Government service etc. etc.

In his appeal to the people and Government of India the president said:—

"I would draw the attention of the Government of India to the fact that thousands upon thousands of acres of rich virgin country in Tanganyika territory are awaiting development. There are plenty of people in India who would make very suitable colonists. East Africa has been considered and rightly so, to be the natural outlet for the surplus population of India and India has plenty of it too.

In view of this fact I would request the Government and people of India to seriously consider the advisability of opening Information Bureaux at Bombay, Lahore and Rajkot to select desirable emigrants and to supply them with necessary information."

The suggestion is an important one and deserves careful consideration at the hands of the Indian public and our Government.

Unfortunately the Government have never given any thought to the question of having an emigration policy of their own. During the days of the hated Indenture system they acted merely as an agent of the Colonial Governments to supply them cheap labour and after the abolition of this hated system they have only followed a policy of drift. The time has now arrived when they ought to frame a new emigration policy in consultation with the Indian leaders.

Several resolutions were passed in this session of the Congress. The most important of them were about the co-operation with the Hilton Young Commission, the demanding of no confidence in the Governor of Kenya. From the accounts of the proceedings of the Congress, published in the East African papers, it is clear that the masses of Indian people in these territories are now awakening. Mr. Hakam Singh was right when he said "The Indian people in East Africa have all through exhibited an indomitable will to suffer and to win at last, and if everything has gone wrong, I feel myself to be in a position to say that it has been due to the weakness shown by the men in front and not by their followers."

It is to be hoped that now our people in East Africa will not allow continuance of the old state of affairs in the Congress any longer. The Congress office must be organised efficiently if any unstained agitation is to be carried on during the present fateful year. It is painful to read in the report of Dr. S. D. Karve, General Secretary of the Congress, that our Congress hasn't yet got a single whole time worker to devote his energies to the cause of Indians in East Africa.

Dr. Karve observes:

"Apathy of Indians towards political work is well-known and members of the Executive Committee were not an exception to this rule. If the community wants the Congress to be a real live body and if it wants to carry the political work to a successful issue, a special care should be exercised in electing the future members, electing only those who will put in regular and continuous and not spasmodic and haphazard work as hitherto. The Executive Committee of the Congress have always felt the handicap of not having a suitable experienced whole time worker for the Congress. Repeated efforts were made to secure a suitable man and the Servants of India Society and many other institutions and individuals were approached without any tangible result. However, when Mr. U. K. Oza, a journalist who had done a lot of political work in India, was passing through Nairobi, the opportunity was taken

to persuade him to remain here and work for the Congress. We were really fortunate in that he altered his plans and accepted the post we offered him.

As all of you are aware Mr. Oza has put in a tremendous amount of work during the month or two that he has been amongst us and the success of the Unofficial Conference and of to-day's Congress is entirely due to him."

We in India ought to be grateful to Mr. Oza for the work that he has done in East Africa and we hope that he will continue it for a long time to come. In the end we have to draw the attention of our leaders in East Africa to the importance of publicity work to be done in India to educate the public on these questions. We hope the Congress will not grudge the expenditure of a thousand shillings for this important work, which has been unfortunately altogether neglected in the past.

Education of Indian Children in Fiji:—

Following is an extract from an address of welcome presented to Mr J. Caghloy M. A. Director of Education, Fiji, by some Indian associations in that colony.

We would respectfully suggest that as the existing Government Secondary schools in Suva do not admit Indian pupils, the establishment of a Secondary school here, to provide facilities for advanced education of Indian children, is a very urgent need. This was recognised by His Excellency Sir Eyre Hutson in his Address in the Legislative Council on 27th November, 1925, and the recommendation of the Education Commission which was subsequently appointed to go into the whole question of education in Fiji is "that the establishment of a Secondary school for Indian pupils is a matter of urgency and should not be delayed." To make adequate provision for the education of our children who aspire to the higher qualifications, we suggest that a Secondary school be established in Suva and run on lines similar to the Boys' Grammar School and on lines similar to the Boys' Grammar School. And especially as Indian pupils are to be examined by the New Zealand University, it seems but fair to have well-qualified and sympathetic teachers from that large-hearted and helpful Dominion to come over and teach our children all necessary subjects.

To this Secondary school should be attached a Primary department, to act as a model for other Primary schools in Fiji. It will also be useful in providing a demonstration school for the Teachers' Training Class which will presumably be a part of the Secondary school.

As regards Primary schools, we agree with the Education Commission that such schools should be established throughout the Colony to take in the 25,000 Indian children of school-going age, and in which adequate provision for vernacular education should be made.

We desire to refer to the education of the girls as well. We wish our women-folk not only to look back upon their long and noble heritage with pride,

illiterate. That was before the invention of the art of writing. But in those days there were independent peoples, and they were all illiterate. They did not have to import literate rulers from the planet Mars or some other member of the solar system. In civilized ages, how much book-learning, if any, did Akbar and Sivaji possess?

Even within historical times, many nations which are at present both independent and literate were largely illiterate. England has enjoyed representative institutions for centuries, but education has been widely diffused there only during the last century. In the age of King John, when the barons wrested the great charter from him, many of the nobility could draw spear-heads more skilfully than the letters of the alphabet; book-learning was despised by them. In later ages of parliamentary history, too, literacy was not a prominent feature of English society. Robert Lowe, Viscount Sherbrooke, familiarly known as Bobby Lowe, went to the Education Office as vice-president of the Council in Lord Palmerston's ministry. He felt then and still more after the Reform Act of 1866 that it would be necessary to educate the people whom that Act had given the vote. He said in his address to the Edinburgh Philosophical Institution in 1867, that it was necessary "to induce our future masters to learn their letters." This shows that in Great Britain even so recently as the sixties of the last century the extension of political rights did not follow but was followed by the spread of education. When Lord Darham's report led to the grant of self-rule to Canada, it was stated in that report:

"It is impossible to exaggerate the want of education among the habitants. No means of instruction have ever been provided for them, and they are almost and universally destitute of the qualifications even of reading and writing."

Not to speak of others in Canada, there even "a great proportion of the teachers could neither read nor write." It was in such a people that representative institutions were granted.

When representative government was established in Japan in the sixties of the last century it was mainly the Samurai who were literate. Even in 1873 only 28 per cent. of the children of school-age were at school. By 1922-3 that percentage had

risen to 90. It is practically cost per cent. now. So in Japan representative government has not come after universal literacy, but universal literacy has been the result of representative government.

But let us take other countries under other forms of government.

The countries of Europe are now vying with each other to honour and welcome King Amanullah Khan of Afghanistan. His country is independent. But it has never been famous for the prevalence of literacy. In fact, some five years ago, the Statesman's Year-book for 1922 had nothing to say in regard to public instruction in that country. But the same book of reference for 1927 records among other educational arrangements that "elementary and secondary schools exist throughout the country. Elementary education is free and compulsory, and higher education is also free." What are the causes of such a wonderful change in the course of five years? They are, we presume to be found in the following facts stated in the same annual for 1927:

"On November 22, 1921, a treaty between Great Britain and Afghanistan was signed at Kabul, in accordance with which Great Britain recognizes the complete independence of Afghanistan, and agrees to an interchange of diplomatic representatives; while Afghanistan accepts the existing Anglo-Afghan frontier."

"The Government of Afghanistan is, since 1922, a constitutional monarchy with Legislative and State Assemblies, and a cabinet presided over by the king himself."

So, Afghanistan has been preparing for universal literacy after establishing full independence, a constitutional government, a legislative assembly, etc.

In Abyssinia "education is restricted to the teaching of the secular and regular clergy. There are schools at Addis Ababa and Harar, at which, however, the attendance is practically negligible. The people are in consequence illiterate and ignorant." Nevertheless, the country is self-ruling and independent.

But let us return to the British Empire itself. There is Home Rule among savages in this very empire. These people live in the Gilbert and Ellice Islands in the mid-western Pacific Ocean. The Gilbert Islanders are nearly always naked, but wear a conical hat of pandanus leaf. In war they have an armour of plaited coconut fibres. Their canoes are made of coconut wood boards.

Mr. E. C. Eliot, Resident Commissioner in

these islands, contributed an interesting article on them to the December (1915) number of *United Empire*, the journal of the Royal Colonial Institute, in which he wrote :—

"To-day a state of 'Home Rule' exists which is probably unique among native races under the protection of the British Crown. With their own code of native laws, revised and amended by a King's Regulation, the people are wisely and justly ruled by their own Councils of Chiefs and Elders."

A perusal of Mr. Eliot's article and consideration of the British objection to allow India to be self-ruling lead to the conclusion that barbarism like that existing in the Gilbert and Ellice Islands fit their inhabitants to be self-ruling and civilisation like that prevalent in India for milleniums disqualifies her children for self-rule.

There are other parts of the British Empire which in some respects afford a better parallel to India than the above-mentioned small islands inhabited by savages.

In the Union of South Africa the non-European population, mostly illiterate, numbered 54,09,092 and the European males, more literate, numbered 7,82,035 in 1921. In Kenya the European males and females number 12,529 and the Africans 26,82,848. In Nyasaland the European males and females number 1,656 and the Africans 12,00,883. In all these countries, and in many other vast regions about which similar statistics might be quoted, the numerically very small number of literate Europeans settled among them manage the affairs of those lands inhabited for the most part by natives who are generally illiterate. These Europeans differ from these Africans in race, language, religion, complexion, manners and customs, standard of living and in most other things. Yet they are thought to be fully qualified to manage the affairs of the countries they inhabit. In India the literates and the illiterates do not form separate sects, racial groups, linguistic groups, castes, occupational groups, or any other kinds of groups. Within the same sects, castes, sub-castes, linguistic groups—nay, families—some are literate and some illiterate. Literates and illiterates are one

another's kith and kin in India. Yet, the literates in India, many of them far more highly educated and more intellectual than any Europeans in Africa are thought to be disqualified to manage the affairs of their country, because they form the minority and the illiterates the majority. But in Africa the European literate minority are deemed qualified to manage the affairs of the country inhabited in common with them by the African illiterate majority. It, therefore, comes to this, that the fault of the literate Indians is that they are not "white" Europeans, and are, in addition, not aliens from a distant, continent but are autochthonous to India and blood relatives of the illiterate majority.

In opposing the attainment of self-rule by Indians, Britishers lay great stress on literacy. But in actual practice, they do not attach any importance to it. Literacy is not a factor which finds a place as a qualification for electors. This is not, of course, peculiar to India. But, if literacy were really considered a *sine qua non* for self-rule in India, one would expect all illiterates to be excluded from the franchise. As regards candidates for election to the legislative bodies, illiteracy is nowhere mentioned as a disqualification. The barest literacy appears to be insisted on, because the candidate is required to sign his nomination paper and certain other declaration and notices connected with his candidatures. Consequently, in discussing the advantages and disadvantages of a residential qualification, Mr. E. L. Hammond, I. C. S., C. B. E., writes in his book on "The Indian Candidate and Returning Officer" (p. 35) :—

"Against this restriction must be set the fact that it may unduly limit candidature and result in the return of a worthy but uneducated rustic, unable to understand, though he may impede, the proceedings in Council."

So, though Britishers profess to consider literacy essentially necessary for self-rule, they have provided us with a form of so-called representative government in which the electors may be absolutely unlettered and the legislators "uneducated rustics", just able to sign their names!

NOTES

"F. E. A. T. M. Congress and After"

Under the above caption *The Calcutta Medical Journal* has published an editorial note in its last January number. The journal is edited by some of the leading physicians and surgeons of Calcutta. The initials in the heading, we take it, stand for "Far-Eastern Association of Tropical Medicine."

The *Journal* writes :—

The much advertised Eastern International Medical Congress met in Calcutta early last month "to increase our knowledge of tropical diseases." The arrangements were almost entirely official, and advantage was taken of the occasion by the Indian Medical Service Officers to misrepresent facts and to advertise the little work they have done in India. Out of about 900 delegates, nearly 80 came from outside India and were given the opportunity to visit certain parts of this great country accompanied by official guides. The official version of the sanitary and medical problems has been set forth clearly in chapters V to VII of a book called "Souvenir of the Indian Empire," published by the authorities for the occasion, which may very well take its stand by "Mother India" of Miss Mayo. A nice souvenir indeed, for it contains the grossest libels and misrepresentations suited for official propaganda about Indian medical talents and the Indian people.

His Excellency the Governor of Bengal opened and the official head of the Indian Medical Service presided over the Congress. The latter posed as head of the medical profession in India, as if the profession consisted only of the members of that heavenborn service. Frequent apologies were made for the sanitary backwardness of the people, and, though they confessed that "prevention was better than cure," they thought the backwardness was due more to the Indians' hopelessly low standard of living and to their unwillingness to adopt preventive measures than to the indifference of the State to the sanitary needs of the people. But alas! the foreign delegates do not know that, after a century and a half of British rule, "40 millions of the people of India (according to Sir William Hunter) pass through life with one meal a day" and that only "8 1/2 percent. of the people can read and write the vernacular despite (!) the efforts and money expended."

We are not surprised to learn that The Indian delegates who attended the opening

ceremony came back convinced that the whole show was part of a systematic campaign to prove the superiority of the British intellect and the perpetual inferiority of the Indian in the medical sphere. In spite of the abstention of many of the talented members of the independent medical profession, the number of papers contributed by Indian workers approached 80 p. c. of that contributed by the European workers (I. M. S. and others combined) in British India.

As to the statement that "a lot had been done" by the I. M. S. people, the *Journal* observes :

The officials admitted that "there was no organised health staff for more than 90 p. c. of the population" in India and, at the same time, they proclaimed that "a lot had been done" for combating preventable diseases and for public health. After holding the purse and controlling the revenues of the land for over 150 years, it is declared that a lot has been done when the malaria infected people got only 1/50th fraction of the amount of Quinine required for a complete course of treatment. Would our foreign delegates be surprised if we quoted some of the staggering figures of mortality from preventable diseases in India? To quote some, cholera carried away a quarter of a million people, plague over 860,000 lives and malaria over a million lives in 1924, and small-pox was responsible for 86,000 deaths in 1925. The number of people temporarily or permanently incapacitated or disabled for work by preventable diseases and the consequent national economic loss therefrom can better be imagined than described. With a general death rate of 24.72 and an expectation of life of only 27 years (as against 53 years in Great Britain), the half-fledged population of India may be said to exist but not to live.

As regards medical research, we read :—

When we come to Medical Research, we find the names of distinguished Indian workers like Brahmachari, Row and Chatterjee omitted in the opening addresses and in the so-called souvenir, while prominent mention has been made of even the most modest workers connected with the Indian Medical Service, as if research was the monopoly of this class of workers alone. Though it was confessed that "recent discoveries in connection with the treatment of Kala-azar have made it possible to organise a campaign against that dread disease," the name of its discoverer, Dr. U. N. Brahmachari, was studiously avoided. Need we remind the delegates that most of the organised

places of research in this country are captured by the European officials and that Indian workers, whether official or non-official, are seriously handicapped in their attempt to contribute to medical research. We do not deny the usefulness of the association of renowned foreign workers in furthering medical research, but we fail to understand why British workers of inferior ability should occupy the posts and draw an enormous salary, when we can get much better specialists from the best institutes of the world at much less cost in India. A modest worker at the Calcutta School of Tropical Medicine gets three times the pay of a first-class worker in many of the advanced countries of Europe. This top-heavy organisation is detrimental to the best interests of India. Many of the delegates felt that the booming with regard to medical research by Europeans in India was out of proportion to the quality of work done in the various institutions.

The *Journal* concludes by observing:

We appreciate the value of such conferences between the various tropical countries, but they would bring very little good to India so long as Indians themselves cannot invite their guests to confer with them about their mutual requirements of national health. Such a day will come soon if only the independent medical profession in India make serious and organised efforts to wipe out the calumnies levelled against them by interested persons. This can only be done by establishing independent centres of work where our countrymen would get full scope for work. The work of Sir J. C. Bose, Sir P. C. Ray, C. V. Raman, U. N. Brahmachari, Raghabendra Row and others has shown that, provided Indians are given suitable opportunities, they can rise equal to or even higher than other nations of the world, for they have in them the talents inherited from an ancient civilisation.

If the late Sir Kailas Chandra Bose and others had stipulated that the money raised or given by them for the Calcutta School of Tropical Medicine should be earmarked for Indian workers, or if, in the alternative, they had founded an independent Medical Research Institute of their own, our countrymen would have got the "full scope for work" for which our contemporary pleads. It is not too late yet to turn over a new leaf.

League of Nations Health Delegation

If the League of Nations Health Delegation find anything good done in India, it is likely that they will set it down to the benevolence and efficiency of the European official medical men alone, and if they find that much remains undone which ought to have been done, they will, following their official guides, ascribe it to something inherently wrong in the country and in the nature of its people. When the Delegation visited Lucknow,

Lieut. Col. Baird, Inspector-General of Civil Hospitals, pointed out the difficulties that the public health officers had to surmount in order to carry on their work in a vast country like India, with all her complex problems. Ignorance of the elementary principles of hygiene among the villagers was one of the greatest obstacles. Prejudice against certain modern methods of safeguarding against disease was another. Certain precautions against the spread of epidemics had practically to be forced on the people. What the health officers could achieve could be judged from the relative statistics for two adjacent areas in one of which health officers had full scope, and in another in which their activities were restricted. Colonel Baird hoped that the health officers in India would not be judged harshly for not having achieved more than what they had done.

If our villagers are ignorant of the elementary principles of hygiene, which is not universally true, why did not the British Government during its more than 150 years of autocratic rule teach them these principles?

We do not contend that we are a perfect people. But we protest against misrepresentation. When a correspondent of the *New Statesman* made some extremely violent statements against Indians, similar to what Lieut. Col. Baird has said, Lord Idlesleigh wrote to that London paper.—

His main charge appears to be that the Indians are "never clean" and therefore "barbarian." The connection between physical cleanliness and civilisation is not as clear to historians as it is to your correspondent, but leaving that aside, the charge of dirtiness in connection with the Hindu is untrue.

After a year's residence in India I came to the conclusion that Hindus generally are as clean as their economic circumstances permit them to be. Wealthy Hindus are as clean as wealthy Englishmen, poor Hindus somewhat cleaner than the English poor, allowance being made for climatic conditions.

Three facts which qualify this conclusion remain to be stated.

(1) Certain Hindu holy men smear their bodies with ashes, using dirtiness as a mortification, just as hermits did in medieval Europe.

(2) Religious frenzy on pilgrimages leads to some insanitary practices. These are not as "BM-PWNS," implies, typical of Hindu life.

(3) Certain Hindu practices disgust Europeans, which are not really insanitary in the Indian climate. Chief among these is the use of cowdung both as fuel and as a flooring. Unpleasant though this sounds, it is not in the least objectionable. The cowdung forms a sort of clay, does not smell, and (according to Abbe Du Bois, whose "Hindu Manners, Customs, and Ceremonies" is still considered an authority) is frequently renewed.

Hindus reciprocate our squeamishness by shuddering at some of our customs; one example is fastening envelopes with saliva; another is the use of the same toothbrush day after day.

When Dr. Baird had finished speaking,

Dr. Madson of Denmark, replying on behalf of the Delegation, said that he too had noticed that there was a spirit of distrust towards the League's activities. The League had not indeed achieved, as yet, a great deal; but it was certainly not the league of the strong against the weak. His own country, Denmark, was one of the smallest countries in Europe; yet, if her voice was heard effectively anywhere, it was in Geneva and nowhere else.

Leaving aside the political aspect of the League's work, there was hardly any fear of misjudging its activities in the field of international finance, in the sphere of intellectual co-operation, and in the department of health. He for one, did believe that the health officers in India had achieved quite a lot. It was indeed remarkable that in the recent Kumbh Mela, the department managed the affairs so well that there were only 36 deaths, while the gathering had exceeded a million.

"The health officers in India had achieved quite a lot" only in the cities and towns, and that mainly in those portions in the cities and towns where the Europeans dwell. The vast majority of the people of India live in the villages, where exactly the opposite of "quite a lot" has been done.

Dr. Madson thinks that the League is not the league of the strong against the weak. But, if ever the interests of Denmark clash with those of the big five, he would find out the real character of the League. Moreover, when it is called the league of the strong against the weak, what is meant above all is that it is a combination of the imperialist nations and the independent occidental nations against the subject, backward or unorganised peoples of the earth, who form the majority of mankind.

In the sphere of international finance, the League has never done, nor can it ever do, anything to prevent Britain from cheating India to enrich herself. For instance, it has been admitted in the British Parliament and elsewhere officially that India was robbed of some 400 millions of rupees by what are known as "reverse concells". Many a time and oft has India lost and Britain gained very large sums of money by the manipulation of India's currency. Can the League, dare, the League, even try to prevent such swindling?

What again has the League yet done for India in the department of health? Nil. But it has already done something perceptible in the case of other countries. Last year, we pointed out in *Welfare* in detail what the League had done for other countries which it had not even attempted for India. For a Health Delegation to go about sight-seeing in India under the

misleading chaperonage of the I.M.S. people is no service done in India, but rather its opposite.

We are not aware that the League has done anything for India in the sphere of intellectual co-operation. Let us quote from its pamphlet, "The League of Nations: A Survey", issued by its Information Section.

"One of its first steps was the institution of a general enquiry into the conditions of intellectual life in different countries, and a series of monographs has been issued on the subject. (No monograph on India has been issued. Ed., M.R.) Efforts were made to bring assistance to those nations whose intellectual life was specially affected through economic conditions; suggestions were made to universities, academies, and learned societies throughout the world to organise the exchange of books and scientific instruments, and a large number of institutions responded. Books were sent from America, England, India, etc., to those in need of them, and gifts made by the Japanese universities made it possible to award two scholarships to Austrian students. Certain publications have been obtained for the Polish Academy, the Budapest Observatory, the School of Mines at Sopron, the universities in Roumania, etc., and exchanges have been organised between the Department of Scientific and Industrial Research in London and institutions at Athens, Dorpat, Vienna, etc.

"The general organisation of intellectual life has been promoted by the formation of a number of national committees for intellectual co-operation working closely in touch with the International Committee, and twenty are now in existence."

Nothing has been done for or in India in any of the directions mentioned above. Where India comes in is in the sending of books from this country "to those in need of them." Evidently India herself does not stand in need of books—there is such an overfluency of them in India that what needs to be done is merely to distribute the excess abroad.

The League and Opium and Labour Legislation in India

The British and pro-British advocates of the League of Nations try to prove its usefulness to India by asserting that it has done great things in regard to the opium traffic. The real fact is, as Mr. C. F. Andrews has shown in detail in *Welfare* that the British Government in India had to agree to reduce the export of opium abroad because of the strong attitude taken up by the U. S. A., which is not a member of the League. Britain felt obliged to please America, and hence her promise to reduce

the export of that poisonous stuff. But what India herself is affected by is the consumption of the drug here. What Government will do in the matter is not yet known. Committees of enquiry are not always or generally fruitful of good results.

But supposing the League were really instrumental in the reduction of the export of opium abroad and of its consumption in India, is that a thing to boast of for Britishers? They ought to be ashamed, in that case, that what their government ought to have done long ago of its own accord, they were compelled to do under external pressure.

As regards labour legislation in India, it cannot be said without detailed examination of all the labour laws, which cannot be done in a brief note, how much of them has proceeded from philanthropy and how much to cripple competition on India's part with British and other manufacturers. The fact that India was made to ratify the Washington Hours of Labour Convention long ago, though the chief manufacturing nations of the West, including Britain have not done so yet, is very significant. The little that has been done is always well-advertised, but that things like unemployment insurance, sickness insurance, contribution by the capitalists to the educational-cultural funds of trade unions, are unknown and unimagined in India is carefully kept in the background.

But assuming again, in the case of labour legislation, that the British Government has done something in this sphere under the influence of the League, how can the advocates of that Government feel proud of it? Why did they not pass these laws long long ago? The League has not been in existence a decade yet, but the British people have been ruling parts of India for well-nigh two centuries. What had they been doing all this while?

Indore Again

The ex-Maharaja of Indore is again proving himself a great nuisance. His infatuation for a danceress created great scandal and led to his enforced abdication. The disgraceful affair filled column after column of our newspapers. Now again he is before the lime light, and our newspapers are wasting their space in descriptions of his movements and intentions. He has two wives living—

that is to say, counting only those legally married to him. But he wants to marry an American woman. But as neither he nor the woman will turn Moslem, the woman must be converted to Hinduism in order that the Maharaja may be able to gratify his polygamons instinct. And this is to be called *shuddhi* or purification! Why not call it by its proper name in this case, *viz.*, *ashuddhi* or impurification? If any Hindu or Arya Samajist missionary performs this ceremony of perversion, he ought to be ashamed of himself and be denounced by his fellow-believers. Every religion has the right to admit to its fold people of other religions by genuine conversion. But all religions ought to be ashamed of travesties of conversion.

Reception of King Amanullah Khan in Europe

There is nothing to find fault with in the splendid reception given to King Amanullah Khan in the European countries through which he has been passing. But surely it is permissible to feel a little amused at the homage he is receiving and will receive at the hands of nations who have abolished both despotic and constitutional monarchy. And the feeling of amusement becomes greater when one cannot but have a shrewd suspicion as to some of the probable causes of European snobbery in his case.

It is well-known that Afghanistan is a big country with a very small population. The area is given variously as about 245,000 or 270,000 square miles, and the population according to the latest estimates is about eight millions. The population of England is 35,681,019 and area 50,874 square miles. The area of Bengal is 76,843 square miles and population 46,695,536. These figures show that, by proper development, Afghanistan can have many millions more of inhabitants, even though much of it is arid and mountainous. It is not suggested that Europeans would like to emigrate to and settle in the Amir's country. What they would like to do is to take part in developing the country. It would perhaps require large numbers of irrigation engineers, mining engineers, chemical engineers, road builders, bridge-makers, technical instructors, medical men, etc., and scientific machinery and instruments and materials of various kinds. These men, machinery and materials

would have to be imported from Europe or America. As His Majesty the Afghan king is now touring in Europe, the different nations there compete with one another in pleasing him in order to supply him with the men, materials and machinery which would be required. These European people also know that there may be openings for their other goods also in Afghanistan, though their hopes may be frustrated in this respect if the Amir continues in future to be as staunch a Swadeshist as he is at present. The European peoples also hope to finance His Majesty with capital. But perhaps they would not entertain this hope, if they knew that he desires to develop his country, slowly if necessary, with the pecuniary resources of his own country. He is very wise in this desire.

What we have stated above about the development of Afghanistan is supported by the description of its undeveloped mineral and other resources. "Northern Afghanistan is reputed to be tolerably rich in copper, and lead and iron are found in many parts. Coal is found in the Ghorband Valley and near the Khurd Kahl Pass. Gold in small quantities is also brought from the Laghman Hills and Kunar. Badakhshan is said to be the only country in the world to produce first quality lapis lazuli. This is smuggled in considerable quantities to China and Bokhara." As there has not been any geological survey of the country, there may be other minerals also whose existence is not yet known.

The Afghans have a fine physique; but as intermittent and remittent fevers and diseases of the eye are among their most common complaints, progressive medical science has obviously a sphere of work there. Some Indian doctors should settle there both for practice as well as for teaching young Afghans the healing art. His Majesty the Afghan King would also do well to import some of his engineers and technical experts from India. They would be as efficient as those from the West, and would suit the Afghan purse better.

Professor H. Glasenapp

Professor Dr. Helmuth von Glasenapp of the University of Berlin has been touring in India since November last year. He passed through Calcutta last month and told us that he would come back in February to deliver

some lectures in connection with the Calcutta University. The Calcutta Review informs its readers that he has been recommended by the Syndicate for appointment as a Reader of the Calcutta University to deliver a course of lectures on "Jainism" and "Influence of Indian Thought on German Philosophers". He has been for years a close student of Indian philosophy and has written books on

Professor H. Glasenapp.

Hindnism, Jaina philosophy, the doctrine of Karma, and the philosophy of Madhvacharya. Of the modern languages and literatures of India, he possesses some knowledge of Hindi and Bengali.

Conference of Indian Christians

During last Christmas a Conference of Indian Christians was held at Allahabad under the presidentship of Mr. B. L. Rallia Ram. He is, comparatively, a young man—he is not yet forty; but he has had varied experience in many foreign countries, which will stand him in good stead in serving his community and country with a broad outlook. During the War he served the Indian troops under the Y. M. C. A. in Mesopotamia. He was a member of the Commission sent out by the C. M. S. Committee in London to study and report on certain aspects of its work throughout India. He went in 1926 to Helsingfors in Finland as one of the delegates of the

Mr. B. L. Raha Ram

Indian Y. M. C. A. to the World Conference of the Association.

"An Explanation"

The character-sketch of Mr. A. V. Thakkar, published in our last number, about which we printed an explanation, was not sent to us by its writer, but by a friend of his; and the latter sent it under a misconception as to our practice in relation to the publication of original articles. So none of the two gentlemen was in the least to blame.

Hartals and Disturbances

Some British journalists in Britain and India have been anticipating that the *hartal* proposed to be observed on the occasion of the landing of the Simon Commission in Bombay on February 3, may lead to riots and similar disturbances, and some of them have warned the promoters of the *hartal* that if such untoward incidents happen, these promoters would be held responsible for them. We should indeed be extremely sorry if the *hartal* does not pass off quite peacefully, as it is intended to do. But in the case of our British political opponents the wish is often father to the anticipation; and those of them who have been apprehending trouble are men of the same kidney with those who have the

power both to quell and create disturbances. It is the duty of the latter to prevent, not to promote, disturbances.

The Simon Commission Hartal

We have all along held the opinion that Indians should have nothing to do with the Simon Commission at any stage of its activities. In spite of what Anglo-Indian and British papers have been writing, we do not see any reason to change our opinion in the least. The small groups of Indians who have expressed a desire not to boycott the Commission have, no doubt, the right to think and act for themselves. But it is suspected that some of them are not masters of themselves and some are working for personal ends. In any case, it is certain that their intended co-operation with the Simon Commission will do no good either to their communities or to India as a whole.

As the vast majority of politically-minded Indians are in favour of boycotting the Commission, one view is that instead of a *hartal* its arrival should be treated with absolute indifference,—no notice being taken of it. There is something to be said in favour of this view. But perhaps as the appointment of the Commission is a slap in the face of the India which seeks self-determination, it may have been rightly considered necessary to do something spectacular to show that that India is hurling back the insult. In that view, it is necessary to make the *hartal* a complete success. It may also be necessary to tell Indian back-studiers or would-be co-operators on the sly, by means of a successful *hartal*, how strong and widespread the national feeling is against the Commission. For these reasons we wish all success to the proposed *hartal*.

The holding of daily propaganda meetings is necessary and unobjectionable. But Mr. Subhas Chandra Bose's notification to the public on the *hartal* should have been somewhat differently worded. He has neither the legal, nor the physical power to make the public obey him. If the All-India Congress Committee or even the Bengal Provincial Congress Committee had been thoroughly representative of most shades of political opinion in the country, and if those bodies had formally given him dictatorial powers, even then his language should not have been dictatorial. But the Congress

is less representative to-day than before and Mr. Bose has not been constituted its pan-India or Bengal dictator. So, nothing would have been lost, if he had simply earnestly appealed to or requested all those to observe *hartal* who, according to his notification, "shall not" do this or that. The moral force of a polite and earnest request would have been greater, not less, than that of the words "shall not." Where obviously the only means that can and should be used is persuasion, it is unwise to use language which is likely to put one's back up. Of course, no reasonable man should make the mere wording of a notification an excuse for not doing his obvious duty. But leaders should not leave any loopholes for strikers, if they can help it.

Some Anglo-Indian journalists who have been trying to persuade Indians to accept them as their friends and well-wishers and follow their advice to co-operate with the Commission, have found that their efforts have not succeeded. So now indirect threats are being used. It has been said that, as the general strike in England was declared illegal, so *hartals* in India must be illegal, and those who are trying to bring them about are acting illegally. Anglo-Indian papers act in various capacities. They sometimes egg the bureaucracy on to take drastic steps. And sometimes they publish inspired articles to warn the Indian public that if it does not "behave", things would go ill with it. Again, at other times, they publish articles as feelers for the bureaucracy, just to ascertain public feeling. Whatever may be the object of tentatively suggesting that *hartals* are probably illegal, if the authorities try to prevent them by any lawful or lawless exercise of their power, whether the attempt succeeds or fails, the object of the promoters of the *hartal* would be completely gained. For, the taking of any such step by the Government would prove to demonstration that the feeling in favour of a general *hartal* was as strong and widespread that the powers that be were obliged to resort to extreme measures to prevent it.

Government has undoubtedly the right to prevent coercion and intimidation. But any steps with that object in view can be logically taken only *after* the resort to intimidation and coercion has been proved.

The Meaning of Swaraj

The derivative meaning of Swaraj is self-rule, self-mastery. *Swa* means self or own, and *raj* or *rajya* means rule, mastery, governance. Hence national Swaraj derivatively stands for complete national self-mastery. So by laying down that the object of the Indian National Congress is the attainment of Swaraj by legitimate and peaceful means, the Congress creed has never prevented its followers from asserting their right to complete self-mastery. The English word "independence" is no doubt a word with a negative import. But in Sanskrit and in our vernaculars we do not use that word, nor any literal translation of it like *anadhinata*; we use *swaraj*, *swadhinata*, *swatantrya*, etc., which are not negative.

Undoubtedly in the history of the Congress the word Swaraj has not been hitherto used definitely and unambiguously to denote absolute national autonomy. But neither can it be asserted that it has been used throughout definitely and unequivocally to mean "colonial self-government" or "dominion status." The word was first uttered from the Congress platform by Dadabhai Naoroji in his presidential address in the Calcutta session of 1908. There after describing in detail the political demands of the Indian nation, he summed up by saying: "the whole matter can be comprised in one word—'Self-government or Swaraj like that of the United Kingdom or the Colonies.'" Self-government like that of the United Kingdom is different from self-government like that of the Colonies even now when colonies like Canada are called Dominions and have earned many of the rights of independent countries. Self-government like that of Britain means absolute independence. Our interpretation, therefore, is that Dadabhai Naoroji placed before his countrymen the ideal of absolute autonomy as the most desirable goal, and that of colonial self-government as the next best thing. And it may be safely presumed that he knew that the second might and would lead to the first in course of time.

We construed his words in this way twenty-one years ago. Writing in the second number of this Review, we observed:—

Some of us have concluded in a mood of either hasty appreciation or of equally hasty faint-flinching that Mr. Naoroji is in favour of self-government on colonial lines, but not of absolute autonomy. But the actual words that he uses,—"Self-govern-

"1435. Would Europeans be likely to invest their capital in works of that sort?"

He answered:—

"I think there is much error upon the subject of European capital in India."

He was again asked:

"1436. Under the existing law that restricts intercourse with India, is it probable in your opinion, that any companies would be found to undertake such works?"

His reply was:—

"I think Europeans who have acquired capital in India, might undertake such public works, with proper encouragement; but I scarcely can anticipate so much enterprise and risk as to take capital from England to invest in such speculations: in truth, capital is, I believe, never taken from England to India; it is made there and remitted home."

On this Major Basu observes:—

"It was then at that time somewhat of a myth that European sojourners brought any capital from England to India. Things may or may not have changed since then, but we require a parliamentary committee of enquiry to bring the true facts to light."

As to the efficacy of any such committee of enquiry in our times, we have our doubts. In the days to which the extracts made by Major Basu relate, Englishmen did not apprehend that what they said in evidence would be utilised by us in trying to safeguard the economic interests of our country, and hence they did not take much care to conceal some facts. But in our times Englishmen know that any admissions of truth made by them would be used by us for our purposes. Hence they would be careful not to disclose inconvenient facts. One fact, however, is quite clear without the labours of any parliamentary committee of enquiry. Much of the capital which comes out from Britain to India even now is money taken from India by officials. In the shape of big salaries, allowances and pensions and by men of business and others in the shape of profits or dividends earned in India. All the work—at least most of the work, done by these British officials, can be done equally well, if not better, by Indians, for smaller salaries and pensions. And if our Government had been a national government, Indian factories, Indian banks, Indian shops, etc., would have flourished in the place of most of the European concerns to be found in all provinces of India. It is, therefore, easy to understand the Indian dislike for the further exploitation of India with money originally obtained by

the political and economic exploitation of our country.

Major Basu proceeds to state that, as regards the necessity, and the advantages to the people of India, of the investment of British capital in India, Mr Rickards truly said in his evidence before the Committee on East Indian affairs, in 1830, that—

"India requires capital to bring forth her resources, but the fittest capital for this purpose would be one of native growth, and such a capital would be created if our institutions did not obstruct it."

This opinion still holds good. All Indian development and improvements should be made with Indian money obtained from Indians. Never mind if the process be slow on that account. The development and exploitation of India by means of foreign capital generally leads, as in mining, to the permanent depletion of India's natural wealth. King Amanullah Khan of Afghanistan has decided very wisely not to borrow any foreign capital for the development of his country, as such capital might give foreigners a strangle-hold on Afghanistan.

Exclusion of Legislators from the Directorate of the Reserve Bank

In his revised Reserve Bank Bill, the Finance Member has reverted to his initial scheme of excluding members of the legislatures from the directorate of the Bank. Are the members of legislatures in European and American countries and in Japan excluded from the directorate of similar banks there?

Exclusion of "Hindus" from American Citizenship

We have received the following correspondence from Mr. Tarakanath Das too late for insertion in the Comment and Criticism section.

In the October number of the Modern Review, page 439, appears an article entitled "Latest On Hindu Citizenship" by Prof. Sudhendra Bose.

Mr. Bose states that, "The Washington Government has consented to validate citizenship of Indians naturalized before 1923. All legal proceedings which have been started to revoke their citizenship papers have now been suspended. This action will enable some sixty odd Indians to maintain their

legal status as full-fledged American citizens with all the rights of any other citizens".

I wrote in the Hon. Raymond F. Crist, Commissioner of Naturalization, asking for an authoritative statement as to the status of those Indians whose citizenship had been cancelled prior to the decision in the Pandit case. I enclose the answer from the Commissioner, which should be of interest to the Indian people.

Some 69 Indians were naturalized, and the citizenship of 45 persons cancelled; therefore 24 persons only still retain their citizenship. As things stand today, no Indian can become an American citizen, as Indians are not regarded as "white persons".

The 45 Indians whose citizenship was cancelled are not benefited by the decision in the Pandit case and unfortunately are rendered stateless.

The letter from the Hon. Raymond F. Crist to which Mrs. Das refers runs as follows:—

My dear Mrs. Das:

Your letter of the 25th ultimo. I regret to state, was inexplicably delayed in an unusually heavy incoming mail, and has just today come to my attention.

The statement quoted by you inaccurately presents the situation. After the Supreme Court of the United States had refused to grant the application for a writ of certiorari in the Pandit case, the Department of Justice authorized the respective United States Attorneys to discontinue the pending suits which had been directed against the naturalization of such persons and which had not theretofore been concluded. This did not alter the citizenship status of those whose certificates had previously been cancelled.

Very sincerely yours,
Raymond M. Crist,
Commissioner of Naturalization.

"Gandhi Still for 'India Free'"

Such is the heading of a short article in the *Literary Digest* of America, which runs as follows:—

"Exchanging One Master For Another" the poorest kind of policy for a country whose legitimate and highest aspiration should be freedom, says no less a personage than Mahatma Gandhi, who declares himself stoutly opposed to the idea that India should ally herself with Russia in order to drive the British out. His pronouncement was made to the Colombo *Times of Ceylon*, the capital of Ceylon, Britain's "premier colony." This newspaper is exclusively British owned and British edited, according to Indian editors, who are much impressed by that fact. They think the more of him that Gandhi makes it clear to-day as at the time when his non-cooperation movement was at its height that he is bent upon freeing India from the yoke of Britain. Though recent years have been marked with sanguinary conflicts between the Hindus and Moslems in various parts of India, his

resolve remains unchanged, it seems, and to the blunt question put by the representative of *The Times of Ceylon*—"Do you honestly believe that India would be happier if the British got out of the place altogether?" he replied with equal bluntness:

"Yes, I believe that that is the only solution of India's problems—and not only the problems of India, but also those of Africa. There is no half-way house to that solution. Of that I am convinced. It would be better, I admit, if the British remained as friends, at the mercy of India, and they would have to be at the mercy of India if they remained without the bayonet and the physical force which keeps them there now, and did penance for their past misdeeds. I admit, too, that there would be strife if they went; internecine trouble, probably much innocent blood would be shed, but India ultimately would find herself."

Gandhi was next asked by the reporter from the same paper why he and his people wished to non-cooperate with the British when they could reach their goal by cooperating with them. He replied with engaging frankness:

"I am strongly against cooperation with any force that is evil. My policy of non-cooperation is aimed at the forces of evil, quite irrespective of the individual, or of the individual administration. I realize that the individual is not to blame. I should not care whether the administration were British or whether from the Viceroy down to the doorkeeper they were Indians. If they were evil, I would not advocate cooperation with them. Congress is not entirely good—by which I mean it makes mistakes like the individual, but it does a certain amount of good, and that is why I support it."

Narcotic Drugs in China

Mr. C. F. Andrews brings to light in *The People* of Lahore some damnable facts to show how for the sake of filthy lucre some European powers and Japan continue wickedly to make a determined attempt to ruin China body and soul. Says he:—

The European powers, which had in former times used their power to introduce opium into China,—such as Great Britain by way of Hong Kong and Shanghai and Portugal by way of Macao, together with the Europeanised Japan which followed only too faithfully the bad examples set by the West,—appear now to have discovered another mode of poisoning the manhood of China.

There has been, ever since the war, a continually increasing smuggling of the very worst and most deadly narcotics, such as heroin and codeine and morphia made from opium, and cocaine made from the coca leaf, which have in many provinces almost taken the place for drug addiction which used to be taken by opium itself. Death and impotence follow far more quickly from these powerful drugs than from opium. So that in many ways, owing to this new and devilish mode of poisoning masses of mankind, the manhood of China is being undermined and it is only with the utmost

difficulty and precaution on the part of Young China that the evil can be kept under any sort of control.

Mr. Andrews then quotes an account from Chinese sources which shows, by giving the figures for the total seizures of smuggled narcotic drugs made by the Chinese Maritime Customs during 1925 and 1926, that the narcotic situation in China during the year 1926 was much more threatening than that of the previous year, as shown by the fact that the importation or smuggling of foreign narcotics during 1926 had increased at least three times that of 1925.

What is being done to ruin China impels Mr. Andrews to observe:—

There is no comment needed on this graphic description of what is happening in China to-day. Only one thing needs to be told, namely, that these human fiends in the West and in Japan, who are prostituting science and mechanical invention for the manufacture of these insidious and deadly poisons, have marked down India also as a base of operations. Cocaine, especially, is being imported by smugglers at immense profits for which men sell their souls. Only if the magistrates of India make the penalty for such an offence of smuggling much more severe, and not retrievable with a fine, will the evil be stopped.

Miss Mayo Criticised

The December number of *The Hindustanee Student* of New York is devoted almost entirely to pointing out the falsehoods and exaggerations contained in Miss Mayo's "Mother India." It is to be hoped that this issue of the journal will be largely circulated in America. What is printed in it has for the most part been already published in newspapers in India.

The Literary Guide of London for January publishes a review of that American woman's book by "one who resided in India many years." It is signed "A. L. Saunders." This reviewer is not blind to the element of truth in the book, but feels bound to observe:—

"The extent to which Miss Mayo can go wildly wrong in her generalizations may be gathered from a few quotations."

The quotations we need not reproduce. The reviewer proceeds:—

As Miss Mayo's countrymen say, can you beat it? She remarks at the beginning of her book that when she started on this Indian voyage of discovery she was warned not to generalize.

It is a pity such eminently judicious advice should have been disregarded.

Why, then, the book's success? Partly because of its appeal to a certain political school, the class of people who subscribed £25,000 to General Dyer; much more because it is an exhortation and a justification for missionary enterprise. Missionaries, like the churches, are feeling the chill blast of unbelief, but can not so well shelter under the convenient cloak of "reinterpretation in terms of modern thought." The difficulty is in man-power rather than in money. The nearer the harvest is represented, the more hope of additional labourers.

It would take too long to follow Miss Mayo's philippic through each heading. Indian ways of living, which for her are insanitary in the extreme, are in many respects cleaner than those of Europe. She has, unfortunately, only too good a case for her descriptions of cruelty to animals; but the cruelty of Indians is callousness—seldom active as in Europe. It is the doing of men who are themselves underfed and hard worked and comfortless. Our humanity to animals is really not much more than a century old; and, though inspired writings are not a reliable guide, it is to be noted that while Hindu, Mahomedan and Buddhist scriptures preach kindness to animals, our Gospels are silent on the point, and the Catholic doctrine, that animals have no souls like men, does undoubtedly make for inhumanity.

Sacred books, the reviewer adds, though some guide to a people's ideals, are rarely trustworthy as a picture of actual life. It would be a mistake, for instance, to interpret the Gospel precepts as to taking no thought for the morrow, laying up no treasure on earth, giving away all one's possessions, as if they represented the actual practice of Scotch or American business men. Miss Mayo quotes the Hindu scriptures as supporting her hopelessly incorrect representation of the domestic life of Indian women and children and the social life of Indian outcasts.

Some Hindu Shastras may describe the Hindu wife as a submissive serf, and the Hindu widows as down-trodden chattel. The average Hindu husband or son knows better.

As to the outcasts—or untouchables, as she calls them—Miss Mayo's account of their degradation is exaggerated, though she has got two important facts correctly. One is that the sum and substance of the Indian caste division, which has flowered into multitudinous sub-divisions, is the racial antagonism between the conquering Aryans (fair-skinned) and the conquered Dravidians (negroids). The same caste rule prevails in the United States but is more violently enforced, and subscribers to American missions would do well to remember it. The other fact is that the large majority of Indian Mussalmans, as of Indian Christians, are converted outcasts or their descendants. The effect of this on the alleged oppression of outcasts

is obvious. You cannot oppress people very seriously when it is perfectly easy for them to transform themselves into members of communities you dare not meddle with.

The reviewer then points out the amount of truth that there is in the most sensational part of the book—that dealing with sexual matters. He also refers to some weak spots in European and American society in this respect, and mentions some Hindu and Muhammadan marriage customs which, in his opinion, the Christian West would do well to imitate.

As for turning the tables on the Britishers, in whose political interests Miss Mayo's book has been written, that has been done very effectively, among others, by Mr. Paras Nath Sinha of Bihar in *The Searchlight* and by Mr. Lajpat Rai in *The People, The Bombay Chronicle*, etc. It is, of course, a truism that to prove that in sexual morals Great Britain is worse than India is not to prove that Indian society is impeccable in that respect;—all our editors and journalists know it. If in spite of that obvious fact, Great Britain and America have to be exposed, it is because we feel compelled to show that, if the perpetuation of India's tutelage and bondage is sought to be justified on the ground of certain faults, Great Britain and America ought to be bound in stronger chains, and that, in any case, if we are to remain slaves on that account, Britishers are unfit to be our masters and mentors and Americans their supporters and enlogists. We must, of course, reform our society—we have been doing it. We do not require any reminders from impure-minded enemies of India. *The Literary guide's* reviewer gives it as his concluding verdict that "the book is clever, even brilliant. It is earnest and plain spoken. But its recklessness of assertion, exaggeration, and sensationalism make it useless as a sociological study."

The Bengal Social Service Exhibition

The Bengal Social Service League is now more than ten years old. During the thirteen years of its existence it has done good work in many directions. Dr. D. N. Mitra, its energetic, resourceful and enterprising secretary, has got together a small band of willing workers whose services will be more and more appreciated with the lapse of years.

The latest philanthropic venture of the League is the permanent Social Service Exhibition opened last month. It is rightly claimed to be a "permanent school of popular education through the medium of charts and models and through demonstrations, lantern lectures, and educative cinema shows." The ideal thing would be to have such a permanent exhibition in every village to teach the people to adopt better methods of living. That means the expenditure of money, but not of more money than has been misappropriated and squandered by unscrupulous persons connected with what may be provisionally called politico-philanthropic schemes. Unfortunately, the country does not open its purse-strings unless there be some political sensationalism and theatricality and political magic. Still, it may be hoped that the League will be able gradually to have a permanent social service exhibition at least in every district town. The Eastern Bengal Railway has successfully run a demonstration train. Cannot the Social Service League arrange with the authorities of that and other Bengal railways to have its Exhibition in one or more carriages of such trains in future?

The Secretary has appealed for only five thousand rupees to enable the League to extend the sphere of its operations. There are very many persons in Calcutta who can singly give this amount without feeling the poorer for the gift.

The Indian Industrial and Commercial Congress.

Presiding over the last session of the Indian Industrial and Commercial Congress, held at Madras, Sir Ibrahim Rahimtoola delivered an ably thought out address. He deprecated provincial sentiment in industrial and commercial matters, observing:—

I have heard with regret that in some quarters economic interests are regarded as distinct as between province and province, and there is a tendency to introduce provincial particularism. I think it is necessary to remember that the division of India into provinces is for administrative purposes only, and that separate local administrations do not mean any conflict of economic interests. It is stated that the problems coming before the Indian Legislature are sometimes visualised from the interests of different provinces, resulting in divisions detrimental to the real interests of the country. In public affairs we have more than enough of divisions and

I earnestly trust that at least in the economic sphere the wider interests of India's prosperity as a whole will be the guiding light of all our activities.

After quoting a passage from a recent speech of Lord Ronaldshay's in which that ex-governor of Bengal had re-iterated the sanctimonious platitude that "Britain held India as a sacred trust for a people who had fallen on evil times" Sir Ibrahim said that in view of that claim it became desirable to examine how the 'trustees' had discharged their duty by India during the century and a half they had been in supreme control of this country. After a detailed examination of this description, he arrived at the conclusion :—

Britishers do not come to India on a mission of philanthropy or for the benefit of their health. I will ask them to drop the pretence of holding India as a "sacred trust" and boldly to acknowledge the fact, that they are here for promoting their trade interests. I would appeal to Lord Irwin to visualise the Indian economic problem in the same spirit in which he, with Lord Lloyd, has done it for Britain in the "Great Opportunity" and to lay down a policy for India, consistent with the views he has expressed therein. I would ask him to call together the best brains of commercial India, to state the real object of Britain's control of India's destiny, and jointly to evolve measures for the prosperity of India,

The resolutions passed by the Congress covered all the most important industrial, commercial and other economic problems and questions of the country, such as Indian banking conditions, the Reserve Bank Bill, the ratio question, protection to the cotton textile industry, state aid to cottage industries, Indian mercantile marine, inland water communications, abolition of import and export restrictions, export duty on hides, protection for lac industry, India's representation at international conferences, Imperial preference, constitution of Port Trusts, the Railway Board, Railway services, Mining concessions, disposal of planting areas, Insurance legislation, Indianisation of services, reduction of railway freight for soft coke, Indian coal industry, female labour in mines, etc.

The Congress adopted a resolution advocating the boycott of the Simon Commission—strongly urging all Indian chambers of commerce and other commercial bodies not to give evidence before the Commission or otherwise assist it in its deliberations.

In bringing the proceedings of the Congress to a close the President said :—

The perfect unanimity which prevailed in this Congress in regard to questions affecting various parts of the country was a happy augury of the future united action of Indians to promote the vital interests of their motherland. He congratulated the delegates on the businesslike methods in which they conducted the proceedings and they had thus made his task the easiest possible. They had got through a tremendous amount of work and everything had gone on smoothly, harmoniously and in the best of spirits. There was nothing in the universe that could keep India in the present condition if they all presented a united front for the cause of their motherland and Indians were intellectually in no way inferior but were superior to people of other races, and even in spite of handicaps they could give a very creditable account of themselves in competitive examination with foreigners. In conclusion, he pointed out that if only all Indians united together there was nothing on the face of the earth that could keep India from her just and legitimate rights.

C. P. and Madras Councils and the Simon Commission

The Central Provinces and the Madras Legislative Councils have done their part well by condemning the constitution of and expressing their want of confidence in the Simon Commission. Other provincial councils and the Central Legislature should do likewise, though it is too much to hope that the Council of State will think alike with the vast majority of their politically minded countrymen.

The formation of committees of the legislative bodies for helping the Commission should be similarly prevented. This cannot be done if the elected members belonging to the Congress or Swarnj party absent themselves from the council chambers. But as the C. P. and Madras Swarnj members have been able to do good work by violating the party mandate, so should the Swarnj members of the other legislative bodies—particularly as obstruction is one of their basic principles. Utility should not be sacrificed or subordinated to theatricalities.

The Indian Science Congress

The Calcutta session of the Indian Science Congress was a very successful one. A large variety of papers was read, belonging to the spheres of both pure science and applied science. The delegates paid visits to various scientific, industrial and educational institutions, and had altogether quite a pleasant time

of it, in addition to the advantage of coming in contact with so many active minds.

As the Tropical Medicine people had already held their congress in Calcutta earlier, there were no medical section meetings this time in connection with the Science Congress. The other section, such as those relating to agriculture, anthropology, botany, chemistry, geology, mathematics and physics, psychology and zoology held successful meetings. A scientific exhibition was also held in connection with the Congress. Numerous fine instruments were shown, which were very much appreciated by the foreign delegates.

According to the Associated Press summaries of the proceedings of the Congress,

In the section of Chemistry alone, more than 140 papers of high technical value were read and discussed.

Calcutta contributed a large number of them, with Madras and Bombay coming second.

The section of Mathematics and Physics, presided over by Dr. Hunter, contributed 81 papers. Allahabad and Calcutta submitted more papers than any other centre in this section.

The section of Psychology attracted about 23 papers. Dr. Michael P. West presided.

The section of Agriculture, presided over by Rao Sahib Venkatraman, attracted 31 papers, as compared with the very meagre number in the first session of the Congress.

41 papers were submitted in the Zoology section of the Congress, presided over by Dr. Sundar Ray. Allahabad contributed more papers in this branch than any other single place, with Calcutta as the second best.

Gysoor and Southern India and the Punjab submitted a large number of papers in the Botany section.

Dr. B. S. Guha, formerly of the Calcutta University, and at present of the Anthropological Survey of India, presided over the section of Anthropology, which attracted more than 60 papers. Mr. S. S. Mehta of Bombay read an interesting paper on "Indian and Roman marriage ceremonies compared."

Mr. K. N. Chatterjee (Calcutta) read a paper on the use of nose ornaments in India. Dr. Kuldass Nag (Calcutta) discussed India's contributions to the culture of Indonesia. Mr. Ramprasad Chanda read a paper on culture contact in ancient India and showed that possibly the caste-system originated because of differences in culture.

Mr. Asoko Chatterjee of the "Modern Review," urged the protection of the aborigines in India.

Thirty-six papers were read in the Geology section, many of which contributed much to this branch of Science and greatly added to the possibility of industrial expansion and commercial development. A paper on the iron resources of Mandi State by Dr. S. K. Roy was read by Mr. Maitra.

It may be mentioned in this connection that the contribution of the Geological section of the Science Congress was considerable. In this connection the remark of Dr. Fermor of the Geological Survey of India may be mentioned, who stated that so long the popular idea was that it was only the Geological

Survey of India who contributed to the sum total of geological research and advancement, but it was now seen from the number of papers read during this session, that people other than those connected with the Survey had no small share in the development of the science.

"Power Alcohol" From New Sources

In the chemical section of the Indian Science Congress much interest centred round Professor Dr Hemendra Kumar Sen's paper on "Power Alcohol".

Two natural products of the province of Bengal were *Gangwa Hyacinth*. The former was a tree growing very abundantly in Sunderbans and the cheapest wood in the market. There were at least 100 tons of sawdust available from the saw mills of the city. By introducing proper forestry regulations the growth of the tree in the forests could be maintained perennially. Prof. Sen obtained 30-40 % of alcohol from a ton of *Gangwa* sawdust. The usual figure obtained with other varieties in other countries was in the region of 20-22 gallons. The cost of production per gallon of spirit was shown to be 60% annas, which pointed therefore to a great prospect for the industry in the province. It was also stated that the Union Distillery of Calcutta managed by Dr. Bose's Laboratory were arranging to erect an experimental plant to give the process a large scale trial. The chemical interest of the problem was also great, as the work would bring out certain results of fundamental interest in Cellulose Chemistry.

The water hyacinth, the other natural product of the province, for destruction of which the Government and the people were so anxious, was found to yield good results. The method adopted by Prof. Sen differed from that followed previously.

A large number of distinguished gentlemen took part in the discussion that followed, amongst whom were noticed Dr. Chunnilal Bose, Dr. P. Niyogi, Dr. Pandya of the Agra University, Dr. A. C. Sarkar, Dr. N. N. Goswami, Dr. J. K. Choudhuri of Dacca, Mr. J. N. Dutta of Sylhet and others. Dr. Panchanan Niyogi asked if the collection of water hyacinth would be feasible, to which the author replied in the affirmative from certain statistics both local and foreign. He emphasised, however, the need for careful organisation. Dr. Sarkar also expressed a similar view. Great enthusiasm was exhibited about this very important contribution of the University of Calcutta. The sectional President Prof. S. S. Bhattacharya warmly congratulated Prof. Sen on the important paper he had presented the section with, and hoped that there would be from now less occasion in future for accusing organic chemists of apathy in the study of natural products.—A. P. I.

Indian Aborigines and the Science Congress

Mr. Asoko Chatterjee, in the course of a paper entitled "A plea for the protection of Aborigines in India" stated that some of the aboriginal tribes in India, such as the Andamanese, were fast dying

out. It was necessary that steps should be taken for their protection and preservation before it was too late.

It was resolved that in view of the fact that it would be prejudicial to the economic and cultural interests of the aboriginal tribes of India, should there be unrestrained contact between them and individuals representing a different state of culture and progress, the Government be approached by the Indian Science Congress to institute an immediate enquiry by competent anthropologists and other men to go into the situation and to formulate protective legislation in the light of such an enquiry.

It was further resolved that proper authorities be approached specially to consider the case of the aborigines of India and to allow the Anthropological Section of the Science Congress to state before them in detail the case of the aborigines in British India and Indian States.

Production and Consumption of Sugar in India

In the section of Agriculture of the Science Congress, Rao Sahab T. S. Venkatraman, in the course of his presidential address referring to the sugar industry in India, said:

"The Indian consumption of sugar and sugar products is at present, largely, in the form of jaggery. A fourth of it, however, is in the form of refined sugar and now the bulk of this article—over 85 per cent—has to be imported from outside, at a cost of about Rs. 15 crores each year. In one year, the value of the article thus imported exceeded 26 crores. The dumping of refined sugar into the country is a serious drain on our wealth. It further exerts an adverse effect on the home industry, and might ultimately lead to the extinction of this crop.

"It is now widely accepted that sugarcane probably originated in India and spread to other countries from here. It was an interesting curiosity to our visitors in the years before the Christian era. Alexander the Great was much struck with it, and his followers named it the "Honeyed Reed" or the reed which makes honey without the help of bees. The Indian area under sugarcane is nearly half that of the world and hence much greater than that of any other single country. This ought to give India the premier position as sugar producer. But to-day she has to import large quantities of refined sugar from outside and across wide seas even to meet her domestic needs."

Educational Psychology

In the psychology section of the Science Congress Prof. West, the president, dealt with psychology and education, and many other speakers discussed problems relating to literacy, the education

of defective, normal and super-normal children intelligence tests, etc.

Mr. Natarajan on the Education of Women

Having before us only a very brief summary of Mr. K. Natarajan's presidential address at the fortieth session of the Indian National Social Conference, held at Madras, we wrote in our last number that "if he really said women's educational progress in India has been marvellous, we cannot help saying that his enthusiasm led him to indulge in the language of hyperbole." On reading this remark of ours, he has sent us a copy of his presidential address, saying that his observation had special reference to the Madras Presidency. What he exactly said in his presidential address with reference to the education of women is quoted below.

In the matter of the education of women the progress made during the last thirty years has been little short of marvellous, and nowhere more so than in this Presidency. You have now in Madras City two great Women's Colleges, attended by about four hundred students drawn from all castes and communities; the number of girls attending high schools and primary schools has also largely increased, and it is a remarkable fact that while, daring and since the war, there has been, owing to the economic stress resulting from high prices and increased school and college fees, some retardation in the advance of men's education, these causes have had little effect in checking the steady growth, both numerically and otherwise, of the education of girls. I must not omit to refer here to the Women's University at Hignye Badruk which owes its existence almost entirely to the self-sacrificing zeal of Professor Karve, whose services to women's cause in India will always be gratefully remembered by social reformers all over the country. Personally, I hold that, in the present circumstances of our country, when a sort of tradition of women's intellectual inferiority has held sway for many centuries, it is necessary, at least till that tradition is wholly destroyed, to make no distinction in the courses of study, especially in the higher education open to men and women. I have, therefore, been all along rather sceptical in my appreciation of the idea of a separate University with an altogether different curriculum of studies for women. But I have always acknowledged that every method and every system which promises to bring the benefits of education to some kind of girls and women who would otherwise go without them, is to be welcomed; and from that point of view the Women's University is a very valuable and interesting experiment.

Medical Research in Ancient India

That Dr. Sir Brajendranath Seal, who has done so much to make the moderns acquaint-

ed with the knowledge of the positive sciences possessed by the ancient Hindus, would also be able to say something new on medical research in India, is only to be expected. This he did in introducing the delegates of the Far Eastern Association of Tropical Medicine to a meeting at Mysore. What they thought and felt after listening to Dr. Seal's brief address, we do not know. But it would encourage our young medical students in research, should they take to it, to know that in ancient times our forefathers did what was for those days remarkable and that they were not inferior to any contemporaries of theirs. If the members of the general public bear this fact in mind, they may also be disposed to help in the establishment and maintenance of medical research institutes for Indians on independent lines.

From the earliest times, said Dr. Seal, hundreds of years before the birth of Christ, from the days of Punarvasu, Atreya and Dhauvantari, the fathers of medicine and surgery, at any rate from the days of the University of Taxila, so famous for its schools of medicine, India has taken an active part in the investigation of diseases prevalent in her warm climate and of the indigenous drugs and their healing virtues. And from the extant treatises of Charaka and Susruta, we are surprised to discover that these early enquirers into what may be called tropical diseases and medicines used to meet in conference, in great gatherings of Rishis and savants on the banks of the Ganges, in some forest or mountain retreat, warmly discussing the fundamentals of life and health, and the principles of disease and its cure. These methods of the academy and symposium are no doubt familiar to us in philosophical enquiry, in Greece and India alike. So also the South Indian Academies of Literature, assigned to a fabulous antiquity, are famous in many a story and legend; but what may be called the Ancient Eastern Association of Tropical Medicine, attended by delegates from far Vahika and Gandhara in the West to Benares and Kosala in the East, in fact, from Central Asia to Middle India, had their conferences and sessions centuries before Christ. Mark the long list of names, Atreya, the President of the Congress, Kumara, Shiras, Kankhayana, the Vahika Physician, Vadisa, Marichi, Maitreya Kashipati—the Lord of Benares. Their name is legion and the debates and discussions show quite a modern spirit of enquiry and investigation, even if

they should be in the nature of imaginary conversations. And not investigation alone. India in the early Buddhist times, certainly not later than the third century B. C., inaugurated the organisation of medical relief to man as well as animals, by organising hospitals and attaching thereto gardens of medical herbs and drug stores as well as regular establishments of medical officers and attendants—an organisation which was carried to the Malaya Peninsula and the Eastern Archipelago in the course of India's peaceful civilizing mission.

The Far-Eastern Association of Tropical Medicine, to-day, equally in its activities of medical research and organisation of medical relief, is, therefore, Dr. Seal went on to observe carrying forward on a modern scientific basis the same movement of congress and conferences and of hospital organisation whereby Ancient India pressed knowledge to the service of suffering humanity. And it was not merely the motive power and impulse, not merely the principle of organisation, in respect of which the Ancient Indian medical organisation was akin to the activities of to-day. In some of their results and discoveries they anticipated in their pre-scientific empirical way some accredited and widely acclaimed results of present-day medical research in tropical diseases and drugs. He proceeded to give one or two concrete illustrations of this fact. Take for example, Sir L. Roger's earlier investigations into dysentery and leprosy. In the Ayurveda Pharmacopoeia, a decoction of the Kurchi bark and the Chanlmoogra oil, in certain combinations, were prescribed for dysentery and leprosy respectively, and the drugs in crude forms were in use as hazaar medicines. What Rogers and his assistants did in their first attempts was by modern analysis to find out and extract the active principle concerned in each of these cases. The subsequent developments of various forms of injection were scientific achievements which were necessarily beyond the reach of the ancient physicians; but still it is clear that the latter had diagnosed varieties of these diseases, and found remedies which though not specifics, could actually alleviate or arrest them, and, as it turned out, they thus laid the foundation of future scientific advance. Then, again, take the question of epidemics—what Charaka calls *varsonas*, devastations of whole peoples and regions, Charaka notes the characteristic signs

and accompaniments of these epidemics—the contamination of the water, the soil, the air, and the agency of various pests—including the mosquito, the fly and the rat, *makshika*, *mushakadi*—to select only a few from the list. Or, again, take the question of specific diets in relation to specific diseases; for example, the interdiction of salt in dropsy. In fact, the dietetics of *Susruta* and *Charaka* may fairly pass the test of any upholder of vitamins or the investigator of the innutrition theory of the origin of diseases.

Minimum and Maximum

Some British papers have asserted that the maximum which Britain may be disposed to concede, to the political aspirations of India is provincial autonomy. Previous to the last Madras session of the Indian National Congress, though revolutionaries had worked for absolute independence as their goal and many non-revolutionaries had declared in speech and writing that nothing short of absolute independence could be the ultimate goal of India, no representative and collective body of Indians, following the path of what is called "constitutional agitation," had declared for that goal. But now that one such body, the Congress, has declared that to be its goal, it cannot be said that all India is in favour of any lower goal. And that lower goal is in the case of the National Liberal Federation, the Muslim League, etc., Dominion status—nothing lower than Dominion status. It would, therefore, be quite inaccurate to say that the minimum demanded in India is Dominion status and the maximum, absolute independence. Britannia considers herself as the Lady Beneficent and India as the beggar. So, on the principle that beggars cannot be choosers, Britannia may confidently think that the maximum which she is prepared to concede, viz., provincial autonomy, will have to be thankfully accepted by India, though it may be lower than her minimum demand. But Britain is not in reality the mistress of the situation. So India will continue to press forward towards her goal, though she is not just yet able to apply any pressure which will make Britain agree to her attaining even Dominion status—not to speak of independence.

Independence is sometimes thought of and characterized as "isolated" independence.

But if other independent countries in the world are not in an "isolated" position, what is there to prevent India from forming alliances with other powers?

Again, Dominion status is sometimes spoken of as superior to or better than absolute independence. We do not understand how. Perhaps it is meant that the self-governing Dominions in the British Empire enjoy all the advantages of independence without the full responsibility of self-defence. But is it really an advantage to lean on others for self-defence? The more one relies on others, the greater is the perpetuation of one's internal weakness. To be called upon all of a sudden to stand on one's legs is no doubt perplexing. But we are not just now contemplating any cataclysmic change. Should, however, there be any such change, the India which would be able to sever her connection with Britain in that way, would certainly be able to undertake the duty of self-defence.

It has been stated that interdependence of nations is a higher ideal, indicating a higher stage of political evolution, than mere independence. That is true. But that stage follows the stage of independence. If all nations be not free, they cannot obviously be mutually dependent. Taking the case of India and the other parts of the British Empire, it would not be interdependence if India alone were a dependancy of the latter. For real interdependence, the other parts of the Empire must bear the same relation to India as India would do to them. That would mean exact equality of political status of all parts of the Empire. And even when that is attained, that would not mean the interdependence of the nations of the earth. India might then depend on Great Britain and Great Britain on India, but not India on Japan or France, or France or Japan on India, for example. Therefore, real and comprehensive interdependence of the nations of the earth presupposes first of all complete independence and equal political status for all nations—at least of such numerically large populations as that of India.

The Hartal and Students

We were opposed from the first to students leaving the state-recognised schools, colleges and universities in conformity with Mr. Gandhi's programme of non-co-operation.

unless room could be found for them in other institutions which were at least as efficient as the former. We hold that view still. The observance of the Simon Commission *hartal* by students stands on a different footing. It does not mean leaving the educational institutions on their part for good. It means only a day's absence. The authorities of those institutions who are in favour of the *hartal* or are neutral will agree to give their students a holiday on February 3. Those who have to be opposed to it on political grounds, as the authorities of Government or state-aided institutions, need not take a more serious view of their students' absence for a single day than they do when they absent themselves without assigning any reasons. They sometimes do that to see a football match or a wrestling match or some race. As for the political aspect of the affair, students are not in these days punished for acting as Congress volunteers, Muslim League volunteers, etc. If students are made to assemble for celebrating the Empire Day, for example, that is certainly politics, though it is not the kind of politics objected to by Government and loyalists. It may be argued that the Simon Commission *hartal* is a direct insult to that body and an indirect insult to the British Imperial Government which has appointed it. But is not the enforced Empire Day celebration by many of our students a direct insult to our national self-respect? Who would willingly celebrate on a particular day the fact of our being a subject people? If our students are encouraged to insult themselves and their country by celebrating the Empire Day, why should they be punished for assisting at a function which is meant to hurl back the insult involved in the appointment of the Simon Commission in violation of India's right of self-determination? The one insult is just as political or non-political as the other.

The Oil War in India

The British advocates of British mineral oil interests are angry with the American Standard Oil Company, because the latter are purchasing petroleum from Russia and selling it at a cheaper price in India than the oil supplied by its rivals. The British partisans say that the American Company has been thereby underselling the indigenous

product of the Indian Empire, and thus want us to range ourselves with them. We do not see why we should. Let us take an example. The Burma Oil Company is as much a foreign Company as the Standard Oil Company. The profits of the former fill the pockets of foreigners—not of the Burmese or the Indians. If the independence of Burma had not been destroyed for her oil and other natural resources, the oil would have remained underground till such time as the Burmans themselves could develop the oil industry and get all the profits. But now the greater sale of the Burma oil, the quicker would be the exhaustion of the total oil deposit in that country; so that even if in future Burma became self-ruling and wanted to buy out the Burma Oil Co., it would not be worth while doing so. Hence we do not see any reason to give preference to the oil supplied by the Burma Oil Co. on other rivals of the Standard Oil Co. We should buy whatever is cheaper for the quality. If the Burmans could tap and supply the oil of their own country, it would be reasonable to purchase it even at a higher price than American or Russian oil.

Meetings Against Child-Marriage

The citizens of Madras held a public meeting last month to support legislation against child marriage. The resolution adopted fixed the minimum marriageable age of bridegrooms and brides at 18 and 14 respectively. Mr. N. Srinivasachariar spoke against the resolution, though he was in sympathy with its object. Devan Bahadur T. Varadarajulu Naidu moved an amendment to the resolution to substitute the figures 21 and 16 for the figures '18 and 14'. It was put and lost.

Madras students of both sexes are taking much interest in the question. At a meeting of the students of Queen Mary's College, which is a woman's college, held under the presidency of its principal, a resolution to fix 16 and 21 as the minimum age for the marriage of brides and bridegrooms respectively was passed. It heartily supported the principle of Mr. Sarda's bill in the Legislative Assembly and Dr. Muthulakshmi Reddy's bill in the Madras Council. Similar resolutions have been passed at the Lady Willington Training College, which also is a woman's college, the Law College, Pachaiappa's College, the Victoria Hostel and the Venkateswar Hostel. The students of the

Madras Presidency intend to carry on the agitation in all colleges in the city and in the mofussil until legislation against too early marriages has been brought about.

Archaeology in our Universities

There is a vast field for archaeological workers in India. Archaeological research is one of the principal means of adding to our positive and definite knowledge of India's past. It is, therefore, to be regretted that even in the postgraduate departments of Indian universities adequate arrangements do not exist for giving training to advanced students in archaeological work. Some of them study epigraphy, numismatics, etc., no doubt, and learn what previous workers have discovered. That is a valuable part of their education. But what is also required is that they should learn to be archaeological discoverers themselves, just as in scientific education students not only acquire what is already known but try to find out new facts and truths themselves. We referred to this desideratum in our universities in a note in a recent issue. Since then the Banaras University has appointed Mr. Rakhaladas Banerji as one of its professors of history. As he is admittedly a very competent archaeologist, well-known for his discoveries at Mohenjo-daro and elsewhere, the Banaras University may now, if it likes, make arrangements for giving archaeological training to some of its advanced students under Mr. Banerji's guidance.

As the years pass, the Government of India and our legislators cannot but have a higher and higher idea of the value of archaeology than they now have. More money will then be available for archaeological work and more workers wanted. India ought to be able to supply these workers, who will have a useful career. Our universities should prepare themselves betimes to become the nurseries of such workers.

Punishment for Wearing Sacred Thread

It is said, the Chief of Baghat in the Simla Hills has imprisoned and fined some members of the depressed classes for wearing the sacred thread. These persons had been recently "purified" and invested with the sacred thread by the Arya Samaj, which has the right to do so. While we do not think the wearing of the sacred thread itself

necessarily makes one a better man, no one has the right to prevent people from doing so if thereby they feel that they can add to their self-respect and raise their social status. The Chief should not have been so antediluvian as to consider an innocent act a crime.

Europeans and Indians in South Africa

In the course of a recent speech Premier Herzog said that "it was often felt that South Africa would have been happier if Indians had not been present". But it was the Europeans who took them there to serve their own selfish purposes. Does not Premier Herzog also know that, by other than the European intruders in South Africa and their partisans, "it was often felt that South Africa would have been happier if [Europeans] had not been present?" When the Premier suggested that "the Indians further complicated the colour question in South Africa," he admitted by implication that some other people had already complicated and in fact been responsible for the genesis of that question. And the Europeans were that people.

"Statesman" to Pay Damages

Judgment has been delivered by the Chief Justice and Mr. Justice C. C. Ghosh, awarding damages of Rs. 1,000 with costs to Mr. Subhas Chandra Bose in the appeal preferred by him from a judgment of Mr. Justice Buckland dismissing his claim for damages for rupees one lakh against the proprietors and the editor of the *Statesman* in respect of a libel contained in the issue of that newspaper of November 26, 1924. Justice has been done; but perhaps the damages awarded should have been heavier.

Hooliganism in Madras Against Boycotters

In a previous note on the Simon Commission *hartal*, we have written that those who anticipate trouble owing to the *hartal*, are men of the same kidney with those who can both quell and create disturbances. Evidently what has been done against a Simon Commission boycott meeting in Madras, presided over by Mr. Yakub Hassan, is the first sample of organised hooliganism anticipated by the British journalists referred to in our previous note.

VIDYAPATI, THE POET OF MITHILA AND BENGAL

BY NAGENDRANATH GUPTA

SEVEN cities might have contended for the honour of the birth-place of Homer, but with the exception of the poet Vidyapati I can recall no other name of a poet claimed as their own by two peoples speaking two different languages. It is not as if the poet had written in two languages, or had translated his works into another or a foreign language with a fascinating felicity of phrase and an artistic selection of words. Vidyapati wrote many works in Sanskrit, for he was a profound Sanskrit scholar of wide attainments; but the lyrical poems that brought him enduring fame were written in his own language, the language of Mithila, the far-famed land of Sita chronicled in epic song, the age-old seat of ancient Aryan learning, and now forming the district of Darbhanga in the province of Bihar. In spite of the facts that Vidyapati wrote his lyrics in a language which is not Bengali and that he was not a native of Bengal, he is recognised as one of the two earliest and greatest poets of Bengal, the other being Chandidasa. Vidyapati's poems are included in the earliest collections of Vaishnava poetry which flooded Bengali literature in the life-time of Chaitanya and after the passing of that great prophet of divine love. Both Chandidasa and Vidyapati lived before

Chaitanya. It has to be explained how the poems of the Maithil poet Vidyapati came to be included as an integral part of Bengali literature.

Before the time of Vasudeva Sarvabhauma, the preceptor of Chaitanya, there was no school or *tal* in Bengal. Mithila was the nearest seat of Sanskrit learning and young Brahmin scholars from Bengal used to proceed to Mithila to acquire learning. Naturally, they learned the Maithil language and greatly admired the poems of Vidyapati, which they copied out and brought with them to Bengal, where they rapidly gained wide popularity, as many people in Bengal in those days understood the language of Mithila. Vasudeva Sarvabhauma was a brilliant scholar who became proficient in all branches of Sanskrit learning. He had the misfortune of vanquishing his Maithil *Guru* in the course of an argument, with the result that all his palm-leaf manuscripts containing grammar, *Nyaya* and other *Shastras*, and the *Darshanas* were forcibly taken away from him and he was ignominiously expelled from Mithila, the Maithil pundits vowing that they would never again admit any scholars from Bengal. Vasudeva carried all his learning on the indelible tablet of his memory and established his own school

at Navadvipa in Bengal and Chaitanya was one of his earliest and most distinguished scholars, but from that time all contact between Bengal and Mithila ceased. The songs of Vidyapati were sung in the famous *kirtans* inaugurated by Chaitanya, and the language and the ravishing melody of the Maithil poet found many imitators among the Vaishnava poets of Bengal. Among the early poems of Rabindranath Tagore are a number of delightful songs in the language and manner of Vidyapati, composed under the *nom de plume* of Bhanu Sinha, the word Bhanu being a synonym of Ravi, the sun. Rabindranath never learned the Maithil language or grammar, but his poetic instinct and ear helped him to acquire the language of Vidyapati's poetry.

It is tolerably certain that for sometime after the intellect of Bengal had ceased to be in touch with Mithila and all inter-communication between the two provinces had ceased, the Vaishnava community of Bengal understood the language of Vidyapati's poetry and knew that the poet was not a Bengali. But as time rolled on and the waters of Lethe washed away the landmarks of memory, all about the language and identity of the Maithil poet whom Bengal had taken into her bosom was forgotten. It has been pointed out as a defect of the Indian intellect that it is entirely lacking in the faculty of historical accuracy, and lets imagination and hearsay do duty for the dry facts of history. This failing, however, is not confined to India. Vidyapati lived in an age older than that of Shakespeare, and yet in England itself there was a prolonged and even acrimonious controversy, the echoes of which were heard until recently, as regards even the identity of the greatest name in English literature. It was quite seriously maintained, with a great array of plausible evidence, that there never was any person of the name of William Shakespeare, or if there was one, the name was merely that of a mediocre play-actor to whose authorship the immortal plays were erroneously and gratuitously attributed. It was triumphantly announced that the real author was Francis Bacon, one of the founders of inductive philosophy and the famous author of the "Advancement of Learning" and "Novum Organum". Is it permissible to enquire whether this controversy is considered a laudable instance of historical research and a careful sifting of the facts of history?

About three hundred years after the passing of Vidyapati the text of many of his poems current in Bengal became hopelessly corrupted, as was only to be expected, since the writers of the manuscripts know nothing about the language in which the poems had been originally composed. Many other poems actually composed by him were treated as anonymous and were not included in his poems, because the last lines in which the author's name appeared were missing. This is a sort of imprinter which is to be found in the poems of Hafiz and in the songs of Kabir, Tulsidas and Surdas, and in all the poems of the Vaishnava poets of Bengal. It came to be firmly believed that Vidyapati was a native of Bengal and several unfounded stories came to be associated with him. As, however, the language of the poems was obviously not Bengali, a theory, which was accepted without challenge or hesitation, was put forward that the language in which Vidyapati had written was Brajaboli, a dialect supposed to be in use in Multa or Brindaban. In point of fact, however, there is not the least resemblance between the language of the poems and the dialect spoken in the holy places named above. Moreover, it was never asserted that Vidyapati had spent a number of years in Brindaban, nor was it ever explained why he should have preferred another language to his own, on the assumption that he was a Bengali, for the composition of his poems.

All the notions about Vidyapati, the motivations in the text of his poems could have been easily set right by a scholar in Mithila, but the poet like the prophet is not always honored in his own country. The name of Vidyapati is venerated in Mithila, there is a palm-leaf manuscript of the *Srimadbhagavatam* in the poet's own handwriting extant in a village in the Parbhanga district, and it is highly treasured; manuscript copies of a number of Vidyapati's poems are to be found in many Maithil homes, but beyond that nothing was done. The Bengali script is borrowed from the Maithil, so that Maithil scholars have no difficulty in reading Bengali, but nothing was done in Mithila either to correct the baseless theories prevalent in Bengal or to bring out a correct edition of the poems. All the errors occurred in Bengal and they were ultimately corrected in Bengal. A complete history of the poet's family was collected, an old palm-leaf manuscript of his poems was found in

Mithila, and a collected and corrected edition of the poems was published in Calcutta and another edition in the Devanagari character was published at Allahabad. A palm-leaf manuscript of the poems was found in the library of the Maharaja of Nepal at Khatmandu and new poems found in it were incorporated in the Calcutta and Allahabad editions.

Such great names in wisdom and learning as Janaka, Yajñavalkya, Vachaspati, Udayana and Pakshadhara belong to Mithila, but prior to Vidyapati no one had attempted to write in the Maithili language. Sanscrit alone was used as the medium of writing and the language spoken by the people was despised as a vulgar lingo. There is reason to believe that Vidyapati himself commenced his literary activities by writing in Sanscrit. There were three distinct stages in the output of his literary work: the books that he wrote in Sanscrit, the few others that he wrote in a form of Prakrit which he designated *Abahath* (अवहट्ठ) and the songs and lyrics in Maithili, which undoubtedly represent his mature and mellowed writings, and have won for him fame and a permanent place in the literature of Bengal.

The system of orthography followed in these poems is that of Prakrit as distinguished from Sanscrit. The language approximates closer to Hindi than to Bengali, and is marvellously musical in the selection of words and the lift and movement of the verse. There is no attempt anywhere at eking out a poem. The majority of the poems are models of brevity and the lyrical cry rings true. Occasionally, the master singer strikes another chord in his harp and one listens entranced to the hoarse of full-throated music and the stately roll and march of his verse. For a fine simile take a fragment of a song:—

जब गोबिंद समय बेनी
 भनि मन्दिर बाहर भेनी,
 नभ जलधर बिहुरि रेंदा
 दख पसारिषि बेनी।
 भनि जलधर वसति बाबा
 जनि गोबिंद दुख माबा।

"In the gleaming of the dusk the maiden (Radha) came out of her house and passed trailing behind her a lengthening contrast of a streak of lightning on a new cloud. She is young like a newly strung garland of flowers."

The darkling twilight is the background of cloud and the moving maiden is the line—not a flash—of lightning moving slowly in the dark. The *dravda* (द्वन्द्व) is the contrast between light and darkness. It is a motion picture reminiscent of the superb similes of Kalidasa. In the *Raghuramsam* the princess Indumati as she passed the rows of princes waiting for her choice of a husband moved like a lighted taper at night *sancharini dipasilheva ratrao* (संचारिणी दीपसिलेव रात्रौ), and as she withdrew the light of her countenance from prince after prince the dark pallor of disappointment spread over their faces as the odifers along a street are swallowed up in the darkness when the torch that lighted them has passed. In the *Kumarsambharam* the moving figure of Parvati, adorned with various flowers, is spoken of as *Sancharini pallavini lateva* (संचारिणी पल्लविनी लतेव), like a moving creeping plant putting forth sprouts of new leaves.

In depicting the love-scenes of Krishna and Radha the Vaishnava poets had no thoughts about the love of mortals. These songs are regarded as sacred literature by the Vaishnava community. The mere fact that these songs moved Chaitanya, who became a Sanyasin and took a vow of celibacy while he was quite a young man, to the raptures of religious exaltation, proves their essentially religious spirit. These poems are really allegorical and afford glimpses of deep spiritual suggestion. Writing of the poems of Vidyapati Sir John Grierson, who was for some time a Civilian in Bihar and is a linguist of some note, said:—

"To understand the allegory, it may be taken as a general rule that Radha represents the soul, the messenger or *duti*, the evangelist or mediator, and Krishna, of course, the deity. The glowing stanzas of Vidyapati are read by the devout Hindu with as little of the baser part of human consciousness as the Song of Solomon is by the Christian priest."

The Vaishnava poets belong to the same order as the Sufi poets like Hafiz and Jalaluddin Rumi. The descriptions of Krishna do not at all conform to the ordinary notions of manly beauty. His complexion is always described as green like new grass, and surely the Indian poets, ancient and modern, were not colour-blind. The beauty of Krishna was the verdant beauty of nature, soothing and restful to the eye. In the

Song of Solomon the virgin seeking her lover is not fair. "I am black, but comely, O ye daughters of Jerusalem, as the tents of Kodar, as the curtains of Solomon." And further on she says, "Our bod is green." Here also is the idea of a colour refreshing to the eye.

The love-tryst is the symbol of the soul seeking and meeting the deity in secret, unknown to the world. The world knows nothing about an overpowering love for the Lord and is ever a stumbling-block in the path of the devotee and the man of God. Men who sought God and His great love renounced the world and escaped to the peace and solitude of the forest. In keeping her assignations with Krishn Radha laid aside every feeling of fear, and while the rain poured and the thunder rolled and hooded death in the shape of serpents crossed her path she went fearlessly to meet her lover:—

रघुनि काजर धन भीम मुखमन

कुसुम परम दुरवार ।

गरज तरज मन रीते हरिच चन

संघर पक्ष अभिसार ॥

* * * *

परम देवद भनि हित कर मानव धनि

निर न करप रीत ।

सुसुख प्रसन्न तीर्ष सख कहरि मोहि

रुचिह कत दुर भीष ॥

"The night emits black darkness, fearful serpents are moving about, the irresistible thunder-bolt falls; the rumble of thunder strikes terror into the heart, the clouds are pouring rain in wrath, the assignation has become doubtful—A snake coiled itself round her feet, but the maiden welcomed it since it silenced the tinkling of her anklets." Then the amazed and perplexed woman who was accompanying her, the *duti*, asked her wonderingly, "O fair one, I ask thee, tell me the truth, how far is the bourn of Love?"

How could the worldly-minded woman with her limitations understand that the deity attracts the devotee as the magnet draws the needle, that this was a love that dured all and that love is stronger than death?

There is a startling and fine conceit in a poem in which the *duti* urges Radha to go to the trysting-place on a night when the moon was full:—

आज प्रणिता तिथि आनि दीप ऐतिह्य

उपित तीरर अभिसार ।

देह जोति सवि किरन स्यादिति

के विभिन्नान पर ॥

सुन्दरि अपनहु हृदय विचारि ।

आधि पसारि जगत हम देख

के सुख सनि नारि ॥

तीरि अनु तिमिर होत कर मानव

आनन तीर तिमिरारि ।

सहज विरोध दूरे परिहर धनि

चल छति जतर सुरारि ॥

दूतो वपन दूरे काक कए मानव

पावक भेख पशवान ।

हरि अभिसार चळति नर कामिनी

विदायति कवि भान ॥

"Knowing tonight is the full-moon I have come: it is fitting that thou shouldst keep the tryst. The light of thy body will mingle with the moonbeams and who will be able to distinguish between the two? O beauteous one, I considered in my heart and I opened my eyes and I saw there is not another maid in the world to compare with thee. Do not look upon darkness as thy friend, for thy countenance is the enemy of darkness. Let alone the conflict of nature; rise and come where Murari is waiting for thee. The maid listened to the messenger and Cupid becamea her guide. The poet Vidynapati says, the fair maiden went to the assignation with Hari."

The invisibility of Radha in the moonlight that flooded the earth is a daring and suggestive co-conception. The figure and fairness of Radha would merge in the moonlight as a component part of it, and she did not need the magic cap of invisibility to escape curious and censorious eyes. On the other hand, the darkness of a moonless night would betray her, for, is not there a perpetual conflict in nature between light and darkness and was not Radha like unto a slender beacon of moving light, not merely in her incomparable beauty but by virtue of the lustrous aura of her soul eager to mingle with the All-soul and enveloping her as with a garment woven from starbeams? In the last line the poet says, Radha went forth in the glory of the full-moon to meet Hari. The name Krishn is not used and Hari is the highest and holiest name of the Lord.

Sometimes, not often, there is a play upon words in some of the verses. It is not high poetry, but it shows the wonderful flexibility of words in the Sanscrit language. There is no more precise or more perfectly formed language in the world, but the variety of meanings attached to single words is bewil-

dering. There is no other language living or dead, which can compare with Sanscrit in this respect, though such words may be found in other languages. The word "cleave" for instance, in the English language means to unite as well as to split, two altogether opposite meanings. Another such word is 'liege', and it means both a vassal and a lord. The single instance of a play upon words that I have selected from Vidyapati is not because it is important but because of an extraordinary coincidence. In a poem descriptive of the beauty of Radha these two lines are to be found:—

सरङ्ग नयन बबन पुन सरङ्ग
सरङ्ग तनु समवासे ।
सरङ्ग चर उदर दम सरङ्ग
केनि करयि मनुषाने ॥

The word *saranga* is used no less than five times and each time it has a different meaning. Taken in the order in which the word occurs, the meanings are: (1) an antelope, (2) A cuckoo, (3) Cupid, (4) Lotus, (5) A black beetle or bee. Translated, the verses mean:—

"Her eyes are like the antelope's, and her voice is like the cuckoo's; Cupid dwells in the glance of her eyes. Over her lotus like forehead are two ringlets like black bees, playfully sipping honey."

The coincidence to which I have referred is that there is a couplet in the Punjabi language with a similar play on the same word *saranga*, and there cannot be the remotest suspicion in either case of either plagiarism or even auto-suggestion:—

सरङ्ग फरैया सरङ्ग नू
नी सरङ्ग गोमा भाय ।
वे सरङ्ग भायि सरङ्ग नू
तान सरङ्ग मुख दे जाय ॥

In these lines the word *saranga* occurs six times, but the meanings are different from those in the verse of Vidyapati, though in the Punjabi verse there are only three meanings which are twice repeated. The word here means, following the same order as before, (1) peacock, (2) snake (3) cloud, (4) peacock, (5) cloud, (6) snake. The meaning of the verse is:—

"A peacock caught a snake. When the cloud spoke, that is, when the thunder was heard, the peacock cried to the cloud and the snake escaped from the mouth of the peacock."

Of the rhymes that swing to a stately measure part of one poem may be quoted as an illustration. It is a marvel of metrical movement:—

कुदुमान विद्याम कानन
केन सिन्दुर रङ्ग ।
निविष्ट नौदे हविरे दमघ
पहन लनि निन देह ॥
प्राप्त देधु मग्नरागति
वर सुवति विभुजन घाते ।
लनि काम देवक विनय बल्लो
विह्वलि विह्वि स घाते ॥
घरद सवधर घरिघ सुन्दर
बदन धीवन छोट ।
विमल कचन कमल पङ्क्ति
लनि छिद्र पद्मन लोट ॥
अधर पल्लव नय मनोहर
दस्य दासिनि जोति ।
लनि विमल विद्रुमदल सुधारके
छोवि चर मग्नराति ॥
मल काकिल केन गोमा नाद
विभुजन भाव ।
मधुर दावे पवाहि मानलि
करय बबन विद्यादे ॥

"Like the pleasure of the god of Love armed with arrows of flowers is her hair, with the line of vermilion to the middle showing itself like the sun in the midst of thick, beautiful clouds. To-day I have seen the fairest damsel in the three worlds passing with the stately gait of a lordly elephant, moving like the victorious flag of Cupid in the world created by Brahma. Her face is fair as the autumn moon and her eyes are restless like a brace of wagtails playing on a lotus of pure gold. Her lips are tender as new leaves and the glint of the pomegranate seed is in her teeth; it is as if the pearls found in the heads of elephants were arranged in rows on leaves of clear coral sprinkled with ambrosia. When she speaks with a smile all the musical notes of the impassioned cuckoo, the lute and the lyre in the three worlds are arrayed together."

The time came when, according to the tradition recorded in various ancient books, Krishna passed out of the sight and out of the life of Radha. Regarded as an allegory the interpretation of this incident is the estrangement of the soul from the deity and the void following the separation. In his poems dealing with this phase of divine love Vidyapati has sounded all the octaves of the whole gamut of grief and anguish. Krishna left Radha without even bidding her farewell:—

मधु निम्ना बेडो घनि भेलि नौन्द ।
उखिन न मोख मोहि निदुर गोविन्द ॥
जाए खने दितु भालिइन गाद ।
जनि सुयार पव पव सँ खेस पाद ॥

Radha is speaking to a friend :—

"O fair one, I fell asleep in the summer night and cruel Govinda did not even ask my permission when he left. I would have given him a close embrace even as the rising tide clings to the shore."

There is one famous song which is sung everywhere in Bengal even to this day :—

सखि दे हमर दुख कहि धोर ।
इ भर बादर बादर बादर
गुन मन्दिर मोर ॥
भग्य घन गरजन्ति गन्तति
गुवन भरि बरिखनिभा ।
कला पाहुन काम दाहन
सघने खर गर हनिया ॥
कुलिम कत मत पात सुदित
मदुर माधव मातिया ।
गत दादुरि जाके जादुकि
पाटि जाओपत झतिया ॥
तिमिर दिग भरि धोर जाकिनी
दरके दामिनी पातिया ।
विद्यापति कह केसे गमा छरि
हरि दिन दिन रातिया ॥

"My friend, there is no end to my grief. In this fall rainy season, in the month of Bhadra, my house is empty. The clouds are thick, there is incessant thunder and it is raining all over the world. My lover is gone abroad and cruel Cupid is shooting his keen shafts at my heart. Thunderbolts are falling by the hundred, the glad peacock is dancing passionately, the impassioned frogs and the moorhens are lifting their voices, and my heart is bursting with grief. Darkness has spread to all directions, the night is fearful and lines of lightning are flashing. Says Vidyapati, how wilt thou pass the days and nights without Hari?"

In another poem Radha says there are means of mitigating the pangs of separation in the summer, but in the rains she is utterly helpless :—

खेदर मोजे कीकिल फलिकुल बारन
करकचन कमकाद ।
अखने छल्ले भवलागिरि बरिखन
तल्लूक कजोरे उपपाद ॥
मगन मरल घन सुनि मन मरिहत
बारिष हरि कह रावे ।

दखिन पवन सीरमे छदि सतरन
डुङ मन डुङ विस्तारवे ॥

"I shall chaso away the cuckoo, and prevent the black bees from coming near me by jingling my bangles, but what shall I do when the clouds from Dhavalagiri begin to pour rain? I am alarmed when I hear the thunder in the sky and the rain clouds rumble. At the same time, if I escape the fragrance of the south wind in summer, my absent lover and myself may forget each other."

A time came when in the passion and intensity of her grief Radha lost her sense of ideolity and suffered not only the agony of her own estrangement but also the grief of Krishna at the parting. The *duti* who has proceeded to Mritara to interview Krishna says :—

धनुजन माधव माधव सुमरदत
सुन्दरि मे लि मथाद ।
यो निज भाव सीमातहि विचरल
भयन गुन सुमथाद ॥
माधव भयवष तीहर चिन्ह ।
भयन विरहे भयन तन कर कर
जिवन्ती भेलि खल्ले ॥
धोरहि सहचरि कातर दिदि धिर
बल बल खोवन राति ।
धनुजन राधा राधा रततहि
माधा माधा बानि ॥
राधा सजो कर इन तहि माधव
माधव सजो कर राधा ।
दाबन प्रेम तनहु नहि दुदत
वादत विरहक राधा ॥
डुङ' दिस दाबदहने जदरे दगधन
काडुल कोट परत ।
ऐ वन बलबल हरि सुभासुयो
कवि विद्यापति भास ॥

"Remembering Madhava, Madhava at all times, the fair one has herself become Madhava. Tempted by her own qualities and enamoured of herself, she has forgotten her own condition and nature. O Madhava, this love for thee knows no precedent. Her body is worn by the separation from her own self and it is doubtful whether she will live. Distracted and with her eyes full of tears, she looks pitifully at her companion and, in a broken voice, incessantly repeats Radha, Radha! When she thinks of Radha she becomes Madhava, and again, thinking of Madhava she becomes Radha. Still there is no abatement of cruel love and the pain of separation is increasing. Says Vidyapati, as a maggot living in a piece of wood despoiled of life when the wood takes fire at both ends and there is no way of escape, so, Lord, seems to be the state of the nectar-mouthed one."

The conception that runs like a thread of gold through this remarkable poem clearly and definitely transcends all notions of mortal love. It is the very ecstasy of the agony of the soul seeking union with God. The estrangement here enters upon a dual phase : first, there is the pain of desolation for the soul left destitute ; next, there is the realisation of the isolation of the higher Soul which is seeking to draw other loving souls unto itself. There is the alternating consciousness of both the seeker and the sought, the double-edged grief that cuts both ways. There is a confluence of two streams of bereavement ; but the waters do not mingle—they retain their individuality and distinctiveness.

The best known and most widely repeated poem of Vidyapati is one in which Radha, in reply to a question of a companion, sums up her experience of love as it is commonly understood and plaintively declares how it fails to quench the longing of the soul. It is athrenody of aching and unsatisfied yearning, but out of it gleams the ever-varying newness and the never-fading freshness of soul-love, as the intoxication of wine represents soul-intoxication in Sufi poetry :—

सति किं पुद्गलि अमुभव मोद ।
 सेहो पियेति अनुसग बखानइत
 तिले तिले नून दोष ॥
 जनम अवधि हम रूप निहारल
 नयन न तिरपित मेल ।
 सेहो मजुर मोल भजनदि छनल
 भुतिपये परय न गेल ॥
 कत मधु जामिनी रमसे गमाबोल
 न हृमल कइसन केल ।
 लाल लाल जुग दिय दिख राखल
 तइयो दिमा जुझल न गेल ॥
 कत बिदगध जन रस अनुमगन
 अनुभव काहु न पेख ।
 विद्यापति कह प्राण जुझाइत
 लाले न मिलल एक ॥

"Friend, what dost thou ask me about my feelings ? That love and ardour become new every moment even in the describing. From my birth I have looked upon beauty, but my eyes have never been satisfied. My ears have heard that sweet voice times out of number, but the feel of that voice does not linger in my ears. How many summer nights have I spent in pleasure and yet I do not understand what pleasure is like : For lakhs and lakhs of eons I have held him to my heart and yet my heart has not been cooled.

Vidyapati says, many who are wise in love are plunged in it, but feeling is not to be seen in any one of them. Not one can be found even in a lakh to soothe the soul."

The word *anubhava* (अनुभव) which I have loosely translated as feeling, is in reality untranslatable. It is one of those words which are peculiar to the genius of a particular language, and for which no accurate or exact synonym can be found in another language. The word itself is in common use and has a plain meaning, but there is a deeper and subtler meaning which baffles translation. It is partly feeling, partly realisation, but in addition there is a subtle something which can be felt but cannot definitely be expressed. It is in this sense that the word has been used by the poet and it holds the key to the poem, because it is to be found at the beginning as well as the end of it. The word was used by Radha's friend in her question so as to get at the root of the matter. The most ethereal among the English poets, Shelley, has treated of Love's Philosophy in lines of surpassing loveliness, in which the deep calls unto the deep and the heights reach out to greater heights :—

The fountains mingle with the river
 And the rivers with the ocean,
 The winds of heaven mix for ever
 With a sweet emotion ;
 Nothing in the world is single ;
 All things by a law divine
 In one another's being mingle—
 Why not I with thine ?
 See the mountains kiss high heaven,
 And the waves clasp one another ;
 No sister flower would be forgiven
 If it disdained its brother ;
 And the sunlight clasps the earth,
 And the moonbeams kiss the sea ;—
 What are all these kissings worth,
 If thou kiss not me ?

This is the faintest expression of love on earth and also beyond it, the love that is mirrored in the affinities in nature and attunes itself to the music of the spheres. The note which runs like a long-drawn sigh of disillusionment through the verses of Vidyapati refers to mortal love, but there is also a haunting suggestion of that other love between the soul and the deity and which is the theme of our poet. The phrase about the lakhs of yugas is not a mere hyperbole but symbolical of the exclusively Aryan conception of the cycle of life wheeling round and round in a never-ending sequence of incarnations.

There are some bymns in which the p

addresses Madhava or Krishna as the deity. I shall reproduce a few lines from one of these :—

तातल सैकते यारिविन्दु सम
उतमिन रमनी समोजे ।
तोहे विसरि मन ताहे समरंज
अव महु हव कोन कोजे ॥
माधव हम परिनाम नितसा ।
गुहु जगतारन दीन दयामय
अतए तोहारि वियोयासा ॥

* * * * *
फत चतुरानन मरि मरि जाओत
न तुय यादि अयसना ।
योहे जनमि पुन तोहे समरओत
सागर सहरि समाना ॥

"Like a drop of water on a hot and parched sandy strand I have remained among wife, children and friends. I forgot thee and gave my mind to them. Of what use are they to me now? Madhava, I despair of thee hereafter. Thou art the saviour of the world, merciful to the humble; therefore I place my trust in Thee. How many four-headed Brahmas die time after time! Thou alone art without a beginning and without an end. Other gods emanate from Thee and again enter Thy being, as the swell rises from the sea and again disappears in it."

A fitting conclusion to a tribute of appreciation, however inadequate, to this poet will be the recital of his invocation to the goddess of Energy, an ode of great sublimity :—

विद्विक्ता देवी विद्विक्ता हो
अविलसेस सोहन्ती ।
एकानेक सदसको घारिनी
अरि रंग पुनन्ती ॥
यन्जल रंग तुय काली कश्चिओ
उज्जल रंग तुय बानी ।
रविमण्डल परचरअ कहिए
मंगा कहिए पानी ॥
महाघर ब्रह्मानी कहिए
हर घर कहिए गौरी ।
नारायन घर दमला कहिए
के जान डतपति होरी ॥

"Manifest thyself, O goddess with the glorious thick tresses, manifest thyself! Thou art many in one, containing thousands and filling the battlefield of the enemy! Thy dark form is known as Kali, thy shining shape is Saraswati. In the nimbus of the sun thou art called Prachianda, the Fierce, and as water thou art known as the Ganges. In the house of Brahma thou art called Brahmani,

and Gouri in the house of Siva. In the house of Narayana they call thee Kamala, but who knows thy origin or whence thou comest?"

The allusion in the second line is to the allegory in which the goddess Kali, in the form of Chandika, destroyed the demon leader Sumbha and the demon army. It is related in *Markandeya Chandi* that armed warriors by the thousand issued from the shape of the goddess, as Minerva sprang full-armed from the brow of Jupiter, and slaughtered the demon army. Afterwards, as this phantom army was disappearing whence it had come, the goddess, who was about to slay the demon chief with her own hands, said to him, "O wicked one, I am alone in this universe, who is the second one beside me?" "दुष्ट, पैका" नगत्य द्वितीया का समापार?" This is the explanation of the whole poem. Sakti, or Energy, is multi-manifest, but it is one and without a second in essence. The antithesis between the dark and bright forms does not imply different entities. The prismatic hues of the rainbow, visibly different, proceed from a single source. Shut out the sun's rays and the rainbow with its variegated colours will disappear. Notable skill has been displayed in the arrangement of the various manifestations of the goddess Sakti. Each one is antithetic of the other and so the group is divided, two by two. To begin with, there are the two forms, one dark and the other bright, one destroying evil and the other the source of all artistic creation. Next follow the fierce energy to be found in fire and the sun side by side with the gentle spirit that moves on the waters. We next find the two Saktis respectively, behind Brahma, the creator, and Siva, the destroyer. Finally, there is the Sakti behind Narayana, the nourisher and the sustainer. Different peoples in different parts of the world have realised for themselves, either independently or in subtle spiritual sympathy with one another, the existence of a supreme and first Creator of the Universe, who set the wheel of the Law in motion, and they have called him God the Father. In the progressive and later stages of spiritual thought the Aryans conceived another and a gentler phase of the unresting activity in nature, and realised by the intuition of faith what has now been established by the patient inquiry of science, the existence of a single, dominant Energy out of which all things proceed

and which manifests itself in many conflicting mutually antagonistic forms. On this foundation rest the allegories, some full of beauty and others full of dread, of the many-named

and multifarm goddess, who represents the female principle in the law of creation and to whom millions in India bow down as God, the Mother.

SOCIOLGY AND PROGRESS

The Contribution of L. T. Hobhouse to Social Philosophy

OF PROFESSOR WENOELL M. THOMAS, JR.

SHOULD sociology confine itself to the attempt to discover the laws of observable social conduct, or should it endeavor also to point out the conditions of human progress, past and future? Can it fruitfully deal with both fact and value? While strongly insisting upon the necessity of distinguishing the facts of evolution from the values of progress, Prof. L. T. Hobhouse, the contemporary English sociologist, publicist and philosopher, would side with those who contend that the chief contribution of the sociologist is his selective or normative investigation and construction of social values. The scientist should be broad enough to be a preacher.

In every civilized country today, according to Prof. Hobhouse, "an army of reformers is toiling at the vast and absorbing problem of social progress. But in method, the 'army' looks more like a miscellaneous assortment of guerilla hands, acting without concert, often at cross purposes, sometimes coming into violent conflict, and at best with no clear sense of any common cause." The promoters of Temperance push their program without regard for anything else, and likewise the thrift specialists, the Single Taxers, the apostles of sanitary and housing reform, the Tariff Reformers, the Trade Unionists, Co-operators, Socialists, and Eugenists. Accordingly,

"To promote unity of aim among men of good-will and lay a basis of co-operation between those attacking different sides of the social problem is a practical problem of the highest importance."

The need is for sociology, the science that deals with the facts of society as a whole, and seeks rationally to discover human value and its conditions; and Hobhouse,

backed by his survey of experience and his interpretation of recent political issues, grapples with the problem in his books *Social Evolution and Political Theory*, the Trilogy *The Rational Good*, *The Elements of Social Justice*, and *Social Development* and in his lectures and seminars on *Social Philosophy and Psychology*. As a science, sociology seeks to discover ultimately the conditions of social progress: and in method, it does well to follow the scientific steps of biology.

(1) *A Construction of "a morphology... a systematic arrangement of types that we find in accordance with their affinities."* When Darwin began his work in biology, he found the whole fabric of organic evolution "standing, as it were, ready and waiting for him in the great natural classifications of botany and zoology." Hobhouse, as a pioneer in sociology, had to invent an arrangement. Guided by the inherent logic of the facts, he arrayed mental types according to their control over the natural environment. But as they now stand, both schemes are purely abstract. "To transform the dead, crystallized classification into a living movement," we need an enquiry into genesis: do the abstract schemes conform to a real time development? Paleontology replied Yes to Darwin; and history, anthropology and archaeology replied to Hobhouse with a Yes growing fainter and less certain as it travelled towards the remote past, but certain enough in the more recent development to affirm that the scale of types arrayed logically according to their control over nature represents also the "genetic affinity whereby the types pass into one another" in novel adaptations. With each

type of control over nature we find associated various expressions of social life in art, morality, government, customs, and the rest, all of which together constitute that particular type of society. Such phases of social development must be compared not by chance features of similarity in outer institutional forms, but by their inner purpose and meaning; "It is the *psychological* groundwork that determines the true affinities in a sociological classification." Once we have constructed our living classification,—a biological or a sociological morphology as the case may be, we are prepared for

(2) *An estimation of the morphological process, in*

"a formula of descriptive synthesis. *** How far and in what direction has it taken us? The biologists have been generally content to follow Mr. Spencer in conceiving evolution as a process from the simple to the complex, or they have regarded it simply as a progressive adaptation of the organism to the environment."

Using the sciences of comparative psychology and sociology, Hobbhse sees in evolution the process of a growing, developing, and harmonizing mind. But the final goal in every science is not mere description, but the discovery of laws, causes, conditions. If then sociology is to be a true science, it must seek

(3) *A determination of the conditions of the process.*

"When, in relation to the organic world, Darwin arrives at the conception of the struggle for existence, the laws of heredity and natural selection, as causes determining the growth of species, he is giving us a theory of the permanent conditions underlying this development."

But when Hobbhse as a sociologist chooses the species *man* that holds to conscious standards of value he is forced to study the conditions of progress. But before he can discover its conditions, he must define its nature; and this is a task for social philosophy, involving "a searching inquiry into the first principles of ethics." Let us then follow this double inquiry into the nature and the conditions of progress.

"Progress is a process of the realization of ends of human value, ethical ends." "In the world of thought there is a reality to which preconceived opinion and rebellious emotion alike must bow. When experiment and calculation have spoken, controversy is put to silence. Is there no corresponding reality, no analogous method in the world of practice, and of human values? No one would deny that given a certain end, the means employed to bring it about will be such as will

'really' succeed or 'really' fail... But what of our ends when we have gained them? Do we not find that some are 'really' satisfying, and others 'really' vain and illusory, and if so, must we not admit that there is a reality and an unreality in the world of our desires, and a truth and falsity in our judgments as to what is good? Lastly, if A pursues an end which is very satisfactory to him, but a crushing blow to B,—is there nothing to determine what is just and fair between the parties? It looks, then as if the right and wrong stand to the will much as true and false stand to the judgment... We shall enquire whether there is a Rational, and therefore a demonstrable, standard of values,—which we may call the Rational Good."

But

"It is useless to look for anything, call it Practical Reason, Will, or what we may, that stands outside the body of impulse-feeling and controls it."

Reason, or intelligence, assumes control by an inner growth. The primal spring of action is *impulse*, an expression of hereditary reactions. But as the individual meets with experience, impulse becomes guided by the rader of *feeling*. Now within impulse-feeling, on the ground of past experience, an idea is formed of future experience... "and this idea regulates the act, reinforcing or checking the impulse to perform it." The onic of *idea* with impulse feeling forms purposive *desire*, "directed to a particular object or end."

Now when desire has attained its object with satisfaction, "there is a harmony between the effort and its result, and the feeling involved in the harmony is one of pleasant, too." The effort of a child to consume a sweet, for example, is not checked but encouraged by the revolting taste. And there is no limit to this harmony.

"Any act or object, simple or complex, near or remote, which stirs feeling, may form the content of an 'experience' we call good or bad."

But since feelings themselves may conflict as when a person feels ashamed for having rejoiced, "the Good is a harmony of feeling with feeling." It is to be carefully noted that this harmony of feeling may be of the most exalted type, and is by no means to be limited to mere bodily affection. The most satisfactory harmony might well be called bliss.

Now the process that realizes this ultimate Good, this all-embracing harmony of feeling is the only process that can ultimately be called progress. And the only process that can continuously realize a universal harmony of feeling is the harmonious development of collective humanity, in which every personality

finds fulfilment. *Social progress, then, is the harmonious development of society.*

2 Now that Hobbouse has found the nature of progress to consist in the Realized Good of a harmonious, social development of personality, he is prepared to go on to infer its conditions. These he divides into four groups.—(1) physical, (2) biological, (3) psychological, and (4) sociological.

(1) One school claims to find the conditions of social development in the *physical environment*, in climate, food, soil, and the rest. Hobbouse grants that these may contribute variety to social development by determining local peculiarities, but maintains that their general influence is relatively small. Areas which afford security and encourage communication will obviously favour the rise and growth of civilization; towns will spring up where large numbers of people can congregate; and a specific climate and food will fix national mannerisms; but we lack evidence that these factors affect history apart from racial and political movements. Can England's commerce be explained by saying she is an island? Would the Black-fellows or Pygmies, placed on the British Isles, have duplicated the record of Englishmen? History shows that the purely physical factor diminishes in importance as the power of man over nature increases: the sea, for instance, at first a barrier, becomes a connector.

(2) The view that the *biological factors* determining the nature of the individual are the chief cause of human development became popular with Darwin, and tended to supersede all others: social progress was supposed to lie in the mating of individual cells, and the breeder of "short horns" knew more about it than the historian. This biological "enlightenment" takes three forms. First, the *struggle for existence between individuals* was assumed to give at a stroke both the facts and the norm of human progress: follow the law of nature, and let the fittest survive! Wrong in its facts, this doctrine is based on the illusion that the fittest in one environment are also the fittest in any; the fitness of a man in society to-day is determined by his social, not his biological qualities; a great inventor or a powerful magnate may be a puny physical specimen. Wrong in its norm, it judges superiority by successful competition which destroys millions of offspring, rather than by success-

ful co-operation which conserves its young, and grows in scope and complexity and strength of organisation. Secondly, the *struggle for existence between groups* was assumed both to display the value of loyal co-operation for the survival of present groups, and to serve as a model of conduct for well-behaved nations. Right in its perception that organization is a source of strength and progress, this doctrine is wrong in setting up the hopelessly self-contradictory norm of inner co-operation with outer competition.

Thirdly, the *Eugenists* seek to improve the stock neither by individual nor by group struggle, but by a *rational biological selection*. Nature produces a variety of individuals, some sound, some defective; why not destroy a stock that is socially harmful by preventing the mating of the individuals that bear the undesirable strain? According to Hobbouse, this method is sound, provided (1) we all agree upon what qualities are good for society. But lacking this common social philosophy, we can indeed apply eugenics to a limited extent if we all agree with the *careful* Eugenists that we do not want certain ultravicious defects such as feeble-mindedness, insanity, alcoholism, syphilis, or tuberculosis. But since a good quality, often dwells with a bad one,—for instance, since tuberculosis may be the physical defect of an inventive or poetic genius, society could not eliminate the one without depriving itself of the invaluable gift of the other. Accordingly "we must be certain that the stock which we seek to eliminate is so vicious that its removal is a net gain," and "that the vice is irremovable and not dependent upon the conditions which it is within our power to modify." But this certainly is not ours unless we possess a thorough understanding of the laws of heredity: we must learn, for instance, the difference between "small fluctuations that are constantly arising and dying away again which we have no adequate ground for eliminating, and definite mutations of permanent significance which we have every ground for eliminating.

(2) But in the last analysis, those who rely *mainly* on Eugenics are shutting their eyes to a method both surer and quicker. *Biological selection* is slow; measuring time by epochs, it is characterized by fixity rather than change; despite violent natural selections, we are from the Stone Age onward approximately the same human type, even in minor traits

But *social selection* is rapid; relying on the fact that in one way or another, living things become adapted to the environment in the short, or in the long, society can know that as is the social environment, so will men be. Society eliminates by hygiene not individuals but defects, by justice not stocks but misfits. The central fallacy underlying the inefficient method of the Eugenist is the biological conceit that human progress is a matter not of institutions, but of "gametes", that man is merely an individual, instead of an individual-in-society. Thus, according to Hobbouse the biological conditions of human development, whether natural or in man's control, are like the physical conditions, almost negligible.

(3) The *psychological conditions* are ultimate in social development, for society consists wholly of persons. *Impulse* is primitive, *feeling* is directive, but the valid expansion of life is a function of *intelligence* or *consciousness*, which grows up within impulse-feeling as its organizer, and by clarifying relations, becomes the normal method for dealing with every new and important situation. Thus any condition that favours intelligence makes for progress. But *individual psychology* is insufficient, since man, with his members and organization, demands a *social treatment*. Society molds the mind of the individual (1) by the *stimulation* of responses in him to social demands, (2), by the *selection* of congenial character and conduct through social approval and disapproval, and (3) by the *accumulation* of traditions and co-operative organizations. The individual molds the mind of society (1) by his special abilities, sympathies, interests, and (2) by his general demand for attention and co-operation. Since the individual and society are thus interwoven, the conditions discovered by social psychology are simply the individual side of the social conditions discovered by sociology.

(4) The *sociological conditions* of social development are the institutional embodiment of the principles of the free harmonious growth of the spiritual life. Rights and

duties, moral, social and political freedom, personal and social justice, the payment of service and the distribution of wealth, property and industrial organization,—in short, all the institutions of Democracy must be so adjusted as to effect a harmony between the free expansion of the individual, and the common good of society. This application of ethical principles to social structure is

"in form deductive, but this is not to say that it is an attempt to apply abstract principles without experience. On the contrary, the only valid principles are those that emerge out of our experience, and the fraction of the highest generalizations is to knit our partial views into a consistent whole."

To sum up, Darwin the biologist finds that the conditions of the organic process are "the struggle for existence, the laws of heredity and natural selection," and probably others; Hobbouse the sociologist finds that the conditions of human progress are a harmonious order of social institutions, including, of course, the mental effort necessary for its achievement. Darwin started with the supposition of organic modification, conceived the hypothesis of natural selection, and labouriously investigated a great number of situations which showed organic change, to ascertain whether it were always accompanied by "natural selection." Hobbouse starts with the philosophic definition of progress, and tests in turn the physical, biological, psychological, and sociological hypotheses to see which factors accompany progress. Thus, Hobbouse not only follows the scientific method of Darwin, but also goes further; and as a sociologist interested in value, in progress, and in the future, he must go further. First, he sets up the ideal of progress; then skillfully selecting from his vast mental storahouse of facts those political and economic conditions that he feels have promoted progress in the past, he arranges them with the tested faith of an expert in an ideal harmonious social order which should minister even better to progress in the future. In thus blazing a scientific trail in the realm of social values, he has rendered humanity a distinct service.

SINCERITY IN SPEECH AND WRITING, AND THE ESSENCE OF TRUE ELOQUENCE

By MISS HETTY KOHN, D.A. (London)

"I spoke a word,
And no one heard;
I wrote a word,
And no one cared,
Or seemed to heed;
But after half a score of years
It blossomed in a fragrant deed.

"Our hearers are beyond our ken,
Yet all we give may come again
With usury of joy or pain.
We never know
To what one little word may grow,"
(John Oxenham; "A Little Word")

"Of all that is written, I love only what a
person hath written with his blood. Write with
blood, and thou wilt find that blood is spirit."
(Nietzsche)

SINCERITY IN SPEECH AND WRITING IN DAILY LIFE

IN ordinary intercourse with people, it is
not, of course, possible to be always
literally sincere. As Moliere cleverly
shows in his "Misanthrope," a too ruthless
sincerity involves offending our fellow-men
and making enemies all round; and to the
fear of our own day, "Nothing but the
Truth", we have a still more indelicate demon-
stration of the practical impossibility of
living even twenty-four hours with our
fellow-creatures without telling a single
"white lie."

Sincerity, however, is not incompatible
either with politeness, hospitality or kindness
and is a far more satisfactory policy in the
long run than that of flattery. The pleasure
of listening to polite speeches wears off as
soon as we discover that they mean nothing,
and we long for a little sincerity from those
around us, even if we have to hear a few
plain, unpalatable truths about ourselves.
There is great value in being able to see
ourselves as others see us, but as our friends
are, as a rule, reluctant to give us this op-
portunity, we have to rely on our enemies
for it. With all this, there is no need to be
brutal or rude; though to combine frankness
with kindness requires considerable skill.
When it is a good friend who in a sym-
-

thetic manner tells us an unpalatable truth
or gives us wholesome advice, we may
resent it at first, but appreciate it in the
long run. This certainly does not apply to
such of our acquaintances as find fault with
us from sheer bad temper or from a love of
fault-finding. There are indeed people who
prefer to hear silvery words and compli-
mentary speeches, even when they are fully
aware that there is no real friendship behind
the empty phrases: they say it sweetens
daily life. Dr. Frank Crane, in one of the
essays ("Apples of Gold") in his delightful
book "Upper Meanings," has the following
to say

"The thing you ought to say is generally the
flattering thing. And what you ought not to say
is criticism.

"Shall we lie, then? Not necessarily. There
are usually two things to say upon any occasion.
Select the pleasing one.

"Even if you have to twist the truth a little
—well, if the only time you twist it is to bring
pleasure and to stir up love, you are to be
congratulated.

"I would much rather have an enemy who
makes me a delightful compliment of which he
believes not a syllable, avowed a sincere woman
than a friend who says disagreeable things to me
under pretext of doing so for my own good."

We agree with Dr. Crane in as far as
there are some occasions when to tell a lie
is more merciful than to tell the truth. We
lie to the patient on whom the doctors have
pronounced the death sentence—we conceal
from the aged parent the news of the death
or disgrace of a distant son or daughter, in
order to save his last few weeks on earth
from the despair into which the news would
cast him. A song entitled "The Truth—or
a Lie," which was sung years ago, gave
eloquent expression to this theme. In fiction,
too, some instances have become classical.
We respect the nun in Hugo's "Les Miser-
ables" who, to give Valjean, the ex-convict,
a chance to escape and lead a better life,
lies to the officials who come to search for
him;—the first untruth she has ever told. In
one of Carmen Sylva's Roumanian stories,

too, the mother tells her first lie, and goes to the length of swearing falsely with her bend upon the venerated family icons, to reassure her son of the supposed fidelity of his adored young wife: he believes his mother, because he has such faith in her unimpeachable honesty, and it saves him from suicide. Again, have we the heart to disagree with Dickens when he says that "there are some falsehoods on which men mount, as on bright wings, towards Heaven"? (Tom Pinch sacrifices his last ten shillings for Martin Chuzzlewit to take to America. Had Tom confessed that they were his all, Martin would never have accepted them.) Even in every-day life a "white" lie calculated to give genuine pleasure might be permissible—but in spite of all this, we cannot agree with the lady cited by Dr. Crane.

Let us desire sincerity as a general rule, and friends around us on whom we feel we could rely in the hour of need. When Dr. Crane goes on to say: "Disarm the brutal commonplace! Spin rainbows in your days, and hang coloured lanterns in your nights, if you do not want ruthless Disgust to trample all your roses and desecrate your dreams!" we cannot but feel that it is sincerity, and not flattery, which will give us the more lasting rainbow and the brighter coloured lantern to illumine our path through life.

It is often irksome to the sincere individual to have to go through with the polite formulae of pressing a tiresome guest to stay on, or to express his admiration for a gift which is unsuitable and utterly useless to him. One remedy is surely to cultivate as far as possible that generous attitude towards the guest or donor which makes the best of the person, and by "drawing him out" will actually make the painful duty of entertaining him into a pleasure, or which, in the instance of the gift, takes the good will for the deed.

The fact is that a great proportion of the polite "white" lies usually resorted to on these occasions, are entirely superfluous. Let us refrain, by all means, from hurting the feelings of our friends, but why, when an unwelcome visitor apologises for having stayed so long, should we think it incumbent on us to overwhelm him with extravagant assurances that among all our acquaintances it is precisely he whose company gives us the greatest pleasure? A friendly "Not at all. Come again whenever you feel inclined" is

quite sufficient. Let us steer clear of flattery at least as far as is humanly possible.

It is maddening to be praised by outsiders for some good quality which we feel we do not possess, while our real merit goes unappreciated. It is also irritating in daily life when people tender us flattering invitations or make us promises which, as time shows, they never meant seriously enough to intend to carry out at all. They perhaps meant them at the moment when they made them, but gave the matter no further thought. Insincerity in pretty things such as invitations, is especially galling when coming from a person we esteem. The object of the invitation may be trifling enough in itself, a walk, a drive, or a tea-party,—yet the "victim" cannot help feeling wounded. He feels lowered and cheapened in his own estimation, for at the time, the friend thought him worth inviting—unless (worse still) the invitation was a mere polite phrase—whilst later he did not think it of sufficient consequence to refer to the invitation again! We are reminded of the cartoon in "Punch" where one man constantly tells another that he is going to invite him to dinner, and enquires minutely as to the address of his office, but does not trouble to make a note of the friend's telephone number.

Much insincerity in ordinary conversation is due to the reluctance of many people to confess that they do not know a certain thing which they are asked. This is a strange weakness, for there is no disgrace in a man's not being a walking encyclopaedia. The maxim of the mediaeval rabbis, quoted in the previous article in connection with sincerity in religious belief, might well be adopted for every-day conversation. It is: "Learn to say: I do not know." We know many persons who, rather than bring themselves to say those four fatal words, will, in their desire to appear well-informed and "important," give grossly inaccurate or exaggerated or indeed, purely imaginary information on any given topic. Needless to say, we soon discover this tendency in our friends, and after being misled once or twice, are on our guard not to accept their statements as gospel truth.

In letters, gushing sentimentality is never really eloquent. While in conversation it is often possible to detect the false note of insincerity in the person's voice and facial expression, in letters it is sometimes difficult

to distinguish the wheat from the chaff. Hence the reticence of a genuine person in writing letters of congratulation or condolence: he rejects each "suitable" phrase of convention as hackneyed and likely to give the addressee the impression of being mere commonplace compliment.

The custom, still so prevalent in Britain, and now in vogue in certain circles in India, of sending greeting cards to friends and acquaintances at Christmas or the New Year, calls for tact in the selection of the verse printed on the ready-made cards. The main idea is to exchange cards with friends just for remembrance's sake at the festive season, and one might, therefore, argue that the wording of the cards does not much matter. However, the recipient involuntarily attaches a personal significance to the sentiment expressed in the verse, and the greeting will for this reason be far more eloquent if the sentiment is appropriate to the degree of intimacy between the two friends. To receive a card with a picture of ivy leaves (an emblem of constancy) and a verse referring to love and friendship and to precious memories of the golden past, is gratifying when it comes from a dear friend, but strikes a false, jarring note when sent by a new or casual acquaintance. When the two acquaintances are of opposite sexes, matters are still further complicated. For instance, a card bearing the following verse by J. G. Holland, beautiful in its simplicity, will be appropriate only from a good friend:

"Where true love bestows its sweetness,
Where true friendship lays its hand,
Dwells all greatness, all completeness,
All wealth of every land."

Again, in the matter of farewell speeches, presentations, or demonstrations in the nature of a "send-off," the person desirous of paying a genuine tribute to him whom he esteems, finds himself in a quandary, for he knows that it requires consummate tact to pay this tribute gracefully without seeming to flatter or to offer mere officious incense. The German, for instance, does not hesitate to bombard the hero of the "farewell" with bouquets of flowers, which custom is more in line with our Indian way of doing things than the undemonstrativeness of the Englishman. Such customs are liable to abuse, and become a nuisance. The sincere person should, however, overcome his reticence, for, as it is but human for a person to enjoy receiving tributes of true appreciation, why

should we not do honour *during his life-time* to the person who has won our esteem and affection? As the French poet says, every farewell is, in a sense, death to those one loves, for the tenure of life is uncertain. It would be a happier world if more flowers were offered to the living, and not only to the departed! The risk is that ultra-sincere persons, in their anxiety to avoid the very appearance of ostentatious flattery, may perchance only succeed in embarrassing the recipient instead of giving him pleasure.

The essence of true eloquence Having touched on the lesser aspects of eloquence namely, in conversation, letter-writing and social life, we come now to eloquence proper, namely, in speeches, lectures and sermons, and in books.

Among the ancient Greeks, eloquence played a far more prominent and vital part in public life and actual politics than it does in any country to-day. 17th century France, an age of excellent orators, lamented this decreasing role of eloquence. Nevertheless, apart from oratory and books, there is no gainsaying the importance of eloquence in the legal and teaching professions and in the commercial world.

True eloquence, whether in speech or writing, whose effect is to be lasting, must have complete sincerity as its basis.

Though earnestness is the first requisite, for the orator or writer must have something to say, mere hysterical enthusiasm is not sufficient. In the case of a canvasser, the enthusiasm may, indeed, suffice to carry the hearer off his feet and induce him to purchase the article—whether he regrets his purchase afterwards or no. Similarly the fiery earnestness of preachers at religious revival meetings has been known to effect the "conversion" of hundreds of people—but in how many cases is the conversion a lasting one?

To attain true eloquence the orator (or writer) must put various restraints on the flow of his words.

Adaptation of the diction to the subject, and also to the minds of the audience or the public is a preliminary requirement, and the fact that this is so often forgotten, accounts for much waste of even the finest eloquence.

The arrangement and presentation of the subject must be clear and logical. The words must be selected carefully to convey the right shade of meaning, and any ambiguous expression rigidly excluded. "A sentence

that needs explaining," said Voltaire, "is not worth explanation: its one duty is to present a fact."

It is partly the presence of ambiguous expressions and obscure metaphors which render the esoteric mysticism of some of the modern poets meaningless to the ordinary mortal. We would not wish to be as caustic as Lessing who in his fable of the nightingale and the lark, suggests that there are poets who, like the lark, soar far from the earth to sing, so as not to be heard, but perhaps it is difficult for the noontide idea that "the gods love that which is dark and concealed," to die!

Sometimes it is the language itself rather than the individual orator, that is responsible for a vague or misleading term. It is the task of the orator to see that none but the right impression is conveyed to the minds of the audience. An illustration is furnished by a paragraph in the recent issue of a German Catholic review, which deprecates the coining of a new and euphemistic word "Freitod," i. e., "voluntary death" instead of the usual word "Selbstmord" (literally "self-murder") for "suicide." The objection is that the new expression has an attractive and heroic ring about it, suggesting that man's life is in his own hands, to be disposed of or ended as he (and not Providence) thinks fit; it is pointed out that the new word invests the suicide with the false halo of courage, making a hero and a martyr of him; and that, if allowed to obtain a firm footing in the German language, the word will contribute to the false notions of liberty prevalent now-a-days. As the paragraph points out, he who ends his own life is in any case a coward who had not the courage to face out his life's battles, or at best a fool who lost his head during temporary stress of circumstances, so that he should be blamed or pitied, but not glorified as a hero of liberty.

The objection is not pedantic: it is merely sound psychology—and in the case of an entirely new word for an abstract idea, it is after all in the hands of the orators and writers whether the expression is to become common property or not.

Figures of speech must be sparingly used, and each one must be appropriate. No great orator will allow a metaphor in his discourse unless it really drives a point home. In the words of Pascal, "It is not enough that a thought or illustration be intrinsically beautiful; it must be appropriate to our subject,

in which nothing ought to be excessive and nothing deficient."

In commenting on a line in one of Corneille's plays ("Polyeucte") where the paraphrase "the enemy of the human race" is used instead of "the devil," Voltaire, the apostle of simplicity, points out the appropriateness and dignity of the phrase in the context, and says that the word "devil" (diable) would have been ludicrous: for, the popular notion of the Evil One is a monster with horns and a long tail, who roars "enemy of the human race" conjures up a terrible being who presumes to do battle with God Himself.

"When a word presents an image which is base, disgusting or comic, enoble it by accessory images; but do not attempt to add vain grandeur to an idea which is imposing in itself. If you want to say that the king comes, say: 'The king comes'—do not imitate the poet who despising these words as too commonplace, said: 'The great monarch wends his majestic steps hither.'"

Simplicity is the golden rule of the best speakers and writers. Voltaire, when complimented on his fine phrases, broke out angrily: "My fine phrases! I know that I never composed a single one in my life." French prose-writers rarely depart from the golden rule. Among British authors, the works of George Eliot and R. L. Stevenson may be cited as patterns of a dignified simplicity worth emulating by aspirants to literary perfection. Among present-day novelists, W. J. Locke and Compton Mackenzie might be mentioned. As regards public speaking, our University undergraduates, and graduates too, might to advantage take the restrained eloquence of the Hon. Srinivasan Sastri as their model, and also adopt the same principles in their essays. The following quotations speak for themselves:

"Refrain from trying to be witty; depict truthfully, and your work will be delightful. Consider that you are suffocating your child by too many caresses. The greater your simplicity, the less will be your desire to shine; make straight for the point; say only what is essential."

(Voltaire: Letter to Cideville)

".....The slightest affectation is a vice."

(Voltaire: Letter to a lady)

Brevity, too, is the aim of the elite in the field of eloquence, though some themes naturally require longer treatment than others. We need not necessarily be as zealous in brevity as Jonbort, who was tormented by the ambition to put "a hook into a page, a page into a phrase, and a phrase into a word," nor take literally the advice of Sir John Adams to his students, namely, to use our

words as sparingly as if they cost a rupee each as in a cable message, but brevity is a difficult art worth acquiring. Calvin, a less impetuous orator than Luther, prided himself upon the brevity of his style. Pascal, whose discourses were most impressive, realised that "continued eloquence wearies." The majority of audiences are unable to concentrate on one subject for an indefinitely long period: but this is a fact ignored by many preachers and lecturers, judging by their "long-windedness" and unreasonable claims on their bearers. The essays of Dr. Crane in "Upper Meanings" dealing with life and conduct are models of brevity. Such themes require brief treatment, for in the hands of a moralist devoid of humour, they become dry and dull. Scarcely any essay in the above-mentioned book exceeds 800 words, and many contain less than 150 words. Every novelist knows how much more difficult it is to write a good short story than to spin out a yarn according to his fancy.

Superfluous words are an unforgivable sin, for the sole duty of words is to convey ideas. The sarcastic criticism of Voltaire on the "Académie française" might be quoted in this connection:

"The necessity of speaking, the embarrassment of having nothing to say, and the desire to gain a reputation for wit, are three things which are capable of making even the greatest man ridiculous."..... Unable to find new thoughts, they have searched for new phrases, and speak without thinking, like people making a pretence of eating, while they are perishing of inanition.

"Instead of there being a rule in the French Academy to have all these speeches printed, they ought to make a rule of not printing them."

Repetition is inexcusable except where the speaker wishes to emphasize a point by presenting it again in a different way. Summing-up is, of course, not included in "repetition."

Exaggeration is allowable only in rare instances, as for example, to give proper perspective to the main idea of a drama.

Eloquence depends for its effectiveness also on the *conscientious care* which has been bestowed on his work by the orator or author. When men of genius find it necessary to devote time to the preparation of their speeches and to revise their manuscripts, speakers and writers of a lesser order need not disdain to do so. Earl Curzon, it is said, wrote out his speeches beforehand, carefully deciding upon each word, and

memorising the whole manuscript. Mr. G. Bernard Shaw tells us that he sometimes re-reads a page twenty times before he considers it ready to go to the printer. Such matters as the choice of titles do not always receive the attention they deserve. As Pascal says, "the last thing which one finds in composing a work, is to know what to put first."

The two quotations given below need no comment.

"For every four words that I write I delete three"
—Pascal

"They think they err, if in their verse they fall"

On any thought that's plain or natural.

Would you of everyone deserve the praise?
In writing vary your discourse and phrase

Take time for thinking, never work in haste
And value not yourself for writing fast.

Gently make haste, of labour not afraid;
A hundred times consider what you've said

Polish, repolish, every colour lay,
And sometimes add, but oftener take away."

(Boileau. "Art of Poetry" translated by Soame)

The *criteria* of eloquence are its convincingness, and its power of creating a permanent impression and really touching the hearts of the multitude. Poetry, the novel and the drama have often achieved, by their pathos, what oratory pure and simple could never have achieved. The public, like children, desire a parable. It took a Charles Dickens to awaken Victorian England to the abuses in schools, workhouses and prisons — true eloquence backed by sincerity and a definite untiring purpose. It would be difficult to think of any treatise which could plead more eloquently the cause of the down-trodden Jew in mediæval Europe than the few lines in "The Merchant of Venice":

".....Hath not a Jew eyes? hath not a Jew hands, organs, dimensions, senses, affections, passions? fed with the same food, hurt with the same weapons, subject to the same diseases, healed by the same means, warmed and cooled by the same winter and summer, as a Christian is? if you prick us, do we not bleed? if you tickle us, do we not laugh? if you poison us, do we not die? and if you wrong us, shall we not revenge?"

In the realm of non-fiction, the telling dicta, the "winged words" which are involuntarily remembered by hearer or reader, are often, though not necessarily, the mark of the cream of eloquence. A book on an abstract subject, interesting and well-reasoned out though it may be, cannot but gain in

impressiveness if it contain a few sentences in which certain of its ideas are crystallised. To take, by way of illustration, a book on teaching ("Education for Self-realisation and Social Service, by Frank Watts), the reader, especially if he is a teacher himself, will remember and be inspired by such sentences as :—

"Make the vague idea clear, the clear idea attractive, and the attractive idea convincing."

"Faith (i.e., in one's vocation) and force are as clearly identical as doubt and debility."

Eloquence, then, noble art though it is in itself, shines brightest when it serves as the companion and adornment of Truth, or as a guide to the seeker after Truth—Truth in its highest, widest, and most abstract meaning. Verity, the ideal—or goddess, if you prefer—worthy of lifelong pursuit, even though absolute Truth be elusive and unattainable. As example, however, is better than precept, the following one, quoted by Carlyle in an "Essay on History" ninety-seven years ago, will serve our purpose admirably :—

"The old story of Sir Walter Raleigh's looking from his prison-window, on some street-tumult,

which afterwards three witnesses reported in three different ways, himself differing from them all, is still a true lesson for us."... Raleigh took up the manuscript of the second volume of his history, then just completed; 'How many falsehoods are here?' said he. 'If I cannot judge of the truth of an event that passes under my eyes, how shall I truly narrate those which have passed thousands of years before my birth; or even those that happened since my existence? Truth, I sacrifice to thee!' The fire was already feeding on his invaluable work, the labour of years; and he calmly sat till it was utterly consumed, and the sable ghost of the last leaf flitted up the chimney."

It is perhaps advisable, after all that has been said in this and the preceding article, published last year in the November number of this Review, to point out that we in no wise undervalue the importance of true eloquence. Eloquence is beautiful and desirable, and there is always scope for it in this world of suffering and injustice; but it must be the genuine article, pure, and free from the debasing elements of insincerity and excessive adornment. Cheap, false eloquence not only misses its mark, but serves to confuse the minds of the hearers, thus contributing to mental insincerity, the very evil we wish to avoid.

PHYSICISTS AT THE VOLTA CENTENARY CONGRESS

Translated specially for the Modern Review from the Italian Journal "L'Espresso"

ARNOLD SOMMERFELD—Professor of Theoretical Physics in the University of Munich, Bavaria, Germany. A great physicist and mathematician. He has made very notable contributions to the solutions of fundamental problems in the field of electricity, hydrodynamics, light and relativity. His works on atomic physics have exercised a great influence on the progress of that subject. He is the most popular teacher of Physics in Germany, and can count amongst his students the majority of the younger generation of rising German Physicists.

ASTON, F.W.—of the Trinity College, Cambridge, one of the most gifted pupils of J. J. Thompson, discoverer of the "mass-spectrograph", with which he proved that atoms of all elements have integral weights, and thus extended the theory of isotopes to the non-radioactive elements. Nobel-Prize man (1922).

HALL, E.H.—Professor of Experimental Physics in the Harvard College. Made a special study of electrical, thermoelectrical, and thermomagnetic phenomena. Discoverer of "Hall Effect."

DEBYE, P.—Professor of Theoretical Physics at Zurich; now called to the chair of Experimental Physics at Leipzig. He is thus a "Physician Complete" in the language of La Fontaine. His greatest contributions are on the Theory of specific heat, on X-rays and on the formation of molecules.

(Debye is a Dutchman by birth, was first professor at Göttingen, then at Zurich in Germany. Now he has been called to fill up the chair of Experimental Physics at Leipzig in Germany. The reader will note how in European countries, particularly in Germany and Switzerland, University chairs are filled up irrespective of questions of nationality, and birth. He will also note that such a thing as applying for a post is unknown. Posts are always offered to the most deserving candidates).

Professor Debye is a very versatile man and can talk English, German and French very fluently. **JANET, P.A.M.** Director, Ecole Supérieure, Paris, has done important experimental work for systematizing the units of electricity, and proving that the ratio of the two units is equal to the velocity of light. An electrotechnician of great fame.

Pietro Debye

CABRERA, B.—Professor of Experimental Physics at the University of Madrid, Spain. Has made a deep study of spectra of elements, and with his colleagues has made systematic study of magnetic properties of elements and compounds. To Cabrera is due the great impetus given to the study of Physics in Spain. One of his pupils, Catalan, has made the most notable contributions in spectroscopy in recent times in the discovery of multiplets.

Paul Andre Marie Janet

LANGMUIR, I. Chief of the Research laboratory of the General Electric Company of Schenectady, New York, U.S.A. Experimenter and Theorist

combined, he has made fundamental contributions to the problems of emission of electricity from hot filaments to problems of adsorption and diffusion, is the inventor of the "Langmuir Pump" and has made numerous contributions to technical Physics. Has recently produced flames of atomic hydrogen in which temperatures of 6000°C are reached.

Arthur E. Kennelly

EHRENHAFT, F.—Professor, and director of the 3rd physical institute of the University of Vienna. Has made a special study of the properties of Ultra-microscopic Particles. Inventor of very fine experimental method for the study of Brownian

Max K. E. L. Planck

movement of the properties of colloids, of the action of light on submicroscopic particles; he has gathered round him a numerous band of students with whom he is contesting the usually adopted fundamental conception of the atomicity of Electricity. He may be called the 'Doubting Thomas' of the present age.

Guglielmo Marconi

KENNELLY, A. E.—Professor of electro-technics in the Technological Institute of Boston, U. S. A. Has a large number of works on the application of mathematics to electro-technical problems. Has made numerous contributions of great Technical value to problems of alternate currents. One of the first to recognize the existence of an ionised layer in the upper atmosphere of the earth for explaining the phenomena of propagation of Radio-waves (Kennelly Heaviside-layer.)

PERUZZA, E.—Professor of Physics in the Polytechnic Institute of Turin. Has made very good contributions to the field of optics and electricity.

SOMIGLIANA, C.—Professor of mathematical Physics in the University of Torino, has exercised a profound influence on the coming generation by his teaching. Has made very important contributions to the mathematical theory of Elasticity and to the theory of the figure of the Earth.

WEISS, P.—Professor of Experimental Physics and Director of the physical Institute Strassburg. Alsace, has made very fundamental researches in the theories of magnetism.

BRAGG, W. L.—Professor of Experimental physics in the University of Manchester, has made fundamental contributions for studying the structure of crystals with the aid of rays. With his father, Professor W. H. Bragg, he discovered the reflexion of X-rays from crystal surfaces. Nobel Prize man with his father in 1915 and probably the youngest Nobel Laureate at that time.

PLANCK, M.—Professor of Theoretical physics in the University of Berlin. Author of numerous profound researches in the thermo-dynamics, radiation and problems of dissociation. He is best known as the author of the most revolutionary and at the same time most fruitful conception in modern physics, viz., The Quantum Theory of Radiation.

MARCONI, G.—One of the scientific glories of Italy and of the world, known far beyond scientific circles as the discoverer of Wireless Telegraphy. He is not only a great inventor but also a great philanthropist.

CANTONE, M.—Professor of Experimental Physics in the University of Naples. Has made fundamental researches on magneto-elastic phenomena.

MAJORANA, Q.—Professor of Physics in the University of Bologna, and President of the Reception Committee of the Congress. He has made very important researches on Gravitation, on Contact Electricity, on Double Refraction in liquids caused by a magnetic field, and on Radiotelephonic transmission by Ultra-violet light.

TOLMAN, R. C.—Professor of Physical chemistry and mathematical physics in the Technical Institute of Pasadena, California. Has made numerous contributions to problems of physical chemistry, thermodynamics and statistical mechanics.

BRULLOUIN, M.—Professor of mathematical physics at the College de France, Paris. Has got very important contributions to problems of dissociation, on thermodynamics and many problems of mathematical physics.

Quirino Majorana

VON LAUE, M.—Professor of Theoretical Physics in the University of Berlin. Discovered the diffraction of X-Rays by crystals in 1912 and thus once for all settled the nature of X-rays. Nobel Laureate in 1914. Theoretical Physicist and Mathematician of great power, he has illuminated by his researches many dark problems in optics, thermodynamics, electricity and relativity.

WAGNER, K. W.—President of the Imperial Department of Telegraphic Technology, Germany and honorary Professor at the Charlottenburg Polytechnique. Profound investigator in numer

ous branches of electro-technology, he has particularly devoted his activity to transmission of signals by electromagnetic waves, and to the study of suitable conductors and dielectrics.

GERLACH, W.—Professor of Experimental physics in the University of Tübingen in Germany. One of the ablest experimenters in the field of Optical and Atomic Physics. Along with Stern, he has proved that all atoms are miniature magnets with definite magnetic moments.

EDDINGTON, A. S.—Plumian Professor of Astronomy at Cambridge, England. A mathematical physicist of great fame. He has made a profound study of the theory of Relativity which he has made popular by his writings. He has made a deep study of the astronomical consequences following from the theory of the electronic structure of matter, has formulated a theory of stellar systems under radiature equilibrium, combines intuition with mathematical sagacity.

Max, Von Laue

AMABUZZI, L.—Professor of Experimental Physics in the University of Parma, Italy. Has made very important contributions to Photo-electricity, was one of the earliest collaborators of A. Righi.

FRANCK, J.—Professor of Experimental Physics, University of Göttingen, Germany. Has performed experiments of great value for studying the ionization of gases and of solving the problems in chemistry with the aid of modern knowledge in atomic physics. Nobel Laureate in 1925. One of the greatest experimental physicists of modern Germany.

DUANE, W.—Professor of Biophysics in the University of Harvard. Has made very important

contributions to fundamental problems in X-ray spectroscopy.

FERMI, E.—Professor of Theoretical Physics in the University of Rome. One of the youngest members of the Congress (he is only 28); he has risen by his brilliant original contributions to be one of the ablest Physicists of Italy. Author of the Fermi (Dirac) statistics in thermodynamics, he promises to become one of the ablest physicists of the world. Has also performed experiments of great value in the domain of thermo-optics.

Robert Andrew Millikan

SMEKAL, A.—Professor in the second Physical Institute of Vienna. Has made very notable contributions to the structure of matter, to thermodynamics, quantum theory and emission and micro-structure of X-rays.

Hendrik Antoon Lorentz

FRANKEL, J.—Professor of Theoretical Physics in the Polytechnic Institute of Leningrad, Soviet Russia. Has made very important contributions to electrodynamics and atomic physics. His con-

tributions are marked by a boldness of conception and fineness of execution.

LA-ROSA, M.—Professor in the University of Palermo, Sicily. Has made numerous important contributions to spectroscopy, General Optics, and theory of alternate currents.

ZEEMANN, P.—Professor of Physics at Amsterdam, Holland. One of the most eminent persons in the scientific world, his experimental studies have a profound influence on the progress of our knowledge of the structure of matter, and propagation of light in matter. Father of magneto-optics and discoverer of Zeemann-Effect. He was awarded jointly with H. A. Lorentz the first Nobel Prize in 1902.

MILLIKAN, R. A.—Director of Norman Bridge Laboratory, Pasadena, California U. S. A. One of the ablest experimenters now living. Has made very fundamental researches on Photo-electricity and studied its connection with Volta effect. Has

Meghnad Saha

made the most accurate determination of the fundamental electronic charge with the simplest apparatus. Has bridged the gulf between ultra-violet light and X-rays with his vacuum spectrograph. In recent years has been studying the "cosmic rays" or highly penetrating rays coming from space. Nobel Laureate in 1923.

GIANFRANCESCO, G.—Professor of Physics at the Pontifical Gregorian University. Has made numerous researches in different branches of physics.

LEVICIVITA, T.—Professor of Rational Mechanics in the University of Rome. One of the most genial mathematical physicists of our time. His researches are of profound significance and of quite definite character, and are dedicated to the most important problems of applied mathematics. He has made contributions to the generalised theory of relativity, to hydrodynamics, electrosta-

tics and electromagnetism. Einstein's theory of generalized relativity would have been impossible but for Levicivita's contributions to absolute Differential Calculus.

BORN, M.—Professor of Theoretical Physics in the University of Göttingen, with a profound grasp of the most important problems of Physics. He has brought to bear upon them his unique powers of mathematical analysis, and has exercised a profound influence on the course of events. His ideas on crystalline structure and their application to thermochemical problems constitute a very genial and fundamental contribution of the present decennium. One of the founders of quantum mechanics, he has drawn round him a large number of students.

LORENTZ, H. A.—Emeritus Professor of Theoretical Physics in the University of Liden, Holland, and one of the masters of modern physics. His researches on the influence of magnetism on the emission of light led to the discovery of 'Zeemann Effect' in 1897, for which he was awarded the first Nobel Prize in 1902. A most expert mathematician, he has enriched Physics with most important contributions in the theory of Relativity, in electron theory and created a very active school about him.

William Robert Wodds

SAHA, M.—Professor of Physics in the University of Allahabad, India. Theoretical Physicist of no common merit, he has drawn the attention of the whole scientific world by his researches on the interpretation of spectra of stars. By his happy intuition in this field, he has opened a way for a most notable number of researches of the greatest interest for applied and pure physics and Astrophysics. In recent years he has dedicated his studies with great success to the structure of spectra and internal constitution of atoms.

WOOL, W. R.—Professor of Experimental Physics in the University of Baltimore, U. S. A. and one of the most original minds at present living. He has enriched Physics with numerous experimental investigations of fundamental value to which he was led by mere intuition before there was any theory to guide him. Amongst his numerous researches may be mentioned—investigations on the

Fluorescence spectra of vapours, studies on absorption spectra, fundamental researches on interference and diffraction of light, invention of a new method of tricolour photography, and in recent times an apparatus for producing high frequency sounds by means of which he can kill fish from a distance.

MAC LENNAN, J. C.—Professor of Physics in the University of Toronto, Canada. He has a series of profound researches on Radioactivity and spectroscopy. In recent years he has carried out a series of brilliant experiments on the origin of the auroral spectrum, which are sure to increase materially our knowledge of the upper layers of the atmosphere.

KRAMERS, F. A.—Professor of Theoretical Physics in the University of Utrecht, and one of the genial collaborators of Bohr in the study of modern theories of Atomic structure.

Niels Bohr

GRUNFELSEN, E.—Sectional Director of the Physico-chemical Reichsanstalt, Berlin, and at present Professor of Physics in the University of Marburg. Has made very important contributions in the domain of Electrotechnics and their application to optics and methods of measurement. He is an authority on the physical properties of metals and has materially advanced our knowledge about them.

AMERIO, A.—Professor of Experimental Physics in the University of Pavia. He has made important contributions on the determination of the temperature of the Solar Photosphere and on the emission spectra of elements. An inventor of very delicate self-registering instruments.

DUKE DE BROGLIE, M.—Paris. One of the ablest experimenters in the domain of atomic and molecular Physics. He has made very extensive researches on characteristic X-ray spectra of elements, and has made many discoveries regarding β -ray emission from radioactive elements. A great worker on the internal structure of atoms.

GIORGI, G.—Professor of Mathematical Physics in the University of Cagliari, Sardinia. Has made very important investigations on the Ratio between electrostatic and electromagnetism units of electricity.

RICHARDSON, O.W.—Professor of Physics in the University of London. His fundamental researches on thermionics have opened a new chapter in

Physics and made possible the advent of the three electrode tube without which wireless telephony would have been impossible. He is a profound student of the Electron Theory of matter, and in recent years has dedicated his energies to the systematisation of molecular spectra of Hydrogen.

BORN, N.—Professor of Theoretical Physics and Director of the Institute of Theoretical Physics at Copenhagen. Nobel Laureate in 1922. Author of the first successful theory of the hydrogen spectrum and of a profound series of researches dealing with the structure of matter, his ideas have dominated the whole scientific world for the past decennium. They have stimulated researches, on the structure of matter, and the origin of spectra all over the world, and have left a lasting stamp on the course of progress of the physical science. He has gathered round him an enthusiastic band of students from all parts of the world, including even aristocratic England and Germany.

SORREY, A.—Professor of Physics in the Sorbonne, Paris. He has made very important researches on Optics, on the ultra-microscope, on double refraction in matter under the influence of electric and magnetic fields.

Sir Ernest Rutherford

RUTHERFORD, SIR, ERNEST.—Professor of Physics in the Cavendish Laboratory, Cambridge, and President of the Royal Society, London. One of the most distinguished experimental physicists of our and of all times. For his first successful theory of Radioactivity, he was awarded the Nobel Prize in 1908. His experiments led to the nuclear theory of the atom which is now accepted all over the

world and form, the cornerstone of the present-day atomic physics. In recent years he has been engaged on the artificial disintegration of atoms, with a view to determine the structure of the nucleus. Founder of a new school, he has gathered round him a brilliant galaxy of workers in Physics.

STERN, O.—Professor of Theoretical Physics in the University of Hamburg. In addition to his contributions in Theoretical Physics he has, in collaboration with Gerlach, worked out a very ingenious and fruitful method for determining the magnetic moments of atoms.

Debendra Mohan Bose

COMPTON, A. H.—Professor of Physics in the University of Chicago. His name is best known for the discovery of "Compton Effect," which proves the corpuscular nature of radiation in a most straightforward and convincing way. Has besides made numerous contributions in the structure of crystals to the theory of T-rays, to the theory of absorption of radiation by matter. Professor Compton had been in India in 1926 when he was invited by the Punjab University to deliver a course of lectures on the relation between matter and radiant energy.

HEISENBERG, W.—The Benjamin of the Congress, being only 28 years of age. One of the most gifted students of Sommerfeld and Bohr. He has been already called to the Chair of Theoretical Physics in the University of Leipzig. Heisenberg has been

engaged on his researches on the structure of atoms and origin of spectra only for the last three years, and he has already excited the wonder of the scientific world by the originality of his ideas and the fertility of his conceptions. His works along with those of Pauli, have led to the explanation of complicated spectra, and of the Periodic Classification of elements.

[Educationists and particularly authorities of Colleges in Bengal may take a lesson from the career of this young man with regard to their policy in the matter of appointments in educational services. In Germany the usual age at which a man is called to a full-fledged chair ordinarily varies from 35 to 40, and he has to pass through successive stages of assistant lecturer, assistant Professor to a full-fledged Professorship. But the only test for promotion to a higher grade is "efficiency" and if a particular man is found efficient he may be promoted to the highest posts over the heads of men much senior to him in experience and service. Heisenberg has been called to the chair of physics in one of the oldest and most renowned of German Universities, over the heads of people who might be double his age. The Germans care only for efficiency and for nothing else.]

Contrast with this the practice which is followed in Bengal. The chief deciding factor is superannuation, i. e., how many years of service a man has put. This vicious policy has been very ruinous in the past and if followed further will mean the ruin of education in Bengal. I need not cite examples. They can just take the Presidency College of Calcutta, once the premier Institution of Bengal, but now in the opinion of the writer occupying a very secondary position because in the matter of new recruitments and filling up of the highest posts, the authorities have been guided by only service rules, and seem to have forgotten that there is such a thing as Efficiency.]

PASCHEN, B. C. F.—President of the Physical Reichsanstalt, and one of the greatest experimental spectroscopists of modern times. One of the ablest experimenters, now living, and inventor of most sensitive measuring instruments.

SIEGBART, M.—Professor of Physics in the University of Apsala, Sweden, and Nobel Laureate in 1924. Has made a series of most important experimental investigations in the spectroscopy of X-rays in which he has displayed extraordinary mechanical ability and grasp of fundamental facts. Has gathered round him a very capable batch of workers who are extending his works in all directions.

LASARFF, P.—Director of the Institute of Physics and Biophysics, Moscow. He has made numerous contributions to problems of physics, and physical chemistry. Has carried out with fine instruments of his own invention extensive surveys of anomalies in the value of gravity, and magnetic field of the earth in Russia.

BOSE, D. M.—Professor of Physics in the University of Calcutta, India. He has made important contributions to the study of tracks of H-particles, to problems of origin of magnetism and other important problems.

! HOW BRITAIN GIVES MILITARY PROTECTION TO INDIA

By THE REV. J. T. SUNDERLAND

PART I

GREAT Britain makes constant and strenuous claim that she is in India for its protection. The Indian people, she declares, cannot protect themselves, and so she generously and unselfishly renders them this great service. When they complain, as they constantly do, of the enormous proportion of the country's revenues spent by their foreign rulers for military purposes, the reply is made: "You should not complain; all this expenditure is for your good; and it is far less than your own expenditure would have to be, if we were not here and you had to protect yourselves. We maintain our army in India solely to guard you, to prevent you from being attacked, invaded, subjugated by a foreign power. Even our mighty British navy, for which you have no expense, we use to guard you from danger. This is a matter of pure generosity on our part, for which you should be profoundly grateful. You are in the highest degree fortunate thus to have the powerful protection of the great British Empire."

What reply is to be made to this claim of Great Britain?

The reply which the Indian people make is to deny that there is any truth whatever in it.

They declare that Britain, instead of being their protector, is a usurper that has deprived them of their dearest possessions on earth, namely, their country and their freedom; that she refuses to give these back; and therefore, that the foreign nation which, far more than any other, they need to be protected from, is Britain herself.

India puts her case essentially like this: "Britain, a far-away power, having no just claim on us and no right to be on our soil, has conquered us, is holding us in subjection against our will, and is exploiting our country. All that Britain's army and navy do for India is to make more firm her grip on us. That is to say, Britain has taken possession of our country by various unrighteous means; and by means of the army which she keeps here (which India

has to pay for), and by the aid of the British navy, she (Britain) holds us down, and at the same time prevents any other power stealing from her her ill-gotten property—her big valuable Indian Empire. This is the sense, and the only sense, in which Britain gives India military and naval protection."

India says to us in America: "Our Indian situation is much what yours would be if Germany had conquered and was holding in subjection the United States, and was maintaining a big army there (at your expense), and was using her navy, to prevent you from revolting and throwing off her rule, and to prevent any other nation—say England or France—from taking you away from her. Would you regard Germany as your protector? Would you have reason to be very grateful to Germany for using her army and navy to make secure her possession of her stolen American empire?"

Is not India right in the way she puts her case?

Really to protect a country is to protect its freedom: is to protect its people, its rightful owners, from having their country taken from them by foreigners, or from being ruled and exploited and despoiled by foreigners. Britain does nothing of this kind for India; but the exact opposite. Instead of protecting India against foreign conquerors, foreign domination, foreign exploitation and foreign tyranny and injustice, Britain uses her military and naval power to rivet all these upon India.

If somebody takes my house from me by force or other unrighteous means, I do not care much to have him protect himself against having the house stolen from him by some other person. That does not benefit me. What I want is the return of the house to me, its rightful owner. That is protecting me in my rights; nothing else is. In like manner, really to protect the Indian people is to give them back their country, of which they have been deprived. Nothing else can ever be.

I repeat: what Britain maintains her army in India for, and what she uses her navy for, is not at all to protect the Indians in their

right to liberty and justice, but to protect herself from what she regards as two possible dangers to herself in India, namely (1), that of the Indian people rising, shaking off their foreign yoke (the British yoke), and recovering possession of their own country; and (2) the danger that some other nation may drive her out of India and thus steal from her the country (the rich possession) which she has taken from the Indian people.

Thus we see that the only protection the British give India in return for the crushing military burden that she is compelled to bear is the infinite injustice and wrong of subjection, bondage, exploitation, loss of freedom, deprivation of the place which she has a right to occupy among the great nations of mankind.

And now as to the cost of all this to India.

As already has been said, Great Britain claims not only that she protects India but that she does it at a far less expense to the Indian people than they would have to bear if they protected themselves. They have to pay nothing for the service of the great British navy; and the cost of the Indian army, great as it is under British rule, is less than an army of their own would cost if they were independent. This is the claim. Is the claim true? India answers, no, it is not.

The Indian people have studied the matter carefully, and there seems to be clear evidence that their military budget now under British rule, is considerably larger than it would need to be under independence; in other words, that they are now paying considerably more for British "no-protection-at-all" than it would cost to maintain an army and a navy of their own which would give them real protection.

Where do they get their evidence? A substantial part of it from Japan.

Japan is more dangerously situated than India. It has more threatening enemies than has India. Russia, which Britain has always regarded as India's only peril, is far nearer to Japan than to India: indeed, Russia's Asiatic possessions extend to Japan's very door, while, on the other hand, she is separated from India by hundreds of miles of space, by lofty and difficult mountain ranges and by buffer States. Yet Japan's army and navy, which afford her ample security, and by means of which she actually fought a victorious war against Russia,

entail upon her a *military and naval expenditure considerably less than that borne to-day by India.*

Let us see exactly what are the figures—the figures which nobody can deny.

According to the Statesman's Year Book for 1926 (and there is no higher authority), Japan's total estimated expenditure for her army and navy for the year ending March 31, 1926, was \$145,612,270. By the same authority the total estimated military expenditure of India for the same period was \$200,735,660. Thus we see that India has to pay actually over \$50,000,000 a year more for military domination by foreign rulers, called "protection," (which is not protection at all but subjection), than it costs Japan really to protect herself with her own army and navy, and have freedom.

Nor is even this all. Notwithstanding India's much larger military expenditure, India has not a War College, or a Naval College, or an Army General, or a Naval Commander, or a battleship, or an aeroplane, or a fort, or a regiment of soldiers, or a cannon, or a rifle, that she is allowed to call her own. In Japan there are all of these; and they belong not to foreigners but to the Japanese people, and are used wholly for their benefit.

In these facts and figures we see the ground for India's claim, not only that Britain's so-called protection is a sham, but that under freedom she could provide for herself real protection at a considerably lower cost than she now pays for the sham.

PART II

The latest and crowning movement of Britain for the "protection of India" is that of creating a "Royal Indian Navy." The plan for building such a navy has caused much discussion in Parliament and elsewhere and some opposition, but it seems to have been finally decided affirmatively.

To the world looking on, and also to some of the Indian people, it has seemed at first sight as if now India will have something of a military kind which will be really her own, which she herself will be permitted to control, and which will really protect her. But—this illusion has been dispelled. It has turned out that the plan is one formed not at all for India's benefit, but wholly for Britain's. Its real object has proved to be to increase the

British navy, under the name of India and at the expense of India.

To be specific; it has three objects in view, as was made clear in the debate on the subject in the British House of Commons, April 5, 1927. In that debate three Amendments to the Bill creating the Navy were moved, all of them aiming to give India some real ownership and some real control. But all were defeated by heavy majorities of more than two to one. The Amendments proposed were to the effect:

1. The Indian Navy, paid for by India, should be used only for the defense of India, in Indian waters, and not for the defense of the Empire, in distant waters.

2. That if sent to distant waters, in defense of the Empire, the cost of the same should be borne by the Empire and not by India.

3. That it should not be sent to a distance, in the service of the Empire, without the consent of both Houses of the Indian Legislature.

But as already stated, these amendments were defeated by large majorities.

It was definitely decided by the British House of Commons:

1. That the so-called Indian Navy, notwithstanding the fact of its being built wholly by Indian money, is to be really a part of the Imperial Navy, to be used anywhere and for any Imperial purposes that the British Admiralty may order.

2. That the cost of using it outside of Indian waters and for general Imperial purposes may at any time be placed on India, if Parliament shall so order.

3. That the Indian Legislatures (that is, the Indian people) shall have no control over it whatever.

Thus the so-called Indian Navy is placed upon exactly the same footing as the Indian Army. While paid for wholly by India, it is to be King George's "My Indian Navy," and a constituent part of his "My Indian Empire"—that is, it is to be owned wholly by Britain, controlled wholly by Britain and used wholly for Britain's ends.*

* In this connection attention ought to be called to a question which is being asked in not a few quarters. The question is, whether, in creating this Royal Indian Navy as an auxiliary to and really a part of her British Navy, Great Britain does not violate her promise made in connection with the Washington Conference for the Limitation of Armaments. At that Conference, she, in

What about "protecting" the Indian people? As for really protecting them (from the tyranny, domination and exploitation of a foreign government, which is the only protection they need), the new Navy is to have no such function at all. Its sole purpose is to be that of *protecting Britain* from the danger of *losing India* either by rebellion or through attack and invasion by some other nation.

What about cost to India? We have found that before the building of the New Navy, the amount which India has paid for her so-called protection (military and naval) has been \$200,735,660 a year, some fifty millions dollars a year in excess of what, if free and independent, she would have had to pay for real protection like that of Japan, with an army and navy of her own as strong as those of Japan. Now let us add to that great sum the heavy cost of building this new navy and the further heavy cost of its perpetual upkeep. Then we shall be able to get some idea of what the impoverished Indian people will be required to pay when Britain's scheme of an "Indian Navy" shall have been put in operation.

Will be required to pay for what purpose? As we have seen, not for protection at all, but for the support of a military and naval system the object of which is to rivet more firmly India's chains.

[This article forms a chapter of the Author's forthcoming work on "India's Case for Freedom," specially contributed to the *Modern Review* like the other chapters published in it]

connection with several other nations, engaged to limit her naval construction in a certain specified manner and to a certain specified degree. Technically she seems to have kept her promise; that is, she appears to have limited her home naval construction exactly as agreed. But what about that naval construction of hers in India? Does she not here really break her promise? It is noticeable that in the debate in Parliament this question came to the fore, members seriously urging that the creation in India of a "new Navy of capital ships, submarines, cruisers, and the rest," to be used anywhere and in any manner the British Admiralty may direct, even including being ordered to China to suppress her struggle for freedom, is a clear violation of Great Britain's duty and pledge to assist in promoting naval disarmament in the world.

The matter is one which is troubling not a few minds outside of Great Britain. Evidently British statesmen will make a mistake if they treat it lightly.

THE CAPE TOWN AGREEMENT

By C F ANDREWS

WHILE heartily congratulating Mr P S Aiyar on so ably stating his case against the Cape-town Agreement in a wholly impersonal manner there are certain comments which are necessary for me to make, in order to correct any false impressions —

(1) *Repatriation* I had already come to dislike Repatriation as strongly as Mr P S Aiyar. This I have stated again and again in the public press, and explained my own earlier mistakes. At the same time, it is fair to say that the Agreement of 1927 is an advance upon that of 1914 on this subject. On three points there has been real gain —

(i) Anyone now accepting the Government bonus is able to come back within three years provided he pays back the bonus. He is in exactly the same position as other returned immigrants except that he has to pay back the borrowed money.

(ii) The age of any minor who returns with his parent, is reduced from 21 to 16.

(iii) No form of recruiting will be allowed which the Indian Government objects to as either non voluntary or unfair.

It is true, that during 1927 a larger number were repatriated than in 1926. This was due to two reasons —

(a) The bonus offered was increased early in 1927.

(b) Many who took the bonus in 1927 are expecting to return if India does not suit them.

(c) In practice, we find that whenever the bonus has been increased the number who have taken it has first risen and then has fallen again.

(d) In practice also if India does not suit those who are now coming over there will be no insuperable difficulty in their finding the money to repay the bonus even if they have spent it. Money is more plentiful out there and friends will often help or else lend the money on good security. South African Indians have had an experience of the world which makes them able to look after themselves.

(ii) *Industrial Legislation* Mr Aiyar's argument — that harsh industrial legislation is being enacted simply in order to drive Indians to become repatriated — is hardly borne out by the facts. Because the main classes attacked by this class legislation are the African natives and coloured persons, who cannot possibly be driven out of South Africa which is their native country. The Indian only comes in as a side issue and he suffers the same disabilities as the two classes I have mentioned. I would agree with Mr P S Aiyar that if the Colour Bar Act were to operate indeed, I have publicly condemned the Indian Delegation at Capetown for not making a protest in this matter and also with regard to clause 101 in the Liquor Bill which was already in draft

when the delegates arrived in Capetown and should have been protested against at that favourable moment. There were also points in the Industrial Wages legislation which discriminated against Indians. These should have been cleared up I agree with Mr Aiyar so far.

But to object to the principle of the two Industrial Wages Acts was impossible for they were in principle non racial and we have always agreed to abide by legislation which is non racial. I was interested in Mr Aiyar's quotation from the Lange Asiatic Commission of 1921 which strangely enough I had not noticed before. But we cannot go back to industrial legislation to the year 1921 in South Africa with a Nationalist Labour Government now in power and Labour often in the saddle.

(iii) *Aliens* Mr Aiyar's point about Indians being still regarded as aliens has surely been settled by the Agreement itself wherein domiciled Indians are definitely recognised as a permanent section of the South African population.

(iv) *Fort Hare College* Here Mr Aiyar's position that Indians should not attend for higher education at an African College is quite untenable. Personally I hope that when the new Indian College is opened in Durban it will be on the same generous non racial basis as Fort Hare. I sincerely trust that a welcome will be given to African natives in our own Indian College just as these African natives have given us a generous welcome in theirs. Nothing but good can come from the warm friendships which have already taken place, between those who will be African leaders in the future and our Indian higher-educational students. To speak of the African as living in the war Mr Habib Moten does (as quoted by Mr Aiyar) is most insulting and I hardly like to think what racial trouble he is stirring up by doing so. The poet Rabindranath Tagore gave me a definite message to the Indians in South Africa. He stated that if the Indian Community could not win the respect and affection of the Africans (who had the true right to be in South Africa, as the children of the soil) then they had no place there. They were imperialist intruders. Mr Habib Moten's statement, which Mr P S Aiyar quotes at length with evident commendation, must shock every Indian nationalist who reads it. It is directly contrary to all that the poet told me to advocate.

Let me explain. There is no direct colour bar as far as I am aware to the European Universities in South Africa in most subjects but inveterate custom is against Indians and the social ostracism is so hard to endure that practically no Indians qualify in that way. They prefer to go to England. On the other hand the Lovedale and Fort Hare institutions which are primarily for Africans have no social ostracism at all. Europeans have gone there in small

numbers, and also Indians; they have received the most kindly and generous treatment, which the South African Indian Congress has acknowledged. Indeed, some of the most highly educated and patriotic Indians in South Africa have been educated at Lovedale and Fort Hare. Let me say, also, in a parenthesis, that the late Chief Justice of South Africa, Sir J. Roos Innes, used to speak with pride of the same experience, for he was educated, along with African students, at Lovedale. He gloried in the fact. The Africans in consequence loved him, as a friend. There could hardly be a sweeter relationship, and one which would more effectively break down colour prejudice. I believe, but am not quite certain, that the present Chief Justice, Sir William Solomon, holds the same proud record.

But Mr. Habib Motan writes: "My Committee records its emphatic protest against any arrangements for Indian students at Fort Hare Native College, and if, in spite of our protest, you make arrangements, and if even one student, not only from the Transvaal, but even from any part of the Union of South Africa, attend the said College, the Indian community will be greatly upset, and

it would then be the duty of my Committee, to come out openly and record our protest against such degradation at your hands."

It is difficult to explain in India, how terribly such words as these, published broadcast and commented on in the South African press, will inflame African minds against the small Indian community. The blunder committed is even worse than a crime.

(c) *Land Alienation Ordinance.* On this point, Mr. P. S. Aiyar is right. The Indian Delegation ought never to have accepted and ratified the municipal land alienation ordinance for Durban, which is an exceedingly bad piece of class legislation, tending to lead to the segregation, in separate areas, of the two communities in the future. We are going to have endless trouble over that. The South African Indian Congress strongly dissented from that part of the Agreement, and is still lodging its protest.

Let me say however, that the Indian position all round, in South Africa, is stronger to-day than it has ever been before, since 1914. Of that I have not a shadow of doubt. Our real danger to-day is in East Africa.

POSITIVE OUTLINE OF IMPERIALISM

By NIRMAL CHANDRA MAITRA

IMPERIALISM is undeniably the ingredient "par excellence" in the politico-institutional technique of the 20th century. Curiously enough, it is also the only great political fact to which a correspondingly adequate political theory is lacking.

It is my purpose, in this article, to offer a definition of "empire" and to make out of it a theory of and a case against Imperialism, strictly from the point of view of Political Philosophy.

The proposed definition is adumbrated in the following three points:

I. "Empire" is an historical category, "sui generis", the genesis and development of which under certain historical circumstances can be traced and the demolition of which under altered historical circumstances can be clearly foreseen.

II. "Empire" consists of more than one constituent nation; the word "nation" is used in the sense prescribed by Bluntschli's well-known definition of it.

III. Of these nations, one nation is sovereign; the other nations have (or, if

there are only two nations in an empire, the other nation has) duties to perform towards the sovereign nation to the fullest extent, and have no power of independently willing any right, civil or political, except the political-legal right of rebellion against Imperialism, which is also a natural right.

From the 3rd point, it is easy to infer that the right of rebellion, in order that it may be effectively exercised, must be affiliated with a militant consciousness of nationhood which the people who constitute an empire must possess, and if they do not, must acquire and develop so as to make it a motive-power of destruction.

According to the three points of the definition, given, Russia has ceased to be an "empire" since 1917, when she declared and carried into effect the "national self-determination" principle and Italy has become an "empire" since 1919 when the Nicholases and Metterniches of the treaty of Versailles conferred on her the power of tyrannizing over the Germans of the Upper Trentino.

Neither of the essentials can be dispensed

with, for no State in the modern world being unioational, the elimination of the 3rd point would entitle every state to call itself an "empire" and the leaving out of the 2nd point would place all the slave-states of the ancient world in the imperial category.

Some existing fallacies must be overthrown before the truth of the definition, sketched above, can be made apparent in all its bearings.

FALLACY No. I

Can "empire" be called "state"?

While many would be inclined to answer this question in the affirmative, terminological accuracy demands that the answer should be in the negative.

The radical differences that exist between "empire" and "state" are noted below.

Firstly, as regards manner of origin: while the State is the objective result of a long and peaceful process of subjective evolution, the empire is the objective result of the subjective fiat of one single person who is often the 'dominus omnium' carried into effect at a stroke, by "blood and iron". (See Georg Jellinek on state-origin, quoted in Willoughby's "Nature of the State.") This view of the origin of the State, by no means confined to the Evolutionists proper, commands the widest acceptance.)

Secondly, as regards manner of existence: while the State, after having come into being, depends and nourishes itself upon majority opinion as manifested through law, the empire after having been created, supports itself on force as manifested through ordinances. (Holland, in his definition of the State, stresses this point. The element of force in the basic composition of the State remains potential, or if any concession is to be made to the Treitschianism of H. Treitschke, is so varnished that it loses its edge.)

Thirdly, as regards outlook: while equality is the principle of the State, subordination is the principle of "empire". In the State is expressed the principle of free self-determining personality; in the empire is expressed the principle of dominant personality.

Fourthly, as regards distribution of power: while the State is one community which is free and politically organized, "empire" consists of communities which are not free and which ought to be, but are not politically organized.

It follows hence that while in the State, "law is the same for all whether it protects or punishes," in the empire, laws vary according to rulers and the ruled. The juristic difference between "laws" and "ordinances" being well-known, it is possible to argue that in an empire, "law" in the strict sense cannot exist; those which pass for "laws" are, in reality, "ordinances."

Fifthly, as regards aim: while the action of the State is directed to the development of every individual to the fullest liberty and to the fullest personal perfection, the empire aims at promoting the ends of some individuals through the vassalage of others.

The State finally, loses statehood when it becomes an empire. Empire, is an entity "sui generis", not to be likened to anything else.

FALLACY No. II

Popular parlance throughout the ages has ideologically affiliated "pax" with "imperium" and it is imperative to disabuse ourselves of this falsehood. Emperors and designing politicians have found it to their interest to encourage this delusion, as for example, the Emperor Napoleon III, the hero of the Paris massacres, in his celebrated speech to the Bordeaux Chamber of Commerce, magniloquently perorated, 'The empire is peace!' Inspiro of this effusion, people credited him with projects of four large-scale wars and subsequent events proved the substantial correctness of the popular forecast.

"Pax Romana" is said to have its Indian analogue in "Pax Saravabhanmica", and "Pax Britannica" looms large in loyalist conception even to-day. We have but to turn to the pages of Engelbert, Abbot of Domont (circa 1325 A.D.) to witness the exposition of Roman Imperialism as it actually was. His book, "De Ortu et Fine Romani Imperii" contains a passage which is well worth remembering by everybody obsessed with the superstition of "Roman peace." It is this:—

"The Roman empire was and is always troubled by wars and rebellions; hardly ever were the gates of the temple of Jaoas shut; the greater number of Roman emperors have died violent deaths; and the Roman empire has been the cause more of disorder than of peace."

The kaleidoscopic changes that accom-

* Quoted by Prof. Benoy Kumar Sarkar in his book 'Fetialism of Young Asia.'

panied the expansion of states into empires and the manufacture of "Pax Sarravhaumica," consequent upon it, were the resultant more often of "Bherighosa" than of "Dhammaghosa"; and the panoramic swiftness with which frontiers extended or dwindled, internal or external policies were broken off or renewed, testifies to the uncertainty of the period, these changes occurred in. Domestic factions debilitated internal sovereignty while foreign potentates menaced external sovereignty and rendered it precarious. The north German tribes were to the Roman emperors what Pulakesha was to Harsha, a menace; and the fratricidal dissensions in the Moghul empire consequent upon the infirmity of Shahjehan have their European counterpart in the warlike animosities of Charlemagne's successors, consequent upon the death of the great Frankish emperor.

As regards modern empires, it is not very necessary to stress this point, for we need only envisage the political-economic history of Europe in the 18th and 19th centuries, replete with the details of war, intrigue and empire-making, with an open mind to be convinced that "Pax" differs from "Imperium" as widely as heaven does from Vauxhall.

This brings us to the heart of Imperialism. Imperialism, at its inception, denotes nothing more than the strangling of one State by another. This strangling is the result of the co-operation and interplay of two historical abstractions, force and fraud. N. Machiavelli (1469-1527) condensed the eternal philosophy of state-dynamics into a convenient apothegm when he said, long ago, that a prince who would expand his territories must combine the characteristics of a lion with those of a fox.

Force, the motto of all World-Augustuses, has been to hold by the Sword what the Sword has won. The Imperialism of Sbi Hwangti who brought China for the first time under one "imperial umbrella" was as much an affair of the Sword as was that of Asoka, the arch-protagonist of world-peace. The army has ever been the axis on which imperial systems have revolved. The Pretorian Guards and the Roman Empire, the Janissaries and the Turkish Empire, the Imperial Guard and the Napoleonic Empire—in all these cases, history proves that imperial efficiency has seldom run along lines other than those of military efficiency.

Charles V frittered away his imperial energy in trying to evolve homogeneity out of heterogeneity; he failed in his task only because his gun was not loud enough to silence the manifold opposition he evoked. The scattered empire of Napoleon and the consolidated empire of Akbar were alike held on one tenure, which was that of the "big battalion", or the "shining armour", or that of the "mailed fist"

British Imperialism, it may be observed in passing, has thoroughly proved its fidelity to the Roman original, a copy of which it professes to be, by basing all its arguments—even that which declares the goal of British policy to be "the progressive realization of self-government in India"—in the final resort, on the solid bed-rock of artillery and armaments. This fact, she does not conceal, but most avowedly bandles about, as for example, she always takes pains to tack to the words just quoted from the declaration made in the Imperial Parliament on August 20, 1917, the phrase, "as an integral part of the British Empire", thereby destroying any possibility of misconstruing the present or prospective relations of India towards herself (Sir Sankaran Nair, in his famous Minute of Dissent, made a point somewhat to this effect)

Fraud—this is a weapon which is, unlike force, operated upon insidiously. The Richelieu of Ancient Magadha, Vassakara, the Brahmin minister of Ajatasatru, who was deputed to the territory of the Vajjis to sow the seeds of dissension there, is not a vanishing, but a permanent type of imperialist statesman.

It is not hasty to conclude from what has been said that Imperialism holds together only so long as there is sufficient force to draw upon.

While the Neo-Hegelians of Oxford—Green, Bradley and Bosanquet—have propounded the theory that consent, not force, is the basis of the state, nobody outside Bedlam has yet maintained nor can anybody ever dare maintain that consent of the subject peoples, normally obtained (i.e. not through bribery or force) is the basis of "empire", too. Consent, in an empire, is always and necessarily lacking and Imperialism remains in the saddle so long as it is powerful enough to keep disruption at bay. War of Liberation is bound to begin whenever there is enough fighting strength and resource

in those on whom the yoke of Imperialism has been imposed.

Imperialism, then, is exactly what Hobbes called "a state of war"; not that there is actual war, but a state in which there is a disposition to fight always present.

"Warre", says Thomas Hobbes in his "Leviathan" (Chapter XIII), "consisteth not in Battell only, or the act of fighting; but in a tract of time wherein the will to contend by Battell is sufficiently known; and therefore, the notion of Time is to be considereth in the nature of Warre; as it is in the nature of the weather. For, as the nature of Foul Weather lyeth not in a shower or two of rain; but in an Inclination thereto of many days together; so the nature of warre consisteth not in actual fighting; but in the known disposition thereto, during all the time there is no assurance to the contrary."

NEWTON'S 3RD LAW IN POLITICS

It is now possible to deny that obedience to Imperialism is an act of duty. An empire depends, it has been seen, both for its birth and for its existence, on superior strength. As Rousseau says, "Strength is physical power. I do not see what moral force could result from its action. To yield to force is an act of necessity and not of will; it is, at the most, an act of prudence. In what sense could it be of duty? If obedience must be rendered to strength, it is not necessary to obey from duty; and if obedience is not enacted, it is not necessary to obey."

It is perhaps necessary to point out that when Carlyle thundered "the strong thing is the just thing" and "rights are correctly articulated might" he did not mean physical force, which is the sole guarantee of Imperialism (See E. Barker's "Political Thought from H. Spencer to the present day," page 185).

The fact that Imperialism, like 18th century despotism, sometimes deems fit to be benevolent, does not negative the inherent

inability of subject peoples, so long as they remain under abjection, to independently possess any right, civil or political. There can be no talk of "rights" under an empire, for "rights" are totally different from "charities" and they presuppose a state to vindicate them. "Empire" is strictly speaking not a state at all; it is the negation of statehood.

True, indeed, constitutions are granted. But the very statement that they are "granted" proves that they have no rootings either in "volente generate" or in "volente de faus." They are imposed from without, not evolved from within.

To speak of subject peoples as being wholly rightless would be wrong; for one right and that alone they indubitably possess: it is the right of rebellion. This right remains potential so long as it is felt that it cannot be successfully exercised.

The naturalness of this right cannot be questioned, for resistance to force is an instinct which is common to all created beings from the ant to the elephant. (By the word, "natural" no reference is implied to any supposed precursive "state of nature").

Is rebellion against Imperialism also a political right? If it is alleged that it is, where is the state guarantee for it to be sought? Certainly not in the empire; for even if the "empire" were a state (which it is not), it cannot be expected that it would dig its own grave by countenancing a right, so utterly subversive of itself.

The answer to the question is found in the fact that every empire derives its life from pre-existing state systems. The physical destruction of these by superior military-naval strength which brings about the empire, leaves to them only a spiritual existence in the consciousness of the vanquished peoples who become reduced to subjection. To be more explicit, these states continue to exist as "self-conscious ethical substances" all throughout the imperial period and, what is more, retain sovereignty over the subject peoples. The memory of independent statehood is cherished by the people, fed on historical studies, and handed on from generation to generation, until the whole accumulated force breaks forth in a paroxysm of rebellion. The ancient states, metaphorically speaking, are so many Hamlet's fathers, goading the Hamlets to enact vengeance. It is for the physical resuscitation of these states that subject

* Ancient Sparta consisted principally of two nations, of which one was reduced to the position of "helots"; it was, therefore, an "empire" according to the essentials of the proposed definition. Hegel, in his "Philosophy of History," referring to the internal constitution of Sparta, says that it resembled that of a ship, the crew of which is in a state of constant mutiny and which seethes with incessant warfare thereby. This statement illustrates what is called "a State of War."

peoples rebel, it is a feeling of lost sovereignty that keeps them uneasy under the empire. Hence the "perpetual war," the Hobbesian "state of war", as it has been called above.

If rebellion is successful, the states which were in a state of suspended animation are ushered back into complete life again; they externally manifest themselves and declare, either actually or constructively, the retrospective legality of the rebellion. Even if rebellion is unsuccessful, its leaders may be hanged by putting in some extra expense for the hangman and the rope, but its political righteousness cannot be assailed, though it cannot be authoritatively declared.

The right of rebellion is a legacy which the physically expiring states bequeath to their citizens; and it is created by the fact of state-destruction, which is, so far as the creation of this specific right goes, an essentially "juristio act."

Denial of legality to rebellion arises, at bottom, from the Benthamite conception of right, as being creatable solely by "positive law." Bentham, when he said, "Rights properly so called are creatures of law properly so called", meant by "law" nothing more than "positive law." There is no doubt that Holland, too, has the same idea of "law" in mind when he defines "legal right."

But this assumption—that "there can be no law without a definite sanction, i.e. without a constituted authority having the duty and the power of compelling observance of the law by penalties and executing the judgment

of those who administer it"—is an error; no less a personage than Sir E. Pollock, the great lawyer, declared the opinion, founded on this assumption, as "transitory and insular." (Address to the University of Manchester, on October the 30th, 1916).

It is a mistake to suppose that state-sovereignty legislatively manifests itself through judicially enforceable "positive laws" alone. It hoots us little to know that the "right of rebellion" can be infringed with impunity, for it cannot be enforced in any court of law under the empire.

The fact is that "positive laws" are but one channel and let it be conceded that they constitute the most important channel for the manifestation of state sovereignty, but are by no means the only channel. "Law is any rule or canon whereby actions are framed" (R. Hooker), and that right which is in consonance with it is a legal right. The antecedent sovereign states, though divested by Imperialism of the symbolisms and excrescences of sovereignty, retain the essence of it and supply the "assent and assistance" which Holland makes essential for "legal rights."

What, then, we may finally ask, is the right of the empire to be? To one who has "followed the real truth of things rather than an imaginary view of them", the answer is clear. The empire has right in so far as it has might and might in so far as it exists in such a way that its subjects regard rebellion as a greater evil than obedience.

RAJPUT ORIGINS IN ORISSA

By PROF. R. D. BANERJEE, M.A.

Banaras Hindu University

LIKE the chiefs of other provinces of India many of the feudatory chiefs and zamindars of Orissa claim to be Rajputs. Yet their genealogical tables and the accounts which they have supplied to the compilers of Imperial and Provincial Gazetteers in this country very often prove the contrary. In almost all cases the chiefs claimed to be of Rajput descent before the British conquest of the country. Many of the modern chiefs

of Orissa are really descended from ancient kings of that country and their ancestry can be traced back, historically, much further than those of most of the princely houses of modern Rajputana. The most prominent example is that of Mayurbhanj. In other cases Rajput origin has been claimed on very meagre and insufficient grounds by chiefs of humbler origins and these claims have gone unchallenged so long. The most

prominent examples are the families of Vizianagram and Patna-Sonpur.

In the case of Vizianagram, the claim of Rajput origin seems to have been tacitly acknowledged by the Rajputs of Rajputana and by accurate historians of the type of Prof. Jadunath Sarkar. Prof. Sarkar, writing of the foundation of the Chiefship of Vizianagram, in the first volume of his monumental work on Anrangzeb, says "In 1652 a Rajput officer of Oolconda seized Vizagapatam and extending his conquest formed a petty Rajahship." * The authority quoted in a footnote in this page is the Imperial Gazetteer, (Vols. X, XII & XXIV). Out of those volumes only Vol. XXIV contains any reference to the Vizianagram family. Prof. Sarkar refers to page 339 in this Volume and on this page we find the following statement: "The family claims descent from Madhevarma, who led a Rajput colony into the Kistna valley in A. D. 591 and whose descendants held important posts at the court of Oolconda. In 1652 one of these, Pansapati Madhevarma, entered Vizagapatam." The claim to Rajput descent and the tacit acceptance of the statement in the gazetteer made Prof. Sarkar admit that the conqueror of Vizagapatam in 1652 was a Rajput. The Maharaja of Vizianagram is no doubt admitted to be a Rajput at the present day and intermarriages are taking place with the highest Rajput families. But the facts to be taken into consideration in deciding the claim of a descent from a Rajput clan are;—(1) the date when a migration is said to have taken place, and (2) the conditions of the migration, e. g., different versions of the same story and their probability.

With these three points of enquiry before us in the case of the Vizianagram family, we find that the first point is decidedly against the theory of Rajput descent. The name Rajput was not in existence in the 6th century, and even if a migration into the Krishna valley is admitted at that time from some unknown place in Northern India, it is not possible to connect such people with genuine Rajputs of the divine Agnikulas of legends. The subsequent Rajput intermarriages of the family are no proof of its descent, as later on all kings became Kshatriyas, genealogies were provided for them as late as the 16th and the 17th centuries (the Koches of Kuch Bihar and the Ahoms of Assam)

and in the nineteenth century most princes became Rajputs. Inspite of the inherent defects in the story provided by the agents of the Vizianagram Estate to the compilers of the Imperial Gazetteer, it contains certain important pieces of information, and if they are correct and authentic they ought to prove the real descent of the family. The name Madhevarma is very suggestive. Several chiefs of that name belonging to the Sailodbhava family ruled over the Kongodamandala in the seventh century. One of them, the subordinate of Sasanka, king of Gauda, was alive in 610 A.D., a date not very far removed from the traditional date of the migration of the so-called Rajputs into the Krishna valley. Madhevarma-Salaya-bhita was not a Rajput, but he was a king and his people ruled over Java and Sumatra when the Rajputs of the bluest blood were still wandering Onjars or unconverted Hunas.

The chiefs of Patna and Sonpur claim to be descended from the Chanbans or Chabmanas. The story of their migration is of interest and provides us with an important specimen of the evolution of Rajput pedigrees of Orissan chiefs in the British period of Indian history. So far as I know, no Orissan chief has been able to produce any genuine records in support of their claims to Rajput descent. The entire claim of the Patna-Sonpur family is based on legend and tradition which varies from time to time with the whims of the individual, either the chief or his officer. The earliest record of the genealogy of the Patna-Sambalpur-Sonpur family is to be found in the narrative of the English traveller T. Motte who was deputed by the East India Company to the "Diamond mines at Sambalpur" in 1766. His journal was printed in the Asiatic Annual Register for 1799. Motte says:—

"Sambalpur was founded by Bulram Dakee of whom they relate the following history. About two centuries ago past since a company of Hindus set out from the banks of the river Sommer in the province of Azmir, on a pilgrimage to the temple of Jaggerut. On their return the whole party was murdered, except one woman who made her escape to Patna, a place thirty coss south from hence, at that time the capital of this part of the country. She supported herself with begging until her son grew up, who showed such a happy genius for learning, and such dexterity at

* Vol. I p. 215.

his exercises, that the Rajah adopted him. When he succeeded, he built this place, and made it his residence, calling it Sumbhupoor, from the country of his father. Had his family come from the Sommer, he would have called it Sommerpore; whereas, I should think, he came from Sumbhal, a large city in the Rohilla country.*"

Motte found that the chiefs of Sambalpur claimed descent from a man who had come from Sambhar, the ancient Sakambhari, the first capital of the Chahamanas before they migrated to Delhi. He does not say whether the original of the Patna-Sambalpur-Sonpur family was a Chauhano or a Parihar or a Kachhwaha. We reach the next stage in this maze of genealogy in "the Gazetteer of the Central Provinces of India" by Charles Grant, Nagpur, 1870 (Second Edition).

In this book the ancestor of the Patna-Sambalpur-Sonpur family has lost the characteristics of a pilgrim to Jagaonath, he has become the Rajput Raja of Sambar near Maiupuri. "The Maharajas of Patna claim direct descent from a race of Rajput Rajas of Garhsambar near Maiupuri and trace it through thirty-one generations. It is alleged that Hitambar Singh, the last of these Rajas, offended the king of Delhi, and was killed; that his family had to abandon their country and fly in every direction; and that one of his wives, who was at that time *enroute*, found her way down to Patna, which was, it seems, at that time represented by a cluster of eight 'garhs,' and the chief of each garh took it to turn in role for a day over the whole. The chief of Kolsagarh received the Raoi kindly, and in due time she gave birth to a boy, who was called Ramai Deva. The chief adopted him, and eventually abdicated in his favour; and when it came to his turn to rule, he took the first opportunity of causing the chiefs of the other seven garhs to be murdered and setting himself up as the ruler over the whole, with the title of Maharaja."†

This statement is certainly based on informations supplied to the compiler of the Gazetteer by officers of the Patna State. It differs materially from the statement of Motte in making the ancestor of the family a Raja instead of a comparatively insignificant private person of Sambhar who came

on pilgrimage to Jagaonath and in making him come from Garh Sambar instead of Sambhar near Ajmer. Mr. Grant quotes the report of Major Impey, which has not been printed as yet but considerable extracts from which are to be found in a learned paper by Mr. C. U. Wills, ICS, on the Chhattisgarh States, published in the Journal and Proceedings of the Asiatic Society of Bengal, Vol. XV, 1919. I have since obtained a copy of the original report and I find that Mr. Grant's quotations are not exact and Major Impey's report contains certain statements which bear on them the hall-mark of untruth. Writing on the 29th May, 1863, Major J. B. Impey states;—

"2. The Maharajahs of Patna claimed direct descent from a race of Rajput Rajas of Garh Sambar—near Mynpooree and count back the individuals of this race for thirty-two generations.

"3. It is narrated that these Rajas used to be in constant attendance at the court of Delhi till the last, named Hitambar Singh, having intrigues and run off with one of the king's daughters, was pursued and killed and his family forced to fly. Amongst the wives of this Rajah was one who, escaping, arrived *enroute*, at Patna, and found refuge with the chief of Kholagarh, being one of the 8 garhs, as marginally noted and which at that time alone formed the territories of Patna, being comprised within the three rivers, Ung, Mahanoddy and Tel and bounded on the west by Khurriar (a possession then of Jeipoor) and Brindanawagorh; and the chiefs of which took it in turns a day at a time to exercise full authority, as Rajah, over the whole. She was placed in charge of the said chief's Brahmin at Ramoor and there gave birth to a boy, named Ramaee Deo. The chief adopted the boy—and subsequently on his coming of age, himself being sick and weary of rule, resigned his position to him. Ramaee Deo soon after this succeeded in murdering the other seven chiefs, and usurping to himself the whole and permanent authority in Patna. Finally he married a daughter of the ruler of Orissa through whose influence and power he was enabled to maintain his usurped position."

The difference between the statements recorded by Motte in 1766 and Impey in 1863 is very great. The State officials had become bold enough to claim that this supposed petty chief of Maiupuri had become of sufficient importance to intrigue with a princess of

* Asiatic Annual Register, 1799, pp. 73-74.

† Central Provinces Gazetteer, Second Edition, Nagpur, 1870, pp. 393-4.

he Royal Honso of Delhi. There is a greater amount of difference with regard to the date of the migration of the ancestor of the family. Motte stated that the ancestor of the family came to Orissa a couple of centuries before his time (1766), say in the middle of the sixteenth century. At this time Akbar was on the throne of Delhi. Will any respectable scholar admit today that Hitambar Sing, a petty Jaigirdar or military adventurer, intrigued with the daughter of the great Mughal Emperor? Orant quotes the names of 26 generations of the chiefs of Patna up to his time. Impey quoted 25 up to Vajra-Hiradhara Deva who died in 1762. Even if we take 20 years to be the average duration of the rule of a chief we cannot name Hitambar Sing, the reputed father of Ramsi Deva, to be a contemporary of Akbar. It became clearly necessary now to furnish additional information to Stato historiographers and compilers of Gazetteers in order to cover this defect. Let us turn to the next editions of the District Gazetteer. It should be sufficient at this stage to note that a suggestion of Motte made in 1766 and recorded and printed in 1793 was sufficient to put the Stato officials on their guard in 1863 and 1870; that Sonner near Ajmer of their tradition may be Sambhal a great Rohilla stronghold. Therefore, in all subsequent "information" supplied to British officials they stuck loyally to Sambhal and gave the go by to the Sambhar of the artless "Chhaukaran" of 1766 who supplied facts as he knew them to Motte. In between Motte and Impey or Orant another Englishman gave a different turn to the ancestry of the chiefs of Patna-Sambalpur-Sonpur. Sir Richard Temple states in 1863, in his report on the Zemindaris and other petty chieftaincies in the Central Provinces—"The Sambalpur and the Patna Rajas are some times said to be descended from or related to the royal or independent Hahaibansi dynasty of Ratanpur, in the Chhattisgarh Plateau, which was formerly the capital of Chhattisgarh." * This rambling reference by the late Editor of the Indian Antiquary only proves a wild craving on the part of these chiefs to secure another Rajput ancestry if the Chauhan claim failed.

We must now return to examine the reports or "information" supplied by the next generation of Stato officials in which they

attempted to cover the deficiencies of their predecessors. This is to be found in the Bengal Provincial Gazetteer, containing the account of the foudatory states of Orissa. This volume, printed at the Bengal Secretariat Press, was edited by Mr. L E B. Cobden-Ramsay, I. C. S. I have not seen a more glaring instance of carelessness on the part of an editor. Mr. Cobden-Ramsay has permitted himself to be hood-winked by his own subordinates as well as many of the Stato officials. He has failed to consult printed books on the subjects on which he was writing and was careless enough to rely entirely on his Indian subordinates. His predecessor Mr. L S S. O'Malley, I. C. S., who compiled the Gazetteer of the District of Sambalpur, is no better in comparison. We can detect even now that some sort of intrigue was being carried on between the petty chiefs of Orissa for the establishment of their Rajput ancestry and one party got hold of the subordinate establishment of some British office and managed to introduce their version of the ancestry of their own chiefs to the detriment of their opponents. Messrs. O'Malley and Cobden-Ramsay, totally oblivious of facts as recorded by Impey and Orant on these particular points, printed the "informations" supplied to them by the Stato officials through their Indian clerks. We find two of them mentioned by O'Malley in a footnote on p. 23 of the Gazetteer of the Sambalpur District, printed in 1901. "I am indebted to Babu Satyabadi Padhi and Babu Nand Kishore Bohidar of Sambalpur for assistance in preparing this account of the legendary history of Sambalpur." * It was the interest of the Sonpur-Sambalpur party to prove that Maynrhanj and Keonjhar were at one time their dependancies and the editor of the Gazetteer quietly printed these names among the 18 dependancies of Sambalpur. † He did not consider it necessary to look into the authenticity of the claim of the Patna-Sonpur group. Mr. Cobden-Ramsay proved himself to be far more adaptable to the needs of the Sonpur-Patna party. He admitted everything placed before him to be true and gave the stamp of truth to these statements by including them in the Gazetteer. His book gave the chiefs of Patna and Sonpur some right to

* Bengal District Gazetteer, Sambalpur, 1909.

p. 23.

† Ibid. p. 22.

* Reprinted at Nagpur 1923, p. 8, foot-note.

claim that their ancestor came to Orissa 600 years ago, *et*, in the beginning of the 14th century instead of the middle of the 16th (p. 22), it admitted the independence and existence of the petty chiefs of Sonpur at the end of the 12th century by the acceptance of the following statements: "It is said that the third monarch of the line, between 1170 and 1202, measured his kingdom from the Nighly to the Godavari and from the Sea to the frontier of Sonpur, the state which adjoins Baud on the West" * There is no evidence of the existence of Sonpur or Patna as separate States in the 12th century or of the migration of the ancestor of the present houses in the 14th.

Mr. Cobden-Ramsay has also provided a second line of ancestors for the Sonpur-Patna group of chiefs by stating another legend according to which one Hamir Deva fled from Garh Shambar and established himself at Manikgarh in the hills of Khariar. He went to fight and was killed. He had seven queens, six of whom became Satis. The seventh was pregnant and found refuge in the forest between Patna and Khariar. She was protected by the aborigines of the Binhal tribe and her son was Ramai Deva.† The uncertainty of the Rajas of Patna and Sonpur about their ancestry and their eagerness to ensure their descent from Rajput stock is proved by their inclusion of two different lines of ancestors on the same page of the account. Evidently there was some one behind one of the parties who had sufficient knowledge of ancient Indian History and Epigraphy to understand the value of the futile suggestion that Sambhal near Mainpuri was the original home of the so-called Chauhans of Patna-Sonpur and not Sambhar or Sakambhari in Rajputana. §

The claim to Rajput descent of the Sonpur-Patna family entered into a new phase in the last quarter of the century from the present day. This attempt was headed by a respectable scholar, Mr. B. C. Mazumdar, formerly a lawyer of Sambalpur and at present a lecturer in the Post-Graduate Department in Arts of the Calcutta University and a Vakil of the Calcutta High Court. Mr. Mazumdar's first work on this subject was published in 1911 and is entitled "Sonpur

in the Sambalpur tract." In Chapter VI Mr. Mazumdar says: "the legendary account of the Chauhan Rajas is that one Humeru of the family of Prithviraj of Delhi, having lost his position at Mainpuri in Upper India during the time of the Mahomedan rulers, came with his queens to the borders of Patna State and established a little principality of his in that locality. How this Rajput adventurer came upon this far-off tract after travelling many hundred miles through rugged hills and dense forests is not now easy to ascertain." (p. 41-45). This account differs from the previous "information" supplied to the compiler of the Bengal Gazetteers, of Sambalpur, and the Orissa Feudatory Tracts, published in 1909, in the fact that the pilgrim of unknown caste described by Motte in 1766 who had become a Chauhan of Sambhal near Mainpuri in Impey's report of 1863 and Grant's Gazetteer in 1870 and who had gone up at least three hundred years anterior in date than the date given by Motte, now becomes a member of the family of Prithviraja. Mr. Mazumdar perhaps does not know that the Chahamanas continued to rule over the North-Eastern portion of Rajputana after the fall of Delhi and Ajmer in 1192-93. So it became convenient to make Humeru, and Hitambar Sing, come to Orissa instead of following the fortunes of Hari Singh or Hammira of Ranastambhapura or Ranthambhor in the Jaipur State. It also became convenient for Mr. Mazumdar through the accommodation of Messrs. Cobden-Ramsay and O'Malley to assert that Mayurbhanj and Keonjhar once acknowledged the suzerainty of the Chauhan Rajas of Patna and Sambalpur. He says on p. 48: "some old records disclose the fact that the Chauhan Rajas of Patna and Sambalpur issued orders of demand of Revenue upon some chiefs of Keonjhar and Mayurbhanj it is to be regretted that no trace of these records can now be obtained, though they were inspected either by Sir A. Grant himself or by his responsible assistants some time previous to 1862". There is no mention of such records in the Gazetteer of the Central Provinces either in the first edition of 1863 or in the second edition of 1880. Mr. Mazumdar henceforth can only be regarded as the historiographer of the chiefs of the Patna-Sambalpur-Sonpur group of chiefs and not

* Bengal District Gazetteer, Orissa Feudatory States, p. 23.

§ *Ibid.*, p. 285.

* Sonpur in the Sambalpur tract, p.

a critical scholar. The next feat attempted by Mr. Mazumdar was in 1925 in his "Orissa in the Making", published by the University of Calcutta. Here he accepts as correct the statements in the Bengal Gazetteers of 1909 and 1910 that "so early as the 12th or 13th century A. D. one Humeru of the family of the Chohan Rajputs of Mainpuri in the United Provinces came to Patna with his wife" (p. 219). The most important addition in this instalment is that "the son of Humeru born in Patna State became by his mythical powers the chief of the eight Mallikis who had the government of Patna and Sambalpur in their hands and thus established the Chohan rule in the Kosala country by being installed at Gad-Sambar." (p. 220). The only proof in support of the statement which Mr. Mazumdar can quote is the acceptance of this tradition by the Maratha Rajas of Nagpur and by Major Impey. As if any of the Bhonslas or their officers were in a position to ascertain the true Rajput origin of any family! In the British period the story of Motte stands out distinctly as the only correct version of the ancestry of the Patna-Sambalpur-Sonpur group of chiefs among the number of accounts supplied to writers like Messrs. Impey, C. Grant, Cobden-Ramsay and O'Malley. Every true scholar will grieve to find the respected name of Mr. B. C. Mazumdar included in this group. "The chiefs of Patna-Sambalpur-Sonpur group were descended from a pilgrim of some unknown caste who came on pilgrimage from Sambhar to Jagannath in the earlier part of the 16th century, founded a kingdom which later on became powerful and began to claim Rajput origin and who, with the help of British Gazetteer writers, have now become the agnates of Prithviraja II of Delhi and Ajmer.

I shall take only one other instance among the chiefs of Orissa, viz., that of Mayurbhanj. The Rhanjas of Orissa were independent monarchs in the time of Ranabhanja I. This chief began as a semi-independent ruler sometime in the 8th century A. D. From the rank of a Ranskha he rose to be a Maharaja and his descendants ruled over almost the whole of Orissa from modern Mayurbhanj to the Gumsar Taluka of the Ganjam-Berhampur district of Madras. Many chiefs of Orissa still call themselves Bhanjas and rule over many of the Garhjat States and Zamindari. The present chiefs of Mayurbhanj, instead of claiming descent

from the ancient Bhanja kings of the inscriptions, started a new theory about their descent in the British period. Evidently the Oriya "*Chhamakarana*" of Mayurbhanj and the allied group of chiefs were neither so intelligent nor so forward as those of the so-called Chauhan chiefs of Patoa-Sambalpur-Sonpur. The theory they started was very fallacious and therefore it immediately became open to attacks of the writers of their opponents. Mr. Mazumdar says: "it is narrated that a son of a celebrated Man Sing of Jaypur in Rajputana came to Puri and got the zemindari of Hariharpur on marrying a daughter of the then Gajapati Raja of Puri and that subsequently the eldest son of this adventurer became the ruler of the northern half of the State and the second son became the proprietor of the southern half, which developed into the State of Koonjhar. It is also stated that Jay Sing after the acquisition of Hariharpur conquered Mayuradhvaia, then holding the Gadi at Bamanghall in the western part of the State, and thus effected a territorial extension.

The new ruler after this acquisition of territory assumed the surname of Bhanja as a measure of policy. The absurd dates recorded in the family annals may be wholly disregarded, as the Temple of Jagannath and the progenitors of the Gajapati Rajas were not in existence earlier than the middle of the 12th century A.D." (pp. 119-20). The statements of Mr. Mazumdar are perfectly correct. In Mr. Cobden-Ramsay's Gazetteer of the Feudatory States of Orissa it is stated that "the Mayurbhanj State was founded some 13 hundred years ago by one Jal Sing who was a relative of the Raja of Jaipur in Rajputana. Jal Sing came on a visit to the shrine of Jagannath at Puri and married a daughter of the then Gajapati Raja of Orissa and received Hariharpur as a dowry. Of his two sons, the eldest Adl Sing, held the Gadi of the Mayurbhanj State. The Annals of the Mayurbhanj Raj family, however, say that Jal Sing came to Puri with his two sons Adi Sing and Jati Sing, the elder of whom was married to a daughter of the Puri Raj." (p. 239). The Rajputs were not in existence as a generic clan in the 6th century A.D. and the Kachhwaha State of Dhundhar, Amber or Jaipur was not in existence at that time. Therefore the "information" supplied to the compiler of the Gazetteer was totally wrong. The attempt of the modern chiefs with the suffix Bhanja of Orissa can, therefore,

be regarded only as a very ill-conceived attempt to obtain Rajput ancestry. The "Chhamkaran" of the Mayurbhanj State was not equipped in Rajput history or ancient Indian chronology and therefore, he made statements to the compiler of the Gazetteer which would make any other man blush in the 20th century.

What, then, is the real origin of these claims to Rajput ancestry on the part of the chiefs of Orissa? Vizianagram is certainly not in Orissa but I have included it within this enquiry because it fell within the zone of influence of Orissa up to 1550 and in the southernmost limit on the eastern coast within which Rajput origin is claimed by Indian chiefs. In all three cases we find that a date is claimed for the migration when the Rajput had no existence and when the migration could not have taken place. The connected circumstances are such as to make the migration theory absolutely improbable. In the case of Patna only persistent and intelligent attempts have been made by State officials and state historiographers to make the claim more acceptable in the light of modern research, but older records of

English writers and modern discoveries in ancient Indian chronology have proved these claims to be entirely false. The only cause which I can assign for this craze for Rajput origin is the preponderance of the Rajputs as warriors and mercenaries in the 17th century when under the Mughals they spread their fame from Balkh to Assam and from Kashmir to Ahmadnagar. Rajputs of Malwa entered the service of the Sultans of Ahmadnagar and Golkonda and there was a rush for Rajput ancestry all over India even on the part of princes whose blood was blue when the Agnikula Rajput was a barbarian clothed in his war paint. The real origin of the Bhanja chief of Mayurbhanja is now being recognised by critical scholars like Rai Bahadur Ramprasad Chanda* and Rai Bahadur Hira Lal†. We must close our enquiry regarding the Rajput origins of Orissa at this point. And at a subsequent date we must take up the Rajput origins in Berar and the Maratha country.

PLUCK OR TIMIDITY

By J. L. SATHE L.C.S.

IT is a great puzzle to many that whereas Hindus are capable of the most heroic deeds, including the most supreme sacrifice, viz., that of one's life, they are seen to give way often to ludicrously inferior antagonists even in the most common-place altercations of everyday life involving physical violence. The stories in the Puranas of Kings' surrendering Kingdoms for a word or for the satisfaction of their elders' whims or of a son's giving up his youth so that his father might be rejuvenated again, are not totally absurd myths, but illustrate a true characteristic of the Hindu race. A Hindu when his sentiments are roused is capable of making any sacrifice. Even now thousands of Hindus may be seen any day in India literally courting death, or torture or poverty, or imprisonment, or disease, in

fact any evil of whatsoever magnitude, out of sheer sentiment, affection, obedience, or duty, as the case may be. But when it comes to a question of blows, however light they may be, or whatever the odds in his favour may be, the Hindu instinctively turns away from them. It may be that he will return and put up a brave fight, braver than any one else in the same position may be capable of doing. But his first instinct is to avoid all fight and to give in to every show of force. Very often this first surrender seals his fate and he has no second chance to retrieve his mistake. Occasionally he gets an opportunity to retaliate and to get into his own.

It cannot be denied that the average Hindu is not politically minded and does not at all desire to rule himself or his country. In the old past he was ruled by a small

class of his own people, viz., the Kshatriyas, and later when they succumbed to inter-caste feud, and the superior prowess of foreigners he was quite content to be ruled by the latter. All that he longs for is like the herbivorous wild beasts of the forests to be let alone with his family to eke out his life in peace and passivity. He must exert himself to cultivate land because he must eat. He must eat because it is ordained by nature that he must do so in order to live. He would even fain not to eat at all in order to avoid having to exert himself and at best he will exert only just enough to keep body and soul barely together. You may call this laziness if you like, but nature does not prompt a creature to exert itself more than is necessary for the struggle of existence. Even a tiger will not roam about killing animals simply for the fun of it or for terrorising others. He lies down and has rest after he has had his fill and will not get up again until he is again hungry. It seems to be the very law of nature that creatures should merely subsist and procreate and should exert themselves only so much as is necessary for the above purposes. The desire to adorn one's self, to gather things round oneself or to exercise power over others merely for the sake of authority or dignity seems to be against instinct and alien to nature. In this respect, the average Hindu is therefore more akin to nature than the other races. He may stand up when he or his family or his belongings are attacked and then like the sambar or bisoo at bay he may be very ferocious. But he requires a conscious effort to rouse himself to fight. His instinct is to avoid a fight and to fly from danger. It is possible that this was the instinct of all human races in the beginning and that the present craze for power, for luxury and wealth is an unnatural craving subsequently acquired. But the fact is that this craving is to be found amongst the Europeans as well as Muhammadans, with the result that they have been able to aggrandise themselves at the expense of the Hindus and other similarly minded people. It will be an interesting study in ethnology to ascertain in what races and nations and to what extent this spirit of self-aggrandisement is present.

The blame for this passivity of the Hindus is often laid at the door of their religion, which enjoins contentment. But what is religion? It is merely the creation

of the best thought in a nation. So ultimately the blame for this defect or virtue of the Hindus—from whichever point of view you may look at it—comes to their own nature. The doctrines of contentment, passivity, future birth, unreality of this world, asceticism, "chaturvarnashram" etc., took root and flourished among us because they found fruitful soil there. These doctrines were not imposed on the Hindus by any outside agency and the nation as a whole has not been inveigled or constrained to accept them, involving as they do the relegation of the majority of the population to dumb servitude or to timid trade and commerce entirely at the mercy of the ruling minority. When the latter could not withstand the onslaught of more aggressive foreigners, the whole nation sank into servitude practically without a murmur.

This does not mean that the Hindus are morally or mentally cowards; for cowardice is different from timidity. On the other hand, they are capable of making a stand against the heaviest odds in the face of practically certain defeat, when they are morally convinced that it is right to oppose. This explains the innumerable heroic deeds performed by the Rajputs and other castes and recorded in history. This explains the "Jauhar" performed by Rajput wives and the practice of *sati* so common when the British came here. This explains the innumerable deeds of heroism and self-sacrifice described in the *Puranas*. This also explains the phenomenal success of Mr. Gandhi's passive resistance movement. But by instinct the Hindu will try to avoid all strife and danger. His hand will not rise automatically to strike another, so he even his assailant and enemy. Nay, it will not rise even to give the "coup de grace" to a dying animal to end its agonies!

That the organisation of Hindu society whereby the majority are content to be ruled was not imposed from outside but was entirely in consonance with the instincts of the Hindu race is proved by the fact that it has subsisted for so many thousands of years in spite of its being the cause of its (race's) practically perpetual servitude. For, in this world which is becoming increasingly small for the size of its population, no nation can hope to be left alone for long. Even the harmless animals of the wild forests have not been left alone but are gradually being exterminated. So how

could the Hindus be expected to be allowed to remain in perpetual enjoyment of such a beautiful and desirable condition as India? Consequently, the Huns, the Greeks, the Scythians, the Mohammedans and the Europeans all came in their turn and established their sway over the docile and unopposing Hindu. And yet the Hindu social organisation held together! The Kshatriyas and Brahmins, themselves the helots of the foreigners, still continued to have their own helots, viz., the Shudras and the untouchables. But with the coming of the Europeans there is a change. No doubt, they too like their preceding invaders imposed their sway over the Hindus. But their attack against Hindu thought was more formidable than the attacks of their predecessors, the Mohammedans. The Huns and Scythians did not count at all, as they themselves succumbed to the enchantment of the Hindu thought. And so gradually and at first imperceptibly, the western ideas began to infiltrate into the minds of the people and to alter their very nature. That is why the old theories of predestination, contentment, avoidance of action, contempla-

tion, etc., are now appearing puerile and childish to many of us. That is why the Shudras and untouchables are now dissatisfied with their lot, and that is why movements like the anti-Brahman movement, simply unthinkable a few years ago, now flourish. That is also why the Hindu-Mohammedan dissensions are now so acrimonious. Many Hindus no longer submit now to any aggression and some of them even show aggressiveness themselves.

The future will show whether this change is for the better or worse for mankind as a whole; for, it is sapping the foundations of our beliefs and religion, the very superiority of which over other faiths arises from its affinity to nature, its let-alone-ness, its peacefulness, its idolization of contemplation, its asceticism, its theory of *Karma*, its tolerance, in short its preaching of *Atma* in preference to both *Manu* and *Mam*. For the present at any rate the change seems to have been prompted by the law of self-preservation and the survival of the fittest, as the example of even the wild beasts shows that the docile and meek and helpless species are apt soon to be exterminated.

RECRUITMENT OF THE CIVIL SERVICE

By NARESH CHANDRA ROY, M.A.

Lecturer, City College, Calcutta

THE recruitment of the Civil Servant constitutes an important problem of government to-day. Upon his integrity and efficiency depends largely the excellence of an administrative system. His ability, his sense of responsibility, and his devotion to duty, all go to make up the character of a government. It is only natural, therefore, that all reasonable attempts should be made to invite the best talent of a country to the Civil Service. All appointments should be made on the principle of "career open to talent." Before the fifties of the last century, however, the patronage system, which is the very antithesis of this principle, was universally in the ascendant. Both in Europe

and across the Atlantic, offices were distributed only among the friends and relatives of the people in power. In England, this use of patronage was the most handy means of conciliating the supporters either in the constituencies or in the House of Commons.¹ Lower grade offices were generally used in influencing elections in particular constituencies while the higher-grade and the well-paid posts were usually reserved for the worthless cadets of the ruling families.² This system of jobbing practically "loaded the Civil Service with incompetents, who could not be got rid of, lest their patrons should lose votes."³ This almost hopeless condition of the public service in Britain

had, however, one saving feature about it. Although an appointment was made on the principle of party-favouritism, a person, once appointed, was not ordinarily removed on the turning of the political wheel. He remained in office generally for life. Removal for partisan motives could never be a general practice in England.⁴

In America, however, a system, more vicious still, gradually came into being. "To the victor belong the spoils" became the leading doctrine of politics in the U. S. A. A long tenure of office also came to be looked upon as detrimental to good public service in a democratic country. Every man must have a chance to serve his country in some public official capacity. "Rotation in office," therefore, caught the imagination of the people. However capable, a man might prove to be in his office, and however, valuable an asset his experience might be to the department, he must not stick to the position as a permanent incumbent. He must make room for others who would be waiting for the sweets of office which he had enjoyed so long. Every four years after a presidential election, America witnessed, as a matter of course, a general sweep of the men already in office and the installation of new men in their stead.⁵ This practice vitiated the American public life for long, nor has it yet been completely eradicated. The system of rewarding the party workers and supporters with a public office degraded the politics of the country and corrupted the administration. In an atmosphere of constant wirepulling and canvassing for the "spoils," efficiency and honesty of the civil service were absolutely irrelevant and out of the question.⁶ Men were put into a job, not that they were fitted for it, but that they must be rewarded with it at any rate for the service they had done to the party.

In Canada also, a similar political principle was for long in the ascendant. "We must support our supporters"—was the Canadian counterpart of the American maxim, "to the victor belong the spoils."⁷ And with the turning of the wheel of party politics, the administrative departments were, much often, absolutely denuded of their old incumbents and packed with the supporters of the new party in power.⁸

While this patronage system was a part and parcel of the public life of the leading states of the modern world, the East India Company in this country could not be

expected to forego this divine right and launch upon a new method of appointing its Civil Servants. The Company was for long only a body of merchant-adventurers; its servants accordingly were appointed like those of any other trading company. The same practice, however, continued to be followed even after it became the arbiter over vast territories. After the battle of Plassey, its political importance came to overshadow its commerce and by the year 1772 it was compelled to assume the direct administration of some provinces in India. Its agents were all on a sudden transformed into public officials and were called upon to discharge public administrative duties. But even after this revolution in the real status of the Company's officers, their recruitment still continued upon old principles and methods.⁹

It was always a custom with the Company to send out men, very young in age, to this country. Men advanced in age and settled down to some occupations in their own country, would not either consent at all to come over to India or insist on such terms as would not suit the Company. Besides, younger men only were likely to adapt themselves to the Indian atmosphere and environment. Older people would lose the pliability of their character and temper and feel out of element in an alien atmosphere. The practice of sending out only young boys to India was, therefore, continued. And what is more, it was regularised and sanctified by parliamentary statutes. Within these restrictions of age-limits, the Company could appoint any person to its service in India.¹⁰ Educational qualification was, really speaking, no essential condition for an appointment to a writership or cadetship. Relatives and friends, whatever might be their academic status, were ship-loaded to India to administer the Company's possessions. At the start of the last century, Lord Wellesley, the newly appointed Governor-General, felt the anomaly of this position of the Company's officers. They were called upon to discharge highly responsible duties. They were to shoulder the most weighty of administrative burdens. They were to apply themselves to work that demanded a high amount of brain power. But their general and special training was not equal to the task they were to fulfil. The Governor-General accordingly adumbrated a scheme for starting a college at Calcutta, where all the Company's recruits, on their first arrival in this country, would take a comprehensive training in liberal

Arts and pursue a course in oriental studies. The Company's authorities in England, however, turned down this far-reaching plan and only consented to maintain at Calcutta an institution purely for Indian studies.¹¹

But although the broad plan of Wellesley did not appeal to the court of directors, they could not resist the demand for a better training of their nominees. In the year 1806 they started a college at Hailebury, some miles off from London. The young men, nominated to the covenanted civil service in India, had all to undertake a systematic course of studies in this institution. And no one was given the appointment unless he had passed four terms at the college.¹² The training at Hailebury was quite comprehensive and all-sided. They got acquainted with the broad principles of European Arts and Sciences and at the same time acquired physical and athletic habits which stood them in good stead out here in India.¹³ Besides, "the spirit of camaraderie which it (Hailebury) fostered"¹⁴ contributed a good deal to the enjoyment of their official life in this country. "Hailebury formed a tie which the vicissitudes of official life could never break."¹⁵ But "this strong esprit de corps had its drawbacks. The interests of the country were too often postponed to the interests of the service." The Haileburians came out to this country in an organised band with almost the attitude of the officers of an army of occupation. They looked upon themselves as the representatives of a superior civilization and a governing people. Their authority was hence to be undisputed and their methods of administration infallible. Their attitude came to be dictatorial, and the extreme aggressiveness and belligerence, which are associated even to-day with the Indian Civil Service, are really the legacy of the Haileburians. This spirit of hauteur and stiffness was not only fostered by the congenial atmosphere of Hailebury but also by the environments and the traditions of the families from which they came. During their regime, the covenanted civil service really constituted "that sacred college of sons and nephews."¹⁶ Only young men, saturated with Anglo-Indian ideas and brought up in Anglo-Indian traditions, could enter the Indian Service. They looked upon India as their birthright and developed a narrow outlook towards Indian affairs.¹⁷

The Charter Act of 1833 completely broke the monopoly of the Company's trade in the

East and henceforward it simply remained a "patronage bureau."¹⁸ The attention of the public now came to be more persistently drawn to this anomalous situation, and an agitation was set on foot to take away this patronage from the clutches of the Company. The sweets of India office which had so long been enjoyed by a few Anglo-Indian families would now be made accessible to the nation at large. Accordingly twenty years later, when the Charter came to be renewed in 1853, the Directors of the Company were divested of their Indian patronage. A committee was appointed forthwith with Lord Macaulay as the chairman. Of the other members, Benjamin Jowett, later the Master of Balliol, was the most distinguished. This Committee was to draw up a detailed scheme for the future recruitment of officers to the Indian Civil Service. It supported the principle of open competitive examination as the exclusive channel of recruitment "Hitherto the admissions have been given by favour", observed its Report, "They are henceforward to be gained by superiority in an intellectual competition."¹⁹

The principle of competitive examination as a method of recruiting public servants, has never been given a unanimous support by the public. Many would point out that this system would encourage cramming in the candidates and bring into the public service only the most efficient and successful of the crammers.²⁰ The general ability and true fitness for work of the candidates would not be properly judged by this method. It is, of course, very difficult to judge to-day as to who would make a successful officer in the future. But it can be presumed at the same time that a young man who has carried off the prizes at the School and the College, who has displayed so far the greatest amount of acuteness and industry would also maintain his calibre and ambition in the public service. Most of the luminaries in the Houses of Parliament, at the Bar and at the Bench were highly distinguished in their academic careers. The foundation of their future was laid at the school and the University. Their noble ambition and high aspiration were stirred and shaped in these institutions. It was here that their habit and character were formed. It can be easily expected, therefore, that those who have marked out their name at the school and the University and have now, by dint of their merit and industry, come out

out of 82 Snatakas who had sent in their replies 38 are working as National servants in the different fields of National activities. Educational institutions :—

Gujarat Vidyapitha ...	3	
National Schools ...	21	30

Work for the submerged classes :—

Untouchables ...	2	
Bhils ...	2	
Kali-naraj ...	2	
Mill-hands ...	2	8

33

These figures bear an eloquent testimony to the spirit which has inspired these Snatakas to devote themselves to the service of their country. After the report was published some more Snatakas have gone to the villages as National servants. The various Ashramas and schools where these Snatakas are working, have been satisfied with their work; and they always look to the Vidyapitha whenever they are in need of more workers.

As regards the ideals that still inspire these Snatakas, the report has published certain extracts from the replies received by them on the subject. Almost all the Snatakas have expressed in unmistakable terms that their goal in life is National service. The different forms which this service may assume may vary with the attitudes and circumstances of the Snatakas. Analysis of the extracts regarding their plan of work gives us the following fields of national service chosen by various Snatakas.

1. Service of the poor and the fallen.
2. National education.
3. Khadi work.
4. Village work.
5. Agriculture (free from government control)
6. Industrial uplift of the Nation.

Some of these extracts are noteworthy :—
One Snatak writes :—

"A real service to humanity, no show, no roughness, a sense of duty and thoughtfulness around, hearing and teaching. Apart from the hum-drum of life, but not running away from it."

That non-co-operation with the 'Satanic Government' is an eternal principle with certain Snatakas will be clear from the following reply :—

"I will not be actively connected with any institution connected with or controlled by the Government."

Some Snatakas want to be ideal businessmen and "do their best to prevent the export

of raw materials from India." Those who have studied science in the Vidyapitha are eager to utilize their scientific knowledge in the service of society by starting small industries like soap-making, colour-manufacturing and so on.

Some critics of the present National Educational Institutions allege that the spirit of non-co-operation is dying and that the students turned out by the Vidyapitha are losing their faith in non-co-operation and National Education. The report gives a fitting reply to these critics when it shows that out of 82 Snatakas who have sent in their replies, 54 have reaffirmed their complete faith in the programme chalked out by Mahatma Gandhi. One Snatak writes :—

"My faith in Non-co-operation and National Education is as firm as before. Non-co-operation has succeeded in effecting a psychological revolution in the minds of people. The present need of the country is a psychological revolution in the outlook of the people. Non-co-operation has proved a very valuable and effective weapon to bring about such a revolution. But this non-co-operation does not exclude the Charkha. Only that activity that centres round the Charkha can be called an activity of non-co-operation."

As regards National Education another Snatak writes :—

"National Education has rendered invaluable service to the country. It will continue to do the same in future. Even if the National University is closed, its spirit will continue to work in different forms. If we want to live as a Nation we must continue National Education in one form or the other."

The critics may still argue that these are mere words but to show that these ideals of Snatakas have moulded their life, the report gives useful figures regarding the spread of khadi and the wheel among the Snatakas. If our social circumstances prevent the Snatakas to translate all their ideals in practical service, khadi and the wheel are the least that they can do for their country. They represent the living symbols of their higher ideals. Fortunately, those who always put on hand-spun and hand-woven khadi are not few. Out of the 82 Snatakas 56 habitually wear pure khadi. As regards regular spinners the figures are not so satisfactory.

1. Regular spinners for one hour	5
2. " " or more everyday	10
3. " " half-an-hour	9
4. " " or more everyday	0
5. Irregular spinners	9
6. Non-spinners.	49
	82

If one carefully goes through the report published by the Snatak Sangha he will find that the Snatakas of the Gujarat Vidyapitha at least have rendered good account of their work after their graduation.

But the real test of the spirit which works behind the Vdyapitha came, when recently Gujarat was over-run by unprecedented floods that devastated the garden of India, and rendered thousands of its people homeless and penniless. We may not underestimate the splendid work of relief done by other volunteers (who again were mostly the followers of Mahatma Gandhi), but the work done by the students and Professors of the Vidyapitha in Dholka and the surrounding places have earned the admiration of all. When the floods came, the academic year of the Vidyapitha was in full swing; but the regular literary courses were postponed, and the students went out in haste to the flood-stricken area to help the unfortunate victims. They did not in the least hesitate to act as ordinary scavengers even, and wading through deep waters they cleared the dirt of the villages. The Vidyapitha

may become a laughing stock of the critics for the steady decrease in the number of its students year by year; but if service and spirit of love constitute real education, the Vidyapitha may not despair of its achievements even if the number goes on declining. The Vidyapitha may not have opened brilliant lucrative careers for its Snatakas—it may not have produced intellectual giants—but if it has contributed even something in sending out real workers in the cause of suffering humanity, it has more than justified its existence.

As these lines are being written, lovers of the Gujarat Vidyapith are making strenuous efforts to reorganise the institution. Mahatma Gandhi, the Chancellor of the Vidyapith, has decided to spare no pains to put life and vigour in the institution; and with the spinning wheel in the centre of its educational curriculum, the Vidyapitha promises to open a brilliant future before it by earnestly taking the problem of village-reorganisation and mass education in Gujarat. May the Vidyapitha receive the blessings of God in realizing its noble ideals under the inspiring guidance of Mahatma Gandhi.

THE SUNSET OF THE CENTURY

(Written in Bengali on the last day of the last century)

The last sun of the century sets amidst the blood-red clouds of the West and the whirlwind of hatred.
The naked passions of self-love of Nations, in its drunken delirium of greed, is dancing to the clash of steel and the howling verses of vengeance.
The hungry self of the Nation shall burst in a violence of fury from its own shameless feeding.
For it has made the world its food,
And licking it, crunching it, and swallowing it in big morsels,

It swells and swells

Till in the midst of its unholy feast descends the sudden shaft of heaven piercing its heart of grossness.

The crimson glow of light on the horizon is not the light of the dawn of peace, my Motherland. It is the glimmer of the funeral pyre burning to ashes the vast flash—the self-love of the Nation—dead under its own excess.

The morning waits behind the patient dark of the East, Meek and silent.

²⁸. "Although this system has, on the whole, worked well with Englishmen, it is open even with them to objections and drawbacks and to think of applying it to the natives of India is nothing less than absurd. Not the least important part of the competitive examination of the young English man was passed for him by his forefathers, who, as we have a right to assume, have transmitted to him not only their physical courage but the powers of independent judgment, the decision of character, the habits of thought and generally those qualities that are necessary for the government of men." Sir John Strachey—*India: Its Administration & Progress*, p. 544.

THE SNATAKS OF GUJARAT VIDYAPITHA

By DILKHUSH B. DIVANJI

THE Non-co-operation movement of 1920-21 gave birth to many national educational institutions. The Gujarat Vidyapitha is one of them. It was established in November 1920, and the inauguration ceremony was performed by Mahatma Gandhi. Seven years have rolled away and the stirring days of 1920-21 have also passed away. But the Gujarat Vidyapitha still holds its own

against heavy odds. The fall in the number of students in the Vidyapitha may at first seem disheartening; but numbers alone do not constitute the strength of an institution. We have to judge the value of the Vidyapitha by the quality of the students it has turned out. The latest figure shows that till now the Vidyapitha has turned out 271 Snataks (graduates). Two years ago the Snataks of

the Vidyapitha formed themselves into 'a Snatak Sangh' (graduates' association). The Sangh is still in its infancy and hence it has not yet chalked out definite lines of work. But as a preliminary steps to its wider activities the Sangha has collected very valuable information regarding the activities of Snataks who have left the Vidyapitha.

The Sangha has only recently published a report of its inquiries in this direction. The information published in this report throws a flood of light on the quality of the Snatakas turned out by the Vidyapitha. The main charge against National Educational Institutions is that they do not open out brilliant "careers" for the Snatakas turned out by them. If the term "career" carries with it a comfortable and convenient life that expresses its value merely in Rupees, Annas and Pies the Gujarat Vidyapith has to plead guilty to the charge. But if the justification of a National Educational Institution is to be measured by the "career" it has opened for National service, the Gujarat Vidyapitha may well claim to have inspired its Snatakas with a real craving for National Service. The informations collected by the Snatak Sangha bears eloquent testimony to the spirit that is working behind the Gujarat Vidyapitha. The work that is being done by the Vidyapitha deserves a wider publicity, because it will show to impartial observers the valuable constructive work done by the non-co-operating students of the National Universities in India.

Out of the 271 graduates the Sangha was able to get the needed information from 82 graduates. The Sangha analysed informations received from these Snatakas, and published it in the form of a very valuable pamphlet. The Snatakas were asked to give the whole story of their activities since they joined Gujarat Vidyapitha; and hence we are able to know almost everything about them.

The critics of the Non-co-operation movement have always argued that the response given by the students to the call of Mahatma Gandhi proceeded mainly from the working up of the emotions and sentiments of the impressionable youth. There is some element of truth in this remark, but we must also know the other side of the picture. In answer to the question as to the real motive that impelled them to join the Vidyapitha, the Snatakas have given various replies. An analysis of these replies, gives us the following figures;—

Disgust for the present system of education	...	10
and a real craving for National Education ...	10	
Faith in the efficacy of the Non-co-operation movement	...	10
Political ferment	...	33
In response to the call of the Nation	...	11
At the inspiration of their relatives	...	6
Sentimental enthusiasm	...	12
		82

The report has published extracts from the replies in support of this analysis and some of them are worth reproduction. One Snatak writes —

"Non co-operated, because could not control myself. My family was against it but relying on my strength launched in the movement. Knew at that time that it was a leap in the dark, but was fired with the zeal of sacrificing my life to free the Nation from its slavery."

Another Snatak writes —

"Realized even at that time that it was a sin to remain in the Government School. Have still retained the same belief. Did not mind loss of education. Only wanted to be away from the sin. Stone-breaking in the streets considered preferable to this sin. Truth of the remark realized even now. If noable to do more, this opportunity of flying away from the sin was eagerly welcomed. Hence non-co-operated."

A third Snatak writes:—

"Many considerations impelled me to boycott the college, but did not do for one month. Waited for one month to convince myself 100 per cent of the necessity of the step. This precaution was found necessary to avoid future repentance."

Some students left the college to do National Service: "Service of the Mother-Land—the chief Motto."

These extracts tell their own tale. They at least show the real stuff of some of the students who joined the Vidyapitha. They were really inspired by high ideas of National Service, and if that is a sentiment one must remember the pregnant remark made by Napoleon that the great movements of the world are always based on sentiment.

With the Vidyapitha began its chequered career. The students joined the Vidyapitha not to spin out brilliant academic careers but to qualify themselves for National Service. The Vidyapitha tried its best to mould these students into National servants. The work of the Vidyapitha is to be tested not in the scales of the numbers and examination results; it is to be judged by the quality of Snatakas, it has turned out. The pamphlet gives very valuable information. The present activities of the Snatakas and their ideals are analysed and we find that

successful is the competitive examination, will also impress their personality upon the public service.²¹

The system of competitive examination also fits in with the ideals of democracy. It cures the recruitment of the most talented of the candidates, no matter from which rung of the social ladder they may have come. It upholds the principle of "career open to talent" "which is the essence of democracy, as patronage and favour do to connexion are the essence of oligarchy."²² In fact, when all points of view are taken into consideration the conclusion becomes irresistible that competitive examination is the best channel of recruiting the public servants.²³

"Competitive examinations, however, may be applied in two different and quite distinct ways: they may be used to ascertain ability of a general nature or ability of a special nature."²⁴

For, quite a long time past, both the U. S. A. and Canada have revolted against the patronage and the spoils system which get such a strong foot-hold in those countries. And as a counterblast to this obnoxious practice of patronage, the system of competitive examination has been accepted, universally in Canada, and partially in the U. S. A.²⁵ But in both these countries, the object of the competitive examination is only to discover the immediate fitness of the candidates for the work they are expected to do. For, almost every vacant post a separate examination is held to "test the peculiar requirements that may be necessary in the office."²⁶ The candidate who is able to satisfy best the examiners with regard to the nature of his immediate duty must be appointed to the post. He may have somehow crammed the details of the Postal Guide and Postal Law, but otherwise may lack altogether intellectual alertness and general culture; but still he will be given a postal appointment to the exclusion of a candidate that may not have been able to pick up the details of the guide but may otherwise possess capacity and initiative. This system is, on the face of it, detective and unscientific. It ignores the fact altogether that an officer once appointed will not be required to do the same duty throughout his career. The one routine business for which he prepared himself at the moment of his appointment is not to be discharged by him throughout his official life. As a matter of course, he must expect to go over to a

responsible position that will call for tact, initiative and the higher powers of the mind. But unless he has a thorough general education, keen intelligence and a capacity for rapid assimilation and adaptation, he will be quite out of element in his new role. In fact, in any career that involves responsible administrative work, this system of recruitment by testing only the immediate fitness of the candidates is absolutely at fault. And Macaulay's Committee on the Indian Civil Service was quite right in brushing aside all questions of immediate fitness and putting all the emphasis upon the general information and culture of the candidates. The Report observes—

"It is undoubtedly desirable that the Civil Servant of the Company should enter on his duties while still young; but it is also desirable that he should have received the best, the most liberal, the most finished education that his native country affords. Such an education has been proved by experience to be the best preparation for every calling which requires the exercise of the higher powers of the mind... We believe that men who have been engaged, up to one or two and twenty, in studies which have no immediate connection with the business of any profession, and of which the effect is merely to open, to invigorate and to enrich the mind, will generally be found, in the business of every profession, superior to men who have at eighteen or nineteen, devoted themselves to the special studies of their calling. The most illustrious English jurists have been men who never opened a law book till after the close of a distinguished academic career nor is there any reason to believe that they would have been greater lawyers if they had passed in drawing pleas and conveyances the time while they gave to Thucydides, to Cicero, and to Newton. The duties of a Civil Servant of the East India Company are of so high a nature that in his case it is peculiarly desirable that an excellent general education, such as may enlarge and strengthen his understanding should precede the special education which must qualify him to despatch the business of his *Outchery*."

According to the recommendations of this Report the competitive examinations for the recruitment of the Indian, British and Colonial Civil Servants are all held to test only the general capacity and the intellectual calibre of the candidates.²⁷ The special training for immediate duty begins only after the candidates have been selected through the channel of this rigid intellectual test. It is now admitted on all hands that this principle is quite scientific. It is easy enough for an alert and well-stored mind to pick up the special requirements of an office at a short notice. An officer, who has a thorough grounding in some branches of liberal arts

and sciences, who has a disciplined intellect and a sharpened common sense, can in a short while adapt himself to the requirements of the balance sheet or affairs of local self-Government.

Now, although recruitment to the Indian Civil Service continued to be made in England through this channel of open competitive examination, all demands of Indians for holding a similar and simultaneous examination in India were brushed aside for a considerable period of time. It was a very difficult job for Indian candidates to cross the seas and sit for the competitive examination held six thousand miles off in London. The agitation, however, bore no fruit. It was pointed out on behalf of the Government that, although the principle of competitive examination as a method of recruiting public servants quite fitted in with British conditions, the Indian atmosphere was too uncongenial for it.¹

University life in England was favourable to the all-round development of manhood. It not only catered to the intellect, but it helped the strengthening of character and the formation of the physique. Intellectual, mental and bodily vigour was developed all together. Young men, therefore, who had the advantage of training in these universities, and who now stood the test of the open competitive examination and came out to India as Civil Servants were, as a matter of course, expected to possess not only the intellectual calibre, but also the physical vigour and dash which would be called for so much in the public service. Besides, the corporate life of a British University which blunted so much the angularities of man and fostered in him an attitude of give and take, was a most important factor in the training of the young men now entering the Indian Public Service. The Indian Universities, however, were very poor imitations of the sister British institutions. Corporate life was ill-developed or absolutely undeveloped. Physical training went by default. Only the intellect was somehow cared for. Under these circumstances, it was out of the question that young graduates of these Universities would prove to be successful in administrative work, simply because at the age of 21 or 22 they stood an intellectual test.²

Besides, all the classes and groups of the Indian people had not taken kindly to University education. The Mahomedans were

simply lagging behind. And of the Hindoos, too, only some particular classes were taking advantage of western education. Hence even if the open competitive examination which was looked upon in the West as the hand-maid of democracy and equality, was introduced in India, it would not be able to create an opportunity for all classes and creeds; only some particular groups would profit by it.

The situation has changed considerably since the above view was maintained and the stronghold of higher education has been stormed by members of all communities alike. To meet the new circumstances a competitive examination has been held in India since 1922 for the recruitment of some officers to the Indian Civil Service. This competition is limited to the Indian candidates alone. But the competition is not an open one as in England. It is limited to the candidates accepted by the Public Service Commission on the recommendation of the different provincial Governments. And the provincial Governments do not recommend the candidates simply with an eye to their physical and intellectual qualifications. Political considerations come in at once. And, as could be only expected, candidates academically distinguished and physically fit, have been in many cases left out of the examination arena for grounds not adduced. This has taken away considerably from the efficacy of the competitive system. Competition loses much of its force if it is not an open one. The principle of Competitive Examination has been devised only to bring into the public service the best available talent of the country. If, however, just at the outset, many of the gifted candidates are shut out altogether, its object gets at once defeated. It is high time, therefore, that the authorities should go the whole hog and throw open the doors of the examination to all who are physically fit and academically up to the mark.

¹ See Ramsay Muir—*Peers and Bureaucrats*, pp 32-33.

² Later on when all other departments accepted the principle of competitive test for appointing their officers, the Foreign Office stuck to its old gun and as such it was described by John Bright as the "nut-door relief department of the English aristocracy." See Laski—*A Grammar of Politics*, p 398.

out of 82 Snatakas who had sent in their replies 38 are working as National servants in the different fields of National activities. Educational institutions :—

Gujarat Vidyapitha	9	
National Schools	21	30

Work for the submargined classes :—

Untouchables	2	
Bhils	2	
Kali-paraj	2	
Mill-hands	2	8
		38

These figures bear an eloquent testimony to the spirit which has inspired these Snatakas to devote themselves to the service of their country. After the report was published some more Snatakas have gone to the villages as National servants. The various Ashramas and schools where these Snatakas are working, have been satisfied with their work; and they always look to the Vidyapitha whenever they are in need of more workers.

As regards the ideals that still inspire these Snatakas, the report has published certain extracts from the replies received by them on the subject. Almost all the Snatakas have expressed in unmistakable terms that their goal in life is National service. The different forms which this service may assume may vary with the attitudes and circumstances of the Snatakas. Analysis of the extracts regarding their plan of work gives us the following fields of national service chosen by various Snatakas.

1. Service of the poor and the fallen.
2. National education.
3. Khadi work.
4. Village work.
5. Agriculture (free from government control)
6. Industrial uplift of the Nation.

Some of these extracts are noteworthy :—
One Snatak writes :—

"A real service to humanity, no show, no roughness, a sense of duty and thoughtfulness around, hearing and teaching. Apart from the ham-drum of life, but not running away from it."

That non-co-operation with the 'Satanic Government' is an eternal principle with certain Snatakas will be clear from the following reply :—

"I will not be actively connected with any institution connected with or controlled by the Government."

Some Snatakas want to be ideal businessmen and "do their best to prevent the export

of raw materials from India." Those who have studied science in the Vidyapitha are eager to utilize their scientific knowledge in the service of society by starting small industries like soap-making, colour-manufacturing and so on.

Some critics of the present National Educational Institutions allege that the spirit of non-co-operation is dying and that the students turned out by the Vidyapitha are losing their faith in non-co-operation and National Education. The report gives a fitting reply to these critics when it shows that out of 82 Snatakas who have sent in their replies, 54 have reaffirmed their complete faith in the programme chalked out by Mahatma Gandhi. One Snatak writes :—

My faith in Non-co-operation and National Education is as firm as before. Non-co-operation has succeeded in effecting a psychological revolution in the minds of people. The present need of the country is a psychological revolution in the outlook of the people. Non-co-operation has proved a very valuable and effective weapon to bring about such a revolution. But this non-co-operation does not exclude the Charkha. Only that activity that centres round the Charkha can be called an activity of non-co-operation."

As regards National Education another Snatak writes :—

"National Education has rendered invaluable service to the country. It will continue to do the same in future. Even if the National University is closed, its spirit will continue to work in different forms. If we want to live as a Nation we must continue National Education in one form or the other."

The critics may still argue that these are mere words but to show that these ideals of Snatakas have moulded their life, the report gives useful figures regarding the spread of khadi and the wheel among the Snatakas. If our social circumstances prevent the Snatakas to translate all their ideals in practical service, khadi and the wheel are the least that they can do for their country. They represent the living symbols of their higher ideals. Fortunately, those who always put on hand-spun and hand-woven khadi are not few. Out of the 82 Snatakas 56 habitually wear pure khadi. As regards regular spinners the figures are not so satisfactory.

1. Regular spinners for one hour	5
2. " " or more everyday	10
3. " " half-an-hour	9
4. " " or more everyday	0
5. Irregular spinners	9
6. Non-spinners.	49

If one carefully goes through the report published by the Snatak Sangha he will find that the Snatakas of the Gujarat Vidyapitha at least have rendered good account of their work after their graduation.

But the real test of the spirit which works behind the Vidyapitha came, when recently Gujarat was over-run by unprecedented floods that devastated the garden of India, and rendered thousands of its people homeless and penniless. We may not underestimate the splendid work of relief done by other volunteers (who again were mostly the followers of Mahatma Gandhi), but the work done by the students and Professors of the Vidyapitha in Dholka and the surrounding places have earned the admiration of all. When the floods came, the academic year of the Vidyapitha was in full swing; but the regular literary courses were postponed, and the students went out in haste to the flood-stricken area to help the unfortunate victims. They did not in the least hesitate to act as ordinary scavengers even, and wading through deep waters they cleared the dirt of the villages. The Vidyapitha

may become a laughing stock of the critics for the steady decrease in the number of its students year by year; but if service and spirit of love constitute real education, the Vidyapitha may not despair of its achievements even if the number goes on declining. The Vidyapitha may not have opened brilliant lucrative careers for its Snatakas—it may not have produced intellectual giants—but if it has contributed even something in sending out real workers in the cause of suffering humanity, it has more than justified its existence.

As these lines are being written, lovers of the Gujarat Vidyapitha are making strenuous efforts to reorganise the institution. Mahatma Gandhi, the Chancellor of the Vidyapitha, has decided to spare no pains to put life and vigour in the institution; and with the spinning wheel in the centre of its educational curriculum, the Vidyapitha promises to open a brilliant future before it by earnestly taking the problem of village-reorganisation and mass education in Gujarat. May the Vidyapitha receive the blessings of God in realizing its noble ideals under the inspiring guidance of Mahatma Gandhi.

THE SUNSET OF THE CENTURY

(Written in Bengali on the last day of the last century)

The last sun of the century sets amidst the blood-red clouds of the West and the whirlwind of hatred.

The naked passions of self-love of Nations, in its drunken delirium of greed, is dancing to the clash of steel and the howling verses of vengeance.

The hungry self of the Nation shall burst in a violence of fury from its own shameless feeding.

For it has made the world its food.
And licking it, crunching it, and swallowing it in big morsels,

It swells and swells

Till in the midst of its unholy feast descends the sudden shaft of heaven piercing its heart of grossness.

The crimson glow of light on the horizon is not the light of the dawn of peace, my Motherland.

It is the glimmer of the funeral pyre burning to ashes the vast flesh—the self-love of the Nation—dead under its own excess.

The morning waits behind the patient dark of the East, meek and silent.

RABINDRANATH TAGORE
—From "Nationalism."

What Machinery is doing to Us

Democracy on the Junk-Heap, our school system scrapped, culture crucified by mass-production, and finally all nations, including America, with new cultural and educational values, ruled by "a new social hierarchy based on the facts of human nature"—these are a few of the changes which the age of machinery is bringing to civilization, according to Aldous Huxley, the English novelist and critic. And down the rough road to these consummations, it seems, America is leading the way. For good or for evil, the whole world is being Americanized. Mr. Huxley tells us in a startling article on "The Outlook for American Culture," to which *Harper's Magazine* deservedly gave the place of honor in its August number.

Mr. Aldous Huxley

The writer has made a special study of our case, he says, not because we are unique or superior,

but because "in speculation on the American future one is speculating on the future of civilized man."

Machinery, with the larger degree of prosperity which its use has brought to the common people, Mr. Huxley believes, is ushering in a new era in which the intelligent minority will have to fight for its life against the rule of the unintelligent majority. In that era, we are told, "the humanitarianism which professes to regard all human beings as equally endowed with moral worth and intellectual ability will be looked upon as an absurdity." Americans, he adds, will be slow to give up the theory of equality on which their nation was founded, but "the growing incapacity of political democracy to deal intelligently with the ever-more complicated problems of world policy will force them to change their ideas about government." Choosing Chicago as a horrible example, Mr. Huxley continues—

"Nobody can honestly suppose that a system which permits of such things as Mr. Thompson's election to the mayoralty of Chicago, with all its grotesque and outrageous accompaniments, is desirable or even in the long run practicable. The revolt against political democracy has already begun in Europe and is obviously destined to spread. There will be no return to autocracy; of course, Government will tend to be concentrated in the hands of intelligent and active oligarchies. The ideal state is one in which there is a material democracy controlled by an aristocracy of intellect—a state in which men and women are guaranteed a decent human existence and are given every opportunity to develop such talents as they possess, and where those with the greatest talent rule. The active and intelligent oligarchies of the ideal state do not yet exist. But the Fascist party in Italy, the Communist party in Russia, the Kuomintang in China are their still inadequate precursors. Owing to the strength of her democratic tradition, America will probably be one of the last countries to change her present form of government. But in the end the change will come. A country can not go on indefinitely being afflicted by Thompson elections and antievolution laws."

Mr. Huxley, it may be remembered, is a grandson of the man who fought the first battles for Darwinism in England, two generations ago. In his effort to discover what the laws of social evolution are going to make of our present institutions, he begins by regarding machinery as chief of the driving forces that are changing the world. He grants that we owe many blessings to labor-saving machines; that they have brought

some degree of leisure and prosperity to almost everybody, and that "universal leisure and variety of impressions make possible a rich universal culture." But are there any signs that this fuller life is coming? For answer the author says: "Let me advise any one who believes in the near approach of the social millennium to go to any great American or European city and note what the majority of men and women do with their new-found prosperity and leisure." We read further:

"A great many men and women—let us frankly admit it, in spite of all our humanitarian and democratic prejudices—do not want to be cultured, are not interested in the higher life. For these people existence on the lower, animal levels is perfectly satisfactory. Given food, drink, the company of their fellows, sexual enjoyment, and plenty of noisy distractions from without, they are happy. They enjoy bodily, but hate mental, exercise. They cannot bear to be alone, or to think. Contemporary urban life, with its jazz bands, its negro dancing, its movies, theatres, football matches, newspapers, and the like, is for them ideal. They can live out their lives without once being solitary, without once making a serious mental effort (for the work which most of these people do is mainly mechanical and requires little or no thought), without once being out of sight or sound of some ready-made distraction. The notion that one can derive pleasure from arduous intellectual occupations is to such people merely absurd. More leisure and more prosperity mean for them more dancing, more parties, more movies, more distractions in general. Most of the inhabitants of ancient Rome belonged to this type, so probably do most of the inhabitants of modern New York and London. And unless some system of eugenics is practised in the interval, there is no reason to suppose that the inhabitants of the great cities in the year 8000 A. D. will be radically different."

—The Literary Digest

Splendor Of Oriental Palace Magnified By Lights

How modern genius can be applied to emphasize the wonders of bygone days is well-illustrated in

Palace of the Maharajah of Mysore as it appeared under Electric Illumination; the Display Reveals the Intricate Details of Indian Architecture

the use of electric lights on famous buildings. Architectural details are thus more clearly revealed and the beauty of the structure heightened instead of lost in the night. When the maharajah of Mysore entertained the viceroy of India recently, a feature of the occasion was the illumination of his palace, which glowed like luminous lace.

Stone Elephant As Bill Board Shows Changes In China

That modern China is recognizing the importance of advertising, even to the extent of tramping on the traditions of the past, is shown by

Superstition and Modern Advertising Meet on Chinese Stone Elephant; Ming Tomb Figure Is Billboard and Shrine

the accompanying illustration. The nationalists have used a stone elephant near the Ming tombs as a billboard on which to display posters urging citizens to put down communism and attend the nationalist-party conference. In striking contrast to this modern note are the stones on the back of the elephant. They were tossed there by women following an ancient superstition, signifying that, if the stone lodged on the monument, good luck would reward the thrower and her next child would be a boy, but if it fell off, a girl child would be born.

—Popular Mechanics

Marconi—the Father of Radio

Atop a bleak Newfoundland cliff overlooking the December Atlantic, a young man sat at a queer looking set of instruments. Wires and coils were grouped about him, while above the small building a kite darted and plunged, carrying aloft a thin wire. Telephones were clamped to the young

man's ears. Then came three clicks that have made world history.

"Do you hear anything, Mr. Kemp?" asked the young man as he passed the receivers to his assistant.

"Yes," was the reply, and Guglielmo Marconi knew that he had heard the letter "S" hurled by wireless across two thousand miles of ocean from Poldhu, England.

Today, twenty-six years since a wireless wave's first trans-Atlantic hop, Marconi finds us living in a world of radio. Broadcasting stations entertain us and the people of fifty-six other lands. Eighteen million radio receiving sets, our Department of Commerce tells us, bring music and speeches of famous men to 90,000,000 listeners the world over. The other day a photograph was dispatched by radio to far corners of the earth. Television is being perfected, and even radio power seems just around the corner.

Even as Marconi laid down his receivers after the first transocean signal, his mind was dreaming of these newest radio successes, but he knew then that the world would doubt his first achievement. It was not until three months later, when Marconi

Marconi (center) and his assistants, G. S. Kemp (left) and A. Paget at a far north experimental station for wireless in 1903

received whole messages on a ship taking him from England to Canada, that the last doubt disappeared. From that time on, progress of radio was rapid. "Wireless telegraph" became "wireless telephone," then "radio" as we know it. Broadcasting stations came into being; then "beam wireless," modern wonder. Now radio waves steer airplanes and detect hidden metal ores.

Despite his achievement, it was not with Marconi that the idea of signaling without wires originated. In 1867 Professor James Clerk-Maxwell, British physicist, based a theory of transmitting electric waves upon earlier experiments of Michael Faraday. Twenty years later Heinrich Hertz in Germany generated by means of an electric spark gap waves that could be measured. Marconi developed Hertz's invention into a device of practical use.

Legend has it that Marconi, at nineteen, then a

student at Bologna, first thought of wireless because his sweetheart's Irish mother forbade their communication. All he has ever said is, "I wanted to communicate with some one with whom I could not otherwise communicate."

Marconi's first wireless patent, obtained in 1896, embodied a "coherer,"—long since replaced by vacuum tubes—that used wireless waves to render a tube of iron filings a relay for electric currents, and with it familiar coils and instruments theretofore used by electrical engineers.

Marconi went to England in 1896 and set up experimental stations and in 1899 sent a wireless message across the Channel to Boulogne in France. Three years later he came to America to continue experiments and by 1901 twelve ocean liners were equipped with his wireless system.

In August, 1901, the first trans-Atlantic wireless station, with twenty 100-foot masts carrying its aerial, was nearing completion at Poldhu, Cornwall, when it was wrecked by a storm.

"I was extremely disappointed," Marconi said, but by the middle of November he had erected a makeshift aerial—sixty copper wires converging in fan shape at the bottom, suspended from a triangle of cables hung in the air. Again Marconi set off for America.

Inconspicuous press notices told of his arrival, in contrast with the columns that were devoted to him when he came to this country last fall. Marconi, wise for his age—he was only twenty-seven—knew that if he announced his purpose to span the Atlantic he would be a laughing stock.

On Signal Hill, overlooking St. John's harbor, Marconi set up his apparatus. He must get a wire, a receiving aerial, into the air. A balloon with the first one was carried off by fierce winds. A huge kite bore the second up 400 feet and defied the elements. Marconi cabled the operators at Poldhu. They were to send the letter "S," three dots or clicks in the Morse code.

At half past twelve on that historic December twelfth, Marconi heard the signals faintly. At ten minutes after one came a succession of S's of unmistakable clearness. Once again Marconi thrilled to hear the clicks that day, and again the following noon.

Two days later the world was told. Marconi had spanned the ocean. And, as Marconi fully expected, few believed it!

Modern engineers have called it a miracle that Marconi's crude apparatus was able to detect at all the feeble S's from the wheezy Poldhu transmitter—even present-day stations, they say, might have failed to catch them. Is it any wonder, then, that the startling announcement "OCEAN SPANNED BY WIRELESS TELEGRAPH" was met with skepticism in 1901?

To reporters, Thomas A. Edison, electrical wizard, said frankly, "I don't believe it." Dr. Leo De Forest, inventor of another system of wireless telegraph, doubted it.

In Britain, none dared deny the signals had been sent, but every one doubted their reception. Then two dispatches reached the press. The first:

ST. JOHN'S N. F. SATURDAY—CONFIRM THAT SIGNALS WERE RECEIVED HERE THURSDAY AND FRIDAY DIRECT FROM CORNWALL RECEIVING WIRE SUSPENDED BY A KITE. MARCONI

And the second:

"SINCE MARCONI HAS STATED OVER HIS OWN SIGNATURE THAT HE HAS RECEIVED THE SIGNALS FROM ENGLAND I BELIEVE HIM AND I THINK THAT HE WILL CARRY IT TO A COMMERCIAL SUCCESS IT IS A GREAT ACHIEVEMENT, AND HE IS A GREAT EXPERIMENTER.

EDISON."

Marconi went to England, and returning, received on shipboard messages from Poldhu, 1501 miles away. He set up a new station at Glace Bay, Nova Scotia, and exchanged messages with Poldhu.

Where Marconi led other inventors were quick to follow—Fleming with his "valves" and De Forest with his vacuum tubes; Alexander Graham Bell with his wireless telephone; Armstrong and his successors with their oscillating circuits. By 1921 only twenty years after Marconi's first trans-Atlantic test, broadcasting was a fact in America. A year later England, France and Germany had regular broadcast programs.

Commercial radio—for "radio" it had now become—was making tremendous strides meanwhile. In 1918, Marconi started investigating short wave radio and low-power, high-speed beam transmission." As early as May, 1924, Marconi telephoned from Poldhu to Sydney Australia by beam radio, his voice being clearly received—a little-known event far preceding last year's trans-Atlantic phone success.

Now the new Canada-England and England-India beam radio links have shown their unlimited possibilities. An experimental line is to link New York and England. The new beam system has already handled 1,000 words a minute in laboratory tests, the inventor says.

The world is getting smaller through radio. An American motor car company recently dispatched a wireless photograph of its latest model to far corners of the earth. A motion picture producer in London has just bought the \$225,000 movie rights to a New York stage success after a conference by trans-Atlantic phone; his actual signature was flashed across the sea by radio. Latest aids to international communication are the new Canada-London phone and direct radio service from New York to Belgium.

—Popular Science Monthly

Novel Baby Carriage

A thoughtful parent at Brighton, England, hitched a parachute to the baby carriage. Result—It entertains the baby and lightens the nursemaid's task.

Mirage

Fata Morgana, famous mirage of the Sicilian coast. Rays through many irregular layers of air of various temperatures rear beautiful castles in the air.

Stammering

The trouble with people who stammer is not in their tongues, but is caused by the failure of their lungs to abstract sufficient oxygen from the air they breathe, according to Professors E. B. Twitmyer and H. E. Starr, University of Pennsylvania psychologists, who are shown making one of the tests that they declare prove their contention. Measuring oxygen in air from a tank before and after the subject breathed it, they find his lungs close up did not retain normal amount of oxygen.

Rubber from Cactus Juice

Dr. John C. Wichmann, Los Angeles, is shown at the left with the juice he extracts from cactuses by boiling, which he declares makes a satisfactory rubber substitute. He predicts that his method will soon turn cactuses into automobile tires.

Autos Play Leapfrog

[Hurdling one motor car with another is the stunt with which M. Mercut, Belgian dare-devil, entertains, thrill-seeking throats. In the jump photographed, made in a run off a short ramp, the driver rose more than six feet and the length of his leap was more than sixty-five feet. The machines used are specially built for the purpose. The hard landing after flight would smash to bits most ordinary automobiles used in passenger service.

Bicyclist Has Trailer to Carry Children

It's easy to take the children for an airing when you know how! A Frenchman devised this novel trailer to be attached at the back of his bicycle. Now he piles his youngsters in the wide carriage seat, buckles them in with a strap, and pedals along the boulevards.

Lightning Shorthand Typewriter

A new French shorthand typewriter prints standard characters on a tape at 200 to 250 words a minute, said to be fifty percent faster than the ordinary method. Light in weight, as the picture shows, the machine has twenty-one keys and can be operated with one or both hands. It is now in use in the Paris courts, the Chamber of Deputies and many of the offices.

Laboratory May Produce Life

Not many years ago the idea that men might ever succeed in duplicating the substance of living creatures was regarded as entirely fanciful and impossible. Yet today many of the organic compounds found in living organisms, such as urea,

starch, sugar and numerous others, actually have been manufactured by chemists in the laboratory. Such a thing as the synthetic production of materials that go into the structure of our bodies turns out to be quite possible with adequate skill and knowledge.

"Why, then," we may ask, "cannot chemists or physicists go a step farther and produce life itself?"

Far from denying that such an achievement of creation is possible, I should say, it is probable. Indeed, students of organic chemistry, and biochemists who study the foundation material of life which we call protoplasm, tell us today that if we could contrive in the laboratory to extend the manufacture of organic compounds until we had a mass of protoplasm, and were able to subject it to suitable treatment, they would expect it to show vitality and to manifest one or another of the lower forms of life!

From some points of view I regard that proposition as not only reasonable but probable. The reasons are plain. It is an undoubted fact that our planet was once a mass of molten material, or even glowing gas, in which life as we know it, was impossible. Yet we know that living things have appeared on this planet. Hence we must assume that something of the kind must have gone on in the past—some first appearance of life in suitably prepared material or protoplasm. And what has gone on in the past may be going on in the present, and may, conceivably, be better understood, and even controlled by man in the future.

Before men can hope to achieve that and many another surprising aim, however, we must vastly increase our knowledge and understanding of the marvel of life and its relation to the inanimate substances we call matter.

Consider first the lower forms of life. A seed, or every life cell, it appears, is itself composed of an enormous number of atoms. Each of these atoms is now known to be a set of minute electrical particles revolving around an electrical nucleus. They have grouped themselves into molecules of such complexity as to form the substance we know as protoplasm.

Now, if we interfere with this protoplasm drastically it may show no signs of life. But if, on the other hand, we preserve it intact, the seed will germinate and bud, gathering molecules and energy from the rest of the material world until it builds up the elaborate and perhaps beautiful structure of a plant or an animal. Equally marvelous, it can continue the same process through generation after generation without limit.

And yet no amount of examination of the seed or germ will reveal or explain its vitality. Within it is an elusive something which not only enables it to build up the structure from alien material, but controls that material in such a way as to erect a structure of definite form and specific type—much as a human builder might erect an imposing cathedral of a definite type of architecture.

What this type shall be depends not at all on the material substances composing it, but entirely on the indwelling vitality, of which the material is only the vehicle.

It is easy enough to destroy this manifestation of life, or vitality. We know today how to aid it to flourish, or how to retard it. But we have

no other control over it, and no real understanding. The essence of life is beyond us: we know not whence it comes, nor whither it goes. So far as our present knowledge goes, there is no life without previous life, passed on from one organism to another.

To realize how truly marvelous is this action of life, we need only observe the living objects all about us. Within a single acorn, for example, lies the power to produce a whole forest of oaks. A bird's egg kept warm for a few weeks, though at first apparently a mere mass of unformed protoplasmic material, can result in a fledged creature, with bones, muscles, nervous system and eyes—which can emerge and fend for itself, stand and peck with discrimination, though perhaps hatched out in a mere incubator. And even the movements of the lowly protozoan, or the amoeba, as it crawls and absorbs nutriment and grows and subdivides and multiplies, is more than anything we are able to account for in terms of the properties of matter.

When we come to the higher forms of life, and

Sir Oliver Lodge

particularly to man himself, the marvel of vitality grows. For here we come to the manifestation of mind. I see no radical distinction between life and mind, though mind is conscious of itself, and life presumably for the most part is not. I regard life as the rudiment of mind, and mind as the conscious apex of life. They are, so to speak, the same thing in different stages of development. Neither is a mere consequence of complex material substance.

Our bodily mechanism consists not only of muscles, through which we alone act on the external world, but it contains a brain and nervous system which controls and works these muscles and receives impressions from our sense organs. Yet the brain is merely the chief instrument which mind, or life, utilizes, and through which all the rest is accomplished. If the brain is

damaged, or out of order, the manifestation of life is imperfect, or may cease altogether. This familiar fact has led some people to say that mind has no existence apart from the brain, that brain is not so much the instrument of mind as it is the mind itself, and that when the brain is destroyed, the mind is destroyed too.

This does not follow at all. In fact, it is contrary to all analogy. A close examination of the brain will not explain thought, though it will show us the mechanism by which thought is reproduced in material form that we can perceive. Examination of the instruments of an orchestra, or the strings of a piano, would never yield a symphony or a sonata: and yet these instruments are necessary for its reproduction or manifestation. A savage wandering in the interior of an arid region would be no nearer the understanding of music; nor would he be destroying music if he wielded a hatchet in his journey; though he would be injuring its presentation. Similarly, even if we could see the processes going on in the molecules of the brain, the rhythm would be interesting, but we might not be any more enlightened than if we merely witnessed the movements of conductor and violinists in an orchestra.

How then shall we discover the secret processes of this all-controlling mind, or life, or vitality, which, though apparently distinct from material substance, interacts closely with matter, thereby manifesting itself and achieving its purposes?

It is plain to everyone that matter does not exhaust even the physical universe. The ether, or whatever is equivalent to it, must be taken into account; though this and all ultramaterial things—such as beauty, intelligence, aspiration, faith, hope, love—are only known to us in their association with matter. We have discovered, for example, that light is an ethereal vibration, but what we see is not the light itself, but the material objects in which it falls.

If the ether is constituted, as I believe it is, it must be the seat of enormous energy, not necessarily infinite but far beyond any energy of which we have any conception. All the energies that we experience in matter are but a minute and residual fraction of the ethereal energy of which they are a feeble manifestation.

My speculation is that this boundless ether, thus full of energy, is utilized and is impregnated throughout with something that may be called life and mind in the highest degree; that it is the home of the ideal and the supernal, and that all life and mind we are conscious of is but a tiny fraction of this majestic reality. I conceive of the ether as the vehicle or physical instrument of this supreme mind. It may be that "spirit" is a better term, that spirit permeates and infuses everything, and that it controls, sustains, and has brought into being the visible and tangible frame of things.

In myself the conviction has gradually formed that the physical ether is literally and physically quivering or pulsating with life and mind. It is as if we might regard it as a great reservoir of

life, from which separate individual fragments can from time to time be drawn, as from a store of raw material in a warehouse. Life is not really generated, but is entrapped by matter. And so it may be possible for us, probably some centuries hence, to construct an efficient trap, and thus to offer a material habitation to otherwise purely ethereal life.

Many persons, I know, will feel afraid of such a conclusion. They will say that such a self-acting mechanism for the creation of life would remove from the universe the need for a planning and creative Mind, so as to be out of harmony with certain deeply implanted instincts and religious ideas. These fears seem to me groundless. For the process we have assumed as so far possible in a laboratory, is surely not a self-acting process at all. A chemist who in the future may discover how to construct protoplasm and to infuse it with vitality, is himself no self-acting machine. He surely is full of knowledge and contrivance and planning, and is conducting operations full of understanding and design. That life, therefore, when it appears, will not have come into being without antecedent life. The chemist or physicist who does it will have been alive, and will only have designed and accomplished it through the agency of a powerful mind. The phenomenon will not have occurred haphazardly or without thought. There is nothing in the process to which exception need be taken. Rather, it might be welcomed, even by religious people, as showing what amount of thought was necessary to produce any imitation of actual existence. If we are wise, we never will be staid of any progress in knowledge; we will never oppose or obstruct the achievements of science.

At present there are some who will try to say that the ether does not exist, and that the idea of life and mind existing out of association with a material organism is an absurdity. They do not see that the really strange problem is how life and mind came into association with matter at all. They will not entertain the notion that they are incarnations, for a brief period, of a persistent something that is not material. And they deny the possibility of any other mode of existence.

The fact is that mere survival or continuity of existence, when regarded from the proper point of view, must be admitted as inevitable. The only rational question is about individual survival. And that question must be answered by an investigation and scrutiny of facts which are gradually forcing themselves more and more on our attention; but which are not yet accepted or studied by any of the orthodox sciences. They are, in fact, too simple, too concrete, too like the ordinary experiences of daily life, to be palatable to the majority of scientific observers; and accordingly, though partially apprehended by the simple, such facts are usually ignored by those who consider themselves the wise and prudent.

[This section is intended for the correction of inaccuracies, errors of fact, clearly erroneous views, misrepresentations, etc., in the original contributions, and editorials published in this Review or in other papers criticising it. As various opinions may reasonably be held on the same subject, this section is not meant for the airing of such differences of opinion. As, owing to the kindness of our numerous contributors, we are always hard pressed for space, critics are requested to be good enough always to be brief and to see that whatever they write is strictly to the point. Generally, no criticism of reviews and notices of books is published. Writers are requested not to exceed the limit of five hundred words.—Editor, *The Modern Review*.]

An Indian Painter Engraver

Some grave errors have unwittingly crept into this article, "An Indian Painter Engraver" by Dr. Sanjit K. Chatterjee of the Calcutta University, which appeared in the February number of your esteemed Magazine. In his article Dr. Chatterjee says that "His (Mukul Dey) spent sometimes copying the frescoes at Ajanta and at Bagh, and to him we owe the first sketches of the unique frescoes at the latter place, which were later on copied by Nanda Lal Bose, Asit Kumar Halder, Surendranath Kar, A. B. Bhonsle, B. A. Apte, M. A. Bhand and V. B. Jagtap, at the instance of the Gwalior Darbar, and these copies have since been published by the India Society of London."

This is, however, far from the actual facts. Mr. A. K. Halder was deputed by the Gwalior Darbar to make copies of the famous frescoes at Bagh in 1917, which were published in the *Rupam* and *Prabasi* of that year, that is, long before Mr. Dey ever dreamt of going there.

Mr. Dey gathered all available informations regarding the famous caves from Mr. Halder, the leader of the first sketching expedition to Bagh, and went there to make sketches and studies long after the earlier batches of copies by Messrs Halder, Bose, Kar, etc., were published.

L. M. SEN, A.R.C.A., (LOND)

INDIAN EPICS IN INDIAN COLONIES

By PHANINDRANATH BOSE, M. A.

THE Indian Epics, Ramayana and Mahabharata are popular in India even in the present day. Those Epics have been translated in almost all the provincial vernaculars in India and are read by almost all the Indians. It is, therefore, very natural that the Indian epics should find a place in the Indian colonies beyond the sea. The colonising movement of the Indians begins from the first century of the Christian Era. As the Indian colonists began to cross over to the islands of the Indian Ocean and thence to the Further India, they carried with them the culture and civilisation of India. Not only the Indian religions—Hinduism and Buddhism, but also the Indian literature

found their way into the Indian colonies. Of the Indian Sanskrit works, the Ramayana and the Mahabharata attained great popularity specially in Java, Cambodia and Champa (modern Annam). The Javanese people have preserved for us a Javanese recension of the Mahabharata. Even in the present-day Javanese dance the story of the Mahabharata finds a conspicuous place. The Sanskrit inscriptions of Champa and Cambodia contain numerous references to the various epic personages, such as Rama, Krishna, Yudhishthira, Arjuna, Bhishma and others. Not only this, the Cambodians got a fascination over the stories of the Indian Epics. They, therefore, sought to represent the stories of the

Mahabharata and Ramayana on the walls of their temples. Thus the bas-reliefs of the magnificent temple of Angkor-Vat in ancient Cambodia depict various scenes from the Mahabharata. M. Coedes has identified many of the bas-reliefs of Angkor-Vat. The scene of the churning of the ocean was very popular with Indo-Cambodian artists. In the bas-reliefs of Angkor-Vat one can easily distinguish the serpent Vasuki, the mountain Mandara, Visnu, the devas and Asuras. The Indo-Cambodian sculptors also made the famous scene from the Mahabharata, namely, Arjuna fighting with the god Siva under the guise of a Kirata. The Ramayana episodes also supplied suitable themes to the sculptors of Angkor-Vat, the most splendid temple of Cambodia, erected under the patronage of the king, deified under the name *Parama Visnuloka*. As the temple was dedicated to the cult of Visnu (though when the French archaeologists had discovered the temple, they had found the image of Visnu replaced by the Buddhist image), it is very natural that the bas-reliefs should contain scenes from the Ramayana and also scenes depicting the Visnu and Krishna legends. Thus we have the following scenes from the Ramayana as identified by M. Coedes:—

- (1) Svayamvara of Sita
- (2) Carrying off of Sita
- (3) Rama soliciting the help of Sugriva
- (4) Alliance between Rama and Sugriva
- (5) Duel between Valm and Sugriva and the death of Valm
- (6) Meeting between Hanumat and Sita
- (7) Alliance between Rama and Vibhisana
- (8) Rama and Lakshmana bound by Indrajit
- (9) Kumbhakarna assailed by monkeys
- (10) Hanumat bringing the mount Mahodaya
- (11) Duel between Rama and Ravana
- (12) Ordeal of Sita

Besides these episodes from the Ramayana some legends of the lives of Visnu and of Krishna are also represented on the bas-reliefs of Angkor-Vat. They are as follows:—

- (1) Sleep of Visnu
- (2) Churning of ocean
- (3) Krishna bearing the mount Govardhana
- (4) Krishna fighting with the serpent Kaliya
- (5) Krishna fighting the elephant Kuvshayapida
- (6) Krishna fighting the Asura Bana
- (7) Krishna fighting the Asuras
- (8) Visnu fighting the Asuras
- (9) Visnu on Garuda.*

Besides these scenes on the bas-reliefs, there are two Saivaita scenes including the one in which Arjuna is represented as fighting

with Siva in the guise of a Kirata. There is also the representation of the well-known fight between the Devas and Asuras. Thus, we have on the bas-reliefs of Angkor-Vat scenes from the Ramayana and the Mahabharata. With them we may add Harivamsa, because the Krishna legends are mainly taken from Harivamsa. It is a very interesting study to follow the steps how the legends of the Ramayana, Mahabharata and Harivamsa are carried over to Cambodia. In building the splendid temple of Angkor-Vat the Vaisnava Builder King thought of making it a fitting memorial to his prosiding god Visnu. And the result was the carving of the above bas-reliefs and others on the temple of Angkor-Vat. We find similar representations also on many Indian temples, but the fact that these are found in a beautiful Cambodian temple speaks of the popularity of the Epics in the distant colony of Cambodia.

Not only Cambodia, but also Java offers another example of the representations of the Indian Epics on temple walls. We do not refer to the glorious pyramidal temple of Borobudur, where the scenes from the lives of Buddha—past and present—are represented. But we refer to the Siva temple at Prambanan in Java. The temple has been thus described by Dr. M. E. Lullin Van Goor of the Archaeological Service of the Dutch East Indies:

"The body of the temple proper, the cube of the temple, rests with its sub-base upon a terrace, which may be regarded in the light of a second, lower-lying sub-base. In the case of the Siva temple, this lowest sub-base is richly ornamented with lions set in niches, flanked by shallow niches in the back walls of which are richly-fashioned trees, carried out in bas-relief. It has a parapet, which encompasses the whole terrace; on the outer side of this parapet are carved *apsarasas* (heavenly nymphs) and figures playing music and dancing. On the inner side of the wall are set scenes from the Ramayana, carved in relief. The upper sub-base, the foot proper of the temple, has carved representations of gods sitting after the fashion of Buddhas."

The Visnu temple of Prambanan also contains bas-reliefs of the Krishna legend. It is significant to note that the Siva temple, Saivaita in character, bears the bas-reliefs of the Ramayana in which Rama plays the chief role. How a Siva temple could contain Vaisnava bas-reliefs we do not understand. We can explain the appearance of the Krishna-reliefs on the Visnu temple, but not that of Ramayana scenes on a Siva temple.

* See, B. E. F. E-O, 1913.

Siva Temple at Prambanan, Java

Let us first consider the Ramayana-reliefs on the Siva temple at Prambanan. The bas-reliefs begin with the king Dasaratha's sacrifice for obtaining sons. We have Visnu seated upon the snake and Rasyasringa performing the sacred sacrifice. The King Dasaratha with his three consorts is observing the sacrifice. In Cambodia, we have the scene depicting the Svayamvara of Sita. In this Javanese temple also we have the same scene: Rama bending the bow of the king Janaka, while on the left Janaka, Lakshmana, Visvamitra and others observe him, on the right Sita standing with her hand-maidens. Again, as in Angkor-Vat, we have here the scene of Rama's meeting with Sugriva. The fight of Valin and Sugriva and the subsequent death of Valin also supply themes to the Javanese artists as to the Cambodian artists. The scene of the meeting of Sita and Hanuman occurs both in Java and Cambodia. The bas-reliefs of the Siva temple in Java are more numerous than those of Angkor-Vat in Cambodia. Mr. Van Stein Callenfels has identified the 43 bas-reliefs of the Javanese Siva temple. They are as follows:—

(1) King Dasaratha's sacrifice: Visnu seated on

the snake, before him Rasyasringa performing sacrifice and king Dasaratha sitting with his three consorts

(2) King Dasaratha deliberating over the marriage of his sons.

(3) Visvamitra, seated on a raised place of honour, asking Rama's support against the Rakasas.

(4) Rama with Visvamitra and Lakshmana entering the forest and killing Tadaka

(5) Rama defeating Marici and other Rakasas in the hermitage of Visvamitra.

(6) Svayamvara of Sita, Rama bending the bow of King Janaka.

(7) Parasurama challenging Rama on his way back to Ayodhya to bend his bow.

(8) Rama bending the bow of Parasurama.

(9) Kaikeyi asking for the banishment of Rama.

(10) The whole city in great joy for the coronation of Rama.

(11) After Rama's exile, the King and Kamsalya mourning for Rama

(12) Rama, Lakshmana and Sita going to the forest.

(13) The burning of Dasaratha.

(14) Bharata trying to persuade Rama to return, but Rama refuses.

(15) Uncertain.

(16) The episode of Rama, Sita and the crow.

(17) The Rakasi Surpanakha declaring her love to Rama

(18) Surpanakha complaining to Ravana.

- (19) Lakshmana guarding Sita while Rama follows the golden deer
 (20) Rama killing the golden deer
 (21) Carrying away of Sita by Ravana.
 (22) Fight between Ravana and the vulture Jatayus
 (23) The dying Jatayus hands over Sita's ring to Rama
 (24) Fight of Rama and Lakshmana with Kabandha
 (25) Uncertain
 (26) Meeting of Rama with Hanuman
 (27) Meeting of Rama and Lakshmana with Sugriva
 (28) Rama giving proof of his strength by piercing with an arrow seven palm trees standing in a row
 (29) Wrestling between Sugriva and his brother Valin
 (30) Rama killing Valin
 (31) Sugriva again becomes monkey king and gets back his consort.
 (32-34) Rama, Lakshmana and Sugriva hold a council of war and send monkeys to search for Sita
 (35-36) Meeting of Hanuman with Sita
 (37-38) Hanuman being seized his tail is burnt, but he escapes and sets fire to the town
 (39) Hanuman on his return tells his experience to Rama, Lakshmana and Sugriva
 (40-42) At the advice of the sea god, Rama with the help of monkeys builds the bridge over

the sea and marches with his monkey army to Lanka.*

These are the episodes which are sculptured on the walls of the Javanese Siva temple. Here we get the sculptural representation of the Ramayana from the very beginning, namely, the sacrifice of king Dasaratha for children, and it is continued up to the crossing of Rama and his monkey-army to Lanka to rescue Sita. The Cambodian representations omit many of the episodes represented in the Javanese temple. The bas-reliefs of Angkor-Vat begin with the marriage of Sita and end with the ordeal of Sita after his rescue. Besides these representations from the Ramayana, we have 12 scenes representing the Krishna legends on the Visnu temple of Prambanan in Java. These Krishna episodes comprise the death of the Rakshasi Putana, of Arista, of Kaliya, of Agha, of Sankhacanda and other scenes of the childhood of Krishna mainly taken from Harivamsa. We are told that in Prambanan Hindu-Javanese art reached the culmination of its florescence, its greatest wealth of ornamentation.

* A short Guide to the Ruined temples in the Prambanan Plain. By Dr. A. L. L. Van Goor

THE MIDWIFE PROBLEM AND ITS RELATION TO CHILD WELFARE

By DR. N. O. MOITRA, M.D. (Berlin)

IN all the advanced countries of Europe there are some laws regarding the training and activities of midwives. In Germany no woman is allowed to practise as a midwife, who has not undergone an efficient training for six months and has not passed a corresponding examination. During the course of training special stress is laid on the proper understanding of the use of asepsis and antisepsis which plays the most important part in all the branches of modern medicine. In England the control hitherto neglected is now carried on by the central Midwife Board. There in England the midwives are registered, and undergo a

training for six months but the law is still not definite enough to prevent those women practising as midwives who under various pretexts, still practise midwifery, without proper training. But now a bill is pending in the House of Commons, which aims at prohibiting radically any practice of midwifery by unskilled persons. In Germany, France and England every birth is attended by a trained and registered midwife who being conversed in complications of birth, is instructed to call in a Doctor in cases of necessity. After this very short sketch of the conditions prevailing in European countries, let us pass over to the conditions still

existing in Bengal, and to discuss the evils of the same.

In the last few years much public attention has been directed to the inadequacy of our laws governing midwives which contain neither the uniform provision, nor the required standard. There are very few provisions to educate the midwives and give them a good standard of life. With the exception of very few activities in some big towns this question has been allowed to drift along without having regard to the consequences. That assistance is required for all women at birth is recognised by all nations, so also the care of new-born children is regarded as sacred as worshipping God. So we find that in Bengal, the midwives were known to exist from the remotest ages, but their standard and condition have remained just the same as it was before a few centuries. It is no exaggeration to say that we excel in bad hygienic conditions in which the so-called future hope of family is born. It is sometimes quite astonishing how we have managed to live under such primitive condition during child-birth! The future heir of a millionaire is born in a thatched cottage, the worst room of a family, with no ventilation, and surrounded by dirtiest clothes, quite unfit even for the adult to live in. It is no wonder that India is said to lead the world in regard to child mortality. The part played by faulty and inadequate obstetric practice as causative factor in high infant mortality at birth, and during early infancy has for a number of years been constantly emphasised in all efforts to reduce the high mortality not only of the infant, but of the suckling mother too.

We find many of the ailments, to which the women fall prey, begin from the first child-birth. So this problem should be manipulated with utmost care, as it is of vital importance on which the future well-being of our nation depends.

Let the matter be discussed, in the light of our present knowledge, and its bearing to India. There is hardly any nation where members of the medical profession are the only persons who are called to assist at child birth. The large majority of the births have always been handled by women other than of the medical profession. Certain women became known as willing to help their fellows during childbirth, and thus get experience in the work, and therefore

were allowed to practise as midwives. There is much criticism whether we should solve this problem by providing adequate help at every confinement by medical men, and midwives being abolished, or whether experienced women should be trained and allowed for practice under strict supervision and control. I think there is no point in eliminating even the half-trained existing midwives without replacing them with qualified ones. Up to this time no restrictions are laid in our country as to the qualification of women assisting a birth.

Briefly speaking we should lay special stress on the following points:—

1. The ideal of the professional midwives be raised, who as they are quite indispensable for the growth of a nation. Intelligent and educated women should be encouraged to dedicate their lives for maternity work. A widow or some one with no home-ties would be a suitable person for this purpose.

2. Provisions be made for the good training in midwifery. The girls in the high schools should be selected for the elementary knowledge of maternity and infant welfare work. The educational requirements of a midwife should be an equivalent of high school education, or of school leaving certificates, i.e., they should have a good standard of general education so that they could assimilate the course of midwifery.

3. Private institutions should be started, and accommodations be made in all hospitals for affording training in midwifery. These institutions should be allowed by law to give certificates of proficiency. Special stress should be laid on the practical side of the training. Boards like the Obstetrical Societies of London or Ireland be formed who could grant the Diplomas to successful candidates, who should have the right to registration, as "Licentiated midwife."

4. The course of study can be divided under the following heads:—

(a) Elementary principles of hygiene, (b) general knowledge of anatomy, with special reference to female generative organs, (c) knowledge in general midwifery and subsequent care of mother and infant for the first three months after birth, (d) special knowledge of fevers during and after confinements (puerperal fever), inflammatory eye conditions of the new-born, and its prophylaxis.

(5) Explanation of the laws govern-

ing the practice of midwifery and the limitations of a midwife. In the event of any complications, i. e., abnormal symptoms during pregnancy, miscarriage, bleeding, abnormal presentations etc., the midwife is required under her rules to advise the father or other responsible relations that medical aid is necessary.

Great difficulties have risen over the question of paying the doctor's fee. This can be solved in two ways. Either the Dr. should attend free of charges or the local board (as it is done in England by Midwife's Act of 1918) should take the responsibility of paying the fee, and recovering the same from the patient, if she is not unable to pay it.

Efforts should be made in the existing medical schools to improve the standard of teaching in midwifery, and special stress be laid on the practical side of the subject, and the students should be encouraged to study the diseases of children.

(6) A list of the qualified midwives should be kept with address and educational qualifications, and the general public should be

encouraged to ask only the qualified persons to their help. So long as the number of qualified midwives is quite inadequate for a vast province like Bengal, we should not prevent unqualified women to practise, but of course, every practising midwife must be registered, though unqualified, so that we can have control over them.

(7) Penalties for the violation of the laws governing the midwives should be imposed by law upon the offending party. As every medical practitioner should be quite aware of his responsibilities to the general public so also the midwife.

(8) Notification is required of all viable children whether alive or dead, i.e., of all children born after the 28th week of pregnancy. An Act should be formulated by which the parents or the midwife or the persons present at birth will be required to notify the occurrence of the birth to the medical officer within 48 hours. "By assisting the expectant mother and the new-born child we not only help ourselves to grow into a healthy nation but we also serve the humanity."

THE ANNIVERSARY OF TANSEN

His Life and Anecdotes.

By RADHA KRISHNA SAKSENA, nsc.

WRITING about Tolsi Das, Vincent Smith refers to him as "The tallest tree in the 'magic garden' of mediaeval Hindu poesy,"—as

The greatest man of his age in India,—greater even than Akber himself, inasmuch as the conquest of the hearts and minds of millions of men and women effected by the poet was an achievement infinitely more lasting and important than any or all of the victories gained in war by the monarch."

Such indeed is 'the undefinable influence exercised by a glorious and victorious reign, which necessarily produces a stimulating effect on all the activities of the human mind,' that another luminary in the great art of music—a contemporary of Tolsidas Miyan Tansen flourished at the illustrious court of the Great Moghul, three centuries

and a half ago, about whom Abul Fazl declared that 'a singer like him has not been in India for the last one thousand years.'

Tansen, originally a Hindu, belonged to the court of the Baghela Chief, Raja Ram Chandra of Rewah, whence he came to Akbar's court where he was converted to Islam, and given the title of Mirza in 1562. He was a close friend of Sur Das—the blind bard and devotee of Northern India, and was initially educated in music at Gwalior in the school founded by Rajah Man Singh Tomar. His favourite instrument was the now almost obsolete Rabab, made of a wooden shallow bowl covered with parchment, something 'like a shortened and flattened Sitar, with four strings of brass and gut.' It is said to possess a more pleasing and fuller tone and better 'graces' than the Sarangi or

Sitar. His descendant disciples later on, were known after these instruments, the Rabab and the Veena, as the Rababiyars and Binkars, a few of whom are to be found now in the Rampur State.

Many interesting anecdotes about this celebrated singer are known, one of them relating (Music of India: H. A. Popley) how one day the Emperor Akbar, after Tansen had finished one of his best performances, asked him if there was anyone in the world who could sing like him. Tansen replied in the affirmative, and said that there was one who far excelled him. The angry monarch who was a fervent lover of music was all attention to bear the name of this other musician. Tansen named his Gurn, Haridas Swami, a famous Hindu sage and devotee of Lord Krishna, who lived at the banks of the Jumna at Brindaban. The Emperor asked him, to bring the honoured sage to his Court, to which Tansen respectfully replied that he would not come to the Court even at the command of His Majesty. Thereupon, the Emperor desiring himself to be taken to him, accompanied Tansen to the hermitage of Haridas Swami, disguising himself as his instrument-bearer. There, Tansen asked his Gurn to sing, but he refused. Then Tansen practised a little trick and himself sang a piece before his old master, making a slight mistake in doing so. The Gurn at once called his attention to it, and showed him how to sing it properly, and then went on in a wonderful burst of song, while the Emperor listened enraptured. Afterwards, as they were going back to the palace, the Emperor said to Tansen, 'Why cannot you sing like that?' 'I have to sing whenever my Emperor commands,' said Tansen, 'but he only sings in obedience to the inner voice.'

Like the stories current about the fascination of wild animals by the music of Baijoo, the spontaneous ignition of lamps when Gopal Naik sang the Deepaka Raga, and the harp of Orpheus touching the heart-strings of the most ferocious beasts and moving even the inanimate creation, one that has been related (Popley) about Tansen says that one day Akbar ordered him to sing a night Raga at noon, and as he sang, darkness came down on the place where he stood, and

spread around as far as the sound reached.

To the memory of this great musician, Gwalior annually pays in the vicinity of the Basant Festival its reverential homage before his unassuming tomb—a simple one-storied open structure supported by twelve outer pillars and four inner. This year the event fell on the 17th, 18th, and 19th January and for 3 days and nights the spacious grounds around the tomb were enfeited, with a full programme of dancing girls, singers and musicians,—some of them from Agra, Lucknow and Rampur,—vying with one another to produce their best in them. The great Bombay musician-devotee, Prof. Vishnu Digambar with his disciples also paid his tribute of homage to the celebrated Tansen a few weeks before, when he organised a Music Conference as well.

The Late Maharaja Madho Rao Scindia himself a connoisseur in the art, and according to Prof. Bhatkhande, an authority on the Abhinaya branch of Music, earmarked a special grant in the State Budget for the celebration of the Tansen Anniversary and entrusted the management of the function to a special committee.

One striking feature about this annual celebration where Hindus and Mahomedans congregate in large numbers is that the spirit of religious toleration, always preached and rigorously practised by the late Maharaja, and also thoroughly inculcated in his subjects, is evidenced everywhere from start to finish. The function begins with the recital of Hari Katha by a Brahman priest and his music party, and ends with the Moslem ceremony of Chadar-laying on the grave of Tansen; and as the Muezzin from a neighbouring mosque sends forth his sonorous call at the prescribed hours, the Muslims quietly leave the gathering to offer their prayers, and the streams of music from the violin, the fiddle, the guitar and the veena, as also the intonations and modulations of the nautch girls and men-musicians continue to flow uninterrupted from the different camps as before. No question about 'music before mosque' is ever raised and not a ray of communal thought enters the minds of these hero-worshippers gathered together to do their homage en masse.

LEPROSY PROBLEM IN BANKURA

By PROFESSOR JOGESH CHANDRA RAY

I

PEOPLE outside the District of Bankura have come to know it as a land of frequent famines. But famines on account of floods of rivers or failure of crops are not uncommon events in our country. Neither is malaria uncommon killing the people by lakhs nor cholera by thousands every year. What is not common elsewhere but common in this District is leprosy, that terrible, loathsome and agonizing disease which condemns the sufferer to living death and is a perpetual source of danger to others and to succeeding generations. In the Census Report of 1911 Bankura was described as "the blackest leper spot in the whole of India". The next and the last Census of 1921 found it worse. We can hardly conceive a calamity greater than race degeneration.

Bengal is not particularly unfortunate in this respect. There were 66 lepers in 1921 in every lakh of her population. There are Provinces which counted more. But there is not a single Province where the proportion was found to be as high as 270 as in Bankura. In Bengal the only Districts which contained over one hundred are Birbhum 148 and Burdwan 112, the two Districts are the north and north-east of Bankura. How black Bankura is and what a terrible state the colour reveals, will be apparent from the annexed map of Bengal reproduced from the Census Report of 1921.

The average of 2.7 afflicted in a thousand of the population of Bankura does not adequately convey the true state. The intensity in certain wide parts of the District is appalling. Thana Gangajalghati had 54, Saltora 47, Majia and Bankura* 45, Indpur 43, and so on. The only Thana outside the District and comparable with Bankura is Thana Gopiballabhpur situated on the sea-coast in Midnapur, counting 6.5. The annexed map of the Districts of West Bengal copied from the Census Report of 1921 will

show the distribution. It will be seen that a wide tract running from south to north through the middle of the District is the most infected area, and that the prevalence becomes less and less on the two sides of the region, and markedly on the east side.

The average of the District as given in the Census Report was always regarded as a very low estimate by those who had intimate knowledge of the District. The late Mr. J. Vas, I.C.S. Collector of the District, took great interest in the leper problem and tried to arrive at a correct estimate during the last famine in 1918 through the officers employed in Relief operations. The number was found to be 4700, or 47 per thousand of the Census population in spite of the death-rate exceeding the birth-rate by over 6 per cent during the previous famine year of 1914-15. There was thus an increase of 2 per thousand in the seven years between 1911 and 1918.

There are separate statistics for the town of Bankura available to me. But the local Doctors estimated the proportion so highly that it seemed incredible. Recently Dr. E. Muir, Head of the Indian Leprosy Relief Association, sent a trained Doctor to this town for training the local Doctors. His casual observation has confirmed the high estimate. He went along the Bazaar for a short walk and without special enquiry detected 14 cases, some of them keeping shops. What is more startling is the fact that he found 10 infected boys in the Govt. Zilla School containing 280 pupils! They are the sons of well-to-do and respectable parents. In another school, the Wesleyan Mission school, having about 300 boys, the percentage is about the same. The subdivisional town of Vishnupur was never considered as bad as the chief town. Yet on examination of one hundred persons of the Bazaar taken at random showed one case!

The Thanas of Onda and Gangajalghati were chosen for survey and propaganda by a party of trained Doctors. I have met the exact figures before me, but I understand

* Excluding the leper population in the Lepers' asylum.

that the proportion found is four to five times the Census figures. Roughly therefore, the number of the afflicted in the District is over ten thousand, or *one per cent of the population*!

During the course of forty years from 1881 to 1921 there was steady decline in Bengal from the proportion of 192 to that of 66 afflicted in a lakh of the population Bankura also shewed some improvement between the years 1881 and 1911. But the course was reversed and the census proportion rose from 230 in 1911 to 270 in 1921. There is no explanation for this rise except two famines which happened within the period during which privation and mal-nutrition took away the power of resistance and rendered many an easy prey to the infection. But the virulence of the attack seems to have been much greater than what the rise indicates. During the famines, the first in 1915 and the second in 1918 a large number of indigent lepers having been unable to combat the disease in this weakened state must have died, though not actually of starvation. The leper is naturally short-lived and any debilitating cause hastens the end. Add to this the fact that the second famine was accompanied with epidemic influenza which carried off a still larger number. As a result the population decreased in the ten years 1911-1921 by death over birth to the extent of over 45 per cent. But in spite of the elimination of the "unfit" there was increase in leprosy. Evidently this was due to rapid infection, and fresh cases cropped up during and after the famines.

Possibly a part of the increase was due to emigration of the able-bodied to other Districts in search of employment, leaving behind those who were unable to move on account of their infirmity. But since emigration is a normal feature of a District which cannot in any year feed its entire population, this cannot be responsible for the total increase in leprosy. Neither can we assume that the census was more accurate in 1921 than in 1911. We are thus forced to the conclusion that there has been going on steady increase and that the recent revelation of the appalling condition is not entirely due to correct diagnosis. The prospect is then becoming gloomier year by year.

II

All physicians, ancient and modern, Indian and European, are agreed that leprosy is con-

agious and that it spreads rapidly unless it is checked by segregation and restriction of free movements of the afflicted. The Ayurveda tells us that "like venereal disease leprosy spreads" from person to person, by sexual intercourse, by contact, by breath, by eating, sleeping and sitting together, by using garments, garlands, and ointments of the diseased." It is now known that "leprosy is due to a small germ which grows inside the body especially in the skin and nerves. People get leprosy by close contact for a long time with a leper who is discharging these germs from ulcers of the skin or from the nose. Living in the same house with such a leper is dangerous, living or working in the same room with him is more dangerous; sleeping in the same bed, using the same clothes, towels and eating utensils is more dangerous still. People are infected at all ages but children are most liable to infection and are commonly infected by parents and other relations and by house servants."*

Unfortunately, the exact method of transmission of the germ is not yet known. But the above conclusions are surely based on observation and cannot be disputed. It seems that if the germ finds an entrance into the skin of a person through an abrasion cut or wound anywhere in the body it makes its home there, and, if the soil be favourable, develops the disease. Every case of infectious leprosy is thus a centre of dissemination. Of the ten thousand cases in the District even if half the number be in the infectious stage the danger to the community is awful.

The innocent-looking sweet-meat, the dust of the street, the water of the bathing pond, the cloth washed by the washermen, the razor of the barber, the house-flies, the bed bugs, the king's cotes etc., may, for aught we know to the contrary, carry the germs. The densely crowded Bazaar, *melas*, *jalras*, theatres, circuses and public meetings are extremely dangerous places where people crowd and sit close together for hours. I wonder how much of the infection of the school boys is due to their running about and playing foot-ball in fields abounding in sharp-angled quartz, and seldom have I seen a team of which one

* What the public should know about Leprosy. Issued by the British Empire Leprosy Relief Association (Indian Council), Simla. The pamphlet ought to be translated into Bengali and freely distributed in the District.

or more of the young players have no bandages in the arms or the legs over cuts.

In Bankura the disease is so common that it does not attract notice, and the gravity of the danger is not always realized. Add to this the fact that lepers try to hide the affected parts of their bodies as long as they can. They know that the public look upon these with mingled feelings of abhorrence and compassion and there is no hope of their ever occupying the position of man in their community. It is despair which drives them to assume an apparently defiant attitude when they come forward in social ceremonies, offer their *hooka* to friends, sit close to them and when occasion arises distribute food with their hands to invited guests. Not a few are driven by poverty to persist in their employments, and fear of starvation blunts their better judgment. There is also a belief among many that the disease disappears if the afflicted mixes with people and take it lightly. Brooding over the calamity is said to prolong it and the superstitions belief arose as an antidote. Happily there are many who realize what it means and calmly keep themselves aloof and pray to merciful God for early deliverance. There are families, poor and illiterate, where the patient is given a separate room or shed with separate clothes, beds and eating-utensils. And who can count the patient martyrs who attend to the sick whom the disease makes fretful and irritable to a degree, not for a day, a month, a year, silently hearing the anguish of heart until Death is merciful and carries the victim off the stage? There is no man who does not sympathize with the woman who treats her leprosy husband as if nothing has happened, the mother, the father who fondly cling to the darling child hoping no harm is done by their caresses. When nature is so strong, and nurses are not available, it is useless to discuss the question of hereditary transmissibility of the disease.

The Hindu *satras* wanted to stamp out the disease by declaring it as the penalty for the greatest sin one might commit and the sinner as the untouchable among the untouchables. The *satras* follow the law of nature which lets only the fittest survive, makes society greater than individuals and seeks the greatest good of the greatest number. I sometimes wonder whether the modern advances in medical science waging

obstinate war against nature is really doing good to society by giving a precarious lease of life to those who are wrecks and swell the number of unfit by their progeny. It is possible to carry feeling to excess and to regard the tiny flesh as the end of all existence.

But it is neither feeling nor reason but ignorance and callousness which is at the bottom of the spread of infectious diseases. In this potty town of Bankura consisting of 14000 male and 12000 female population there are probably 280 men and 120 women lepers, at least half of whom are in the infectious stage. Certain quarters of the town, the original villages out of which it has grown, without any sanitary plan are densely congested. The town being the headquarters of the District draws a large number of people from every part of it, and it is not uncommon to find infectious lepers handling food-grains and vegetables, sweet-meat and grocery, selling their handicrafts, and jostling in the small crowded bazaar and in law-courts. Tea-drinking shops are springing up like mushroom, and all grades of men from college students to petty shop-keepers are drinking the beverage out of the same cups. It is indeed a melancholy state when afflicted young men of some education contract marriage, and whole families of respectable and well-educated gentlemen get the disease. "People often appear to the public to be quite well, while all the time they are discharging the germs of leprosy from the nose or from ulcers under the clothes. Such people may be a great danger to those who come in close contact with them at home, in the course of business or in public conveyances." Again, beggar lepers are "not so dangerous as is often supposed. In most beggar lepers the germs have died out leaving only disfigurement. * * * Besides these people do not come in close contact with such beggars. The ordinary respectable citizen, who, to guard his respectability conceals the fact that he is suffering from leprosy, is a much greater danger to the community than the pauper." The lowest classes are everywhere the victims of this disease in which poverty and want of personal cleanliness prevail. But in Bankura the highest class, the Brahman caste, counts a large number. Mr. Vas found Brahmans forming 8 per cent. of the total lepers in a Thana, and in Onda they have been found to stand next to the Bauri.

caste. This unmistakably shows that they have not the sense of untouchability and freely mix with lepers.

The problem has a wider aspect. The Census Return of 1921 shows that a lakh and a half of the population of Bankura emigrated to other Districts of Bengal to earn their living. In the famine year of 1918 fifty thousand men and women are estimated to have gone to the tea-gardens in Assam. Many are seasonal emigrants. We cannot, however, imagine that all the men and women who go elsewhere as labourer or the vast number of men and also of women to serve as shop-assistants and domestic servants are free from leprosy. At the conference on the Leper Problem in India held in Calcutta in 1920, Mr. Vas observed that "these two circumstances—the wide prevalence of the disease and the great volume of emigration—make it clear, I think, that Bankura is not only a great focus of the disease of leprosy, but a centre of dissemination to other areas and other population." * It would be an exaggeration to describe the problem as one of grave Provincial and even Imperial danger. Indeed, when Railways and motor buses have made travelling easy, the safety of a Province is determined by the safety of its units.

III

Leprosy seems to have been endemic in Bankura since remote past. It has been the bane of the worship of Dharma who implicated the terrible punishment of leprosy upon the unbelievers and condoned those who faithfully worshipped him. The lowest classes, the aborigines, were, his worshippers, but the highest were always afraid of his displeasure. The disease has now been pandemic, and it is not possible to say whether it has become milder or not. But the wide prevalence goes to show that the people have not been immune to it.

Similarly there is literary evidence to show that seven or eight hundred years ago leprosy was so widely prevalent in Eastern Bengal that the writer, an inhabitant of central Bengal who alludes to it gave the fact to illustrate the effect of eating salted and dried fish. Whether the explanation is correct or not, the fact remains that while E. Bengal has vastly improved, W. Bengal has not, and that Bankura is still "the blackest leprosy spot in the whole of India." In the

Census Report of 1921 we read that "in 1881 leprosy was more prevalent in Northern Bengal and almost as prevalent in Central Bengal as it is now in Western Bengal, and the proportion afflicted in E. Bengal was more than half of that in W. Bengal today. The improvement has been great in E. Bengal, greater in N. Bengal and greatest of all in Central Bengal where the proportion afflicted is but 27 per cent of what it was 40 years ago."

Why has Bankura remained an exception and why has it been going down? It would appear that the explanation is greatly economic and partly social. But before entering into it let us examine the predisposing causes of leprosy. These may be according to Dr. Muir, 1) temporary, due to acute disease like enteric, influenza, etc. or (2) more permanent, due to chronic ailments such as bowel diseases, syphilis, recurring attacks of malaria, hook worm, etc. or (b) due to climatic conditions, unhealthy and insanitary surroundings, lack of sufficient exercise or unsuitable diet. The predisposing causes can thus be summed up in what is vaguely called loss of resistant power or vitality. Unfortunately, more than one of the permanent causes are present in Bankura in some part or another, and as the germs of the disease are there in large numbers, it is not surprising that the disease does not show decline.

The Ayurveda recognised the influence of climate in limiting the spread of diseases, and laid particular stress on diet in warding off the infection of leprosy. Certain combinations of food and excessive consumption of particular kinds of food were believed to predispose the body. Physiographically Bankura is not the same in all parts, its northern and western parts being borders of the plateau of Chotanagpur, and its southern and eastern parts of Lower Bengal, not many years ago three-fourths of the District were covered with forest. But reckless destruction has made the air of the northern part drier, annual variation of temperature larger and the soil less moist and fertile. The zone of leprosy is widest in this part and possibly the change of climate for the worse has accentuated it.

It was long supposed that the incidence of the disease is high over lateritic soil and extensive tracts of Bankura have red soil. Possibly the iron contained in it dissolving in drinking water induces chronic

pation. The water of many wells in the town of Bankura is highly charged with iron, and outsiders coming to it complain of constipation for some time, and emigrants to Lower Bengal are afraid of the water there which they say brings on looseness of bowels. Though the people in the villages generally drink the water of ponds and lakes, a large number appears to have chronic constipation.

Among other permanent predisposing causes of leprosy Dr. Muir mentions syphilis and the local Doctors are unanimous in asserting that the majority of the leprosy patients at first suffered from this disease. Some having wide practice in this line go so far as to say that ninety per cent of the population of certain castes living in the town have syphilitic taint. It is difficult to say which of the two diseases has more disastrous results on the race, and it is sad to reflect that nothing has been done to root out the latent predisposing cause of leprosy known to all. More disgusting is the news that venereal disease is common also in villages. Some contract the disease elsewhere during their temporary stay and on return spread it in their families. At the conference on the Leper Problem in India referred to above Mr. D. L. Joshee of Ranchandrapuram, Madras, told a similar story. He said that "quite a number of coolies who have been to Rangoon come to us with the disease of leprosy. They themselves say that the cause is their immoral living. They say their disease began with syphilis and developed into leprosy." But it is to be remembered that Burma is highly infected, standing next to Assam. The two infections being present, the diseases developed one after the other. Perhaps this is the reason why syphilis has drawn more notice in this town than in others.

The social structure of the population of the District is its most remarkable feature. more than a third of the population consist of the lowest and poorest classes. They form the bondless labour class. What is more remarkable is the presence of a lakh of Brahmans in this poor District, who though not actually landless cannot maintain themselves and a very large number cannot be distinguished by their appearance from the lowest class. But considerable contact of two races in widely unequal stages of civilization results in moral degeneration of the higher and physical deterioration of the lower. The Santals of the District who

number a lakh have so far kept themselves aloof, and though as poor as the other two lakhs of the labour population have still retained the vigour of their race. Probably leprosy is not so widely prevalent among them as among these classes who live as close neighbours, of higher castes serve as domestic servants, and supply agricultural labour. In ancient times, and even now in many Provinces, they were kept at a distance as untouchable. The domestic servants recruited from the low class used to live in the family of their masters. But necessity has no law, and the same necessity surely dictates the raising of the level of life of those with whom we are compelled to associate. The physical law of action and re-action holds good in moral and material life and the real problem is centred in this fact.

We have seen that Bankura cannot feed its population even in normal years and sends away a lakh and a half to other Districts. But even in spite of this huge emigration, there is not much relief to the District. The standard of living of the vast majority is extremely miserable. Perhaps one-third of the population are always on the verge of starvation. Perhaps another third seldom enjoy two full meals a day. In the town itself where is an outward appearance of better condition in dress among the general population the thin frame, the haggard look and stooping gait of men and skinny limbs and dry face of women at once show the extent of under-feeding. Many a family live on one meal of rice a day, the other meal consists of a few mouthfuls of *muri* (fried rice) or a handful of cooked rice in plenty of water. Soup of pulse with copious water is a luxury, and oil in the daily diet is barely sufficient to give its smell to the leaf vegetable often of the coarsest kind, and wild herbs. There is not a drop of oil to rub on the body before bath that it may cleanse the skin, protect it against the sun and weather and the germ fœa floating in the air. But the craving of nature for oily food is not so easily satisfied, and the baked paste of poppy seed is used as a delicacy by all classes either alone or as an adjunct to a vegetable. Another striking feature in the diet is the habitual consumption of an excessive quantity of salt. Perhaps this is due to nature's another craving, the craving for organised salts present in vegetable and fruits which are lacking in

the diet. A standard Ayurvedic writer is of opinion that consumption of poppy seed dries up the tissues and has constipating effect. It is popularly believed to cause night-blindness which is common among the people. As to excessive use of common salt the Ayurvedic writers have all condemned the habit. They say that it makes the body flabby and predisposes it to skin disease, ulcer and leprosy. In this connection I may mention a fact recently noticed by the surgeon of the local Medical School Hospital that the blood of his patients takes long time to coagulate, longer than what he found in the Calcutta Medical College Hospital. The discovery is worth investigation in its relation to leprosy.

The ordinary diet of the next economically better class counting perhaps another third of the population is as low and unbalanced as the above. It is deficient in protein and markedly in fat. The same hankering after poppy seed and salt is conspicuous. Fresh vegetables are not plentiful and fruits are rare, particularly in the drier parts of the District which are also highly infested. The corrective to chronic constipation is wanting, and there is surprising avidity for innutritious vegetables which fetch abnormally high prices. Compared with this diet that of the neighbouring Districts of Hugli and Midnapur is much better at least in fresh vegetables and to some extent also in fats. The people there consume less salt. Their diet is, however, low and unbalanced, and, I think responsible for their low vitality on account of which malaria has been ravaging the Districts for over half a century. Low diet and low vitality are twin brothers, and low productive capacity accompanies. There is thus a vicious circle from which there is no possibility of escape. The energy of the people of E. Bengal is chiefly if not entirely due to their nutritious diet. West Bengal is almost dead, and Bankura in particular as shown by its indolence prevailing among the common people.

IV

In his *Diagnosis, Treatment and Prevention of Leprosy* Dr. Muir names five enemies of this disease and asks the public to make them allies in order to fight against it. These are (1) freedom from other diseases (2) bowels well regulated, (3) exercise aban-

dant, (4) habits regular, and (5) diet fresh, nourishing, not excessive. As to treatment "the first great essential is the elimination of the predisposing cause or causes," and "diet, exercise, skin and bowel sanitation must be attended to, and the climatic, hygienic and social conditions under which the patient is living must be enquired into."

Fortunately, these instructions form the elements of hygiene and are not special for leprosy, and it is obvious no preventive or curative remedies can cope with a widespread disease unless persistent efforts are made from all directions for many years. Enlightened public opinion is the first requisite in a campaign against the terrible scourge of leprosy, and what a glory would

Map showing Lepers per 100,000 of the Population in Bengal

it be to the public spirited sons of the land to declare it free from it! The problem is too pressing to wait a day longer.

I do not wish to minimise the gravity of the problem, bound up as it is with economic and social causes. Agriculture, the main stay of our country, is uncertain in result when it is solely dependent on the monsoon and more uncertain in places like

this where monsoon itself is naturally uncertain. The greater part of the District is not meant by nature for profitable agriculture, and the people have neither capital nor knowledge to combat with her. Commencing with the terrible famine of 1866 there have been six officially recorded famines up-to-date giving one in every decade on the average. In a recent Government Resolution in the Report of the survey and settlement operations in the District, the case has been clearly stated. "Of the total area of the District only 47 per cent is cultivable and even this moiety suffers so much from drought and unequal distribution of rainfall that a partial or total failure of crops occurs every third or fourth year. Even in a normal year, the settlement officer calculates that the total yield of paddy is barely sufficient to provide 84 per cent of the population with two meals a day." There is thus no surplus to buy the other necessities of life, and I have tried to show what the meals are. And how long can the people drag on the miserable existence and beat nature of the inexorable law of survival? Famine and pestilence are inevitable, and the population is bound to decline unless measures on a comprehensive scale are immediately taken.

There are only three ways by which Nature's balance can be maintained, and these are birth-control, permanent emigration, and increased means of livelihood, and I believe if the affairs of the District be properly handled there is yet hope for it. It is not the place to discuss them in detail, but it is not surprising that the people have been forced to adopt one or all of them. There is the general practice among the poor of marriage by purchase. The price of the child wife varies according to her age and the low social and material condition of the husband. The highest price prevails among the Brahman caste. The total cost is often prohibitive and compels young men to defer marriage to a late age and sometimes to pass life as old bachelors. The great desparity of age of the married couple results in small family, desirable in a poor country, but early widowhood in undesirable in a moral people. Mere increase of population is no test of prosperity, the real test is increase of longevity. The lower classes having cheap wives, child marriage and widow marriage multiply as rapidly as they die. This is Nature's last attempt at preserv-

ing the race, more are born in order that a few may survive. This state is however not peculiar to Bankura, but affects its welfare to a marked degree. The swelling of the poor class is not a blessing, when there is no means of livelihood, and enforced beggary is bound to lead to immorality. The ratio of men to women lepers in the province is as three to one, but in West Bengal and particularly in Bankura it is as two to one. Men are more exposed to infection than women; but where women move freely and have lecherous husbands and other male relations, the ratio is increased. The best and the quickest remedy for lowering the marriage expenses and diminishing the number of widows is the introduction of widow marriage under certain conditions, and here is a vast field for the Hindu social reformers.

The excess population of a District naturally migrate to other Districts, and Bankura has been following this law. The last Census Report shows that in ten years 1911-1921 it has lost 104 persons out of every thousand of its population. About one-half of this is due to death, and the other half to emigration. Probably the smallest subdivision of Vishanpur which has lost 168 persons is the worst off in respect of death due to malaria and influenza. The only consolation is that excepting the Thanas of Sonamukhi the other Thanas are not highly infected with leprosy and that in the matter of decline of population due to death the smallest subdivisions of Burdwan and Midnapur have each lost 111 persons, Arambagh 108, Ghatal 105, and so on. As a consequence labour has been scarce in them and extensive rice fields are lying uncultivated and all useful works requiring manual labour are at a standstill. There is thus large field for emigration from Bankura to the neighbouring Districts to the good of all. Temporary or seasonal emigration does no permanent good to either. Let the necessary labouring classes as well as artisans be encouraged to settle with their families in their new homes in new Districts and concerted action of the public spirited well-wishers of the Districts is sure to achieve success in redistribution of population.

But the greatest evil of chronic poverty is moral deterioration. The people lose the sense of self-respect, become cunning

and suspicious, exactly the reverse of the qualities necessary for improvement and advance through co-operation. The thoughtful residents of the District deplore the change in the character and mental outlook of the people which they say has been gradually brought about in the course of the last twenty years or so. Of course, this effect of frequent famines and wide-spread diseases like malaria or leprosy is not immediate; it takes time to develop into pessimism inaction on one hand and blind selfishness with attendant evils on the other. Mr. G. S. Dutt, I. C. S. and Collector of the District devoted his best energy to the amelioration of the condition, but it is an up-hill work and requires patient and continuous labour for years before any appreciable upward movement can be effected. The stubborn fact is inertia, and resolute must be the spirit of workers to overcome it. There should be well-qualified and well-trained lecturers to impart the lesson of self-help and self confidence. Visual demonstration and comparison are the two means to awaken interest.

The improvement in leprosy noticed in other parts of Bengal has been automatic with improved standard of living and the campaign against the disease will be fruitless unless the problem is attacked on all sides. So far as nourishing food and altered diet goes Bankura need not despair. It is fortunate in possessing a variety of climatic and soil conditions and can grow a variety of crops for which it is now dependent upon other Districts and Provinces. It can raise barley and wheat, pulses and oil seeds in larger quantities than it does at present. The waste uplands may be profitably cultivated in the rainy season for soya bean, the combined pulse and oil seed, which the people directly need in their diet. Vegetables can be grown every where in abundance, and many kinds of fruit trees in waste lands. Let the necessity for these be inculcated, and the question of irrigation will solve itself.

It is a happy sign that the District Board has become alive to the gravity of the leper problem, and appointed three Doctors for treatment by the modern method of injection. This provision appears to me inadequate. For, the number of patients is enormous and widely scattered, and the treatment is long. Both the Aynurved and modern medical science are unanimous that leprosy

is curable in the early stage, and more attention ought to be given to these early cases than to the advanced where cure is not certain. But unfortunately people neglect the disease when it is not yet painful and does not attract notice of the public. At least three more Doctors have to be appointed for the treatment of the early cases, remembering that expenditure is always heavy at the beginning of a campaign.

The Research in Leprosy treatment is not yet advanced and the Aynurveda and the modern treatment are on the same footing as to result. Some cases are per-

UNDER 25 LEPROS PER 100,000 WHITE

Proportion of Lepers per 100,000 of population in several districts of the Burdwan Division (Bengal)

manently cured, some temporarily, and others not at all. The Bengal Council ought to allot sufficient fund for pushing on research in the school of Tropical medicine. In the mean time, when the Aynurvedic treatment is at least as good as the other, and the people have natural and traditional faith in it there is no reason why competent

Kabirajras should not be appointed for those who wish to avail of it especially in view of the fact that treatment is voluntary and resources are limited. The chief point is to bring relief to the sufferer and to check the spread by awakening the sense of danger. As an aid to this treatment trees such as Nim (*Nelium*), Karanja (*Pongamia*), Chaulmogra (*Taraktogenos* or *Hydnocarpus*), Guggula (*Balsamodendron*) should be freely planted along village sides and in forests. The District Board might grow the latter plants in a nursery and freely distribute them. If practicable the women lepers and venereals might be induced to be rendered sterile.

Compulsory segregation of lepers is out of the question when the number is legion and Homes and Colonies are wanting. The only course left open is to rely on persistent propaganda and to create public opinion. How much could preachers of the gospel of *Sadachara* or right living, which is synonymous with Hinduism and the stepping stone to spiritual growth, do! The field is vast for qualified preachers who could appeal to the masses through the Sastra.

There are pauper lepers who die unfed and uncared for and the people of Bankura cannot be too grateful to the Christian mission to Lepers for establishing an Asylum in the outskirts of the town. The accom-

modation is limited, and the number of inmates is at present 180. Thanks also to the benevolence of the late Babu Kishorlal Jatin of Calcutta for increasing the accommodation and providing for a resident Doctor. But there are, alas, a mere drop in the ocean. Besides, it is a fact that even pauper lepers are not willing to seek the Asylum for fear of losing caste and becoming Christians. Surely, they cannot be compelled to segregate and locked up in a place which they do not like. Some Homes are, therefore, necessary where they may live in peace.

All the measures suggested above require funds. But I believe that if appeal be made Bengal will come to the rescue and will not allow this District to be a land of cripples. The Government of Bengal knows it to be "one of the poorest and most backward Districts in the Province." But it is apt to be forgetful of its duties unless constantly reminded. The defective definition of a Loper in the Lepers Act ought to be amended in the light of the present knowledge and the Act enforced in order to prevent free movements of the lepers. There was a proposal for a Loper Colony in Midnapur, and the Bankura representatives may ask the Government regarding its fate undoubtedly, they have undertaken onerous duties on behalf of the District, and may their efforts be crowned with success.

IF LIFE IS A TREE

If Life is a tree
Joy is its leaf
Leaves bud, leaves grow; leaves fall ..

If Life is a tree
Its roots are sorrows...

Long after the leaves are fallen,
Long after the boughs are bare,
The roots cling fast
Deep in the Earth-Mother's bosom.

[Books in the following languages will be noticed: Assamese, Bengali, English, French, German, Gujarati, Hindi, Italian, Kanarese, Malayalam, Marathi, Nepali, Oriya, Portuguese, Pungabi, Sindhi, Spanish, Tamil, Telugu and Urdu. Newspapers, periodicals, school and college text-books and their annotations, pamphlets and leaflets, reprints of magazine articles, addresses, etc., will not be noticed. The receipt of books received for review will not be acknowledged, nor any queries relating thereto answered. The review of any book is not guaranteed. Books should be sent to our office, addressed to the Assamese Reviewer, the Hindi Reviewer, the Bengali Reviewer, etc., according to the language of the books. No criticism of book-reviews and notices will be published.—Editor, M. R.]

ENGLISH

HAPPINESS IN MARRIAGE:—By Mrs. Margaret Sanger. Published by Jonathan Cape, London. Pp. 224. Price 5 sh.

There is nothing so difficult to write about as sex. The very word is sufficient to bring an embarrassed smile to most people. Why this is, how this developed in the course of our human evolution, is a mystery. For sex is the origin of life, the origin of every creature that exists. It is the primal force from which most that is creative and beautiful in our life today, springs. It is sublimated sex energy that has built our culture—our music, art, and literature. Yet out of this deepest of instincts, and about it, has grown up the ugliest, the sickest and the most perverse attitude. It is noticeable that the men and women who most abuse or misuse sex, are the ones who have the lowest opinion of it and in whose presence one often feels unclean. They are the persons who speak loudest of purity (in others) and who regard a study of sex as obscenity.

One can well understand why some persons, even intellectual men and women, take this attitude. Perhaps their own intimate lives are ugly and beastly. For, the lives of many men and women are out of harmony with all that they profess in public. Modern and progressive in public life, their intimate relationship at home may be on the level of the most primitive tribes. No, one can hardly say that, for primitive peoples often live very clean sex lives. One might say, instead, they are on the level with the ordinary capitalist whose buying and selling habits extend into the realm of sex also.

But it is just because of the silence about sex, just because of the ugliness that ugly people permit to grow up about it, that young men and women should study the best literature on this subject before embarking on marriage. With knowledge comes light, and with light, beauty and health. The old order costs too much in pain and suffering. The ignorance that passes as purity,

is a danger to the individual and the race. It is for this reason that Margaret Sanger's book can be recommended to married couples and to those who are to marry.

Margaret Sanger is the leader of the international birth-control movement. Not only is she a woman trained in medicine, but for years she has been a woman to whom other women have gone to seek advice and help in their marriage relationships. She is further a mother of two sons, whom she has brought to manhood and whose questions she has had to answer and whom she has had to educate to avoid the ugly mistakes that most youth faces. On the sex problem she has a very natural and beautiful outlook. All of this has led her to write a book, which is not, like her others, primarily on birth-control, but one which deals in detail with the intimate relationship between husband and wife. In it she has taken the problems which thousands of men and women have laid before her in their search for a solution of problems in their own lives. She has found that the problems can almost be classified, for, they are so much alike. And she has tried to give a solution by showing what a normal and beautiful marriage relationship should be.

The first part of the book—that on courtship—does not impress the reviewer of this volume. The manner of courtship as described by her there belongs to a certain class of people only, in a certain system of society. It is American—or perhaps also Anglo-Saxon. It is certainly not German or Russian or Scandinavian. But the last half of her book is universal, for here she approaches the period of married life. She emphasizes the ignorance of men (who boast that they know "all about women" just because they may have had relations with prostitutes or barmaids or landladies) about sex or about the emotional lives of women. There are countless thousands of men who have lived a sex life before they married, who are absolutely ignorant of the nature of woman, and who eventually are responsible for the nervous diseases from which women so often suffer. To

many men, woman is really little more than just a convenient piece of bed-room furniture, as also a cheap house-servant. That there are periods when a woman should not be approached, and that sex relations should depend upon the nature of woman, is ignored by most husbands who regard their wives as private property who have no autonomy over their own bodies.

Mrs. Sanger in conclusion pleads with eloquence for a race of children born with the conscious desire of the parents. She is opposed to children conceived by accident or chance or habit. Forced motherhood is one of the ugliest things in the human race. She also believes that a woman has much to give to society as a woman, and not just as a mother; for this reason, as well as for the health of the woman and child, she advocates that motherhood should be postponed until at least the age of twenty-three, and that a woman should, through birth-control methods, be able to space her children as she finds suitable with her inclination, health, and economic means.

She also touches a problem which is especially to be brought before the Indian public—that maturity means not just physical maturity, but it must mean physical, plus mental, plus psychic maturity. To regard a woman as mature from the physical standpoint only is to disregard the things which separate man from the beast—the mental and psychic factors. The human being matures more quickly physically than it does mentally or psychically. Mrs. Sanger holds that a woman has finished the period of adolescence, or growth to ripe maturity, only at the age of twenty-three. In India it might be a bit sooner, but it is doubtful if it is much earlier. It is very, very doubtful, if any woman should be a mother null after the age of twenty. And even then Mrs. Sanger holds that motherhood is not the sole aim of marriage, but that marriage means a very deep companionship as well. She advocates a period of at least two years to elapse after marriage before the first child is conceived. This two years she holds to be necessary for a husband and wife to know each other, to cement the ties of love and comradeship, and to work together in their journey through life. The whole attitude of many men that a woman should become a mother at once after marriage, is out of harmony with nature. Sex desire, and the instinct for motherhood, are two entirely different things, and both demand and deserve the respect of all. The desire for a child generally comes long after sex desire has developed. The drive to motherhood which is artificially created by a society, is not the natural motherhood. As a rule, this instinct is aroused in a woman only when she feels in her spirit that she is one in body and soul with her husband. Women cannot feel this unless they know their husbands thoroughly. It takes a long time for a man and woman to know each other, even in the west where we are comrades from childhood, in youth and into maturity. And the woman who desires a child by a husband who is strange to her, who is cruel or disrespectful of her as a woman, hardly exists.

There are chapters in this book which are of very great importance but which it is not well to write of. Not that they should not be written

of—but a review of a volume is no place to treat them. Such intimate subjects demand more extended treatment; they have received that in the volume under review. They deal with the most intimate relationship between husband and wife, and out of which great unhappiness and nervous illness for women often develops. In all sincerity, and with all respect and desire for a more beautiful, natural, and happier married life for men and women, we recommend this book to those who are married or betrothed in marriage.

— AGNES SNEDELEY

SOUTHERN INDIAN BRONZES (first series): By O. C. Gangoly, Editor "Rupam" 6, Old Post Office Street, Calcutta.

A thing of Beauty is theoretically considered to be a "Joy for ever," but practically remains confined to a coterie of elites. How to make the masterpieces of architecture or sculpture painting or decorative art easily accessible to many through cheap yet faithful reproductions is a problem of great import in this age of democracy. Mr. O. C. Gangoly, with characteristic zeal has come forward to tackle with this problem of "vulgarisation" in the French sense of the term. With rare discrimination and taste he has launched this series of "Little Books on Asiatic Art" which proposes to publish not only booklet on Indian art but also on the sister schools of Asiatic art e.g., those of China, Japan, Persia, Cambodia, Java, Siam etc. The first volume on "Southern Indian Bronzes" fills our hope and raises a great expectation. Mr. Gangoly being a pioneer in the study of South Indian bronzes has gloriously succeeded in bringing out the inner aesthetic appeal of these masterpieces in bronze. Anyone that would care to study with a little patience the 23 exquisite specimens reproduced here by Mr. Gangoly is sure to admit that "to know them and to appreciate them is to receive an initiation into a new world of plastic dreams not revealed in any of the masterpieces of Greek or Renaissance bronzes."

In a short introduction of 33 pages Mr. Gangoly has condensed all information necessary to follow him in his documentation. He has further managed to explain certain technicalities with the help of 10 excellent diagrams, illustrating the canons of the shilpastras. The high quality of reproduction and printing makes the book a work of art. We congratulate the editor of Rupam on this noble venture and recommend the book to all lovers of oriental art.

NATYASHASTRA: with the commentary of Abhinavagupta Edited by Pandit M. Ramakrishna Kavi M. A., Vol. I Pp. XXVII+386. Price Rs 6. Gaidwad Oriental Series No. XXXVI. Central Library, Daroda. (1926).

A curious sort of historical fatality seems to cling to the history of ancient Hindu dramaturgy. While actual surviving specimens of nataka or drama rarely go beyond the Gupta era (only recently pushed as far back as the age of Kanishka, thanks to the discovery of *Sariputra-prakarana* and other dramatic fragments of Asvaghosa) and while Bhasa the illustrious predecessor of Kalidasa made a tantalising gesture and slowly came down to the age of vernacular (Malayalam) rehauding—the reputation of Bharata Muni,

the author or rather the first important compiler of Natyashastra still stands with all the glamour of hoary antiquity. Hence the problem of dramatic origins in India is at once exciting and baffling. Abhinavagupta the famous rhetorician of the Kashmirian school while commenting on Bharata's Natyashastra says that the work is a compendium of three different schools of opinion (1) of Brahman, (2) of Sadasiva also called Natya Veda probably identified with Dvadasasahasri or Adibharata and (3) of Bharata. Most of our present Natyashastra.

But what about the long chain of evolution from Brahman's Natyaveda (a branch of the Upavedas) to the Nata-Sutras mentioned by Pāṇini? Practically no specimens have survived. Surely it cannot be that Asvaghosa the Buddhist "litterateur" was the first to compose dramas in Sanskrit. There must have been plays pantomimic as well as textual during the age of the grammarians from Pāṇini to Patanjali who mention titles of such composition based on the Great Epics which were the eternal quarries for our later dramatists like Bhāsa and Kālidāsa. But History has played cruel jokes here as in other departments of Indian literature and we are faced with the formidable task of editing a science of Hindu dramaturgy that goes earlier than most of the extant dramas of our literature—a fine paradox indeed!

Yet from 1865 when Fitz-Edward Hall discussed Natyashastra in his preface to the *Dasarupa*, scholars have been trying to establish the text of this important treatise. The researches of the French scholars Grosset and Regnaud, between 1880-1893 and of Sylvain Levi in 1891 followed by the publication of the Devanagari text in the Kavyamala series in 1891 impressed us more and more with the formidable nature of the textual criticism that was lying ahead. Rāmkrishna Kavi, the editor of the Gaekwad Natyashastra, appeared in the list apparently well-equipped with "40 copies of the text obtained from different parts of India." Tentatively he has classified his texts as (A) North Indian and (B) South Indian manuscripts and has opined that the B group is earlier. But he frankly confesses that "no two MSS. taken at random agree with each other fully." In that case it would be more advisable and scientific, as we suggest to the learned editor, to reserve all broad generalisations for his concluding chapters and to concentrate all his energies scrupulously to the collation of texts and notation of the variants with as much thoroughness as possible. That will make the Gaekwad Natyashastra, as it should be, a *Variorum* edition of the precious text, invaluable for reference. Even if the press copy has been prepared on a different plan, it should be modified so as to satisfy this primary scientific need which alone gives the *raison d'être* for a new and expensive edition of the voluminous text. The editor is no doubt obliged to ply in unknown ocean of textual speculation, but he should, for that very reason, record his personal suggestions, emendations and additions strictly outside the body of the original text as well as commentary. Rāmkrishna Kavi is a Sanskritist of rare erudition, specially in the domain of Hindu *Ars Poetica*. Moreover, he has unique experience of working in almost all

the important manuscript libraries of Malabar, Madras and Andhra. Hence we hope that following the hard yet unavoidable path of patient textual analysis, he will give us a model edition of one of the rarest texts of Sanskrit literature. The sculptural representations of the 93 (out of 108) *Karanas* or postures which he reproduces in the volume add a special value to his edition. We only wish that actual photographic reproduction of these rare plastic documents from the relief on the Chidambaram temple (13th century A.D.) were published as a supplement. So an exhaustive glossary and index would enhance the value of the work. It is a stupendous work and we hope the Pandit will rise equal to the occasion and make this edition a veritable *magnum opus*.

THE HINDU COLONY OF CAMBODIA: By Prof. Phanindranath Bose M.A. Theosophical Publishing House, Adyar, Madras Pp. 410. Price Rs. 3.

Mr. Bose is indefatigable in the work of popularising the history of ancient Hindu Colonies in the Far East. He has already published books on Champa and on Siam and now he winds up the history of further India by compiling from French sources the annals of the Hindu Colony of Cambodia. After giving survey of its political history Mr. Bose adds several interesting chapters relating to the culture history of Cambodia viz Indian Literature in Cambodia, monuments in Cambodia etc.

The detailed description of the Saiva temples of Angkor Thom and the Vaishnava temple of Angkor-Vat adds to the interest of the book. The book may be read with profit by all lovers of Hindu colonial history. As an enthusiastic member of the Greater India Society, Mr. Bose has consecrated several years of his life in the task of propagating the knowledge about Greater India amongst those who are not in a position to read the works in French and other foreign languages. His books should be read widely by the public.

K. N.

OUR ASIATIC CHRIST: By Oscar Macmillan Duck, made and printed in the United States of America by Harper and Brothers 1/p. 151. Price 1.25 dollars.

This is a book for missionary propaganda, and contains truths, half truths and untruths. The author seems to have been inspired by Miss Mayo whom he has not failed to quote. He believes that "India is tired—tired of life and its awful responsibilities and rebirths" (p. 158). But the example of amorous, thieving and irresponsible Krishna "gives India the sense of release, the sense of freedom from Karma; you can kick a hole in the universe if you only follow Krishna", it is a religious druck" (p. 159).

The author has reverted to the old method of preaching Christianity.

THE GOSPEL OF SAINT JOHN: By Hirimohan Banerjee (5-1 Kasi Basse Lane, Calcutta) Pp. XXXVI + 224 + 16 (Foreword) + 27 (Supplement). Price Rs. 1-8; or 2s.

Contains the authorised version of the fourth Gospel. Our author's commentary is uncritical

and unreliable. He is obsessed with the idea that "Man is a born sinner."

FATE AND ACTION: By Durga Prasada, Vakil High Court, Allahabad. pp 29.

The sub title of the pamphlet is "The Philosophy of Life"

VEER SHAIWA PHILOSOPHY OF SHAITAVANAS: By Siddharamappa Dundappa Pawate: Published by Vithappa Dasavappa Bheangadi, Hubli Pp. 61+13. Price Re 1- (paper).

Useful but marred by sectarianism.

MAHES CH. GHOSH

ALL-INDIA DRAMA CONFERENCE, 1921. Published by the Amateur Dramatic Association, Bangalore City, 1927.

The Amateur Dramatic Association of Bangalore city organised the first Festival of Fine Arts in 1919 which was opened by Dr. Rabindranath Tagore. The Association, on their success, organised an All-India Drama Conference and a second Festival of Fine Arts in 1921 opened by Mrs. Sarojini Naidu. This volume which has been tastefully produced contains the papers read on the occasion together with the address. Most of the 15 papers are illuminating and repay perusal. They give the tradition, motifs and methods of old Indian Drama as well as thoughts and scope of present-day drama and the stage. Mrs. Naidu pointedly says, "The stage to-day is the University of the people." The papers on The Dravidian Drama, The Kerala Theatre, The Art of Dancing in South India, The Indian Dramatic Tradition and how it helps, are both interesting and instructive, and that on Tagore as a dramatist will be enjoyed by many. The labours of the A. D. A. have been crowned with success so far as they go. We have here papers on the modern Hindi and Marathi stage, but the Bengali stage is conspicuous by its absence.

THE PATRIOT POET: By Chaudhuri Rahu Ali Allahshahi. B. A. Lucknow.

The late Khan Bahadur Syed Akbar Hussain of Allahabad was a great Urdu poet. He introduced a variety of novel ideas and expressions in Urdu poetry. He wrote on almost all topical matters and was popularly called the "Lisan-ul-Ast" or the mouthpiece of his times. The author has shown the various sides of his poetry with extracts and translations. Some of his sayings clearly show the catholicity of his mind—e.g., "Do not call him good or bad on account of his religion. See his character, for that is the real test." "No mere these external forms are useless. Those who are good are really men of faith and those who are bad are Kafir."

chapter deals with the proposed lines of resuscitation and the Appendix indicates the lines of enquiry to be adopted.

THE MADURA SAURASHTRA COMMUNITY: By Mr K. R. R. Sastry, M. A. Madura.

Mr. Sastry has studied the weaving communities of Madura at close quarters. He describes the social and economic sides of the life of this Community of the Saurashtras who have settled in 56 places in South India. They migrated to Madura after settling at Devagiri (Daulatabad) and Vijaynagar and their spoken language, called Khatri, has got an admixture of Sauraseni, Vraja and Telugu words and phrases. This is calculated to be a very useful study in applied economics.

RAMES BASU

HINDUSTANI SEVA DAL: Published by Dr. N. S. Hardiker, General Secretary Price one anna.

In this book the aims, objects and the constitution of the Hindustani Seva Dal have been embodied in details. The Dal was founded by Dr. Hardiker with the object of training and organising the people of India (i) for National Service and disciplined sacrifice with a view to the attainment of Swaraj by peaceful and legitimate means; (ii) for enrolling and bringing under uniform discipline all existing volunteer organisations and (iii) for raising the standard of National efficiency by systematic physical culture. Its organ the *Volunteer* has been aiming to evolve the ideals of patriotism, nationalism and national service. The Indian National Congress in its Coconada session (1923) recognised the valuable services rendered by the Dal. Other volunteer organisations in the country would do well to frame their constitution on these lines.

P. O. S.

GERMAN

BENGALISCHER ERZÄHLER (Bengali Novelists) or "Der Sieg der Seele" (The Victory of the Soul): By Reinhard Wagner, Publisher: Weltgeist Verlagsgesellschaft, Berlin. Price 6 M. 20 Pf.

The Weltgeist Publishing Company has sent me the above-mentioned book for the sake of review. I am glad to draw the attention of my countrymen to this excellent publication. It is the first successful attempt of a German scholar who has been a very diligent student of Indian culture for the last several years. It is the first German translation from the original Bengali. We find here a collection of "chota galpas," short stories, selected from the works of famous Bengali writers of modern times. The author has prefaced the translation with a few remarks that set forth the nature and contents of the stories. The collection begins with the immortal song of Dwijendral Roy, "My Motherland." The 29 stories that follow are taken from the works of Jatindramohan Sen Gupta, Hemendrakumar Roy, Manilal Bhattacharya, Manindralal Basu, Nalinikanta Bhattacharya, Prabhakumar Mukhopadhyaya, Rabindranath Thakur, Saratchandra Chattopadhyaya and Shrimati Sumitri Dutt. Dr. Reinhard Wagner has rendered a signal service to the cause of Bengali literature through this translation of representative "chota

calpas." They bear ample testimony to the inexhaustible wealth of deep thoughts, high sentiments and unflinching devotion that reverberate through the empyreal vaults of the Indian mind.

The printing and the binding of the book are simply excellent.

TARACHAND ROY

DIE SEXUELLE NOT UNSERER Zeit (*The Sexual Distress of our Times*); By Dr. Hertha Riese. Published by Herse and Becker, Leipzig 1927. 110 pp. Price not given; perhaps M. 5.

Dr. Hertha Riese is a practising physician in Frankfurt on the Main in Germany. She is the consulting physician in charge of one of the "Marriage Advice Centers" of which there are seven already in existence in Germany, with others in various cities coming into existence. These Centers are maintained by the various municipalities. To them women may come free of charge to consult physicians about the problems in their married life, such as the sex education of their children, contraceptive methods, illness, etc. As the director of one of these Centers, as well as a practising physician, Dr. Riese is well qualified to give the result of her experience to the public.

This volume gives a very, very black picture of the conditions of working class families in Germany. There is a section given to sexual problems in bourgeois society, but most of the volume is concerned with the problems of the proletariat. We see families of four to twelve living in one room in an attic. The one room is the sleeping room, kitchen, and dining room for the family. The mother gives birth to one child after another— with her other children as spectators. Within an hour after the birth of a child the mother is often up taking care of the other children. In order to avoid having more children, we see the husband often going to sleep in the barracks for the homeless. Then we see him, driven by the natural needs of sex, pick up with street women. Next he takes to drink; then he comes home and beats his wife and children and forces himself upon his wife. He has perhaps contracted a venereal disease, and this he gives his wife. And, since the father and mother sleep in the same bed with one or more of the children, as well as use the same towels and dishes as the children, the venereal disease is given to the children.

The picture as here given us, with all its ramifications is horrible. And yet with it all Dr. Riese sees but one solution—birth-control methods which will enable the men and women to regulate the size of their family, combined with more education and better living conditions for workers. All this is good so far as it goes. But it is only a palliative, not a solution. Here in this book is pictured the choice blossoms of the capitalist system—the system by which the vast masses must sell their labour power to the capitalist minority in return for a few pence a day. Although birth-control methods give men and women the power to regulate their own lives, still poverty and the capitalist system cannot be touched by this solution. Combined with birth-control methods must go a fundamental and revolutionary change in society by which those who work get the fruits of their labour, instead of this fruit

being harvested and enjoyed by the exploiting minority.

The last section of the book deals with the morality and ethics of bourgeois society. Whereas, with the workers, marriage is nearly always based upon love, in bourgeois society it is the result of "reason". Which means that a man and a woman are mated, as animals are mated, according to economic considerations. These "marriages of convenience", which have economic considerations as their foundation, are the origin of much of the misery in upper-class society. It is the men from this class who seek their women companions on the streets, or who maintain one or more mistresses whom they find more interesting than their legal wives. And likewise with the wives; married to men whom they do not love and for whom they have no respect or attraction, they also keep up the public appearance of the legal marriage, while at the same time having their lovers privately. Often the husband and wife come to an agreement by which one does not interfere in the affairs of the other, only the outward form of marriage being maintained. Yet it is this class which calls itself the "respectable" class of society, which demands the right to set the ethical and other standards for society, which makes the laws, and talks about the ignorance and immorality of the working class. It is a rotten system. The results show that venereal diseases, for instance syphilis, is most widespread among these classes. For instance, statistics show that syphilis is most widely spread in the following classes—the highest being taken first business men, academic circles, artists and the professions, and, the lowest figure—the working class. Of course, Dr. Riese does not give these facts. Although she is doing good work in her way in the Marriage Advice Center of Frankfurt, still her only solution of all these problems is "responsibility in love". She is doing what she can by giving birth-control methods, by sending women to specialists, by giving certificates enabling a woman to be sterilized when her health requires it. All good so far as it goes. But her methods are not cutting at the cancer that is destroying society—the capitalist system which subordinates all things in life to profit and pleasure of the exploiting few. Her methods must go hand in hand with the Socialist movement for a new society. Otherwise, they are but superficial palliatives.

AGNES SMEDLEY

SANSKRIT-HINDI

THE RASAYOGANAGARA. VOL. 1: By Faidya Pandit Hari Prapannya, Shri Bhaskar Jushadhalaya, Bombay. Price Rs. 12.

This is a laudable attempt at the compilation of a Sanskrit-Hindi dictionary of Ayurvedic Rasa Medicines. The various medicines are arranged in alphabetic order and original Sanskrit texts, with reference, tika—where deemed necessary, and translation in Modern Hindi given in each case.

We have to wait for the complete treatise to see how far complete this work would be but from what we can see from the volume under review, it is likely to be a valuable addition to the literature on this subject.

The English introduction should have been written in consultation with an up-to-date authority on the matters discussed, as many obsolete speculations have been served up with really valuable data. Besides the introduction to a work of this nature should always be terse, concise and confined solely to the subject matter of the treatise.

A table of Sanskrit anatomical terms with their English equivalents are given. Similarly a glossary of Sanskrit names for the various medicinal ingredients together with their Hindi and English (or Latin) equivalents, and another one giving descriptions in precise scientific English of Ayurvedic processes, should be included in order to render the work of real value to Scholars.

K. N. C.

HINDI

PREMIKA (a novel): By Pandit Javariprasad Sharma; Published by Hindi Pustak Bhandar, Lahoria Sarai. Pp. 19+341. Price Rs. 2-8.

Marie Corelli's *The Maids* loosely done into Hindi with considerable abridgements.

The author is the editor of a Hindi paper and that accounts for his easy flowing racy style. That also accounts for the extremely unsatisfactory nature of the introduction which is evidently written in haste and hardly does justice to the well-known English novelist.

The reasons that he gives for thinking that Indians will find the book particularly instructive and entertaining, are thoroughly fallacious. Coningal fidelity is not a monopoly of Indians and an exposure of the abuses in English society will never fill thoughtful Indians with a sense of elation. The *tu quoque* argument is one of the weakest kinds of argument. According to the author, the non-recognition in England of Marie Corelli, as a writer of the first rank, is due to her merciless criticism of English society. This is hardly fair, for English critics have never hesitated to recognise the merits of H. G. Wells, Bernard Shaw, and others. In short the introduction bristles with irresponsible statements like these. The author fails to realise that there is a good deal of difference between mere journalistic claptrap and sober literary criticism.

The general get-up of the book is extraordinarily good.

BRAHMA DHARMA PART II: Published by the Lahore Brahma Dharma Prachar Samiti. Pp. 84.

A Translation of Maharshi Devendranath Tagore's well-known dissertations on the Brahma faith.

M. B.

especially of Rajput history will hail this monumental original work of the Rai Bahadur who is the greatest living authority on the subject. All the available materials, some of which are accessible to our author alone, have been laid under contribution. Such a work, based as it is on up-to-date materials and scientific principles, was keenly felt as a desideratum to replace the work of Col. Todd written about a century ago.

The fasciculus under notice consists of two parts dealing with the history of Udayapur from the times of Guhil to those of Rana Pratapsingha. One may here and there differ from the opinion of the author but his array of facts and citation of sources cannot but command admiration. At the end of the first part are given seven appendices—the last one being the bibliography. Here we miss such works as—Prof. Bhandarkar's *Excavations at Nasar* (Arch-Surv-Memoirs), and the work on Rajput Paintings by Dr. Coomaraswamy and Mr. O. C. Ganguly. In the introduction the author discusses about the nature and sources of his materials.

This is a work for which one shall have to come to Hindi literature and for this we congratulate the learned author.

PUNDIT SATYANARAIN KAVIRATNA:—By Pandit Benarsidas Chaturvedi, Editor, the Vishala Bharata, Hindi Sahitya-Sammelan, Allahabad.

This is the life-sketch of a Hindi Poet who may be called the last representative of the *brajabhasha* dialect. Pundit Satyanarain was a born-poet. His life of simplicity is reflected in his poems. His main credit was his attempt to infuse new life and thought into old-type themes of poetry, as we find in his *Bhramaravati*. His appeal to Rabindranath to do something for Hindi as he did so much in English is worth mentioning. Pundit Benarsidas has done a service, not only to the poet who was his intimate friend but also to the Hindi literature by showing the man and his mind.

SORASARAT:—By Mr. Krishnakanta Malviya. Published by Pt. Padmakanta Malviya, Adhyatma Press, Allahabad.

This sumptuous volume written in the form of letters on what young women should know will at once attract the attention of those for whom it is intended. It may not be too much to assert that it has surpassed all other works on the subject in Hindi literature. The views of the author are catholic and judicious—and are based on a comparative study of eastern and western ideals. The quotations from Sanskrit texts are not derogatory to modern advanced views on life. The appendix gives some life-sketches, poems, and directions for simple physical exercises for women. It is surely a most worthy volume for presentation.

RAMES BASU

MALAYALAM

RAJYUKTA KA ITIHAS—FASCICULES II: By Rai Bahadur Gaurishankar Hirachand Ojha, Vaidik Sanshodhaya, Aymer. 1927. pp. 401-736+1r.

Considering the fact that most of the works on history in the Hindi language are mere second hand compilations, every lover of history and

YESU-KRISTU (PART I): By A. John-Maynard. 1st edition, published by the Vidyabhiraradhini Press, Quilon. Pp. 92. Price As. 6.

A short useful life-sketch of Jesus Christ, being a free rendering from the English translation of the French book, *La Vie de Jesus Christ*.

PARITAMASARAH: By P. V. Rama Menon. Published by C. P. Nambudiri and Brothers for the Kerala Publishing House, Trichur. Pp. 186. Price Rs. 1-4.

Books on scientific subjects are few and far between in the Malayalam literature. Mr. P. V. Rama Menon has done a real service by publishing his book on the law of evolution which is a free rendering of Prof. Smakker's treatise on the subject. Students will no doubt profit by reading it. We wish, however, that the author had given a vocabulary of the scientific terms he had used as an appendix to the book which would have been of use for easy reference.

OTTAM-TULLALUKAL: Published by the Mangalodayam Press, Trichur. Pp. 656. Price Rs. 2.

This is a collection of 18 Tullal songs composed by 11 different authors. All the songs deal with one or other Puranic story, such as of Ambarisha, Yayati, Ajamila and others. The authors are all now dead, but they lived and wrote in the 1st quarter of the 20th century. The present volume is the 3rd of the *Mangalodayam Granthavali* series.

P. ANJAN ACHARY.

BENGALI

KHEJURI-BANDHAN: By Mr. Mahendranath Karan. Kshemamanda Kuir, Bhanganmari, P. O. Janaka, Dist. Midnapur.

The author who has already attained reputation as the historian of Hujli which is an important sub-division from the standpoints of language, ethnography, and geography of Bengal, now gives a connected account of the port of Khajuri which was once famous for its Anchorage and signal mast and also of Kanthali noted for its lighthouse. More recently the former was connected with the first telegraphic experiments in India in 1851. Many other facts, together with a gazetteer, are collected. There are some illustrations.

RAMES BASE.

BAJRABANTI: Collected by Umesh Ch. Chakravarty, 91, Upper Circular Road, Calcutta.

The book is a collection of instructive and inspiring portions from late Deshabandhu Das's speeches and writings. The compiler has arranged them in such a systematic way as would enable the reader to form an idea about Deshabandhu the man and his mind. This book may be included as a text book in national schools.

SADHANA: Compiled and published by Amal Kumar Ganguli from Saradashikari Ashram, J. Maharani Hemanta Kumari St., Calcutta. Price Rs. 1-4as.

In the book under notice the editor has compiled selected Slokas from our religious literature e.g. Veda, Upanishada, Gita, Chandi etc. Several poems from our national songs have also been embodied in the book. This excellent selection of slokas and poems should, we think, be incorporated in the curriculum of our national boys' and girls' schools.

P. SENGUPTA

MARATHI

MUSSOLINI AND FASCISM: By D. V. Jamhankar B. A. Publisher—D. K. Gondhalekar, Shamcarpeth Poona. Page 286, Price Rs. 2.

In the first part of this book the author has narrated in a popular and fascinating style of Mussolini's life and the second part is devoted to the origin, tenets, and achievements of the Fascist movement. A perusal of the book is sufficient for removing from the minds of readers the false ideas engendered by perverted accounts and mis-statements of interested writers. The set-up is excellent.

CHHANDORACHANA OR A TREATISE ON PROSODY: By M. T. Patwardhan M. A. Publisher—Ravikiran Mandal, Pages 15+228 Price Rs. 1-12.

It was some forty years ago that a small brochure was written by the late Parasharampant Tatya Godbole on Prosody for the use of students in vernacular schools and two more books appeared since then, but their treatment of the subject was neither exhaustive nor scientific. Prof. Patwardhan's book can easily surpass them both in the quality and quantity of matter, inasmuch as the writer, who is thoroughly acquainted with the Sanskrit, Marathi and Persian languages and, of course, with English, and is himself a renowned poet of the modern type, has treated the subject in all its aspects in a systematic and scientific manner, giving the characteristics not only of classical meters derived from Sanskrit but also of those lately adopted in Marathi from Persian and English poetry such as Qazal sonnets, lyrical songs &c. The book is a valuable addition to Marathi literature.

KATAVICHAR: By seven members of the Ravikiran Mandal, who are also its publishers. Pages 107. Price Re one

This is a collection of essays written on different aspects of Marathi poetry in what is called the 'Keshabent era'. It is to be noted that this group of seven includes one lady graduate (who alas! is no more living). Some writers in the outburst of enthusiasm for modern Marathi poetry have made astounding statements in denunciation of the old religious poetry. But otherwise the book furnishes rich food for reflection to those who feel interested in the renaissance of Marathi poetry under the influence of Western poetical literature.

VIDYUT ANI VIDYUT CRANE BOOK 1: By G. K. Date. Publisher—Vidyut Karyalaya, Malad. Pages 207. Price Rs. 2-8.

The speedily growing use of electricity in factories and homes in India makes it incumbent on all, whether educated or uneducated to make themselves acquainted at least with the elements of the subject. There are thousands of artisans working in factories driven with electric power who have to handle, erect and operate electric cranes, and this book should prove as an invaluable guide to them. But the pity is that the book instead of being written in an easy and popular style, is written in the form of catechism and no attempt appears to have been made to divest it of technicalities or to make them understandable by lay readers. However, even in its present form

book will prove useful to practical men and first year students of technical institutes in India. Diagrams and illustrations are given where necessary.

CHAMATKAR-NIRNAYA: *Or the question of miracles solved.* By Shri Mayanand Chaitanya. Publisher Govind L. Desai, Jayaji Bazar, Gwalior. Pages 267. Price Rs. 1-8.

In this book the author has, or rather thinks he has satisfactorily exploded the wrong notions and beliefs entertained by his countrymen about miracles alleged to have been worked by revered saints and Yogis in India and established the truth that the only true miracle in this world is that of Vishwarup, such as was shown to Arjun by Shri Krishna. He regards as false every miracle which is a transgression of the known laws of Nature, which means that he has no faith in the possibility of man's acquiring further knowledge and that advanced knowledge discounting present-day theories about the laws of Nature. There is superstition in avoiding superstition says Bacon, and this saving seems to hold good in this case. The single miracle in which the author has faith viz. that of Vishwarup can be seen even in these days says the author with the Divine sight, which can be acquired by a careful perusal of his another book named 'Divya-Drishti'. How incredulous is the world not to believe it!

V. G. APTE.

GUJARATI

INDIA IN WORLD POLITICS: By Dr. Tarak Nath Das. Printed at the Union Printing Works, 137 Grey Street, Durban. Natal. Thin Paper cover. Pp. 87. Price 2s. 6d. (1927).

This Gujarati translation of a Book on Indian Politics is made, printed and published in South Africa by an individual who calls himself *Swatantra*, (Independent). We are greatly pleased to see Gujarati so flourishing in that part of the world, as the translation is really intelligently done, and the rendering bespeaks great care on the part of the writer.

WILHELM TELL: By Schiller: Translated by Narshimbhai Ishcarbhai Patel, printed at the Charotar Printing Press, Anand. cloth bound. Pp. 198+78. Price Rs. 2-0-0. (1927).

Seventy-eight brightly and intelligently written pages on the life and life work of Schiller: This is an introduction to Gujarati readers for the first time we believe, of the world-famous Schiller and his work. His well-known play Wilhelm Tell is translated here and ably annotated, and illustrated

too. The author has done his work with a thoroughness which is admirable.

LIFE OF SHIVAJI: By Kakalbhai Kothari.

This is an up-to-date biography, which has utilised all materials to hand, dispelling the many falsehoods and illusions about the great Hindu Leader. There have been other Lives written of him but they were stale, lifeless, and not up-to-date: This one has a force and vigor of its own and has at a bound secured its proper place in our Literature.

A GUIDE TO HOLIDAYS: By Pranjiban Vilhaldas Dhruv printed at the Jinn Vijay Press, Surat. clothbound Pp. 592. Price-Rs 5-8-0 (1927).

The lore and the ritual in respect of each Hindu holiday are fully given here. They furnish truly a guide to their observance as the name of the book implies.

RUBAIYAT OF OMAR KHAYYAM: By Rustam Pestanji Bhajivala, printed at the Gujarati News Printing Press, Bombay. Paper cover, pp. 25+86. Price Rs. 1-0-0. (1927).

Real love for the work of the Philosopher-Poet of Persia has prompted Mr. Bhajivala to publish this little volume. Information is given in it in respect of the Poet and his work. The translation of his quatrains is such as would be found more suitable for Parsi than Hindu or Mahomedans.

A REVIEW OF NALAKHYAN: By Oza, B. A. printed at the Rharat Vijaya Press, Baroda. Paper cover. Pp. 60. Price Rs. 0-6-0. (1927).

Premanand's Nalakhyan is a gem in the verse literature of Gujarati. This detailed review of the poem brings out its good parts in very great relief.

SHRI ANAND KAVYA MANODANU, PEARL VII: Published By Jiban Chand Sakar Chand Jhaveri, printed at the Jivan Sinhi Printing Press, Lindi. Cloth bound. Pp. 192+66+192+148. Price Rs 1-8-0 (1927.)

This collection consists of several poems in old Gujarati such as Dholanara 'G Talo and others. It has a very informative instruction by the pen of Mr. Mohanlal D. Desai on the Poet's life and work, and on the whole it is a useful contribution to the literature of old Gujarati.

The Agamodanya Samiti of Rutlam has published a substantial volume of Gathas 1 to 1684 of the *Vishishavashyak Bhashya* of Jain bhadrā gani Kshama Sharamani, a well-known book of Jain ritual. It is an entirely religious book and would be appreciated by Jains.

K. M. J.

INDIAN PERIODICALS

Second Chambers in Provincial Legislatures

In the course of an article entitled "The Second Chamber in the Indian Constitution" in *The Indian Review* the Hon'ble Sir Phiroze Sethna deals with the constitution, functions and other important aspects of the Council of State. He concludes his article as follows :

Our provincial legislatures are not bi-cameral, but the question is kept open, and the Government of India Act expressly provides that one of the questions which the Statutory Commission will have to consider is "whether the establishment of Second Chambers of the local legislatures is or is not desirable." The subject has hardly received any attention at all. In some parts of the British Empire, both the system are found working side by side. In some provinces of Canada, there is a single Chamber, in others there are two chambers. In Australia every state has two chambers. It would be desirable to inquire into the working of the Second Chambers in the provinces of Canada and the States of Australia (and also the United States) and I would suggest that a competent Indian should visit those countries and prepare a report on the subject. Such a report will be valuable in enabling us to decide whether our provincial legislatures also should be bi-cameral or not. Small provinces, particularly if they are homogeneous in character, may not find it necessary to have a Second Chamber. But Bombay, Bengal, Madras and the United Provinces are large provinces and perhaps a Second Chamber may be found desirable and expedient in them. A writer suggests that the best way of providing for communal representation and interest is to establish Second Chambers in the provinces. The suggestion is worth consideration.

Rabindranath on Co-operation

The Bengal Co-operative Journal has published an authorised translation of Rabindranath Tagore's presidential address at the International Co-operators' Day Meeting at Calcutta, under the caption "Co-operation and our Destiny". According to the poet:

In the pre-historic age huge primitive animals gathered in their bodies immense bulk and power. But man did not establish his superiority by becoming a bigger monstrosity. Man came to this world, weak and small, and was able to overcome

much huger animals in their isolation by realising the unity of separate units of power. Each man to-day is the master of an immense power because of the combination of the physical and mental powers of many men. Man thus is now the lord of animal creation.

Likewise men can rise out of the misery and conflict of inequality if the real truth of unity is allowed to prevail in the domain of economics also.

Only recently man has discovered the utility of this truth in the domain of economics. This is what is known as the production of wealth by co-operation and this shows that the time is not distant when mammoth capital will cease to exist, by splitting up into smaller units. Man will be free from the tyranny of economic inequality not by wading through blood, but by establishing a principle of harmony between the various units of power. That is, the principles of humanism whose absence caused such a disorder in economics are going to be recognised at last. Just as, formerly, the weak social animal conquered the isolated monster; even so to-day, victory will come to the economically weak, not by extermination of the powerful but by realising its own strength through unity. I can already see its victorious colours flying in the distance and in our country, too, that same victory is being heralded by the principle of co-operation.

Some people advance the argument that in India development schemes should be shaped on the models of the Danish agriculturists. The poet refutes this argument, for :

Conditions in India and Denmark are not the same. The improvement of dairy farming there is not due entirely to the co-operative movement; the help and initiative of the State plays a big role. Arrangements have been made for the extensive training of the people at large in dairy farming which is possible only in a free country. Another great advantage of Denmark is that the country does not groan under the heavy weight of armaments. The entire revenue can be adequately applied to the manifold needs of the people. But it does not rest with us in India to disturb the revenue for purposes of the health and education of the people. The amount set apart for the country's welfare is hopelessly inadequate for these purposes. Here again the problem is the extreme difference between the powers of the state and the powers of the people. But we must conquer our poverty and downfall due to this difference by realising our own strength through methods of co-operation, by improving our own health and education. I have often

said this in the past and it has to be said again and again even now.

He observes in conclusion:

There was a time in our country when the community had a claim on the wealth of the rich. They were forced by the pressure of public opinion to acknowledge the responsibility of their wealth. That led to the efficient supply of social needs and society was kept alive. But because of such traditions of charity, the people never learned to depend on themselves. They did not feel that the food and drink, health and education, religion and joy of the village depend on the co-operation and the good-will of each of them. So when there came the modern social changes, when the enjoyment of wealth became exclusively personal, when the responsibility of possession did not naturally lead to its application for the general welfare, people failed miserably to uphold their own interests. It is because the rich spend their wealth in the towns and cities that the poor villagers have to lament the over-miserliness of their fate. They have lost the power to believe that the means of their betterment are in themselves.

If in the first instance, this faith can be revived in the economic field only then will the country begin to live in all its departments. Our duty today is to preach this truth by spreading the co-operative system among the people. The organised strength of the puny monkeys caused the downfall of the powerful monster, Ravana, ten-headed in his greed, twenty-handed in his exploitation. This organisation was bound by ties of love to a central figure, Ramehendra by his love unified the weak and made of them a terrible force. We want that love, that coherence for our salvation to-day.

Where Asia and Europe Meet

Mr. S. V. Ramamurthy, M. A., I. C. S., writes in *The Hindustan Review*:

East and West meet not on their own plane but on a higher plane. Snow and water meet in their common nature as shown by a common history taken over all time. Snow cannot claim precedence over water because in summer snow yields water while water merely evaporates. Water cannot take precedence over snow because in winter water flows as rivers while snow keeps idle on the mountain tops. Take their history over all time, they are identical.

Asia may work out science from religion. Europe may build up religion from science. But the processes, when complete, will be identical. Europe may move when Asia rests. Asia may move when Europe rests. Yet over all time each total activity is of the same pattern.

Europe and Asia meet in the vision of those who see not only the past but also the future, in the vision that transcends time and space, in the vision that is of God. To Asia then whose life flows from her religion it has been given to realise the brotherhood of man. Buddha has taught it. Christ has taught it. Muhammad has taught it. Many lesser men in Asia have lived it. To Europe,

the realization of the brotherhood of man is a hope of the future.

In the present then, Europe and Asia are bound by their dual rhythm. Europe has been active but her life is in floods. Asia has been bound in sleep but the snow on her mountain tops are melting. Cast off the clothes of winter. Prepare ye for the new summer!

Swami Vivekananda's Doctrine of Service

Swami Ashokananda in discussing the origin of Swami Vivekananda's doctrine of Service in *Prabuddha Bharata* observes:

Service originates from love and sympathy in the ordinary plane. But when by constant practice, our sympathy is purged of its earthly taints, when we learn to look upon suffering humanity as only God in different forms assumed by him in order to offer us opportunity to serve him, as Swami Vivekananda says, we find that the consciousness of the Divine in men is the motive of service, and such service becomes a potent means of God-realisation: *this is the doctrine of service*. Its origin, so far as the Ramkrishna Order is concerned, is traceable to that psychology which underlies Sri Ramkrishna's whole teaching and especially his teaching on the harmony of religions. The fact is that both Sri Ramkrishna and Swami Vivekananda taught and exemplified a certain attitude towards life and reality: religious harmony and service both come out of that attitude, and also that other doctrine of Swami Vivekananda that there is no sin. They all rise out of the monistic consciousness.

Such is our comprehension of the problem. Sri Ramkrishna may not have expressly asked Swami Vivekananda and other disciples to undertake secular works for the service of man and to propound the doctrine of service by which a universal spirit of service could be evoked, helping on the one hand the national regeneration in its various aspects and purifying on the other hand the hearts of the workers and leading them on to Self-realisation, the only one goal of human life. But there is that in Sri Ramkrishna's teaching, which directly and inevitably leads to them. If Sri Ramkrishna's teaching was the seed, in the fertile life of Swami Vivekananda and other disciples, this has become a mighty tree, of which this doctrine of service is a main branch.

Acharya Bose on India's Intellectual Life

The Mysore Economic Journal reproduces Sir J. C. Bose's illuminating Mysore Convocation Address under the caption "India's Intellectual Life". The Scientific Savant opens his address with a reference to his early struggles:

I was paralyzed at the beginning of my life by various hypnotic suggestions that India was only interesting because of metaphysical speculations of her ancient dreamers and that the great-

ness of the country was past never to be revived again.

You may ask who taught me better, what led me to persist against insuperable difficulties? My answer is that my own work, my teacher, that strokes of repeated adversity served as the adequate stimulus, and that the lesson of the past was my abiding inspiration.

According to Acharya Bose:

Teaching and research are indissolubly connected with each other. The spirit of research cannot be imparted by mere lectures on antiquated theories which are often entirely baseless and which effectively block all further progress. Nothing can be so destructive of originality as blind acceptance of ex-cathedra statements. The true function of a great teacher is to train his disciples to discover things themselves. Such a teacher cannot be easily found and it will be your duty to discover him and give him every facility for his work. Let there be no creation of a learned caste whose attention is mainly taken up in securing special privileges. It is only from a burning candle that others could be lighted. The pupils by working under such a teacher will learn the value of persistence and of the infinite care to be taken at every step; they will catch from him glimpses of inspiration by which he succeeds in wresting from nature her most jealously guarded secrets. They will become a part of his being and will hand down a passionate love of truth through fleeting generations. That spirit can never die; we shall pass away and even kingdoms may disappear. Truth alone will survive, for it is Eternal.

Regarding the chief function of a University he observes:

The extension and utilization of knowledge in the service of men are as important a function of the University, though not only function. It is here that we are brought into intimate contact with great thoughts and ideals of different races and people. We need not be discouraged by the temporary aberration of man, but must be inspired by the nobility of his aspiration. It is not by withdrawal but through active struggles that we shall best serve our country.

Gold Reserves in Mysore

We read in *The Feudatory and Zemindary India*:

Five mining companies carried on gold mining at the Kolar Gold field during the twelve months ending June 30 last, all producing and paying dividends. The nominal paid up capital of all the companies remained the same as in the preceding year namely £1,717,000. The quantity of fine gold produced last year was 382,899 ozs. and the quantity of fine silver was 22,883 ozs. The total value of both minerals was £1,633,729, being a decrease of £52,816 or 3.13 per cent, in comparison with the previous year. This decrease in value is due not only to decrease in production but also to a slight drop in the market price of gold and fluctuation in the rate of exchange. The total amounts paid in dividends by all the

companies last year was £309,168 or 18.54 per cent, of the paid up capital of all the five companies, the corresponding figure for the previous year being 18.58 per cent. The royalty payable to the Mysore Government was £87,599 being a decrease of 4.02 per cent.

Evile of World Economy

The outstanding characteristic of the modern world is its increasing geographical unification—and this world unity has brought about world economy. Prof. Dr. P. J. Thomas of the Madras University discusses the world economic problems in the course of an informative article in *The Young Men of India*. He at first examines how far the world has benefited by this world-economy and says that it "has brought about a growing sense of world solidarity." But, observes the writer, these gains have not been obtained without attendant evils:

World economy has made for increased international dependence, and the consequences of international rivalry are to-day more intense and widespread. Every civilized country now gets many of the most essential things from outside. Britain, for instance, imports more than three-fourths of its foodstuffs and all its cotton from abroad and if those distant countries refuse to send those articles or are prevented by war from doing so, industry will come to a sudden collapse and starvation will stare the country in the face. The same will happen if other countries do not purchase Britain's goods. Similarly a crisis in one country affects all others, for as already shown, all countries are interdependent in industry and finance. Those who have followed the course of the American crisis of 1907 will bear testimony to the international character of financial and industrial fluctuations.

Labour unrest is also growing in all countries and as labour is now organized on an international basis it is clear how the menace of the labour movement is international too. We now know that a general strike is quite feasible in countries where labour is well-organized, and there is no reason why a more unified international labour movement should not bring about international strikes.

Thus world economy is in many ways threatening the safety of the world. If it has made our lives more cheerful and our surroundings more congenial, it has also made our economic position more insecure and our comforts less dependent on our own efforts. What is the remedy? National Governments acting alone have proved themselves ineffective in controlling crises and checking the inordinate ambitions of Trusts and Kartels. The impotence of national governments will only increase in the future. Therefore, if world economy is to be made in function for the good of mankind, it is necessary that there should be a strong international organization to control it. There is no getting away from this conclusion. And we in India are as much interested in it as those in

Europe and America, for we depend on world market for the disposal of our products, as the world markets depend on us for their supply. Like other countries we have gained and lost by the emergence of world economy, and our future interests are inextricably connected with the ease and safety of international economic relations.

Tapasvins or Politicians ?

The *Vedic Magazine* publishes an inspiring address of Mr. T. L. Yaswani where he deals with several aspects of Brahmacharya in relation to national character and national destiny. He observes:

How may we rebuild India ? The question has been asked me by youngmen in different parts of the country. Some there do I know,—some among our elderly politicians,—who think a new India can be built by snatching concessions from the Government and Great Britain. Not so think I. Some there be who have faith in Royal Commissions, Council debates, and perchments of Parliament. My faith is different. A New India, I humbly submit, will be built by the power of Tapasya. Not politicians but Tapasvins will build a free India. The India that is to give a mighty message to the world, the India that is to be a teacher of the world, a servant of humanity in the coming days, the truly free India will be built. I humbly submit by the Shakti born of Brahmacharya, of purity and wisdom, of Tapasya,—not by discussions in Councils, not by debates in Parliament.

So let my closing word to you be:—Develop the power of Tapasya. The ancient books tell us that Tapas built the universe. In the beginning, we read, the world was not; then God the great Spirit did Tapas; and of it the worlds were born. Out of Tapas, too, will be born a new nation. If you that are young, if you in different parts of the country grow in the spirit of Brahmacharya, of Tapas,—then I feel, we shall not have to wait long for the coming of the day of a new India, a free India. Tapas, sacrifice, self-control, Brahmacharya,—there is the secret of national advance.

I have asked myself again and again:—"How many of India's youngmen are prepared to pray to God:—"O Lord, accept us as a sacrifice!" Believe me, new India will not be built by talks and meetings and paper-resolutions. New India will be built by bands of young Brahmacharis, young Tapasvins in whose hearts will be the silent aspiration, the silent prayer:—"O Lord! accept us as a sacrifice."

Such youngmen India needs today. Clothed with poverty and filled with a longing for India's liberation, they will move from place to place; they will wander from village to village, declaring to waiting multitudes the message of India and her ancient Rishis. Blessed, indeed, will be such youngmen. For them will the Lord take up as instruments of India's destiny. And they will be the builders of the temple of the Mother.

Fatherhood of God

Some people assert that, the conception of God as father is a prominent feature in the religion of Jesus. But "quite reverse is the fact"—remarks S. Mahesh Chandra Ghosh in the course of a well-documented article in *The Vedic Magazine*:

Of all the countries of the world, India was the first to discover this truth. The idea of the Fatherhood of God is as old as the oldest part of the Rigveda (Vide i. 89. 4; 90. 7; 159. 2; 160. 2 etc.)

The following passages are quoted from the Vedic Literature:—

त्वं हि पिता, त्वम् माता *tram hi pita tram mata*
Rig V. VIII. 93. II. Atharva V. XX. 108 2. Sama V. ii 4, 13. 2.

"Thou art Father; thou art Mother,"
सखा पिता पितृवमः पितृवम् *sakha pita pitritvam*

"Friend, Father, the most fatherly of fathers" (Rv. iv. 17. 16) सखा (*sakha*) means really both "friend or companions."

पिता नोऽसि, पिता नो बन्धि *pita no'si pita no bodhi*

Yajur V. xxvii. 20. Sata Br. XIV. 1, 4. 15. Tait. Ar. IV. 7. 4; V. 6. 9. (बन्धि for बन्धि); IV. 10. 5; V. 8. 12.

"Thou art our Father; as Father instruct na." "The Vedic seers God is not only 'Father' but the most fatherly of fathers; He is mother too; He is also सखा (*sakha*) friend and companion."

In the Svetasvatara Upanishad (iii 17) God has been called—

सर्वस्य शरणं धर *Sarvasya saranam dharit*
"The Refuge and Lover of all."

This idea occurs also in the Gita IX. 18. The word धर (dharit) is ordinarily translated by the word "Friend." Literally it means "good-hearted." He is "Sweetheart" in its truest sense; He is our Lover.

In the Gita God has been declared as the Lover (or Friend) of all the creatures.

धर सर्वभूतानाम्
We may call him Father, Mother, Friend and Lover. But in fact He is nearer and dearer than every one of them. He is dearer than the son, dearer than wealth, and dearer than everything else in world."

पुत्र प्रेयः पुत्रात् प्रेयो विपुत्रात् प्रेयो न्यस्तम् *putra preyo putrat preyo vittat preyo nyastam sarvamat*

(Bhik. U. i 49.) Of all the persons in the world, the son is the dearest but dearer than that son is the Supreme Self.

He is nearer to us, nearer to all; He is nearer than the nearest. Even the words 'near and nearer' make him distant. Only an external object can be near or nearer. But he is the eye of our

eye, the ear of our ear, the mind of our mind, the self of our Self; (Kena 2). Ho is the warp and woof of our Self; Ho is our inner Self (Katha IV I, Brih I. 4, 8; iii. 4; iii 5 etc). Understanding and realizing this, the Rishis of the Upanishads said, "This Self is to be worshipped as Dear."

आत्मनामेव प्रियमुपासीत *atmanam eva priyam-upasita*

Rt. U. 1. 49. Only to this Inner and Dear Self can we say in the truest and the most literal sense.

तव अस्मान्म तव स्मसि *tam asmanm-tava smasi*

"Thou art ours; we are thine" (Rigveda viii. 92. 32. Ait. Ar. II. 1. 4, 18).

The Rishi says:—
The Self is to be seen, is to be hearkened to, is to be thought on, is to be meditated on. (Brih. U. II. 4 5; V 5, 6)

यादया वा परं द्रव्यः श्रान्त्यो मन्त्रयो निरिष्यामिष्यः
No other religion has reached such a high level. But there are different strata in the religions of the world. At a low stratum God is an object of fear. At a stratum just above this He is our Lord. There are higher strata still. In one of these strata He is our Father. In the religion of Jesus we find all the strata. At one moment he would exhort his followers to fear God. In another mood he said God is the Lord. And when he soared higher, he understood that God is our father.

Though it was not a new discovery of Jesus' and though it falls short of the highest ideal of Indian seers, yet it is a truth of a higher religion and it has a permanent value in the religious world.

Sj Ghosh also tells us that the idea of the Fatherhood of God was not new among the Greeks also. It was a prevalent idea even in the Homeric Age.

F. S. Marvin on India

In reviewing F. S. Marvin's work entitled "India and the West", Mr. A. M. K. Cumaraswamy writes in *The National Christian Council Review*:

What Mr. Marvin apparently fails to see is the feeling of shame and humiliation which presses hard on India at her being compelled to be saved by an external power, however benign. India is now learning that she must work out her own salvation, and that the price must be paid. The proposal, therefore, that England must carefully watch over India till she comes of age and that freedom cannot be given to India as a dowry cannot be palatable to the Indian people. This same failure accounts for Mr. Marvin's contention that India is more fortunate than China—a proposition which will not be subscribed to by the majority of Indians. Mr. Marvin is undoubtedly longest in his belief that Britain, while elaborating a democratic constitution at home, has attempted more slowly and with greater difficulty to extend

the same principles in the East, and in seeing, herein a striking example of the unity of history. Many noble Englishmen, some of them rulers in India, have believed likewise. But Indians may be pardoned if they say they are compelled to declare that history does not confirm this belief that India has had to struggle to extract well-nigh every small measure of advance from an unwilling Government, and that Lord Birkenhead's "by the sword" declaration and Lloyd George's Steel Frame speech appear to express the true state of affairs between Britain and her Eastern 'partner'.

Tracing Crime to Neglected Teeth

The Indian Dental Review reprints an article from the pen of Dr. Charles E. Fox, in which he opines that dental irregularities are responsible for an astounding number of crimes. Says he

Women as well as men turn out to be burdens on society because of neglect of teeth in formative years. A misshapen jaw, due to loss of malformed teeth, is the first ingredient in that unfortunate hodge-podge that makes a criminal. For malformed teeth make an ugly, abnormally-shaped face, and a person so afflicted is a sour, unhappy man or woman. To take the sequence one step further, such a man or woman imagines he has a grudge against society, and the mind of a person of this kind is the ideal birth place for the vicious crimes of which we read.

He then emphasises the importance of parents' taking timely interest in the state of their children's teeth and points out:

There are two types of dentally abnormal people in whom criminality lurks. Neglecting an infected, abscessed tooth for years often results in a form of insanity, and many are the serious crimes that have been committed by people in this state of mind. An infected tooth always gives some slight sign of its presence and it is the duty of parents who want their children to grow up good citizens and successful men and women, to watch for these signs.

A child with frequent headaches, ear-aches, throat-infections, head-colds, or neuralgia is more than likely to be suffering from the effects of a hidden abscess in the mouth. X-ray and the prompt treatment of a dental surgeon is imperative. This is valuable advice for grown-ups as well.

The other class of criminals that originates among people with dental irregularities is composed of people who have had over-lapping, buck or otherwise ill-formed teeth since childhood.

These teeth, usually too large, or too many for the size of the mouth, have in the early years pushed the gums all out of shape, so that by the time an adult age is reached the face presents a grotesque and hideous appearance. One or the other of the jaws may protrude, the mouth will usually be partly open, even when closed, and a smile on a face like that is terrible to behold.

Pictures the mental attitude of a girl who has grown up to the age of eighteen, with a hideously deformed mouth. Of course, she is unpopular with

the young men of age. None of them want even to walk beside such a face, far less to kiss it.

This girl, her natural desire and need for companionship thwarted, will turn dark and sour toward everyone, and the chaooses are, nine to one, that she will eventually develop into one of those twisted malicious characters known as a "village gossip."

As to boys, the record of the teeth of men now in prison institutions proves that defective teeth are one of the biggest contributing factors in the formation of the criminal mind. Without question, some of the present "crime wave" is to a large extent due to the lack of dental knowledge which parents possessed twenty or thirty years ago.

Spirit of Service Among Students

Prof. Akram Hussain in the course of an article in *The Sa-adat College Magazine* expresses the opinion that Indian students should be imbued with the spirit of service in their student life. He observes in this connection:

Rahindranath has set up the Sreeniketan because he has realised that for the uplift of a nation academic learning and scholarship alone is not sufficient; purity, honesty and all other character-building qualities also are not sufficient; the idea of service, the habit of thinking and working for others must be inculcated and stimulated along with these. It is not enough if a few men in a country are learned or virtuous or wealthy, there should be acquirement as well as distribution of the blessings of knowledge, character and wealth. Unless you raise the platform on which you take your stand you cannot rise very high yourself. Selfishness is not permissible even in piety. Be good and help others being good, give in order to have, serve in order to enjoy. No doubt you are the centre, but there can be no centre without a circumference.

In a country like India in which the level of knowledge and power is so low and the economic situation so miserable it is absolutely necessary that the fortunate few should be sympathetic to the unfortunate many. Thinkers of every school in this country are now agreed that the students of our schools and colleges should be imbued with the spirit of service so that in later life they may be real servants of society and benefactors of country and mankind. Two or three decades ago people of this country believed that the business of the student was book-learning only; provided he read his books he might ignore even the laws of health. That age is now happily gone. The present view is that the student should not only learn his lesson and enjoy himself in healthy diversions but should also give his spare time to the service of the country. The nation cannot bear that time should be wasted. If the student's spare time is not spent in the right manner it will surely be spent in the wrong manner bringing ruin and misery at the end. When we remember how

the ignorance of India is being exploited by the knowledge and cunning of more fortunate nations, how the wealth of our country is drained away because we do not know business, how our neighbour the cultivator is swelling the coffers of the huge factory millionaire by the sweat of his brow without being able to earn for himself his daily bread, how the Indian agriculturist is sinking deeper and deeper into indebtedness and how more fortunate countries than ours have been able to drive away malaria and other diseases by combined effort, we cannot remain idle and inactive laying all the blame of our miseries at the door of Providence.

Schoolboy Howlers

S. Venketaraman writes in *The Scholar*:

I have not been able to trace out the origin of the word "howler," which is the more unfortunate as it is not to be found even in a work like Sir James Murray's "New English Dictionary." An eminent professor of English whom I consulted, thinks that the word so-called because it makes the teacher howl with rage and indirectly it also makes the poor schoolboy howl with pain!

More often than not, "howlers" proceed from ignorance, inattention, want of study and thoughtlessness on the part of the perpetrator. But sometimes comes across mistakes showing a good deal of thought and ingenuity on the part of the pupil. At one of their examinations, the third form boys of a school were asked to show their familiarity with certain words and phrases by using them in sentences of their own. Two of the words were "adage" and "adjudge." His utter ignorance of the meanings of these words did not prevent a boy from writing a perfectly correct sentence: "Rams wrote 'adago' for 'adjudge'." The lad's ingenuity consists in selecting just those two words from five unfamiliar ones, which sound almost alike and using them for the construction of what turns out to be not only a sentence but also a "howler."

Equally amusing is the story of a youngster who wondered how there could be a feminine gender of the word "mouk" because his teacher had told him that monks don't marry!

Forced Labour in E. B. Ry.

We read in *Indian Railways*:

The question of Forced Labour without having any remuneration has long been agitating the minds of the suffering employees of this railway but owing to lack of united effort their clamour for such gross injustice has always been allowed to die within their sphere. It is high time now that all the employees should place their demands for a suitable allowance for overtime work done by them. When the cases of leave and pay or allowance have hitherto been ignored by the railway authorities, the employees should under no circumstances neglect to claim the remuneration for the over-time or any additional work. It is high time for the organisers and parties at differ-

ent sections to educate the staff so that they may rise to the occasion and place their demands before the authorities in no time. It will not be out of place to mention here that a few days back the authorities consulted with the heads of all branches of traffic department how one day's rest may be granted to all the employees after six days' work and it is puzzling to note the end of the proposal which is perhaps nipped in the bud.

Modern Science and British Christianity

The Maha-Bodhi writes:

British Christianity is taking advantage of the beneficial results of modern science. Medical science has made great stride within recent years, and the theologians took advantage thereof, organised medical missions and today the missionary societies have a special medical board whereby they gain the help of charitably-minded people and send missionaries with a knowledge of medicine to distant lands and through medical sciences extend the Christian influence over the ignorant natives and convert them to Christianity. Jesus had no knowledge of medicine, and when the blind man was brought before him he used mud and spit to anoint the eye. He ordered his disciples to heal the sick by the power of the holy Ghost, but today the medical missionary applies scientific methods to heal the sick. As a body of men Christian padres are better educated in modern science than our Bhikkhus, Brahmins and laymen. The British people are excited when their interests are threatened by alien forces. They generously respond to the appeals made to relieve human suffering, and the padres know that if they are not active they will have to go to the wall. Hence their activity in the field of modern research, and with scientific aids they manage to get their business done to their advantage.

But in India:

There is no spirit of research, no unity, no enterprise among the Hindus and Buddhists. They quarrel among themselves for petty things thereby giving the alien the power to subdue, which they do for their own self-interest. What is needed among the Buddhists is the training enforced by our Lord Buddha. The driving force of altruistic activity is self-sacrifice. When the mind is centered in some good object the idea of egoistic pride goes to the background. Among the civilized races the competition is to do more good to the country, and to raise the status of the nation. Science has given a large field of activity to the human brain, and the youth of Europe and America have free science laboratories to expand their energy in improving their range of observation. In India and Ceylon science laboratories are scarce, and only the advanced student can make use of apparatus thereof. It is different in the United States. The man who makes money in America generously gives large sums to improve the backward people, and they are divinely compassionate in giving their money for the education of the young.

Monsoon Charges for Postmen

The postmen and runners in the East Bengal districts have got to discharge their onerous duties under extremely difficult circumstances during rains. During this time of the year the villages in the interior look like "little isles hemmed in with a vast sheet of water", the water channels running in the villages are blocked with water-hyacinth which makes them impassable and the rivers overflow their banks. In the course of an article entitled "Monsoon Charges in East Bengal" to *Labour* Mr. Lakshmikanta Sen invites the attention of the public:

To the very inadequate allowance that these ill-starred men receive as boat-hire and rower's wages. For years they have knocked their heads against the stone-wall of the bureaucracy without avail. But in the year of grace 1926 A. D. the Gods smiled on them. It is a thousand pities that what the authorities sanctioned is utterly inadequate, and disappointing. They have sanctioned Rs. 3 or 4/- for a single boat and Rs. 6/- to 10/- as rower's wages, I am speaking of the Dacca District. I make bold to say that the decision of the authorities betrays utter callousness and want of sympathetic insight to creep under the skin, I say for the shame of it you have got to revise it.

The French Chamber of Deputies

Mr. A. S. Poochspakesa Ayyar M. A. (Oxon.), ICS., gives the following impression of his visit to the Chamber of Deputies, France in the "*Garland*".

This Chamber of Deputies is about the most lively assembly that I have ever seen. Even after the President has taken his chair, which he does somewhat ceremoniously, being ushered in by an usher girl with a sword who cries "M. Le President," the members continue to cluster together in small groups chatting, laughing and making gestures. The members are most of them elderly men with a large preponderance of bald heads, yet they behave like school boys before the class begins. The president rises and reads something at a terrific speed. The talk and the laughter go on just the same among the members. The president stamps his feet, raps the cane on the table and rings the bell. Some ushers cry out "Silence messieurs, a-t-il vous plait" (Silence sirs, if you please), "Silence messieurs, je vous prie" (Silence, sirs, I pray you) thrice a minute. But the members are generally neither pleased to keep silence nor are they amenable to prayers. So, this hubbub continues. The president sits down finally and calls upon a member to speak. As if to revenge himself, he now speaks to others and pays not the slightest heed to the member. The member thunders on as only Frenchmen can do. Six men from the right cry "Tres bien" (Well-and!) and six from the left shout out "Rabbihi!" Four or five stand up and try to speak at the same time.

They address one another and speak all at a time, and there is a terrible confusion. Such is the liberty in this assembly. Liberty, equality and fraternity are fully present since there is nothing to choose between member and member or member and president. But eloquence is very common, and the members are all attention to an orator who can sweep them of their feet by a fervid appeal to their emotions. Brilliant repartees are very common.

President Patel of the Indian Legislative Assembly also narrated similar experience about some foreign legislatures a few months ago.

Middle-class Unemployment in Bengal

The Rajendra College Magazine (Faridpur) publishes the following note by Mr. L. B. Burrows, Dt. Magistrate on "the scheme for dealing to some extent with the question of unemployment among the middle classes":

Government have sanctioned a scheme, formulated by the Collector, Faridpur, for dealing to some extent with the question of unemployment among the middle classes. It provides one year's training in practical agriculture at the Government Agricultural Farm, Faridpur. During this year's training, instruction in agricultural carpentry, elementary veterinary knowledge and the principles of co-operative credit will also be given. During this period of training, the boys or young men will be required to work at the Govt. Agricultural Farm as labourers and will be paid Rs. 12/- a month for their labour on the Farm. Free accommodation will be provided for them. They will be required to arrange for their own meals and bring their own utensils, furniture, bedding, light etc. After the year's training each boy or young man will receive provincial settlement of a 15 bigha plot of Khas Mahal land free of rent for three years and will also be advanced Rs 200/- by Government under Land Improvement or Agricultural Loans Act for initial expenses, these advances being made on the personal joint and several security of two persons acceptable to the Collector. The advance with the usual interest would be recovered in four annual instalments commencing from the 2nd year after the money is advanced, a further condition being that, if for any reason the provincial settlement is terminated by the collector at any time, the whole amount or such balance as is outstanding will be immediately recoverable from the two sureties.

Having been given the land and the loan, each boy or young man will bring the land into cultivation with his own hands and will not be allowed to let out the land in farm or bar or settlement, nor in any other way sublet the land or any portion thereof. The work done on the land will be inspected every half year by the District Agricultural Officer and the Khas Mahal Officer, and the Collector will decide on their reports whether the arrangement should continue. Any attempt, to let the land in farm or bar or to sublet it, will involve immediate cancellation of the

provisional settlement. At the end of the three years, provided satisfactory progress had been made, an ordinary raiyatwari settlement will be made on the usual terms obtaining in the Government estate in which the land is situated, no salami being charged. Further land may also be settled at the Collector's discretion upto the limit which can be cultivated personally by each boy or young man and his family.

An agreement for the experimental period will have to be signed by each candidate. A copy of the agreement will be supplied on application.

It is proposed to give effect to the scheme with five boys of the Bhadrakalok class in the beginning, and the first batch of five boys will be taken for training from the 1st March, 1928. Preference will be given to inhabitants of this district.

Keshab Chandra and the Brahma Samaj

We read in *The Standard Bearer*:

The solidarity of the Brahma Samaj broke under the giant strides of another super man Brahmananda Keshava Chandra, who came with a new flood of religious inspiration, his dynamic personality and spiritual force could be ill-contained within the still conservative mould of thought and conduct of the Brahma Samaj, and the latter had to give way before the mighty flood-tide.

In 1884, when the sun of the Brahma Dharma had risen to the height of its glory, and shined over Bengal with its glaring rays of enlightenment, a great change came about in the faith of the Samaj. Till then, while following the example of Raja Rammohan Roy, Maharshi had placed supreme confidence in the Vedic scripture, and was preaching his faith in the light of his own self-experience, there was no cause for conflict within the Samaj; but under the influence of Christian missionaries like Duff & Co. the question came into prominence amongst Brahmos, that the Vedas should not be regarded as the main plank of the Brahma faith, which should be founded on self-experience alone. Argument with the Maharshi eventually led to the acceptance of the latter view as the fundamental principle of the Brahma Society. It was on this immovable rock of self-experience alone as the foundation of faith, that Keshava Chandra took his bold stand in the age to follow and found the right opportunity to give strange form to the Brahma faith through his new and yet newer revelations.

The versatile genius of Keshava Chandra could not confine itself within the dispensation of any particular scripture; so his continual blows sent a shock of consternation in the life of the Samaj and it felt bewildered. Those who had come to the fore-front among the Brahmos under the leadership of Maharshi, were quite unprepared for such a revolutionary shock and did not like that the old should give way to the new. Not with such a pre-vision of thought had they come in to join the Brahma movement, led by Maharshi. Had the truth that had descended in Rammohan and through him, was about to spread throughout the life of the nation, remained confined within any sectarian mould, the will of God would have

remained unfulfilled. So Keshava Chandra, in going to give a special form to the Brahma Dharma only loosened its original roots. The spirit of the Brahma Dharma imparted a new current of strength to Hindu life. Its mould was broken, but its force of true inspiration succeeded.

Indian Women in Revenue Department

Stri-Dharma writes :

According to a press telegram, a deputation of the Women Graduates' Union met Mr. M. E. Watts, the Dewan of Travancore recently to discuss the present state of unemployment among the women graduates of the State and suggest a possible solution of the situation. The Dewan said that he had been thinking about the question and would do something very soon. He suggested the possibility of employing women graduates in the land Revenue Department. He also suggested the employment of women in the Military Department, but the deputation completely objected to this.

Indians Abroad and Colonial Government

Mr. C. F. Andrews is contributing a series of illuminating articles on the disabilities of Indians Abroad to *Welfare*. In the February issue of that paper he discusses problems confronting the Indians residing in colonies. He observes :

In Malaya, as far as I am aware, the Indians are still suffering from very inadequate representation on the Legislative Council. When I was present, in 1924, making a thorough enquiry I found that the European non-official element entirely predominated, overwhelming that of other races. Neither the Chinese, nor the Indians, were properly represented in proportion to their numbers and influence.

In Ceylon, representation has been given to the Indian Community as such, but here again up to the present time there has been nothing adequate accomplished. There are only two seats reserved for Indians, though they compose one in seven of the population.

Burma, as a part of India, comes under the Reform Act of 1919, and Indians have their place side by side with Burmese on the Reform Council. But this position is by no means secure, if at any future time Burma becomes separated from India with a political system of its own, the future will to a very large extent depend on how far the immigrant Indians are able to assimilate themselves to the country of their adoption. There are ominous signs today that cause anxiety.

Assam is never likely to become separated from India,—as may quite possibly be the destiny of Burma. It is all the more necessary to see to it, that owing to immigration no new complications of a political nature should arise. With regard to the tea-garden immigrants, from Upper India, I

have never heard a word of complaint from the Assamese. They find it quite possible to assimilate them; and as Hindus they can understand them, in spite of differences of language; they also have friendly relations with them. But in the district of Goalpara, I found a condition of things developing, owing to the rapid influx of Musalmans of the cultivator type from Mymensingh district in East Bengal, which was not unlikely to give political trouble in the future. The Assamese find the greatest difficulty in assimilating their own habits of life to those of the Mymensingh newcomers.

In Java, the Indian Community has been very sadly neglected, owing to the lamentable apathy of the foreign department of the Indian Government. The Chinese have attained a remarkable system of internal Self government which the Dutch acknowledge in Java,—as also the British in Singapore. The Chinese are under their own administrative officers in all minor affairs. They have their own President. But Indians have no such internal Self-government. They suffer accordingly. Therefore, I met with a good deal of discontent concerning their present political weakness. Indians, who had been long resident in Java, would tell me that the political power of the Chinese was incomparably stronger than their own, not merely on account of numbers, but also on account of organisation.

When we turn to the other side of the map and consider the emigration from India westwards, we have an even more difficult and complicated political problem before us. Mesopotamia, or Iraq, is at present a Mandate of the A. class, nearing its own independence. Up to now Indians under the Mandate, have taken their place along with other nationals, in many ways they have had advantages owing to the close relation of the Indian Government to the British supervising power in that land. But in a few years time, with Iraq as an independent state in the League of Nations, things may be very different. It has never been my good fortune to go to this part of the world and I have to rely on Indian firsthand evidence, which has been very freely given me by those who have been many years in the country. There appears to be at present an easy-going tolerance for Indian immigration and no immediate claim for its prohibition, Iraq is badly in need of population. Though Indians, as far as I could gather, are not specially liked there was no direct antipathy. But when I have asked what would happen if entire independence were given to Iraq, there was a good deal of uncertainty about the answer.

At every turn, as we consider the present position, we find the lack of any organisation within the Government of India itself, which can build up a tradition of help and service to Indians abroad similar to that which the Colonial Office fulfils in Whitehall. We have no 'Colonial Office' in the Government of India and no Colonial Secretary.

In Aden, the Indian Community, owing chiefly to certain admirable Parsee and other firms, has gained for itself prestige and respect. But as the territory is held about entirely for naval and military purposes by Great Britain the Indians of Aden have very little political importance. Now that it is no longer attached to the Bombay Government, whatever influence Indians had

owing to wealth and social status, is not likely to be increased.

When we cross the Indian Ocean and come to East Africa, we are at once in the midst of a confusion which shows signs of becoming still more confounded as time goes on.

Taking the simplest first, the vast territory of Tanganyika (which is more likely to become the ultimate centre of any East African Federation than Kenya) is still under a Mandate.

Up to the present, there has been no electorate of any kind, but only a Council, nominated by the Governor according to his own absolute discretion. No definite number of seats has been allotted to Indians.

Central Banking in the Days of Hastings

In the same journal we read an informative article under the caption "Central Banking in the Days of Hastings" from the pen of Dr. H. Sinha. In view of the present controversy about the Reserve Bank of India the pioneer enterprise on such lines may be studied with interest.

Journalism

At a time when the question of introducing courses of studies in Journalism in Indian universities has been engaging public attention the article on journalism by Mr. C. J. Varkey in the *Mangalore Government College Miscellany* will be read with profit. Says Mr. Varkey:

The modern Newspaper may be defined as the modern Mercury. In the old Greek mythology, Mercury, the messenger and envoy of Jupiter conducted the intercourse between heaven and earth, announcing the will of the gods to men, and protecting mortals in pursuit of business enterprises agreeable to the will of the inhabitants of Olympus. Similarly, the modern Newspaper is increasingly assuming the functions of the agent of the "living oracle." It is really one of the custodians of the true "keys of power." Knowledge is power. The press possesses and uses that power. Its agents are everywhere beholding the evil and the good. It is the world's audiphone. Its business is not only to see and hear everything that is worth observing or fit to be noted, but also to proclaim it on the house tops,—to restore to the human race the sense of family kinship and nearness,

keeping the nations informed of each other's affairs, condition, and prospects; thereby increasing brotherly interest in each other, knitting lap to lap in friendly and mutually enriching intercourse, and gradually but surely promoting the coming of the time of millennial happiness, foreseen and foretold by prophets and poets, when "all men's good" shall

Be each man's rule, and universal peace
Lie like a shaft of light across the land,
And like a lion of beams athwart the sea,
Thro' all the circle of the golden year.

If today the pen is mightier than the sword, the superiority is due in no small measure to the work and the influence of the newspaper press and its agents, the journalists of today. The modern journalist is more than a recorder of daily events—more, too, than a critic of affairs of social, public, and national life. He is a recognised public teacher and guide who moves along with the times; who at stated periods, weekly or daily, takes note of all forms of progress and development; who accepts as his motto or rule of life *humanitas alium*; and who helps his fellow-men in all departments of mental study, literary and artistic, scientific and philosophical, while utilising all his knowledge and influence on behalf of morality and righteousness. The journalist who most realises his duty, and who is most faithful to his mission, makes, in the truest sense, the greatest good of the greatest number his chief concern. He is the friend of the poor and the oppressed. He is the promoter of social and sanitary reform. He exalts and commends the domestic virtues. He is the champion of truth and of freedom. He is the advocate of the righteousness which exalteth a nation. He acquires influence in proportion as he shows himself independent, incorruptible, and wholeheartedly devoted to the public good. In short, he becomes a true "King of men."

Such is the Fourth Estate. It concerns itself with every sphere of human life and attainment. It claims to rank with the highest and most honourable of professions. It is the instructor of the statesman and the administrator, of the scientist and the litterateur, as well as of the common people. It draws its working members from every class and rank. It is possible by its agency for a man sprung from the humblest condition of life to raise himself to a position in which he becomes the truest counselor of the noblest and the wisest, moulding "a mighty state's decree" and shaping "the whisper of the throne."

Such being the high position occupied by Journalism among the professions, and the responsibilities of the journalist among the teachers of the world, it stands to reason that those who enter its ranks should be men of education and training. With the growth and development of the press in India, there arises the need of men trained for the journalistic profession.

FOREIGN PERIODICALS

The Nirvana Stupa of Kusinara

The Young East of Japan states:

That, according to a press message from Allahabad dated Oct. 4, the Nirvana Stupa of Kusinara, in Gorakhpur District, one of the most important relics of Buddhist times, which was in a dilapidated condition, has now been repaired under the superintendence of the Archaeological Department. The cost of repair has generously been met by a Burmese gentleman.

A Flying Hotel

We read in the Living Age:

NEXT April England will witness the launching of the first complete aerial hotel in the form of an enormous dirigible that will contain quarters for one hundred guests and a crew of fifty. Sir Samuel Hoare, Secretary of State for Air, has just been inspecting this super-Zep, and through him certain facts are released to the public.

Built into the lower part of the dirigible, just forward of amidships, is a four-story construction. The lower floor houses the control and navigation rooms; the crew's quarters come next; and the two top floors are given over to passengers. Here will be found a dining-room for fifty people which can be cleared to form a ball-room, while from a balcony the more staid passengers can enjoy the singular privilege of seeing how the Black Bottom looks above the clouds. Two and four-berth staterooms with accommodations for all the hundred guests will also be provided. Two verandahs, running the length of the hotel on either side, will furnish ample space for exercise.

The entire airship is being made of duralumin, and, though its dimensions equal those of a fifty-thousand-ton battleship, it will only weigh 156 tons when fully loaded. Five million cubic feet of gas will keep it afloat. Thirty-five gasoline tanks, each capable of holding a ton of fuel, will supply the six Rolls-Royce engines that develop a total of forty-two hundred horsepower and that will drive the machine at eighty-three miles an hour, though a modest seventy-five will be the usual cruising rate. No one has yet vouchsafed for what purpose the flying hotel will be used, but Commander Burney, president of the company that is building it, says that it represents a revolution in airship construction and that it will look like a mosquito compared to more pretentious successors that he already has in mind.

Minimum Wage Legislation in the U. S. A

Mr. Rudolf Broda, A. M., J. D., Associate Professor of Social Science, Antioch College, Ohio contributes an article entitled "Minimum Wage Legislation in the United States" to the *International Labour Review* for January 1928 wherein he gives a detailed study of the system of minimum wages as prevalent in that country. He outlines the history of the minimum wages movement at the beginning of his informative article after which he examines the essential characteristics of existing legislation: the field of application, the principle of wage fixing and machinery for the purpose. He then surveys in detail the Massachusetts Law—the first minimum wage legislation to come into force in the U. S. A. Finally the writer analyses the practical effects of the legal regulation of minimum wages from the point of view of the workers, the employers and industry respectively. From the information thus made available by the writer it would appear that such regulation has given satisfactory results without involving the parties concerned in any disagreeable consequences. The article provides an interesting study in view of the fact that:

The question of minimum wage-fixing machinery, included on the agenda of the Tenth Session of the International Labour Conference, only formed the subject at that Session of a preliminary study in accordance with the new double-discussion procedure; it will be for the 1923 Conference to take a decision on the matter.

Modern Teaching of Geography

Dr. George B. Cressey, Ph. D., observes in the *China Journal*:

To most people, the word 'geography' conveys an impression of locations, sugar coated with various interesting facts about strange peoples and customs. The conventional geography as taught in most elementary schools has been little more than an endless list of places and entertaining descriptions. If a course is added in High School, it is usually Commercial Geography, which is

merely a continuation of statistics. In its higher development, geography has been largely represented by exploration and map making, and by physiography and meteorology.

Although geography in some form has existed since primitive man first found his way from place to place, it is only very recently that it has been studied as a science and included in the college curriculum. With this new position, modern geography has become a very different subject. In place of facts and descriptions it has substituted causal relationships. Its present status may be described as a link between the natural and physical sciences, with physical geology, climatology and agriculture on one side, and economics, sociology and history on the other. In the centre is man. Geography is, thus, an attempt to understand human activities in terms of the natural and social environment.

This new geography uses all the material of the old, but considers it of significance only in so far as it furnishes the information for explaining relationships. This new attitude may be illustrated by a standard joke among geographers. Little Mary had just returned from school and was asked "Where is Tokyo?" Mary replied "I don't know, but if you will tell me where it is I can explain why it is there."

This transformation in the attitude and content of geography has been brought about largely by those whose original training was in geology. Land forms are not entitled to any larger place than several related subjects, but, due to the influence of such geographic geologists as Salisbury, physiography marks the starting point in the new development. An examination of several collegiate texts will indicate the changing emphasis toward the social and economic side.

Afghanistan

The sojourn of King Amanullah Khan of Afghanistan in Europe gives rise to various speculations regarding the king and the progressive country. We find in the *Asiatic Review* a short survey of the country from the Anglo-Indian point of view. Discussing about the present situation in the country the writer says:

The young King—by his own desire and intuition, for he had no Western schooling—is using his endeavours to civilize and Westernize his State. Educational colleges, military training, roads, electrification, motors, justice—all proceed on more modern lines. Continental engineers and motorists throng to Kabul and jostle the Afghans in the bazaars. The *corps diplomatique* is representative of Europe. French, Germans, Russians, Italians, all carry on the work of commercial Westernization. The British, less familiar in the bazaars, are in a position of dignified friendship. The British Minister, Sir Francis Humphrys, is most successful in his relationship with the Court of Kabul. But the change since 1914 will be recognized.

The activities of the Soviet Russians rouse suspicion in the mind of the writer:

Russians in various capacities have been all over Afghanistan, and for some years the Soviet Russians have done their best to stir up trouble in India. There is a line of advance which may have given results for Afghanistan. Russia has formed four small racial Soviet republics on the Oxus—Usbekistan, Turcomanistan, Kere Khirgiz, and Tajikistan. The first three are Tartar, and the latter Persian; but the Oxus, though the political boundary, is not an ethnological one. People of these four tribes and races live in considerable numbers on the Afghan side of the river. The Soviet regime in these republics is carrying out some remarkable activities, which in themselves are far from sinister; but so far as Afghanistan is concerned, the line of activity is believed to lie in stimulating the people who are akin to the republics to demand inclusion, especially on the ground of the material advantages which Soviet Russian action within them is developing. Should Kabul object, the Soviets might move troops with the ostensible object of freeing an oppressed people.

It is possible, therefore, that at any moment trouble may arise. Otherwise the new status of Afghanistan, and the activities of its enterprising young King, are factors which are by no means in themselves to be regretted. It is also reassuring to know that the wisdom and dignity with which our affairs at Kabul are conducted will, if anything can, move the Afghans to look to Great Britain both in the matter of trade development and in friendship.

The Kazan Republic

In the same journal Mr. W. E. D. Allen, an extensive traveller in the Asiatic parts of the Soviet Union gives an interesting account of the Kazan Republic—the Tatar Republic on the Volga. Says he:

Politically the Kazan Republic is not strong, by comparison with the two fellow Turkish-speaking republics of Usbekistan and Azerbaijan. The large Russian majority inhabiting the territory of the Republic exercises an influence over local affairs out of all proportion to their numbers. In Soviet Russia political power is largely in the hands of the town proletariat, and the political influence of the Russians in the Kazan Republic can be gauged from the fact that, while the Republic contains a population in the proportion of 51·6 per cent. Tatars, 39·6 per cent. Russians, and 8·9 per cent. other nationalities, the population of the towns is in the proportion of 73·3 per cent. Russians, 23·4 per cent. Tatars, and 3·3 per cent. other nationalities. The Tatars have actually decreased by 3 per cent. since the Revolution, as the result of the Civil War and the Volga famine. The bulk of the Tatar peasantry are illiterate. Nevertheless, the importance of the Volga Tatars in the Russian Muslim world is considerable, and the moral influence of the small class of educated Kazanites is out of all proportion to their numbers. They are the intellectual leaders of the Turkish-speaking elements in the Soviet Union, and these elements during the coming generation will exercise an

increasing influence on all the imponderable problems of the vast Eurasian area.

Why America is not Socialist

Rene Johannet in an article in *Echo de Paris* traces the reasons why the United States is immune to Socialism or Communism. In the course of his article the writer observes :

The enthronement of the dollar in a nation without ancient traditions, without an aristocracy, without an intellectual caste,—indeed, where intellect is less revered to-day than it was in the time of Emerson, Thoreau, Poe, and Hawthorne,—has this significant effect—that wealth, and above all great fortunes, do not arouse the sordid envy which so largely motivates European Socialism. Consequently, the United States has never resorted to that fiscal demagogism which levies taxes primarily to take away the possession of the fortunate, instead of to meet the legitimate expenses of the State. Cherishing no dread of expropriation, its millionaires have not feared to call attention to their wealth. They have been able to give free rein to the natural ambition of every man to play a prominent part in civic life. They have, therefore, aspired to be public benefactors, devoting a large part of their wealth to founding museums, universities, and libraries, and to other community objects.

But it is not only the millionaires in America who are steadily growing richer. The sanctity of private property begets an accumulation complex among all classes of the people. As a result savings increase and the number of investors multiplies beyond precedent. Between 1913 and 1928 the owners of stocks and bonds of public and private corporations in America multiplied tenfold.

The writer then defines Communism as follows :

What is Communism essentially? Misdirected craving for wealth. Its proselytes seek some quick and easy way to better themselves materially at the expense of others. The doctrine appeals most strongly to the weak and shiftless, who lack courage and initiative to fight the battle of life alone, and therefore, run in packs, or take to the cover of the State. But natural selection and training have given Americans precisely the opposite mentality. They are descended from the more aggressive elements of Europe. Their ancestors were not men of the herd, but men of initiative and decision, who sought new lands, and freely faced hardships to find wider scope for their natural energies. Appeals to the State and the call of the revolutionary mob were equally offensive to their ears. They relied on their own strength. America's social vices are not of the Communist order, but of a predatory and piratical kind. They are the vices of men who push ahead unscrupulously to their objective by the shortest possible route.

A Day From Tolstoi's Life

Stefan Zweig describes "A Day from Tolstoi's Life" in *Pester Lloyd* from which we quote the following paragraphs.

Once more before going to bed the old man paces up and down his bare study. He will not sleep until he has passed final judgment on himself, until he has exacted a stern reckoning for every hour of the past twenty-four. His diary lies open on the table, its white page staring at him like the eye of conscience. He reviews every moment of the day and judges it. He thinks of the poverty-stricken peasant woman whom he left with no other help than a miserable little coin. He recalls that he was impatient with the beggars. He remembers harsh thoughts toward his wife. And all these failures to live up to his ideals he records unsparingly in the book, closing the day's entry thus : "Again found wanting, again soul-crushed, not enough good done. Once more I have proved that I have not learned to do what is difficult, to love the people about me instead of humanity at large. Help me, God, help me!" Then once more he enters the date of the following day and the three mystical initials indicating "If I am alive."

Now his job is done. Another day has been lived to the end. With bowed shoulders he goes into his bedchamber, pulls off his heavy boots, disrobes, and lies down to bed, his thoughts again on death. Those winged thoughts! They still flit through his brain, but little by little lose themselves like butterflies in darkening woods. Slumber hovers on the portal of his mind.

What a that? He suddenly rouses himself. Waa n't that a step? Yes, a step in the next room, soft and stealthily. He jumps lightly and noiselessly out of bed and presses his burning eye to the keyhole. Yes, a light. Someone has come in with a lamp and is ransacking his desk, fingering over the leaves of his diary, peering into the secrets of his soul. It is Sophia Andreievna, his wife. Insatiable curiosity! On every hand he is beset by this anxiety to spy into the profundities of his soul, the deepest sanctities of his heart. His hands tremble with anger. He seizes the latch with an involuntary impulse to open the door suddenly and berate his wife. But at the last moment he controls himself. "Perhaps even this has been laid upon me as a test." So he creeps silently back to bed, but not to sleep. Lev Nikolaevich Tolstoi, the greatest, the most gifted man of his time, lies there, betrayed in his own house, tortured by doubt, submerged in loneliness unutterable.

Belief in Immortality

Prof. Karl Clemen, (Professor of Comparative Religion at Bonn University) contributes an article on "Belief in Immortality" to *Kölnische Zeitung* in the course of which he observes :

It is certainly significant, that ever since the earliest Stone Age men have almost universally believed in survival after death. Let me add this

thought: most of us do not attain the objects of our striving in our present life. This is true not only of our commoner and more mundane ambitions, but in a still higher degree of our moral ideals. If moral perfection is the highest object for which we can strive, and if an underlying purpose determines our existence, we have some reason to hope that an opportunity will be afforded us somehow and somewhere to complete our evolution. Goethe doubtless had some such thought as that in mind when he said: "The conviction that we shall live hereafter is forced upon me by the very idea of action; for if I work steadily and faithfully up to my last hour, Nature is under an obligation to promote me to some other form of existence when the present form no longer suffices for my activities." Another remark of Goethe's is not entirely amiss in this connection: "I might say that men who do not hope for another life are already dead in this life."

Literature and Art in Japan

The progress of literature and Art in Japan during the year 1927 (The second year of Showa) has thus been briefly sketched by the *Japan Magazine*:

No remarkable change occurred in literary and art circles. The neo-sensualist is now at a low ebb, while the so-called proletarian literature is still far from achieving stability, only a few writers publishing notable work. The attention of the general reading public is still concentrated on older writers such as Tosoo Shimazaki, Shusei Tokuda, Hakucho Masamune and others. In the meantime, it cannot be overlooked that through the whole year of 1924 the general tendency was very strong toward the study of Meiji literature and culture as well as classical Japanese literature.

Significant in 1927 was the publication of serial books on various subjects, a series popularly called "Yen Series" because of the books being sold at one yen a volume. The forerunner of these was "Contemporary Japanese Literature Series" published by the Kaizo Publishing Company. This was an epoch-making event in the publishing world of Japan, where the comparatively high price of books is generally talked of. Interest of the reading public was great. The series by Kaizo was soon followed by "The World's Literature Series" by another publishing firm at the beginning of the 2nd year of Showa. Since then over ten series of a similar kind have been placed on the market, thus making the so-called "Yen Series" very popular.

In the fine art field, also, we observe little significant change as compared with the previous year. The only fact worth mentioning is that the time has become ripe for the fundamental reform of the Imperial Art Academy. The Academy is the highest institution in Japanese fine art and the most influential body. In spite of that, no real activities have hitherto been undertaken by the organization except holding its semi-annual exhibition. If it goes on in this way, it is generally argued, its authority will be questioned, in contrast with the Teikoku Gakushuin (Imperial

Academy) which is practically contributing to the advancement of civilization to a great extent. In order to achieve the original mission of the Imperial Art Academy, a fundamental improvement of the organization is considered essential. First of all, its autonomy and economic independence should be ensured so that the body may take up the work of controlling fine art administration and of making connections with foreign fine art fields closer, so as to contribute to the genuine sense of the world, to the development of the fine art of the country.

Albert Roussel's Padmavati

Arthur Hoeree narrates his long interview with Albert Roussel the celebrated French musician in *Eolus*. Albert Roussel was born in the city of Tourcoing (Northern France) in 1869. From his infancy he was fond of reading books on travels and adventure and dreamt of distant voyages. He was, therefore, prepared for the Naval School. One day in his college the professor of piano gave him a lesson on Beethoven's *Sonatas* which was a revelation to him. At last the young votary went to sea—his dreaming soul voyaged over the Atlantic, the Indian Ocean and the Chinese seas. The sea was his inspiration as it were—for at that period he made his first attempt at musical composition. Shortly after he resigned his post and Roussel, the ex-naval ensign, took up his abode in Paris to learn the science of music from Gigout and Vincent d'Indy. From 1902 to 1913 he served as a professor at the Schola and made extensive tour in Spain, Italy, Germany, Belgium and North Africa. Meantime, the sailor in Roussel, was being still enticed by far off seas. He went to India and brought back the idea for his three paellas *Evocations*, a vast fresco for Orchestra, Soli and Chorus. Mr. Hoeree says of him in this connection. "He speaks to us of India in his own language, a language which we all understand and he leaves to the ethnographers the task of determining the particularities of oriental music." At this time he came in contact with Mr. Rouché, the famous opera director, who commissioned him to write ballets for his opera. These popularized his name. For, we read in *Eolus*:

After the success of the *Festin de l'Araignée* M. Rouché owed it to himself to commission a new work of Roussel, this time worthy of the Opera of which M. Rouché was the director. *Padmavati*, an episode of the history of India is the chosen subject for an opera-ballet around which M. Laloy writes a beautiful poem suitable to scenic development. The war breaks out, and

interrupts the work. The ex-naval ensign, off the lists since 1902, re-enlists. But ill-health gets the better of his courage and he is discharged in 1918. He settles down in Brittany where he finishes *Padmavati*. It is not, however, publicly produced until 1923.

The story is as follows: Alaouddin, the fierce Sultan of the Mogols, comes unarmed to his enemy, Ratan-Sen, King of Tchitor to seek alliance with him. In the meantime his troops are surrounding the city. Ratan-Sen receives his ancient enemy with every mark of respect, having all his soldiers, his slaves and dancers parade before him. Alaouddin is pleased but not satisfied. He would like to see the king's bride, *Padmavati*, the living image of the celestial lotus called *padma*. Unwillingly the king consents, but dazzled by her beauty the Sultan puts off the ceremony of alliance to the following day. After his departure the Brahman who had accompanied him comes back to the king with a message: "The Sultan demands the King's bride as a pledge of his friendship; otherwise the city shall be destroyed". The crowd rushes upon the Brahman and massacres him. The call to arms resonates, the people prepare for battle. In the second act we see the interior of the temple of Siva where *Padmavati* and the king, Ratan-Sen, have taken refuge. All resistance has been in vain. The Sultan has granted a truce till dawn. Torn between his duty as a ruler and his conjugal love, the king finally employs *Padmavati* to save his people by sacrificing herself to the Sultan. The Queen, rather than allow her husband to charge his soul with such a crime, stabs him. There follows all the impressive ritual of the funeral ceremony. *Padmavati* is about to follow her husband to death. Just as she throws herself into the flames of the funeral pyre, the door of the temple is broken in and Alaouddin appears at the head of his army and stands looking at the pyre where his dream is being consumed.

The drama with its crowds, its processions, warriors' dances, funeral rites, is in truth rather a spectacle than an opera. The ballet, the pantomime and the choruses are the important features.

Although the composer of the drama has deviated from history at places in his story yet it may be said to his credit that he has faithfully depicted the heroism and womanly virtue of *Padmavati*. The catalogue of Runssell's works, numbering not less than 30, includes music of every kind—theatrical, symphonic, chamber-music, vocal works. The interviewer concludes:

He is, however, planning a piece for chamber-orchestra which he will reserve for one of the remarkable *Concerts Straram*. The former mathematician again spoke to me of his love of the stars whose secret he often ponders and I should not be surprised if one day he gave us an 'astronomical symphony.'

Traffic in Women and Children

Asoc G. Porritt writes the following illuminating review on the Report of the Special

Body of Experts on Traffic in Women and Children (League of Nations Publication No. IV. Social. 1921. IV. 2) in *Birth Control Review*:

There are plenty of people in the world who believe, or imagine that they believe that we live in an age of moral decadence. They look back to the 'good old days' as a period when virtue flourished and when men and women were nobler and better than the young generation of to-day gives promise of becoming. Such people should read with care the 'Report of the Special Body of Experts on Traffic in Women and Children' the first part of which has recently been issued at Geneva, under the auspices of the League of Nations.

Such a report would have been impossible fifty years ago, when Josephine Butler was lifting up her voice to the wilderness against the current conceptions of the prostitute as a necessary evil, essential to the health of men, yet a lost soul, so degraded and sub-human as to deserve no pity, and to possess no rights. In those days governments and government officials were almost unanimous in believing in government regulation of prostitution, a regulation which reduced the unfortunate prostitute below the level of the slave in any country which still tolerated chattel slavery. It is not fifty years ago, but barely twenty years, since revelations in books and magazine articles often exaggerated or too highly colored but with a substantial basis of truth—brought home to the sheltered women of America the frightful results of the double-standard of morals, which had until then been complacently accepted by the average woman as well as by the average man.

About the extent of the trade and the age of the victims she points out.

In the reader who does not remember the "bad old days," there is not much cause for congratulation in the Report now given to the world. The traffic in Women and Children still exists. The experts found it in active operation and found every degree of suffering and misery among its victims. They also found that many women were secured for the traffic by fraud, although the majority of the women concerned were willing prostitutes or had been in the 'business' before they came into the international traffic.

Even more pitiful are the very young girls who are victims. Girls under 21 are internationally protected under the Convention of 1910, but false declarations of age, altered birth certificates and the 'protection' of being married women are all used to secure little girls of 14 or 15 for some of the countries where their 'customers' prefer them young. In Mexico, reads the Report, 'souteneurs said that none but young ones are wanted. The Argentine Government reply states that foreign girls are always young. In Portugal 40 per cent of all prostitutes registered, including foreigners, are between 16 and 20 years of age.'

The reviewer is of opinion that large and easy profits are at the bottom of this business

and that state regulation of vices is an evil:

It is a cheering fact for those who are deeply impressed with the evils of prostitution that the worst conditions and the greatest amount of disease are found in those places where vice is tolerated and official regulation of prostitution is the accepted policy. Twenty years ago the regulation of prostitution was very generally accepted as the only means of protecting the "good women" of the community and preventing the spread of venereal disease. The women and men who opposed the policy as an evil partnership of the Government in vice, were considered impractical dreamers. But the investigations of the experts clearly show that morality and expediency, in this matter as in so many others, in the long run coincide, and that, whatever evils may be diminished by the regulation of prostitution, evils many times more formidable are increased and encouraged. These facts are now widely recognized and many countries have abolished the whole system of licensing houses of prostitution and attempting to segregate the evil.

Prostitution that exists in modern cities, and especially in cities where it is officially recognized, is largely an artificial product, eagerly stimulated by numerous intermediaries as a source of profit to themselves. In the majority of cases the women themselves get little more out of their wretched business than a mere existence, harassed by their owners, by police and government officials, and loaded down with a burden of debt, from which those who live on them take good care that they shall never be able to free themselves.

The Report makes clear that the persons to strike at, if the trade of prostitution is to be minimized, are the men and women—chiefly men—who are in it for the sake of the large and easy profits to be obtained from it.

Longer and Healthier Lives in America

We read in *The Literary Digest*:

By the end of this century the average American should live to the ripe age of eighty years. This is the conclusion of Dr. Irving Fisher, of Yale University. According to Surgeon-General Cummings of the United States Health Service, the health of the people of all parts of the world was generally better for the past year than for any previous year for which records are available. In fact, at the recent Race Betterment Conference, in Battle Creek, attended by physicians, economists, sociologists, surgeons, college professors, criminologists, chemists, and educators, the statement was made by Dr. Eugene Lyman Fisk, of the Life Extension Institute, that man may yet acquire a life cycle of 100 years; that mankind can learn to prolong the years of life as it has learned to control the forces of nature.

The journal then quotes Dr. Fisk's address and observes:

"It is all a matter of acquiring the ability to

extend the life circle. Dr. Fisk told his hearers. Men have already done things just as amazing. They did not, Dr. Fisk points out, inherit the ability to fly, but they acquired it. They did not inherit the ability to see and talk around the earth, but they learned enough concerning nature's laws to perform such miracles with ease. Similarly, they did not inherit the ability to live 100 years, but there is every reason to believe that they will develop it."

"Already the race has progressed far on the path towards that goal. In the last four centuries, thirty-seven years have been added to the average lifetime. Thirteen of these have been gained during the last three decades.

"As thus explained by Dr. Fisk, the possibilities for longer life seem to depend only on man's intelligence and determination. Because of these two qualities, the race has already accomplished many marvelous things. What they may enable men to do in the future not even the scientists can foretell."—(Dr. Fisk's Address.)

Closely following the Battle Creek Conference comes the news from Chicago that Albert D. Lasker, former chairman of the Shipping Board and now head of the Lord and Thomas advertising agency, and his wife have donated \$1,000,000 to the University of Chicago for the purpose of prolonging life. Research, we are told, is to be directed toward establishing the cause, prevention, and cure of those diseases which attack men and women of middle age and beyond. The first efforts, say Chicago dispatches, will be made against Bright's disease and heart disease.

International Relationship in the New year

The New Republic writes:

The beginning of the new year finds the international situation on the whole somewhat worse than it was a year ago. The breakdown of the Geneva Conference has clouded Anglo-American relations and brought us perilously close to the beginning of a race in naval armament. In Europe the relations between France and Italy, Italy and Yugoslavia, Rumania and Russia, Russia and Poland, remain in a dangerous state of tension. In the Orient, the Chinese revolution shows no signs of entering a more peaceful stage, and seems likely to continue its present bloody course for years. The present Japanese government is more chauvinistic than its predecessor, and the Manchurian situation grows correspondingly more serious. On the bright side of the ledger must be recorded the astonishing improvement in relations between Mexico and the United States, the easing, temporarily and least, of the tension over the Polish-Lithuanian dispute, the results of Lindbergh's flight to France, and Russia's reentrance into the western European concert of nations, by participating in the League's preliminary conference on disarmament.

Alcohol

H. Travers says in *The Theosophical Path* :

Alcoholic liquors have a directly pernicious action on the brain, and especially upon a certain important organ thereof. Doctors become, with every day, if we may judge from their quoted utterances, more and more of the opinion that alcohol, even in small quantities, does nothing but harm. But, even if it could be shown (which, however, seems not to be the case) that alcohol benefits the *physical* health, we should still condemn its use, on the ground the such alleged benefit is gained at the expense of more essential functions in our constitution. Its action may be described as a poking of the fire, or a bleeding of the cow (instead of milking her); and it need not be denied that such violent means may often be productive of a temporary flood of energy—energy of a certain kind.

A dose of alcohol will liberate a quantity of the stored up virtues of the body; it will unlock the bank of life and draw large checks; and

though we may have a large enough balance to last a lifetime, payment has to be made somewhere. It is an acknowledged fact that the debt is handed on to subsequent generations, in the form of debilitated and neurotic constitutions; and what science has discovered with reference to the mechanism of heredity supports the conclusions drawn from experience, that a generation may be shipped, and vitiated germ-cells transmitted by a parent who is herself free from alcoholism.

At best, alcohol feeds the grosser nature at the expense of the finer and does even that much in a very clumsy and wasteful manner. It is admitted that its seemingly stimulating effect is in reality an inhibitive effect that is, it deadens certain useful and necessary brakes and checks whose proper function is to prevent waste and to regulate functions. Mentally speaking, this becomes equivalent to a deadening of the conscience, a removal of the sense of shame. Such effects are apparent enough in the case of acute alcoholism; and the same must apply, with necessary changes, to chronic alcoholism—that is, to moderate drinking.

which, leads to a surer confidence in themselves and creates in them the desire for united action and guides them to the realisation of the truth that Womanhood is one".

The report stated:

The aim of Conference was to reform educational matters for women. During the period under review the Conference had come to be a force and a power, a movement that had revived women's whole consciousness and given womanhood a status of its own. The modern system of education seemed something which was quite apart from the real and intimate life of students and particularly girls. It seemed to ill-fit them for either domestic or public work.

In 1925 it was decided that an All-India Conference of Women on Educational Reform should be called with Mrs. Cousins as Organizing Secretary. As a result of this move 22 constituent conferences were held all over the country. It was but in the fitness of things that the city of Poona, renowned for its educational institutes and

The Dowager Begum of Bhopal
President All-India Women's Educational Conference

general progress should invite the first historic Conference. This attempt proved such a success and the response was so keen that it was decided to form this Conference into a permanent body of definite character with a constitution and a standing committee of its own. Various resolutions of immense importance were passed and a memorandum of Women's demands was formulated.

This Conference has awakened up in the women a keen desire to consider seriously the problem of education.

Mrs. Kamala Devi Chattopadhyay, General
Secretary of the Conference, and her husband

During the year several Women's Educational Leagues have been formed in various provinces, such as Bengal, Gujarat, Hyderabad (Deccan), Indore. In preparation for this session at Delhi there have been 30 conferences held this year all over India and over 200 delegates have been elected. Several new places which were never represented last year such as Central Provinces, Behar, Ajmer, Andhra, Canara, Tamil Nadu and Travancore have sent representatives this year.

One of the main activities the Conference undertook was to secure support for the Child Marriage Bill and the Age of Consent Bill, both now pending before the Legislative Assembly. It carried on propaganda public meetings of ladies through constituent conferences. Signatures in support of the Bills have been collected and Gujarat alone contributes nearly 10,000.

LADY IRWIN in opening the Conference defined the real end of education to be the formation of character and the training of

mind and body "as an equipment for the great school of life," "Women" proceeded Her Excellency "are the repository of tradition and long may they continue to be so." It is reported that Lady Irwin attended the Conference "not as a Viceress but as a woman in a woman's conference." Regarding the standard of Girls' Education Her Excellency was of opinion that there should be differentiation between the education of boys and girls. The workers in the field of female education should take into account the distinctive necessities of women.

Mrs. Sarojini Naidu

"We must do all in our power to set a different standard and to create a desire in the public mind and in the girls themselves for an education which will allow girls, or, at any rate, greater number of girls, to develop in other lines. What I feel we should aim to give them is a practical knowledge of domestic subjects and laws of health which will enable them to fulfil one side of their duties as wives and mothers reinforced by study of those subjects which will help most to widen their interests and outlook."

Some delegates considered this to be a dangerous doctrine which results in undoing of all that has been done so far to advance women to a position of intellectual and social equality with men. *The Indian Social Reformer* holds this view and says :

"Men and women are not two different species or even castes or communities and there is no possibility of antagonism between the two. Radically different courses of study for men and women will not conduce to the intimate mutual understanding between the two sexes which is essential to harmonious social progress. Indian women are sufficiently expert in domestic management, and what they particularly need is an outlook reaching beyond their families, castes and communities."

Mrs. Sasama Sen

The Conference was peculiarly fortunate in having a practical statesman like the DOWAGER BEGUM OF BUREAL to preside over its deliberations. Her active interest in the cause of girls' education and removal of social evils are too well-known. In her State she has founded many girls' schools of modern style and is at present Chancellor—being the only woman to hold that office in the annals of Indian universities—of the Aligarh Muslim

University. In her presidential address Her Highness said that the obstacles in the path of female education in India were poverty and prejudice, *purdah* and child-marriages. Regarding poverty and prejudice the president observed :

While on the one hand, poverty of the people of India and their prejudices stand in the way of a proper settlement, on the other there were old and antiquated customs clothed in the sanctity of religion which retarded educational progress. The Begum deplored the fact that in India the income per-head was Rs. 2 and As. 8 per month and there could be little hope of the people taking their due share in the spread of education. However, it was their lack of interest and sometimes their opposition which had prevented Government from paying due attention to the education of women of India. The ratio of education between women and men was hardly five to one hundred.

Late Mrs. Parvati Ammal

Adverting to the *purdah* system she remarked:

That there could be no denying the fact that the present strictness of *purdah* among Mussalmans did not form part of their religious obligation. It was based on purely local consideration and was not as strict as in other Islamic countries. If the

system were remodelled according to peculiarities of environments and placed on a reasonable footing most of the evil effects which it had on female education would disappear while at the same time they should be spared from a situation that was causing a great deal of anxiety.

At the close of her address the Brahm vehemently denounced the evils of early marriages which resulted in disease and mortality, diminishing of longevity, poor physique of children and physical and intellectual degeneration.

A memorandum of women's demands was formulated at the Conference besides resolutions passed. It demanded compulsory primary education and sought to widen the scope of university courses by introducing fine arts, social science etc., and advocated that women must get adequate representation on all educational and local bodies that control education.

The Conference then passed resolutions relating to women's education and emancipation from hampering customs. It is a matter for real congratulation to find the Conference passing two resolutions of great importance, viz.,

(i) This Conference is of opinion that a complete course of physical training should be made compulsory in all boys' or girls' schools and should include as much cheerful recreation out of doors, as possible, also girl-guiding on Indian lines.

(ii) Systematic medical inspection should be made compulsory in all schools and colleges, and in the case of girls the inspection should be carried out by medical women. Where possible the schools clinics should be started and arrangements made to deal with cases of mal-nutrition."

Other resolutions deplored the effects of early marriage on education, denounced the practice of allowing immature boys and girls to become parents and demanded the raising of the age of consent. They were :—

This Conference deeply deplores the effect of early marriage on education. It emphatically condemns the custom of allowing immature boys and girls to become parents. It calls on the Central Government and the Provincial Legislatures to follow the precedent set up by the Indian States of Baroda, Mysore, Rajkot, Kashmir, Gondal, Indore, Limbdi and Bardi, which have raised the legal age of marriage. This meeting demands that the legal age of marriage for girls and boys be made 16 and 21 respectively. While welcoming Rai Sahab Harbilas Sarda's attempt to pass legislation prohibiting early marriage, this Conference strongly protests against his proposed ages of 12 and 15 and calls on him and the Select Committee to amend the Bill in conformity with this resolution."

This Conference also reiterates its demand of

By BENARSI DAS CHATURVEDI

The Case of Kenya Indians before the Hilton Young Commission

The memorandum that has been presented by the East African Indian National Congress to the Hilton Young Commission is a document of great importance. It is divided into five parts :—(1) The Indian Record (2) Federation (3) Closer Union (4) Official Majority and (5) Common Roll. We read in the first part :—

The geographical situation of East Africa, looking as it does across the Arabian Sea towards the west coast of India, has for centuries made it and still makes it one of the natural outlets for Indian expansion. Indians have been settled in East Africa for generations. In 1874 it was officially reported that the Indian population of Zanzibar and the East African Coast numbered 4198 as against 24 Europeans including officials. Lord Salisbury, writing as Secretary of State for India in 1875 suggested that on grounds of humanity and with a view to promote the well-being of the poorer classes in India, Indian emigration to the East coast of Africa for the purposes of settlement and colonization should be actively encouraged, and emphasised "from the Imperial point of view the great advantages which must result from peopling the warmer British possessions, which are rich in natural resources and only want population, by an intelligent and industrious race to whom the climate of these countries is well-suited." When the Royal Charter was conferred upon the Imperial British East Africa Company in 1888 by Queen Victoria it was advanced in the preamble of the document as one of the chief grounds for the grant "that the possession by a British Company of the coast line as above defined which includes the Port of Mombasa would be advantageous to the Commercial and other interests of our subjects in the Indian Ocean who would otherwise become compelled to reside and trade under the Government or protection of alien powers." Persons of unquestioned authority from Sir John Kirk, Consul General at Zanzibar from 1866 to 1887 to Mr. Winston Churchill, who visited the Colony in 1903, have testified to the valuable work done by Indians as pioneers in East Africa. Indians have pushed

forward and opened up trade in territories beyond the limits of British administration. In the early days of the Colony their advent was welcomed. They were brought from India in large numbers to construct the Uganda Railway and those responsible for the work have testified that it could not have been completed within any reasonable period without their help. In the Great War the Indian Army was called upon to assist in the protection of Kenya and in the conquest of Tanganyika territory. The extent of the services which they rendered may be gauged from the fact that in November, 1914, an Expeditionary Force of 34,000 Indian combatant ranks and 12,000 non-combatants was despatched to the East African theatre of war, and that an Indian force consisting approximately of 12 mobile guns, 10 Indian battalions, half a dozen Imperial Service units with a small force of cavalry was maintained in this theatre until the end of the war. The numbers of the Indian community resident in Kenya have steadily expanded until they amounted at the census of 1926 to 26, 759 as against 12,029 Europeans.

At the present time Indians are playing an important part in nearly every branch of the life of the Colony. 2351 of them are employed in various departments of Government service; 5201 are engaged in commerce; and 3951 in industry. In Government service, although in the course of time they may be replaced by Africans, as they become competent to perform the duties now carried out by the Indians, at the present stage no other equally economical or efficient agency is available. In commerce they have done much to develop both the external and the internal trade of the country. Not only do the latest annual trade returns show that goods valued at $\frac{3}{4}$ of a million sterling were imported from India and goods valued at more than $1\frac{1}{2}$ million sterling exported to India, but much of the export trade to Great Britain and foreign countries passes through Indian hands. In the internal economic life of Kenya and Uganda they are playing an essential part both in the development of retail business, mainly with Natives, and in the purchase of African produce. The Kenya Economic Commission, who displayed a marked prejudice in other respects against Indians, were compelled to admit that "the Indian has played and still plays a useful part in opening up trade, stimulating the wants of the Natives and inducing them to part with their products."

for purposes of export." The Indian trader is the pioneer of civilization, since, by bringing new and desirable articles to the notice of the Natives, he creates in them a desire to acquire such commodities and stimulates them to work harder and to better their condition. So long as the Native continues to show little attitude for retail trade, no alternative to the Indian shopkeeper is in sight. In newly opened districts, moreover, the Indian as a rule provides the only market in which Africans can sell their crops. It is the small Indian trader who has been first in the field and is the pioneer of trade on a large scale.

In the sphere of industry the Indians are widely employed as mechanics, engineers, carpenters, masons, blacksmiths, wheelwrights, watchmakers, printers, sawyers, electric-suppliers, contractors, tailors, etc. Their position in this field is due entirely to their own merits. As the Native standard of living is lower and in their own country Natives will work for a smaller wage, they would certainly be employed in place of Indians if they were qualified to undertake the work. The example of Indian artisans under whom the Natives are employed is an important factor in the training of Africans as skilled workers. The point which the Indian community desire to impress on the Commission is that they are playing a vital part at the present stage in the economic progress both of the Colony as a whole and of the African Native, and that no other community is in a position to make the contribution which they are now making to the development of the Colony."

As regards Federation the memorandum clearly says that the Indians are definitely opposed to the establishment at present of any form of Federal Government or political federation. As the Governors of Tanganyika and Uganda have spoken against this sort of Federation and even the whites of those territories regard it with great misgivings and as there is no enthusiasm for it in Zanzibar, the question of political federation may be said to have lost its practical importance for immediate future.

On the subject of Closer Union the Congress recommends the subjects of scientific research, particularly medical research, posts and telegraphs and education for further co-ordination by means of conferences.

While making these recommendations the Congress asserts that such co-ordination should imply no menace to the policy of the "open door" which they regard as essential to their existence nor the extension of disabilities on Indians existing in one territory to other territories in which they do not exist."

The Congress has strongly opposed the idea of the creation of non-official majority, in the Legislative Council of Kenya for in practice it would prove to be a non-official majority of Europeans elected or nominated.

While dealing with the question of Common Roll, and that is a vital problem, the memorandum says—

The experience of the last few years has confirmed the Indian community in their view that the present system of non-official representation on a communal basis is unjust to them in that it affords no adequate safeguard of their interests and ought to be abolished. The fact that while their numbers are more than double the numbers of the European community and while they continue to play an important part in the development of the Colony in spite of racial restrictions their representation on the Council is less than half, places on them the stigma of inferiority which the whole community resents. In India the communal system of representation was adopted in order to secure to minorities their due share of representation, not in order to place a small minority of the population in a position of political predominance over other communities. Moreover, in India unlike Kenya there are no racial distinctions and the communal franchise as between Hindus and Muslims does not imply any political or social inferiority. As a matter of fact, the experience of India during the last few years has shown that the communal system as it exists there has tended to accentuate rather than compose communal feeling. The same tendency can be seen in Kenya where the gap between Europeans and Indians is as wide as ever. The common electoral roll must help to bridge the gulf between Europeans and Indians by forcing candidates of either race to consider the needs and aspirations of the other and by securing the return of moderately minded men."

This demand for a Common Roll will undoubtedly be opposed vehemently by the Europeans. Hon. T. J. O'Shea put the case of the Europeans at a meeting at Eldoret in these words:—

"Having regard to the extraordinary demands put forward by the Indian leaders in Congress, he thought it was necessary to take stock of the position with regard to Indians in the country. The Congress had very deliberately and emphatically put forward a demand for a common roll. In other words they have put forward a demand that they shall be the dominating factor in the future of Kenya. I respectfully suggest to those who have asked me not to deal with this question that it is essential to make it perfectly clear now at the outset what our attitude will be to that demand. In that connexion I feel sure I voice not only my own opinion but also the opinion of every white man and woman in this country that that demand is an impossible one, that it cannot be accepted or agreed to and will never be agreed to and if pressed is going to result in a very serious state of affairs in this country in the near future. I think it is advisable in the interests of Kenya as a whole that we make it perfectly clear that if the Indian leaders are so unwise and unmindful of the interests of Kenya and of all races in it, including their own as to put forward that demand they will be held responsible for the consequences."

This uncompromising and threatening attitude makes it abundantly clear that the Whites will have nothing to do with Common Roll. Taking into consideration the fact that the present Government of Kenya is siding with the Whites and the Conservative Government will in every way support the Kenya Government at least on this issue, there can be absolutely no hope of the Common Roll being granted in the near future.

I am sorry to note that the memorandum is halting, apologetic and in certain respects reactionary. Take the question of sharing the trusteeship of the natives with the Whites. We read in the memorandum :—

The Indian community assert that their record in their own country and in East Africa justifies them in claiming an important voice in any changes in the political structure of Kenya or neighbouring territories that may be under contemplation and their due share in any further association of the immigrant communities in the exercise of the trusteeship of the Native, if the Commission comes to the conclusion that the time is ripe for a further advance in that direction.

Apart from the Indians elected to represent their own community Indians should also be nominated along with Europeans to represent Native interests on the Legislative Council which are at present inadequately represented. In many walks of life Indians are in closer touch with Natives than Europeans and many of them are well-qualified to represent the wishes and aspirations of the Native races so far as a person of another race can do so.

The ultimate responsibility for the welfare of the Africans will of course rest with Government acting through its official majority. In order that Indians may be effectively associated in this trust it is suggested that suitable Indian officials should be included amongst the officially nominated members of the Legislative Council.

By their demand for 'due share' in the trusteeship of the Africans and for their 'nomination along with Europeans to represent Native interests.' Our countrymen in Kenya have not only made a fatal mistake, but have also brought disgrace to the fair name of India. Their attitude is in the highest degree immoral. How can we, who have always declaimed against the exploitation of the Natives by the Whites, take a share in the same exploitation business? There is no possibility of Indians getting any substantial advantage by taking up this position *eg.* the addition of one Indian member to represent the Africans, will not make much difference. They had up to this time a strong moral position which has now been lost by this thoughtless action of

the East African Congress. We are anxious to know how much Kunwar Maharaj Singh and Mr. Ewbank, the representatives of the Government of India, had to do with this discreditable affair. Sir Muhammad Habibullah is reported to have given expression to the following sentiment in one of the speeches in the Assembly :—

"The Natives of Africa may possibly have some reason to complain of the new White paper; but the Indians surely have none. For, they too along with the Europeans will get additional power as a result of the White paper. Does not the White paper speak everywhere of associating the immigrant communities, meaning thereby the Indian as well as the European, in Native trusteeship?"

Suppose the English and the French had made an agreement like this in the 18th century sharing among themselves the trusteeship of the Indians. What should then have been our attitude towards that scandalous arrangement?

Will Mahatma Gandhi and Mr. C.F. Andrews declare publicly what they think of this move on the part of Kenya Indians?

Fortunately, there is an awakening among the Africans. The time is fast approaching when they will understand the activities of their self-appointed trustees—Europeans and Indians and they will know how to deal with them.

Chhota Imperialists

There are a number of colonial Indians who have inherited the mentality of the white settlers and they have begun to think like them. These Indians will prove much more harmful to the cause of India than the white settlers, for the former can easily discredit India in the eyes of the world by copying the manners and methods of the White imperialists. For example, there are some Indians in South Africa who consider it derogatory to themselves to send their sons to a college where the African boys are being educated. We have already suffered a great deal on account of colour prejudice of the Whites against us and it is a pity that we should behave like those Whites.

A South African Indian writes :—

"If even a single South African Indian student attends the Native College, the Indian Community will be greatly upset."

He has called it a 'degradation'. Could arrogance go any further?

The time has now come when the Indian National Congress should make it perfectly

clear to the world at large that those Chotta Imperialists do not represent India at all.

A good suggestion

Mr. Chattr Singh writes in his letter to me:—

"I understand that Mrs. Sarojini Naidu has been elected to represent India in the Pan-Pacific Conference which is to be held in Honolulu. Can she be induced to visit Fiji? It will be a golden opportunity for our people in Fiji Islands. Her visit is bound to be of immense benefit to resident Indians there, whose prestige would surely be enhanced in the eyes of the prejudiced colonial Europeans and others. A few years ago I wrote to Mahatma on this subject and he promised to give it his consideration but his hands have been full with matters of greater importance and he has not been able to do any thing in this direction. Now here is an opportunity."

It will not be difficult for the Congress to make some arrangement for Mrs. Naidu's visit to Fiji. Let our people in Fiji send a cable on this subject to Dr. Ansari.

Our Opportunity in Tanganyika

Hon'ble Mr. S. N. Ghose Bar-at-Law writes from Dar es-Salaam:—

"This country is the place for Indians and it is not yet too late for us to get a firm and proper footing though I am afraid in a few years, if we do not look after it, our position will be as bad as in the neighbouring province. I do not know why Indians with money do not care to come and develop this place. It will mean a good return for them and will at the same time provide employment for middle class and poorer Indians."

Want of Unity among our People in the Colonies

Our activities in India react on the condition of our people in the Colonies. The Hindu-Muslim dissensions in the mother-country find their echo in distant places like Fiji and Tanganyika. It is high time that our political and religious leaders realised that by their narrow communalistic and sectarian activities they not only do harm to the cause of India but also do a great deal of disservice to Greater India. I understand that there is a considerable ill-feeling prevalent in Fiji among the members of the Aryasamaj on the one hand and those of the Sonatan Dharma Sabha and Indian Reform League on the other. In Nairobi, Kenya, the Aryasamajists have fallen out among themselves and there is a split on the lines of the Gurukul and College parties in the Punjab. It is difficult for us, in India, to decide which party is to be blamed for this unfortunate state of affairs. We can only warn our compatriots abroad against the baneful consequences of their short-sightedness. Colonial Indians have already got more than their due share of troubles, why should they import now ones from the Motherland?

Citizens of Greater India

There are not less than seven or eight lakhs of Indian children in the Colonies. They are more intelligent and more healthy than our

Ocean Road Dar-es Salaam (Tanganyika)

People like Sir Purushottam Das Thakur Das, Sir Laloo Bhai Samal Das and Syt Ambalal Sarabhai should visit Tanganyika and find out for themselves what opportunities that beautiful colony offers for Indian trade and settlement.

children at home. If they are given proper education some of them at least will bring credit to not only to the Colonies—their adopted motherland—but also to India herself. It is our duty to give every help for the education of these children. The

Christian Mission have already done a good deal and we ought to be grateful to them for that. Without the education imparted by the Mission schools in some of the Colonies our people would have been nowhere today.

Two Indian boys of Fiji Islands

Here is a picture of two Indian boys in Fiji sent to me by Rev. J. W. Burton of

Australia. Mr. Burton writes "These little chaps are of very great interest to me. Their mother was a little orphan girl who came to us when she was about 8 years old during my time in Fiji. It was not considered wise for certain reasons to put her into the Orphanage and we took her into our own home and treated her as our little friend. When our babies arrived she was nurse and playfellow to them and we have had for her all through these years a very warm affection. She was not very fortunate in her marriage and has had to bear a good deal of poverty in the bringing up of a large family but she is a devoted Christian girl and is anxious to bring up her children to love the Lord Jesus Christ and to follow in his steps. These are two of her children."

It was fortunate that this little girl got the protection and patronage of Rev. Burton but who is to take care of the thousands of girls, and boys in the Colonies who are helpless and who see no future before them for a clean and useful life?

Mr. C. F. Andrews in South Rhodesia

Has not the time come when our organization in India should take the initiative in their own hands and do something for these future citizens of Greater India?

Mr. C. F. Andrews in South Rhodesia

The photograph of Mr. C. F. Andrews (p 358) was taken at Bulawayo in Southern Rhodesia where Mr. Andrews went on two occasions during his stay in South Africa. He had been to visit them before in 1921. They live in complete isolation from India and are

about 600 in number. No one else has been to visit them from India except Mrs. Sarojini Naidu who went there in 1921. Gwing to Mr. Andrews' advice the Indians in S Rhodesia have now linked themselves up with the Indians in S. Africa. On Dec. 30 and 31 last year, for the first time in history, South Rhodesian Indians went to Kimberley, Cape Province, as delegates to the S African Indian National Congress. They were very warmly welcomed on their arrival and the Congress has been strengthened by their presence.

FOR ALL THE GLADNESS OF LIFE

For the gift of life in this wonderful world,
For its high cost and its mystery,
For the sure laws of health, making joy,
For power and intelligence, awake to see and to know,
We bring hearts full of gladness.

For the changing seasons and their contrasts,
For the sheen of the snow fields,
And the splendor of winter days,
For the warmth and light of our fireside,
We are glad and thankful.

For the coming of the spring and the long days,
For all growing things flowering into life,
For running brooks and sunny meadows,
And the coming of song birds in the trees,
We are glad and happy.

For joyous summer hours of rest,
For scenes of wonder and beauty,
For the glory of the hills and the sea,
For serene sunsets and moonlit nights,
We keep glad memories.

For the golden days of autumn,
For the color of the woods,
The ripened fruits and the harvests of wheat,
The merry makings and the corn-husking,
We raise our songs.

For the joy and love of our homes,
For the grace and faithfulness of excellent women,
For the children's laughter and music,
For honorable ancestry and noble discipline,
May we be rich forever.

For all true friends, here with us or absent,
The generous, the loyal, the brave and sincere;
For the bond of devotion, making us one,
For broadening peace and good-will through the world,
Our hearts beat in gladness.

For beautiful works of art and skill,
Paintings and statues of heroes,
For temples, towers, and cathedrals,
For singers and music and poets,
We are glad and rejoice.

For the leaders of men in all nations,
Thinkers, inventors, teachers, and statesmen,
Defenders of freedom and justice, seekers of truth,
For all lovers of men, the unthanked and humble
We bring our praise.

For great thoughts, the secrets of wisdom,
For order and law, guiding the stars,
For righteousness at the heart of the world,
One mind, one law, one will,
We bow in reverence.

For evil turned into good and sorrow to joy,
For darkness giving way to the sunshine,
For the right victorious over injustice,
For all good things that cannot die,
We lift up our hearts.

For one religion, beneath all names and creeds,
For faith in the goodness eternal in man, and in progress,

For all high inspirations,
And the hope of life everlasting,
We are glad evermore.

—Charles F. Dole

INDIAN Womanhood

SRIJUKTA SWARNAKUMARI DEVI, wife of late Janakinath Ghosal one of the founders of the Indian National Congress and a great champion of women's emancipation in India, has been awarded the Jagattarini Gold Medal by the Calcutta University at the last Convocation. This medal is awarded annually to some eminent Bengali litterateur—the previous recipients being Dr. Rabindranath Tagore, Mr. Saratchandra Chatterjee and Mr. Amritalal Bose. Srijukta Swarnakumari is the author of eleven Bengali Novels besides several other books and edited for sometime

Srimati T. Madhavi Amma
Member Cochin Legislative Council

the *Dharati* (now defunct)—a first class Bengali monthly journal. It may be men-

Srijukta Swarna Kumari Devi

tioned in this connection that Srijukta Swarnakumari is the elder sister of Dr. Rabin-dranath Tagore.

MRS. T. K. KRISHNA MENON (Srimati T. C. Kalyani Amma) comes of a respectable Nair family of Trichur in the Cochin State. She was one of those who started and edited the "Sarada", the first Malayalam monthly, devoted entirely to the interest of the ladies in Kerala. She also edited, along with others, the *Sadguru*, a quasi religious magazine.

Koel Tampuran, C. S. I., F. R. S., a poet and scholar of no mean repute. She was elected a member of the Royal Asiatic Society and was for some years the Honorary Secretary of the Cochin Ladies Association. She is a deeply spiritual lady and commands great influence over the Malayalam community for her philanthropic services.

Srimati T. Madhavi Amma is the only lady member of the first Legislative Council in the Cochin State. Madhavi Amma

held its Second session at Calcutta last month. MAHARAJE SUCHARU DEVI of Moyur-bhanj who "has tried to exemplify in herself that idea of womanhood for which India has been striving so long" opened the Conference on the first day which was presided over by SRIJUKTA ADALA BOSE (Lady J. C. Bose). A detailed account of the activities of the Conference for the last year was presented before the meeting by Miss Rivett, the General Secretary. MRS. SARALA DEVI CHAUDHURANI and MRS. PRIYAMDANA DEVI presided over the morning and evening sessions respectively on the second day when instructive papers were read by

MRS. A. N. CHAUDHURI, MRS. N. J. BANERJI and others. Miss Hoog presided over the last days proceedings at which Miss KAMALA BOSE, Miss RANI GHOSH and others discussed various matters relating to Women's Education.

LADY BOSE, President of the Nari Siksha Samiti is also the organiser of the Women's Handicrafts and Art Exhibition which held its third session in the Calcutta Brahma Balika Sikshalaya last month. The Exhibition, was a signal success and excellent specimens for exhibition were sent to it by women from all parts of Bengal.

THE TREE LOVER

BY KALFUS KURTZ OUSLING

If you love a tree, we are brothers!
All over the world, there are others
Who love many things: azure sea,
Or a robin-redbreast, or a bee
That's drowsing above the white clover.
There are lovers always, the world over.

But lovers of trees stand apart,
For trees strike down deep in the heart,
A man or a dog, we may help without end,
But a tree, living beauty is ours to defend.
If you love a tree, in your heart is a shrine,
For the love of a tree is a love half divine,

The Louisville Courier-Journal

HOME COMING

By EDWARD DAVISON

The mists are all gone
And the stars come out bright.
But I am not alone
As of old in sight.

Were I now but to call
To the window above,
It would only forestall
The voice of my love.

Who already has heard
That I come that I come
Expecting her word
To hasten me home.

Her word from above,
From the heart of the light,
The word of my love,
My name in the night

The Christian Science Monitor

NOTES

The British Empire as a League of Nations

It is stated in *The Inquirer of London* that the Rev. Lawrence Clarke made a speech at an anniversary meeting at Montreal in responding to the toast of "The Empire." It was, in part as follows:—

His conclusion, drawn from keen observation was that, while they were extravagant at times, they were right in their main thesis—best expressed in Lord Rosebery's phrase: "Britain is the greatest secular agency for good the world has seen."

The speaker referred to the heritage of the English language, through which the people of the Empire were welded; to the idea of service in the minds of England's statesmen, and to the character of the Empire as a League of Nations. He spoke also of the unique character of Britain's policy with regard to overseas Dominions and Colonies, that policy which brings the younger nations within the Empire through growing pains, then sets them free to work out their own destiny.

We do not possess sufficient knowledge of all the secular agencies for good to be able either to support or to controvert the opinion that "Britain is the greatest secular agency for good the world has seen." Perhaps Britain is one of the secular agencies of evil also. What is Britain's position in order of (dis-) merit among such agencies of evil? It is only after striking a balance between the good and the evil done by Britain that it can be properly characterised.

As to the British Empire being a League of Nations, there is indeed a striking similarity between it and the League at Geneva, in that subject India is a "member" of both the Leagues, though both profess to be leagues of free nations! From the brief resume of his speech given in *The Inquirer*, it seems that he had nothing to say about India, though out of the 450 millions of the population of the British Empire 320 are inhabitants of India! So far as population is concerned, India constitutes the Empire in a

sense in which no other part of it does so. It is quite in consonance with British self-righteousness that while credit is taken for setting free the younger nations within the Empire to work out their own destiny, no reference is made to the policy which puts obstacles in the way of the oldest nation within it winning freedom to work out its own destiny.

The Earl of Oxford and Asquith

The late Earl of Oxford and Asquith, who won his laurels as plain Mr. Asquith, was a great English statesman, and had, in addition, reputation of being a gentleman, which every politician is not. It is not difficult to realise the loss which the British people have sustained by his death. We sympathise with them.

As India forms part of the British Empire, in judging of the achievements of British statesmen who have filled the office of prime-minister the good or harm done by him to India has to be taken into consideration. We are not aware that Earl Oxford ever personally did any good to India. Nor are we aware that he, as an individual politician, wronged India in any way.

Bengal Budget for 1928-29

The Bengal Budget Estimates for 1928-29 have been stated thus:—

	Rs.
Opening Balance	1,87,27,000
Total Expenditure	11,84,51,000
Total Income	10,81,15,000
Expenditure Excess	1,00,36,000

This is the third deficit budget in succession. And that in spite of the fact that Bengal's expenditure, except for the police and general administration, has been all

along kept very low. Year after year we have shown that though very large sums are collected in Bengal from various sources as revenue, she is allowed to keep for her expenses a much smaller amount than every one of the other major provinces, each of which has a smaller population—Bombay and the Punjab having each less than half the population of Bengal.

It has been repeatedly admitted by the head of the bureaucracy and other European officials in Bengal that the Meston settlement has been utterly unjust towards Bengal. But no radical remedy has been applied. Only what is insultingly called a "remission" of Bengal's contribution to the Central Government has been made for some years past. For what sins is Bengal being punished? One, no doubt, is that in the earlier periods of British rule territorial expansion was effected with the help of the revenues of Bengal. But should the unintended and compulsory sins of the fathers be visited on their descendants literally? Former generations of British subjects in Bengal did not knowingly and intentionally pay taxes to the Government of their days in order that they might be partly used for depriving some other parts of India of their liberty and subjected to Britain. They were guilty, no doubt, of being unable to withhold payment of taxes, through ignorance and weakness. But their descendants should not be punished for this ignorance and weakness.

Bengal should be allowed to retain at least as much of the revenues collected within her boundaries as Madras and Bombay are. Even Burma, with less than one-third of the population of Bengal, has budgeted for an expenditure of Rs. 12,38,64,000 in 1928-29.

Though Bengal is going to have the third successive deficit budget, expenditure has been increased by many lakhs in the police department and on general administration!

No-tax Campaign at Bardoli

According to an Associated Press message dated Surat the 13th February last,

The Bardoli Taluka of Surat District, is again preparing for a no-tax campaign under the leadership of Mr. Vallabhai Patel of Ahmedabad. The landlords and peasants of Bardoli met here yesterday in conference to consider the situation

created by the recent enhancement of the land revenue by 23 per cent.

Many of the Gujerat Congress leaders were present at the conference which met at the Swarajya Ashram.

Mr. Vallabhai declared that his correspondence with the Bombay Government did not show that the Government were willing to postpone the collection of the land revenue until the complaints were enquired into by an impartial committee demanded by the people. He also explained the serious consequences of non-payment of taxes.

The conference then passed a resolution declaring that cultivators should refuse to pay the land revenue assessment which was according to them unfair, and tyrannical, and that they would suffer all consequences peacefully until Government agreed to refer reassessment to arbitration. If the Government were willing to accept the revenue assessment on the old scale, it would be paid without reservation.

The resolution was supported by farmers of different villages, and carried unanimously.

The supporters included some Mahomedans and a Parsi.

The peasants and landlords of Bardoli have decided to do what all other strong and self-respecting persons should have done in similar circumstances.

Inland Steamer Freights

On the 9th February last, in the Legislative Assembly at Delhi,

Mr. K. C. Neogy moved that the Bill amending the Indian Steam Vessels Act be circulated for eliciting opinions thereon. The Bill invested Government with authority to fix the maximum and minimum freights and fares that could be lawfully charged by inland steamer services. It also sought to constitute Advisory Committees to be attached to inland steamer concerns to keep them in touch with public opinion and the grievances of travellers.

Mr. Neogy said that his Bill had the unanimous support of the press of Bengal.

Sir Walter Willson, while not opposing the motion for circulation, said that it would be unjust to press this legislation without at the same time regulating the passenger boats which plied on rivers.

Mr. B. Das was surprised to hear Sir Walter Willson argue that small country boats were competing with the little "Inchcapes" in India.

Sir Walter Willson ought also to have objected that, as the maximum and minimum rates to be charged by bullock-carts have not been fixed by law, the maximum and minimum rates for railways should be abolished!

Mr. Sarabai N. Hayi felt that Mr. Neogy's Bill did not go far enough. British companies were trying every means to keep out Indian companies. The latter were induced to wind up their concerns by tempting offers, and in the last resort by

threat of a rate war. Shippers also helped British companies.

Sir George Rainy said that the Bill proposed to fix minimum and maximum rates, the former to enable Indian companies to float, and the latter to guard the public against higher fares. Mr. Neogy had not shown that there had been an increase in fares and rates to justify his fear; and as for the minimum rates the principle involved was whether such rates were possible of application to a system involving competition. The case of the Railways quoted by Mr. Neogy was not similar, as Railways were given a monopoly, and in return accepted maximum and minimum rates.

The Commerce Member, however, assured that he was not speaking in a spirit of hostility. The Government would weigh both sides, after obtaining the local Governments' and other views.

Mr. Neogy replied that the small dividends of these companies were due to the transfer of large sums deliberately to their reserves. The balance sheets of the companies had been examined for him by a friend, who was an expert.

Mr. Neogy said that for seven years the public had been agitating in East Bengal; but the shipping companies had kept on an attitude of supreme indifference. The Government's attitude of non-interference had, of course, been most helpful to British trade. He maintained that shipping companies were just as monopolist as the railways and must be dealt with in a similar manner. There was not a single indigenous shipping company in his part of the country, because of the rate war.

Mr. Neogy could and should have shown that "there had been an increase in fares and rates" by steamer companies in Bengal. He could also have shown by narration of actual facts how by murderous rate wars the competition of indigenous steamer services in Bengal had been got rid of in the past by British Steamer Companies. Perhaps he intends to do both when the bill comes next before the Assembly.

The *Hindu* comments with delightful ingenuousness:—

One can understand Sir Walter Willson's opposition to Mr. Neogy's Bill to regulate freight in regard to traffic by inland steam vessels; but what puzzles one is the Government's objections to it. Sir Walter stands for the big steamship companies, but Sir George Rainy ought to stand for fairness to all concerned, the passengers and merchants who use the vessels and the capitalists who run them.

A general impression has long prevailed among Indians, and others that the political imperialism of Britain is connected with the economic imperialism of that country, and that the British exploitation of India is only the other side of the medal of the British administration of India. Undoubtedly, it ought not to be so. But probably Sir George Rainy is not an idealist. That is

why he has unintentionally caused puzzlement to *The Hindu*.

Indian Women's Conference at Delhi

The proceedings of the Indian Women's Conference at Delhi must be highly gratifying to all advocates of women's progress in India. It is to be hoped that the leaders and delegates of the conference will keep up their activities in order that their resolutions and the appeals they have made to the bureaucracy and the leading political men of India may bear full fruit.

It is gratifying to find that ruling princesses, the wives of high Indian officials, and "advanced" political women and feminists stood on a common platform for the betterment of the lot of their sisters, irrespective of social rank, caste, creed and race. It is to be hoped that it would soon be possible and considered desirable to do without the "influence"—whatever its value—of the wives of high British functionaries. It is somewhat incongruous to find so prominent a non-co-operator and Swarajist as Mrs. Sarojini Naidu taking part in a conference opened by the Viceroy's wife. In purely social functions, a non-co-operator may associate with the better halves of bureaucrats. But educational conferences are not non-political affairs. If education had been an entirely non-political affair, national schools would not have been started in Bengal during the anti-partition agitation and all over India in the heyday of the Non-co-operation movement.

And where British bureaucrats are unable to obtain the "Co-operation" of "advanced" Indian politicians of the male sex, the bureaucrats' wives may succeed in capturing these politicians' wives or those Indian women who are leaders by their own right. Whether the tail wags the dog or the dog the tail—we are not uncharitable enough to seek to determine which sex is which—the wagging may come all right.

In proposing a vote of thanks to Lady Irwin, Mrs. Naidu gratefully acknowledged the illuminating words of Her Excellency which, she said, should be the keynote of their aims and ideals. Amidst loud applause, Mrs. Naidu declared that the East and West had met to day in the kinship of women, that indivisible sisterhood India, she said, was the home of Lakshmi, Saraswati and Parvati (cheers), and did not consist of Hindu deities only, but of ideals of all the nationalities who had come into contact in this land. She

strongly repudiated the charge that India consisted of narrow ideals.

It was good of Lady Irwin that she agreed to open the Conference. As she did not thrust herself on its promoters, we have nothing to say against her, though we do not agree with her on some points.

As regards the women of the East and West meeting in kinship, that statement would have been perfectly true if the wives of non-official Britishers in India had joined hands with our women at the conference with alacrity and if a British woman had been chosen to open the conference, purely for her distinction as an educationist and philanthropist, but not solely or mainly for the official position of her husband.

Lady Irwin said in the course of her address :—

The obstacles in the way of women's education in this country are enormous difficulties of language, poverty, ignorance, apathy, hostile public opinion, social customs and even politics. But women, the world-over, are famed for their patience, their dogged courage in the face of daily adversities. If we keep a stout heart and are determined to go forward steadily, I am convinced that we shall, in due time, overcome all our present troubles, and win through them to our goal. In one respect India is favoured. Other countries have been pioneers, and have made mistakes by which India, if she is wise, may profit. They have been slow to recognise the necessity for differentiating between education of boys and girls. It is, of course true that they both have to live in the same world and that they both have to share it between them; but their functions in it are largely different. In many countries to-day, we see girls' education developing on lines which are a slavish imitation of boys' education. It is surely inappropriate that a curriculum for girls should be decided by the necessity of studying for a certain examination so that it must perforce exclude many if not most of the subjects we would most wish girls to learn. If public opinion, for example, demands that Matriculation should always be the first test of excellence of a high school education, schools will necessarily be framed to meet that demand. The result will be, as I suggested, to drive us into a uniformity that fails to take account of the distinctive necessities of women. We must therefore, as I see it, do all in our power to set a different standard, and to create a desire in the public which will allow girls or at any rate a greater number of girls to develop on other lines. What I feel we should aim to give them is a practical knowledge of domestic subjects and the laws of health, which will enable them to fulfil one side of their duties as wives and mothers, reinforced by a study of those subjects which will help most to widen their interests and outlook.

Some of the obstacles in the way of Indian women's education pointed out by the speaker, are real; others are imaginary

or greatly exaggerated. Take, for instance, the difficulties of language. It is a fact that there are many languages in India. But their number has been greatly exaggerated in census reports and linguistic surveys, mere dialects being treated as distinct languages. The principal languages with a literature, with the number of their speakers, are mentioned below :

Hindi	98,115,000
Bengali	49,294,000
Telugu	23,601,000
Panjabi	21,886,000
Marathi	18,798,000
Tamil	18,780,000
Rajasthani	12,681,000
Kanarese	10,374,000
Oriya	10,143,000
Onjarati	9,552,000
Burmese	8,428,000
Malayalam	7,498,000
Sindhi	3,872,000
Assamese	1,727,000
Pashto	1,496,000
Kashmiri	1,269,000

Total 297,009,000

This list, therefore, shows that, out of the 315,156,396 inhabitants of the Indian Empire, 297,009,000, or the vast majority, speak only sixteen languages with literatures of their own, and each is spoken by more than a million inhabitants. And most of the speakers of each of these languages live in particular areas. Surely, it is possible to prepare text-books for them, open girls' schools for them and educate the girls there. There are many independent or practically free countries in the world, having a small number of inhabitants, where girls are educated in public schools to a greater extent than in India. Some of these countries are mentioned below :

Country	Population
Afghanistan	6,380,000
Palestine	1,000,000
Persia	10,000,000
Siam	0,513,000
Turkey in Asia	12,000,000
Egypt	14,000,000
Canada	9,000,000
Mexico	16,000,000
Costa Rica	532,000
Guatemala	1,600,000
Honduras	674,000
Nicaragua	610,000

Country	Population
Panama	442,000
Salvador	1,634,000
Cuba	3,500,000
Dominican Republic	900,000
Haiti	2,300,000
Argentina	10,000,000
Bolivia	2,800,000
Chile	4,000,000
Colombia	6,000,000
Ecuador	2,000,000
Paraguay	700,000
Peru	5,500,000
Uruguay	1,720,000
Venezuela	3,027,000
Australia	6,000,000
New Zealand	1,461,000
Albania	1,000,000
Austria	6,600,000
Belgium	7,600,000
Bulgaria	5,500,000
Czechoslovakia	14,300,000
Denmark	3,435,000
Estonia	1,116,000
Finland	3,500,000
Greece	7,000,000
Hungary	8,000,000
Latvia	2,000,000
Lithuania	2,000,000
Norway	2,789,000
Sweden	6,074,000
Switzerland	4,000,000
Turkey in Europe	2,000,000

If it is possible for all these countries to make their own separate arrangements for the education of their girls and women, surely it is quite practicable for the government in India to do so for the education of girls and women—at least those of them who speak the principal languages having literatures of their own.

For the prevailing poverty and ignorance the Government is at least as much to blame as the people. The hostility of public opinion still exists, but has been rapidly giving way. It is apt to be greatly exaggerated by the British bureaucrats, who have neglected their duty in the matter of the education of the people, and naturally, therefore, by their wives also. Social customs do unhappily still stand in the way to some extent. But they have lost their rigidity, and the difficulties presented by them can be overcome by a moderate amount of persuasion and propaganda, in which the social workers of the country have been engaged to a continually

increasing extent. We do not understand what Her Excellency Lady Irwin means by saying that even politics is an obstacle in the way of women's education in India. Did any political party in any of the legislatures in India ever vote against Government spending money for the education of girls and women? We do not know that any party ever did so. If Her Excellency means—but that is not likely—that the British Government in India does not for political reasons promote the education of girls (as well as of boys) to the extent that it ought to; that is no doubt true.

As for differentiating between the education of boys and girls, its necessity is apt to be over-emphasised. Boys and girls are both human beings. Both are members of society. Both are to grow up into citizens. Both have minds and souls to inform, enlighten and liberate. For these reasons, their education should be to a great extent of the same kind and in the same subjects. This is necessary also to enable women to understand, sympathise and co-operate with their male relatives. Moreover, a liberal education is necessary for women in order that the brand of inferiority may be erased, and that they may be sincerely respected by men. Unquestionably girls and women should also be taught subjects which would enable them to be makers of healthy and happy homes. And even in teaching subjects like literature, history, sociology etc., the special needs and characteristics of women should be kept in view.

The Simon Commission Hartal

It has been said by some people that those who hold that the Simon Commission should be boycotted might and should have treated it with indifference. What need was there for a hartal all over India? Those who, like us, were for the hartal, may in their turn ask, why do Britishers try to convince the world even after the hartal that the majority of the people of India are in favour of the commission? Publicity has its value. To keep the world informed of the actual state of things has its value. It is rather late in the day to write an essay on the value and need of publicity. Britishers have been all along trying to minimise the importance of the opinion of politically-minded Indians. It was necessary to tell

Britishers and others by something striking what India really felt about the statutory commission. Mathematically speaking, nobody can say definitely what the opinion of India is on a particular matter unless a plebiscite be taken. Such a plebiscite has not been taken by the Government or the leaders of the people. But if on ceremonial occasions, like the King's birth-day or the Empire day, the Viceroy, can assume that all Indian hearts are overflowing with loyalty and sends loyal greetings to His British Majesty on behalf of all Indians accordingly, surely it is quite right for Indian leaders to infer and conclude from India-wide open demonstrations that India does, on the whole, repudiate the commission.

If there had not been any *hartals* and other demonstrations, their absence would have been construed by our opponents into loyal and quiet acceptance of the commission.

The disturbances and loss of life in Madras town and the unruly behaviour of some people in some parts of Calcutta are greatly to be regretted. But the leaders of the people are not to blame for them. For, for many days ahead they had been asking people to keep within doors during the period of the *hartal* and to be strictly non-violent. It is strictly true that the police were responsible for some of the disturbances. They provoked, charged and assaulted people. In some places, people not wearing police uniform throw brickbats at passing trams, etc. It has been asserted that these men were agents provocateurs of the police. Some of them may be so, though it is difficult to prove the allegation. As it has been asserted that in some places brickbats were thrown at policemen, those who threw them could not have been agents provocateurs. In that case, they may have been those unruly members of the populace who generally behave in this way at times of excitement. Their behaviour is greatly to be regretted, but the leaders of the people cannot be held responsible for their conduct. It may, no doubt, be asked, why do the leaders provide occasions for such excitement and turbulence when they know there are such people in the country. The answer partly is that all political and other demonstrations and activities cannot be given up because of the existence of some men who may, at the instigation of the police or of their own accord, create disturbances. The Government with all its powers and resources

cannot keep order throughout the country. It is not derogatory to the leaders that, in spite of their efforts and influence, there have been some untoward incidents. If they had sufficient power and influence to prevent all disturbances, they could have set up a parallel Government of their own. The wonder is, not that there have been a few disturbances, but that there have not been more. It is remarkable proof of the essentially peace-loving character of our people that a great national demonstration has passed off with such a small number of disturbances.

Prabasi Banga Sahitya Sammilan

Sj P. N. Bhattacharyya, Secretary Reception Committee, Prabasi Banga Sahitya Sammilan writes from Indore, Central India :—

"The seventh session of the Prabasi-Banga-Sahitya-Sammilan" will be held at Indore (Central India) during the Christmas holidays of 1928. A Reception Committee has been formed, with Dr. Praphulle Chandra Basu, Principal, Holkar College, as the Chairman.

"That this Sammilan is an institution, in which every Bengali residing outside Bengal may feel pride and satisfaction, goes without saying. It is, therefore, urgent that the call of this Sammilan should reach every Bengali brother and sister, who may feel interested in the literary and social activities of this great institution. We are trying to collect information regarding the Bengali institutions and Bengali residents of all places, big and small, in the different provinces of India. We earnestly appeal to all Bengalis residing outside Bengal to help us in this matter by sending information on the following points to the undersigned as early as practicable :—

"1. Names of all Bengali institutions with their addresses.

"2. Names of the Secretaries of those institutions and their addresses.

"3. The number of members of those institutions.

"4. Names of all Bengali residents of note with their addresses.

"It is further requested that those who would favour us with information about their own places may also be kind enough to send us information concerning their neighbouring towns and other places known to them."

We hope our Bengali readers outside

Bergal will readily respond to Mr. Bhatta-charyya's appeal.

The "Rascals" of Moscow

The saints of Britain whose mouthpiece is the London *Daily Mail* have found out that the "rascals" of Moscow were at the bottom of the disturbances in Madras on the occasion of the *hartal*. The mischief-makers of Moscow could have found combustible materials much nearer their homes than Madras. But probably chose the Indian provincial capital farthest from their city in order to escape detection. But who can escape the vigilance of the saints of Britain? Or perhaps as Euellen, Shakespeare's Welsh pedant drew a parallel between Alexander the Great and Henry V, because the former was born in Macedon and the latter at Monmouth, both spelt with an initial M, so there must be some affinity between Madras and Moscow! And what is more wonderful, there is actually a river at or near Madras and another at or near Moscow! That is what Euellen also found to be a marvellous point of resemblance between Macedon and Monmouth.

Sir John Simon's 300 Messages of Welcome

Sir John Simon is reported to have stated that he has received 300 messages of welcome by telegraph and wireless. As he has not published a list of the senders of these messages, it is not possible to ascertain how many of them are genuine, and what is the importance and representative character of the senders of those which are genuine. Some are undoubtedly bogus, and at least one protest has been taken to be a message of welcome and the sender thanked for the same! For instance,

The *Indian Daily Mail* publishes a letter from Mr. D. P. Chunchalkar, Amalner, who writes that at a public meeting held under his presidency a resolution was adopted protesting against the Statutory Commission and deciding to have nothing to do with it in any form and at any stage. The resolution was communicated to the chairman of the Commission. To this came a reply from the office of the Commission expressing its thanks and pleasure at the message of goodwill and welcome.

The paper wishes to know how many of the hundreds of messages received by the Commission

were of the type of the Amalner meeting's resolution and asks the Commission if it would care to furnish information as to how many messages of protest have been treated as messages of welcome.

Some other disclaimers are noted below.

Madras Feb 11—We are authorised to state that the report from Delhi that the South Indian Liberal Federation sent a welcome message to Sir John Simon is absolutely unfounded. The federation regret that its name should have been so utilised without any warrant by other persons.—(F. P. I.)

Diwan Bahadur G. Narayanaswami Chetti, writes—

It is seen from the report and your observations thereon in your issue of yesterday regarding the welcome telegrams sent to the Simon Commission that there is a misapprehension that the telegram sent by me was as 'the President of the Madras Corporation representing the views of that body. May I write to inform you that it was sent by me purely in my individual capacity and not on behalf of the Corporation as President of that body. Further comment by me appears needless on your misunderstanding.

The report that the president of the Coconada municipality had sent his cordial greetings to the Simon commission has been contradicted by that gentleman. According to the *Swarajya* of Madras, he stated at a meeting of the municipal council that he had not sent any telegram of welcome because the council had condemned the constitution of the commission by unanimous resolution. Rai Bahadur Vikramjit Singh, chairman of the Cawnpore municipality has repudiated the message of welcome attributed to him.

There was another knight having the proper name John, between whom and Sir John Simon there is no internal or external resemblance. But Sir John Simon would be fortunate if his 300 messages of welcome did not to some extent become as proverbial as Sir John Falstaff's men in buckram, whose number dwindled down from a hundred to nil.

Evidence in Camera before the Simon Commission

It appears from Sir John Simon's letter to the Viceroy, in which the status, scope and procedure of the Commission are defined, that there will be some evidence offered to the Commission alone by the servants of the Government. The Indian Committee of the Central Legislatures, proposed to be appointed, will not be allowed to be present when such evidence will be given, though such evidence

calls most for cross-examination by well-informed Indians. This is the kind of thing which we must accept as establishing equality between the British Commission and the Indian Committee. There are other points of this "equality" which it is needless to describe—the thing has been exploded.

A "Political correspondent" of the *Indian Daily Mail*, who evidently knows what he writes about, states in its issue of February 11, that the Government has been engaged in getting up their case against Indian self-rule for a long time past. It would appear from the following passage from this correspondent's contribution that Miss Katherine Mayo had access to some of the material collected by the servants of the Government :-

As was to be expected, the Commissioners will have placed before them statistics regarding the various classes and creeds of India: that there are spoken no fewer than 222 vernacular languages; that strife between the Hindus and Muslims has reached a pitch never before known; that the number of different castes amounts to some thousands; that there are over 60 millions of untouchables with whom no other caste may associate in any way; and finally that out of a total population of about 320 millions approximately 95 per cent. are illiterate; and the Commissioners are asked to infer that party politics as understood in England do not and cannot exist in India and that therefore Westminster is an exotic growth in India being foreign to the tradition and mentality of Indians who are steeped in age-long autocracy. The Commissioners are informed that out of the 230 million people inhabiting British India nearly 220 millions have been unaware that they are living under the benefits of the Montford Reforms. The Commissioners are asked to remember how infinitesimal is the number of those who voted at elections. They are reminded that Parliament which sent them out to this country was responsible not for the loudly articulate India but for the rural India to whom the British Raj is the one thing that matters above every other thing on earth, and they will be given "facts" collected by I. C. S. Officers placed on special duty, one in each province and in one province even two, to collate the proceedings of their legislatures in regard to things such as the number of offensive questions put, number of questions disallowed, amount of time wasted in useless discussions, "the degree of exhibition of child's play" in the Councils, the number of social reform measures opposed by non-officials, number of private bills, etc. In some of the Provinces even police officers are said to have been attached to the special-duty officers to throw into bold relief the breaches of the peace that had occurred in their Provinces, having a subtle bearing on the introduction of responsible government.

The Duty of Our Public Bodies

As the Commission has been boycotted by our most representative public bodies and

public men, there may not be any evidence placed before it controverting the official "facts." And even if the Indian Committee of the Central Legislature be appointed—which is doubtful—it will not have the opportunity to cross-examine the official witnesses. Hence, the official "facts" may be placed before the world without any corrective, just as Miss Mayo's, lies and half-truths have had a start of many months.

It is therefore, urgently necessary for the Congress, the National Liberal Federation, The Muslim League and other bodies to prepare a full statement of India's case for self-rule, meeting all the official arguments and exposing all the official lies and half-truths, as far as they can be guessed and gathered from the *Indian Daily Mail's* correspondent's letter, Miss Mayo's book, Khub Dekhta Ago's "India Tomorrow," etc.

It should be shown what Indians have said and done in and outside the Councils, for the education and uplift of the masses (including the depressed classes), for the education of women, ryots for social reform, for wiping away the debts of the ryots, etc. It should further be shown, by giving exact quotations from and references to Government publications, such as council proceedings, how the officials have opposed and placed obstacles in the way of the uplift of the depressed classes, of social reform, of the removal of peasant indebtedness, etc.

Some years ago the Bombay Presidency Association published a memorandum showing how all that had been done for the Deccan ryots had been done at the instance of the leading educated men of that province. Similar statements should be drawn up and published for all provinces and for India as a whole.

All these statements should be published in India, Europe, America and Japan.

Colonel Wedgwood on Secret Evidence

A special cable to "Forward" dated London, Feb. 8, says :-

Interviewed regarding Sir John Simon's statement and boycott in India, Col. Wedgwood said: "I am amazed at the solidarity shown by the Indian leaders. We certainly have a knack in this country of uniting the Indian opinion. Sir John Simon's letter merely relates the procedure which was outlined in the House of Commons. The Assembly and the Councils are each to be asked to set up committees which would consider

with the Commission a mass of official and other materials available. It may be said that if the Indians do not participate, there can be no effective criticism of this material and evidence and such criticism is desirable in order to expose the fallacies or narrow points of view to the Commission. I was not impressed when my attention was drawn in that part of Sir John Simon's letter wherein it was stated that the Indian Committee would be asked to retire when the occasion demanded."

Col. Wedgwood added:—"I wish the question has not been raised of hearing any evidence in private by the British Commissioners alone. This naturally does not seem to be a great matter to Sir John but it indicates just that distrust and lack of identity in the aim which always calls those people who are not trusted. For friendship and confidence, one must make sacrifices, even if the sacrifices be of prestige."

Utmost publicity of the whole of the proceedings of the Commission seems to be essential. If endless mistrust is not to be engendered, it will be far better not to hear secret evidence at all."

"No Confidence" in the Commission

Lala Lajpat Rai moved his resolution in the Legislative Assembly of "no confidence" in Simon commission in an outspoken and telling speech. Those who interrupted him got replies which silenced them. Other Indian leaders who expressed want of confidence in the commission, also made good speeches. The motion was carried by 68 votes to 62. An overwhelming majority of the elected members voted for the motion. One nominated member, Mr. N. M. Joshi, voted for the resolution. All honor to him. Of the elected Muhammadan members present, the majority voted for the motion, thus exploding the myth that all or a majority of the Moslem population are in favour of the Commission.

Death of Harchandrai Vishindas

The first day of the debate on Lalaji's motion was marked by a tragic occurrence. In spite of serious illness, Mr. Harchandrai Vishindas, the eminent Sindhi leader, had come to Delhi to vote for the motion. He was going to the Council Chamber when his illness took a fatal turn and he died on the way. He was a martyr to his sense of duty. His example will show to all unprejudiced and right-thinking persons how strong is the feeling roused against the Simon Commission.

Mr. Harchandrai Vishindas was one of

our elder statesmen. Before Non-co-operation days he used to be a prominent delegate from Sindh to the Indian National Congress, in which capacity and in other ways he rendered good service to his province and India.

The Boycott and After

The boycott of the Simon Commission has entailed on our leaders the duty of drawing up a constitution for India. The work has been seriously undertaken at an all-party conference. This is an important piece of work. But this is not all. There must be at its back the authority of well-informed public opinion in its widest sense. Public opinion must mean the opinion of the masses as well as of the classes. Even at present the masses are consciously with the classes to a greater extent than Englishmen know or are ready to admit. Writing of the earlier years of the Indian National Congress Mr. K. T. Paul correctly observes in his book on "The British Connection with India", to which Lord Ronaldsday has contributed a foreword:—

"Two things the British people in India failed to realise. The political upheaval was apiece with the whole National Movement, which embraced in rapidly increasing measure the vast masses as well as the 'educated' thousands. The other point was that the *literate* have held the traditionally accepted leadership of India, all through the centuries. Not by direct literacy but by the moral influence of the literate minority, India has been ever willing to be led in religious and social matters, and now in all other matters as well. The men who assembled at the annual Congress were only thousands in number, but each single one of them through the social avenues peculiar to India represented many hundreds and through them many more thousands. The determined self-illusion of the Services in this particular was really very tragic in regard to the great interests involved."

The acceptance by the masses of the religious, social and political leadership of the *literate classes* which was perceptible even in the earlier years of the Indian National Congress, has become still more marked since the inauguration of the Non-co-operation movement. The masses are willing and eager to be led. What the leaders have to do is not merely to lead them by means of their influence over them, but also to fill their minds with such general and political knowledge as would enable them to act independently, though in concert with the leaders. This sort of education

should be imparted in two ways. Lectures on political, economic and social subjects, meant for the masses, should be delivered in public. They should not be mere harangues. Our illiterate people are sufficiently intelligent and serious-minded to be able to follow and understand instructive discourses on serious topics, if high-flown bookish language be avoided and care be taken to make them interesting.

Very few men can long remember what they hear only once, and it is not possible to impart all knowledge and information by means of public speeches. And even highly educated men require often to refresh their memories with the help of the printed page. For these reasons, our entire illiterate adult population should be made literate as quickly as possible. All possible means must be adopted to have as much public money spent for the purpose as is practicable. And, in addition, all our adult literate persons must make themselves responsible for removing the illiteracy of as large a number of persons every year as they can by their utmost efforts.

As for boys and girls, not a year should be lost in opening as many schools as would accommodate all children of school-going age.

The Depressed Classes in India and South Africa

In the course of a very important article on "Problems of Indian Self-government" contributed to the current number of *Foreign Affairs*, Mr. C. F. Andrews refers to speeches delivered by British statesmen which though meant to be conciliatory, unintentionally gave rise to resentment. Says he :—

The second example is much more recent. It refers to Lord Birkenhead himself. Nothing was farther from his mind than to hurt the feelings of educated Indians at the very time when he wished to pacify them. Yet, reading his conciliatory speech I could see at once that it bristled with provocations. He declared with unctious that he would never, never have omitted a representative of the depressed classes, if Indians had been appointed to the Statutory Commission—blindly oblivious to the fact that when South African Dominion status was granted, nothing whatever was done to represent the interests of the African natives, who are exactly parallel to the depressed classes in India. Indians are not slow in instituting comparisons, when hypocritical professions are made of a superior righteousness. Earl Winterton's speeches were equally provocative; but since he habitually

indulges in haughty, offensive arrogance, nothing better was expected of him. The net result of such speeches was to make the boycott of the Statutory Commission by all thoughtful patriots more certain than ever.

Social Reform and the Anglo-Indian Bureaucracy

One of the things on which Englishmen base their claim to rule India is that they thereby ensure the continuance of social reforms, which would be jeopardised under Indian self-rule. On this topic Mr. Andrews writes :—

This lack of intimate contact between the two countries paralyzes high statesmanship. For statesmanship can hardly exist in such a medium. The foreign rulers, realizing that they are disliked, try to rule cautiously. They lose that courage which is necessary for great enterprises of reform. The one outstanding act in India, when such reform was accomplished, was the abolition of Sati, or widow-burning, owing to Lord Bentinck's co-operation with Raja Ram Mohan Roy. But this was due to the happy coincidences of two remarkable personalities. It was rather the exception that proves the rule.

The normal routine, which has become a rigid convention, is for the foreign ruler in all social matters to "play for safety". He dodges the plain issue, fearing an upheaval. A Mustafa Kemal Ghazi can carry out sweeping social changes, because his hand is on the pulse of the people over whom his sway is almost absolute. He is their hero and supreme patriot. But a Viceroy, however, noble-minded, is rather like a suspected enemy, who comes over from England to exploit India's weakness. This suspicion of British rule in India has become deep as his life itself, and even noble acts come under its miasma.

It has been my daily experience for nearly a quarter of a century to watch the course of events in India, with an eager longing for advance in humanitarian directions. Every day my own conviction—slowly and painfully formed—has grown stronger, that the rule of the foreigner is now definitely standing in the way of healthy social reform. Even with the very imperfect Legislative Councils, under the Reform Act of 1919 progress has been far more rapid than under the autocracy which preceded. But it has not been rapid enough; and the official vote is continually given for reaction. It has been a commonplace of these recent years to watch the British Government in India relying for its support on those nominated and elected members who stand out for blank conservatism without progress. Government officials have been told to go into the lobby side by side with these conservative reactionaries.

Mr. Andrews might have added that many of the Indian States are more progressive in social legislation than British-ruled India.

The Depressed Classes and Swaraj

Would the depressed classes stand to gain or to lose under Swaraj? Mr. Andrews answers:

Unhesitatingly I would say, that to-day the strongest forces working for their emancipation are to be found outside Government circles. By far the most powerful movement for their upliftment is the National Movement. If the British rule were to cease to-morrow, the depressed classes would at once be brought into the foreground of the national programme. Japan was able partly to solve its own "untouchable" problem, because it had the matter in its own hands from the very first. But in India the spirit of reform is continually defeated by a laggard administration. While writing this, I am not unminded of the fact that the rule of law in India, without respect of persons, has been one of the most persistent causes of whatever upliftment has already been made. But here again the evil of foreign rule is apparent, because the one person who claims exemption and privilege under the law is the foreigner himself.

All that I have tried to state cannot be reasoned out here. But what may carry conviction is the fact that the conclusions I have reached have been against the natural bent of my own mind, when I first came out to India many years ago.

The Eighteen Pence Ratio

Sir Basil Blackett's cocksureness on the virtues of the 18d ratio has met with a rude rebuff. *The Statist* observes:—

The appearance of the Government of India's Four-and-a-Half per cent., Sterling Loan at the commencement of this week caused little surprise. Competent observers of the financial situation in India must have been fully aware that the sterling resources required to meet the £5 million India Bills maturing this month were not available in the hands of the Government. To have remitted the necessary resources to London from India would have caused a weakening of Rupee Exchange, which would have been most unwelcome at the present time when the new 18d. ratio is still going through a testing period. Sir Basil Blackett's promise made in his last Budget speech has thus been completely falsified. He said on that occasion: "We have avoided external borrowing since May, 1923 and next year's Budget (1927-28) provides for no such borrowing. We will thus have met capital and debt disbursements to the tune of 48 million sterling during the four years ending March 21, 1928." The validity of this prediction has been undermined by the efforts that have had to be made to maintain Rupee Exchange at its new legal parity of 18d. These efforts entailed substantial encroachments upon the Government of India's accumulated sterling resources.

England's Educational Policy in India

Mr. V. V. Oak, M.A., B.S. writes from the Wilberforce University, Wilberforce, Ohio, U. S. A.—

"I have been working on the revision of my book 'England's Educational Policy in India', but I am greatly handicapped by the fact that I do not have the latest material from home except the government reports. So many small pamphlets, books and articles have been written on the subject that I think it is absolutely necessary for me to get some of them. Under the circumstances, I am approaching the readers of your papers and writers of such papers and books to send me a copy of their work. I will promise to return the same to them if they so desire or pay postal expenses or price of the book.

There are many books written by provincial writers dealing only with the provinces they live in. I need that type of information also even though I am writing the book from the all-India point of view. I am in bad need of the latest information—statistical and otherwise—concerning the various Indian states, especially of the progressive ones like Mysore, Baroda, and others. I receive full co-operation from every place I apply to except from the people of my country. Under the circumstances I am depending upon the readers of your paper, especially those that are interested in Education.

"The book will deal, besides the phases I have already included therein, with the question of national education, the prevalent system of education in some important countries, and a careful analysis of the educational system and facilities in this country."

Police Despotism on Hartal Day

No time was lost to arrest and punish people alleged to have broken the law on the day of the *hartal* in Calcutta. We cannot say whether those punished were all innocent, but there is not the least doubt in our mind that some absolutely innocent persons were arrested and punished. But this was not the worst form of wrong inflicted on the people on that day. The only lawful power which the police has with regard to offenders is to arrest them and bring them before a magistrate for trial. They have no right to inflict punishment on any offenders. But that is what they did on *hartal* day. They assaulted numerous persons, not only on public streets and squares, but within the University buildings and within the Presidency College compound. Some at least of the men assaulted were perfectly innocent peaceful citizens. But supposing they and all the other men who were assaulted were guilty, the police constables, sergeants and

higher police officers could legally arrest them and bring them to trial. But they exceeded their powers, and inflicted punishment themselves. The Police Commissioner came out with praise of his subordinates in indecent hurry, and, of course, his panegyric will be endorsed by the Government of Bengal. There is not to be even a departmental enquiry into the conduct of the police, though definite charges have been levelled against them by responsible persons. No wonder, the *Amrita Bazar Patrika* has suggested that a proclamation should be issued announcing that His Majesty's Government has abdicated in favour of the Calcutta Police.

At the Calcutta Town Hall meeting convened to protest against police tyranny, a non-official committee of enquiry was appointed to take evidence and prepare a report. Its publication will be eagerly awaited.

Students and the Hartal

In various parts of India, students of many schools and colleges who absented themselves from their classes or otherwise took part in the *hartal* have been punished in various ways. All have been reprimanded, many have been heavily fined, some have been deprived of their scholarships, and a few have been, for some other alleged act of indiscipline or lawlessness, rusticated. The Calcutta Presidency College and Eden Hostel have been closed for an indefinite period. The boarders of the latter were ordered to clear out within 24 hours! So far as actual breach of law is concerned, students as students cannot claim immunity from punishment. But the charges brought against them should be proved as the charges against other offenders ordinarily have to be. And when they have been proved guilty, they should, in consideration of their youth, be either lightly punished, or in most cases let off with a warning.

Those who simply absented themselves or took part in any peaceful demonstration need not have been punished in any way. They did nothing morally wrong. Such absence is not worse than absence to see a football match, a wrestling match, or some such other *tamasha*. The Anglo-Indian bureaucracy look upon the Simon Commission boycott *hartal* as an act of disloyalty or sedition, and some

principals and headmasters have taken their cue from them. But if the *hartal* was seditious, the proper thing to do was to proceed against the leaders and their adult followers. It is rather cowardly to vent all the wrath on the students simply because it is easy to punish them.

Those leaders who take advantage of the patriotic enthusiasm of students to encourage them to behave in such a way as to lead to disciplinary action being taken against them, are also to blame to some extent. These leaders cannot protect the students from punishment and should, therefore, hesitate to take such help from them for making political demonstrations successful as are most likely to bring them into trouble. We are not among those who think that students should keep themselves entirely aloof from the political activities of their countrymen, though we do believe that their main duty is to prepare themselves by education for their future work in life, which includes the duties of citizenship. The reason why we have presumed to write on the duty of political leaders is that it does not seem to us proper for any person to ask others to do anything of which that person does not share the risk.

The bureaucrats who ask our students to give a wide berth to politics have their own definition of that word. It is not politics to read text-books on Indian history written from the British point of view and slavishly answer questions set thereon. It is not politics to read and accept or pretend to accept the unmixt praises of British rule contained in books on England's work in India. It is not politics to read and accept or pretend to accept the views on economics given in text-books on political economy written from the British point of view. It is not politics to have to listen to loyalist speeches on Empire Day or King's birth day and salute the British flag. In brief, nothing is politics which directly or indirectly promotes the permanence of British domination and superiority and Indian subordination and inferiority in India, which tends to produce faith in Britain's angelic work and mission in India, and which curbs or kills the passion for freedom. But whatever tends to make the students think and act like men, whatever makes them conscious of the defects of British rule, whatever strengthens the desire for freedom and self rule, is politics in the

sinister sense in which the Anglo-Indian bureaucrat understands it in India.

So long as there is British domination in India, Britishers will try to catch our boys and girls young, and induce in them a servile mentality. On the other hand, our object is to instill into the minds of our children love of freedom and to make them rebels against servility. But we do not want to turn them into shouting automata. Barking dogs seldom bite.

Presidency College Affair

The Calcutta Presidency College has become notorious for scuffles between some of its students and its principal for the time being or some professors. Enquiries have been made and are still in progress to find out who were to blame. Such enquiries generally start with the presumption that some students alone are to blame. Some students may be to blame. But may not the principal and some members of the staff also be to blame? The students of the Presidency College belong exactly to those sects, castes, and sometimes even families, to which the students in other Calcutta Colleges belong; and perhaps a larger proportion of the students of the Presidency College are sons of Government servants than of other Calcutta Colleges. So it should be ascertained why Presidency College principals or professors alone are assaulted or alleged to be assaulted.

It seems to us that as Mr. Principal Stapleton's handling of his students and staff should be enquired into, some evidence against him may not be obtained so long as he remains principal and so long as there is a likelihood of his continuing to occupy that post. It should not be assumed that he would not know who had deposed against him, even if one does so *in camera* under the seal of secrecy. Nor should it be assumed that he is free from vindictiveness. We think Mr. Stapleton's scene of operations should be changed, and the enquiry should be an open one.

Mishaps on Hartal Day in Madras

Restrictions have been lawlessly placed on the legitimate activities of Madras citizens and many of their leaders because

of the rowdiness of some turbulent people and the consequent loss of life on the day of the hartal. For these the leaders and the law-abiding citizens of Madras were not responsible. The action of the authorities has been challenged as it ought to be.

We cannot from this distance judge whether it was at all necessary to open fire on the crowd in Madras. But assuming its necessity, surely firing at the lower limbs would have quite served the purpose of disabling or dispersing those on mischief bent. It cannot be denied that in India the desire to shoot, and that with intent to kill, is stronger and is given rein to more than in England. Some months ago, writing about the communal riots that occur in this country and the recourse to firing often taken by the government, *The Times of India* made the damaging admission that there is not in India that intense desire to avoid shooting at all costs which is to be seen, for instance, in England. What it admitted with reference to shooting on the occasion of communal riots is true of shooting at crowds on other occasions as well. It wrote:

"We think there can be little doubt that the frequency with which recourse is made to shooting must raise the gravest fears. From our own experience of some very bloody riots in Bombay we know that there are times when nothing but shooting appears to have a chance of restoring order. But experience also teaches that when fire control and discipline are not of the most rigid kind there is a terrible danger that more shots will be fired than are absolutely necessary. It is for that reason that an inquiry should be held into every case of firing on a crowd. There is another reason, which is that there is not apparent in India that intense desire at all costs to avoid shooting which is to be seen, for instance, in England. The history of the general strike last year is memorable for the fact that not a shot was fired from start to finish, and the record is one to be proud of. One may contrast with that the history of the past year in India, and the contrast surely is painful enough to make Government desirous by every possible means to avoid making it more emphatic. The contrast in fact strengthens the case for an inquiry whether the cause of the present communal disorders cannot be eliminated."

Sir Stanley Jackson at the Convocation

Presiding at the annual Convocation of the Calcutta University, the Governor-Chancellor Sir Stanley Jackson said in the course of his address:

"It is a matter of regret for me that my first visit as Chancellor of this University could not be

made under happier conditions. I am informed that amongst those who took an active part in the disturbances which occurred within the week, when an attempt was made to interfere with, and offer resistance to law and order, were students of this University. It is not the function of the University to question the rights of individual political opinion, but the unseemly conduct of members of the University, acting no doubt under the incitement of outside influence, is calculated to shake the confidence of the supporters and well-wishers of the University's progress.

"It is obvious that an institution, which includes among its members some so devoid of a sense of order and discipline, cannot be regarded otherwise than with anxiety and misgiving. As Chancellor, it should be my duty and pleasure to assist as best I can your just requests for support from Government. This I am prepared to do, but I am alarmed lest, the Government may be forced to feel it their duty to consider seriously whether the measure of support which is at present given, might not, in the general interests of education, be diverted into other channels, from which experience has shown they may expect better results."

It is not necessary here to discuss who were responsible for "the disturbances" on the *hartal* day. Let us assume that among them there were some students. Students are divisible in Calcutta into three classes: schoolboys, college students and students of post-graduate University classes. These last may in some sense be called "members of the University," not the two former classes. It has been alleged that some students of the Presidency College were guilty of unruly conduct. But no one, so far as we are aware, has yet alleged that any post-graduate student of the University classes made any attempt "to interfere with and offer resistance to law and order." It is true some young men, presumably students, cried "shame, shame" and tried to persuade some graduates not to enter the Senate House to obtain their degrees. We unhesitatingly and unequivocally disapprove of such conduct on the part of these young men. But it would be an absurdity to characterise such behaviour as interference with law and order. Nor has it been proved that these young men are post-graduate students.

Assuming that some College students have been guilty of indiscipline, only those students should be suitably dealt with not all the students of that college; nor should Government withdraw its support from that college. But supposing all the students of that college and even the staff were guilty, why should the University be deprived of the pecuniary support given to it by the Government? The money received by the

University does not even in part go to maintain that college or any other college of its class. The grant given by Government to the University is for the maintenance of its post-graduate classes.

Suppose, however, that some post-graduate students have been guilty of reprehensible conduct, would it be reasonable on that ground to deprive the University of its grant? No man in his senses would say it would be.

Students of Cambridge University, of which Sir Stanley Jackson was an alumnus, have sometimes been guilty of very unruly and disorderly conduct. They have sometimes been guilty of rudeness to their professors during "rags" and at other times. We do not like such things and would earnestly appeal to our students not to give up the manners of our *Vidyarthi*s of yore and go in for the rude and unmannerly pranks of some occidental students. But that is a digression. Now that Sir Stanley Jackson may have been able to overcome his excitement, we would ask him never again to forget that Cambridge University has never been deprived of any of its grants for the lapses of any of its students. St. Francis of Assisi spoke of the body as Brother Ass. It should not be left even to the Anglo-Indian Chancellor of an Indian University to show that the mind of man also may sometimes deserve to be spoken of as Brother Ass.

In the dyarchical system of Government education is a transferred subject. It is for the Minister in charge of that subject to give their due shares of the educational allotment to the University, the Colleges, the secondary schools, the primary schools etc., after the Legislative Council has voted for such apportionment. The Governor has neither the right nor the power to divert moneys meant for the University into any other channels, as he threatened to do. The Governor's *brutum fulmen* has only made him ridiculous.

It is not known whether the education minister has sent to the Governor a protest against His Excellency's encroachment on his province. What is clear is that a protest is called for. The Legislative Council also should express in some way its displeasure at the Governor's conduct.

We would not have criticised his conduct in the way we have done, if he had simply admonished the offending students as Chancellor. There should not have been

any mixing up of the functions of the head of the University and the head of the Executive.

The Vice-Chancellor's Address

Professor Jadunath Sarkar, Vice-Chancellor of the Calcutta University, pleaded in his Convocation address for more liberal aid to the non-Government colleges in the following passage:

These private Colleges have been recently faced with a great difficulty; while their expenditure has increased through their having undertaken to teach many new subjects and taken affiliation in Honours in addition to Pass, their income has declined by reason of the economic distress prevailing in the country and the consequent fall in the vast numbers which a few years ago used to enter for the degree course in Arts or Science. Most private colleges are now passing through thin lean years, and unless the standard of teaching is to be deplorably lowered, they must meet together and devise means for increasing their income and for reducing their expenditure by inter-collegiate co-operation. When they have thus done their duty, I venture to appeal to Your Excellency's Government to grant more liberal aids to these colleges for their maintenance.

Referring to the research work done by the University teachers in Arts and Sciences during the last year, Mr. Sarkar said:—

It is a record of activity, remarkable for its range and variety, and I venture to plead that as soon as our political atmosphere ceases to be charged with electricity and is freed from capricious gusts and cross-currents of popular passion and popular delusions, the earliest opportunity should be taken by the Bengal Government and Legislative Council to place the Post-graduate Department on a permanent basis by assuring its necessary income for the future in the form of a block grant, as is the case in many other Indian Universities.

We support this plea. But we have to add that, as there does not seem to be any prospect of our political atmosphere ceasing in the near future to be charged with electricity and as education cannot wait for clear and fine political weather, the Bengal Government and Legislative Council should do their duty without any loss of precious time.

The Vice-Chancellor's suggestions for placing the University lecturers on a graded scale of pay and for building residences for them close to the University are also worthy of unqualified support. Said he:—

I repeat the appeal made by me last year for public support to the schemes first of placing the University lecturers on a graded scale of

pay, so as to induce them to remain here instead of improving their prospects by going elsewhere, and secondly of building residences for them close to the University in order to develop the corporate life of the University and bring the teachers and students into constant daily contact. With frequent changes in the staff and with teachers who can be met only during the prescribed periods of lectures or tutorials, it is impossible for any University to do its work properly and for even the most gifted and devoted teacher to give his best to his pupils, for under these adverse conditions it is physically impossible for a teacher to inspire his students or mould their character. Calcutta cannot aspire to be an Oxford, by merely engaging highly qualified lecturers, if the social facilities of Oxford are absent here. With our University teachers freed from anxiety about their future, and enabled to live close to their boys in what the last Royal Commission on the London University recommended as "a University quarter," there would be a great improvement in the research done by our teachers and advanced students and a great elevation of the academic standard, in return for our present expenditure. In this respect helping the teachers would really be helping the community.

The greater portion of the Vice-Chancellor's speech was addressed to students. Detached passages from it have been quoted and interpreted by some politicians in such a way as to create prejudice against him. But we would ask our students to read the whole of it calmly and profit by at least those portions which are non-controversial. They will find that Mr. Sarkar has praised the University as "*the strongest force on the side of democracy*," not of bureaucracy, be it noted. They should note that his address contains the following passage:—

"The true son of a University feels it his duty to take his stand in the ranks of the defenders of reason and liberty, of law and progress, of justice and reform,—against the forces of bigotry and selfishness, the tyranny of power or of the populace, the vulgar appeals to passion and unreason."

But for the time when the address was delivered, the following passage would not have exposed Mr. Sarkar to criticism:—

It is a commonplace truth of economics that the employment of immature lads in factories is not only harmful to their health but also hinders the growth of a class of efficient adult labourers. Similarly, the youth who prematurely leaves his studies or practical training incomplete, in response to the noble instinct of patriotism, is sure to realise in his hours of calm reflection that he is really showing irreverence to our Great Mother by laying before her "shine the cheap and useless offering of an undeveloped body, an immature mind, a hastily learnt art or craft, an undisciplined will. He will realise with regret, after his life's opportunities are gone for ever, that it requires a higher type of patriotism to possess his soul

in patience, to resist with unshaken firmness all distractions and temptations during the period of his education, and to thoroughly master his own special subject, so that he may supply the nation with an expert workman and supreme teacher,—which is its greatest need.

If it be true of the individual that

"Self-reverence, self-knowledge, self-control,

"These three alone lead life to sovereign power," it is no less true of that aggregate of individuals which we call a nation. Let every future citizen of India, as he leaves the training ground of his boyhood and youth, select his rule of life. Let him make his choice between the eternal verities on the one hand and the popular delusions and misrepresentations of the hour on the other, between the sway of reason and the insurrection of the passions, between holding his strength in reserve till the proper time for its use and making premature theatrical demonstrations, between self-discipline and moral anarchy.

In the first eleven words in the above extract which we have italicised, Mr. Sarkar speaks of the youth leaving his studies or practical training incomplete, not of spending a few hours occasionally in things that have no direct connection with his studies or practical training. Hence we do not feel justified in concluding that he has asked students to have nothing to do with politics. We think some aspects of the contemporary politics of our country are worthy of serious study by our students from the printed page and the spoken word. If there are other elements of contemporary politics which only or mostly cause distractions, we would certainly advise our students to have nothing to do with them. And temptations of all sorts must, of course, be shunned and resisted. We are not for what Macaulay calls "Valetudinarian Virtue"; Virtue must be strong enough to resist evil. But it is not wise for youth not to expose themselves to needless peril.

If in the words "popular delusions and misrepresentations of the hour" and "theatrical demonstrations" any people discover caps that exactly fit them, that is a thing for which Mr. Sarkar ought not to be blamed. It would be a gratuitous assumption to hold that in Mr. Sarkar's opinion all our political opinions and activities are covered by the words popular delusions and misrepresentations and theatrical demonstrations. Students should certainly have nothing to do with things of which those words are an accurate description. But there are other things in our politics which are not delusions or mere theatricality, and these Mr. Sarkar has not asked students to have nothing to do with. Of course, he holds that their education is

their chief concern, and in that opinion we are in complete agreement with him.

A Wrong and A Blunder

Maharaja Ripudaman Singh of Nabha, when after his forced abdication chose to call himself Garudharan Singh, has been deprived of his liberty. He is henceforth to live in Kodaikunai in Madras presidency. He must no longer call himself or be called Moharaj; his son is to be raised to the *gadi*. The allowance of Rs. 25,000 per mensem which he used to be paid from the revenues of his State has been reduced to Rs. 10,000. And all this for alleged repeated participation in disloyal activities since his departure from Nabha. Far from this allegation being proved, even the "disloyal activities" have not been enumerated. Ordinary men, who are British subjects, are no doubt deported, interned, "domiciled", imprisoned without trial and exiled from particular provinces or districts. But the Maharaja is not a British subject. Perhaps according to treaty he is an "ally!"

The world has been assured repeatedly that Indian ruling princes are passing sleepless nights owing to the apprehension caused in their minds by the prospect of British-ruled India being in future ruled by "Indian politicians." The world should be told further what worse treatment these potentates are supposed to expect at the hands of our "politicians" than that meted out to some of our princes. Was the case of the Maharaja of Nabha ever placed before or considered by the Chamber of Princes? If so, what was their report, recommendation, or decision? If not, what does it exist for?

Boycott of British Cloth and Other Goods

It has been decided in several public meetings in Bengal to boycott British Cloth definitely and other British goods as far as practicable. It is to be hoped that the resolve will be steadfastly adhered to. The present writer has used for his *dhotis*, *chadars* and *panjabis* nothing but cloth manufactured in India, since the year 1895. He can, therefore, say from experience that it is practicable to do without British cloth to a great extent. He has used cotton

goods manufactured in India for other kinds of apparel and for other purposes also to a great extent, but not entirely. He has also used woollen textiles made in India to some extent. Other Swadeshi goods also he uses as far as they are easily available. We think it is practicable for individual Indians to do without foreign cotton and woollen goods, particularly if the users are young and in the enjoyment of normal health. If the nation as a whole wants to boycott British cloth, our production of such cloth must be greatly increased. And our mill-owners and their agents must give up profiteering. They need not incur any loss.

The Simon Commission and the Council of State

The Council of State has not belied expectations. By 34 votes to 13 it has passed a resolution in favour of appointing a Committee of the Central Legislature for co-operating with the Simon Commission. The thirteen members who voted against the motion have done right.

Society for the Improvement of Backward Classes

The seventeenth annual report of the Society for the Improvement of Backward Classes, Bengal and Assam, for the year 1926-27, has been published. It is a record of very good work done. During the year under report the Society had 497 schools in 22 districts of Bengal and Assam. The children, both boys and girls, receiving education in these schools, numbered 16,670, of whom the largest number 6118, belong to the Namasudra community, and the next largest number, 2637, to the Mahammadan community. Money is urgently needed by the Society. Subscriptions and donations are to be sent to Babu Satis Chandra Chakrabarti, M.A., Honorary Secretary, 14 Badurbagan Row, Calcutta.

Bengal Central Bank Ltd.

The Balance sheet of the Bengal Central Bank, Ltd. for the year 1927, shows its steady growth. In spite of the failure of

the Bengal National Bank the increase of business during the year 1927 has been satisfactory. Deposits have increased by 50 percent and the Reserve Fund is about 50 percent of the paid-up capital.

Bengal Banker's Federation

A few weeks ago, the loan offices and the Banking concerns of Bengal held a Conference in Calcutta to consider their present position. About 50 representatives from different parts of Bengal attended, and many more sent letters and telegrams of sympathy with the object of the Conference. It appears that these concerns hold an important position in the national economy. There are about 600 of them working at present in important district and subdivisional head-quarters with resources aggregating several crores of rupees. Any movement affecting them is thus of national importance.

Briefly, the aim is to start a Federation and Federal Bank for their mutual assistance. From the draft memorandum and articles of association of the Federation recently circulated, it appears that it will be registered as an association, not for profit, but for improving the working of the loan offices and banking companies from within in all respects. Thus the Federation will send out experts for showing up-to-date methods of book-keeping, accounting, auditing and banking procedure. It will arrange for the training and examination of bank employees and will grant diplomas, certificates and prizes. It will conduct a journal for discussing banking problems and legal decisions affecting bankers. There are many other similar items in the programme.

The proposed Federal Bank will be a Central Bank with its share capital subscribed exclusively by the registered loan offices and private banking concerns of Bengal, the directors being chosen by themselves from amongst their own directors. As it will thus be not an ordinary bank, but a bankers' bank, it will ensure public confidence and be able to attract substantial deposits in Calcutta. These will be available for use in the mofussil, should any loan office require any financial accommodation to meet any pressing demand. Even if there is no financial stress, the mofussil banks will be able to make a profit by borrowing in Calcutta

and lending in the mofussil for the rate of interest is higher in the mofussil than in Calcutta.

Apart from such individual and corporate benefits to these loan offices, the Federal Bank will be able to initiate schemes for assisting the trade and industries of Bengal, which are beyond the capacity of individual banks to finance. This is a crying necessity in Bengal, where there is acute unemployment among middle-class young men. The scope of employment must be widened beyond government service and the so-called learned professions. Fresh avenues of employment must be found in trade and industry, which are now largely controlled by non-Indians and non-Bengalis in Calcutta and in the mofussil. It should not be forgotten that finance is the keystone of the arch of trade and industry. If finance is available, and if there is firm resolve, Bengalis can certainly get a due share of the trade and industries of their province. The present movement should, therefore, receive the enthusiastic support of all Bengalis. Further information may be obtained from the Hon. Secretary of the Bengal Bankers' Federation, Salisbury House, 15 Hare Street, Calcutta.

The Second Session of the Pan-Asiatic League and The Future

In a letter from one of the organisers of the Pan-Asiatic League, we find the following interesting information, which should receive careful consideration of all Indian statesmen interested in Asian Freedom :—

"The second session of the Pan-Asiatic League was held at Shanghai. There was great opposition from British as well as Russian sides. The former are as usual against it for imperialistic reasons, while the Russians don't like it because it stands not for Proletariate Dictatorship, but for Asian Independence only. You must have known about the oppressed nations' Conference held in Europe, this year under Russian patronage. The Russians want us to join in that. But our own aim is quite different, in that we stand for liberty and happiness to all mankind and the prerequisite is Asian independence. Moreover, the Russians don't like the Japanese and this is an additional reason for their being antagonistic. Let us try to do our work in spite of world opposition and success will be ours, if the cause we espouse is noble. The Indians are systematically being supplied with anti-Japanese news by the British

agents with the object of estranging Japan from India and vice-versa. This must be counteracted. The Indians should know that Japan is our friend after all, in spite of what westernised Japanese politicians may say to please England."

This letter is from an Indian patriot whose honesty and voracity are beyond dispute. The only way a solid foundation for a durable understanding between the peoples of Asia can be laid, is to foster cultural, commercial and political co-operation among the far-sighted leaders of these lands. Through exchange of professors and students the work of cultural understanding may be promoted. All Asian peoples, especially China, Japan and India can effectively co-operate in the field of international relations, by adopting a common policy on problems of Immigration and by combatting all restrictions, imposed upon them on the basis of racial discrimination.

Japanese statesmen are the best judges of the foreign policy adopted for the preservation of the interest of the Japanese people. However, it may be safely asserted that, there may come a time, when Japan will have to beg for Chinese and Indian support even to secure necessary food-supply, and to avoid complete isolation in World Politics. Opportunist Diplomacy of Japan led her to invade Siberia which cost her about one billion yens without any gain, except acquiring suspicion and ill-will of the Russian masses! Japan has been forced to change her policy towards Russia; and at the present time Russia is flirting with Japan. But none should forget that if Great Britain and America change their policy towards Russia, then Japan's position may be dubious unless Japan can secure an Anglo-American-Japanese understanding, before this possibility develops. Of course, it is needless to say that there is not the remotest possibility for an Anglo-American-Japanese understanding; because the present tendency of British diplomacy is to secure Anglo-American co-operation in international affairs. Japan should cultivate the friendship of America, Russia and other nations, but it is to be hoped that the Japanese statesmen, who do not shape their national policy on a temporary and opportunist basis, would do their best to secure the confidence of the people of Asia, especially China and India. The future of Asia, depends largely upon Indo-Chinese-Japanese co-operation. It is the duty of Indian statesmen to do their

best to promote Indo-Chinese-Japanese friendship, a requisite for Asian Independence.

T. D.

Japanese Activities for Commercial Expansion in Asia

The latest information on Japanese efforts for commercial expansion in Asia is contained in the following interesting news-item:—

"A Japanese commercial delegation arrived in Jerusalem on Dec. 8 for the purpose of establishing formal commercial relations between Japan and Palestine, according to a Jewish Telegraph Agency dispatch. The delegation was accompanied by a Japanese priest who intended to make a study of the work being done in Palestine by the Zionists."

The Japanese are doing their best to acquire mining concessions in various parts of Asiatic Russia. They are consolidating their economic position in Manchuria, China, Siam, Malaya Peninsula, Burma and India. The Japanese Commercial Intelligence officers are in Persia and Turkey to find out possibilities of securing market for Japanese goods and to acquire concessions for oil lands. Japanese traders are not ignoring Afghanistan and Central Asia, as fields for commercial expansion.

If one compares Japanese resources of raw materials and geographical position with those of India, it will be evident that India enjoys a far more favourable situation than Japan. The Japanese are trying to get ahead in spite of their weakness, where rich India is only talking about the need of enacting a discriminatory tariff legislation against Japanese goods. Let us hope that Indian commercial leaders will actively organize themselves to strengthen India's commercial position, through expansion of Indian Mercantile Marine, Indian Banking and Indian Industrial Development of various characters.

T. D.

South African Merchant Marine

A recent Johannesburg despatch records that "Concrete proposals are being considered by the South African Government for provision of a fleet to carry the whole of the

country's perishable and wool export trade. Big South African interests have offered to float a \$15,000,000 company to build ten ships. They ask an annual subsidy of \$500,000."

This should be a lesson for the Indian statesmen. Without an Indian National Merchant Marine, Indian people will not be able to hold their own in international commercial and industrial competition. In the past various efforts to create Indian Merchant Marine have been frustrated by the British Indian Government's antipathy to genuine Indian interests and anxiety to protect British commercial interests at the cost of India.

1. Indian coast-wise shipping must be reserved for genuine Indian national mercantile marine. 2. A law should be passed which will prevent all forms of unfair competition such as cut throat rate war on Indian shipping. Let India aid the Indian merchants who are trying to create an Indian National Mercantile Marine.

T. D.

The New Governor-General of the Philippine Islands

President Coolidge has appointed Col. Henry L. Stimson, who served under President Taft as the Secretary of War, and who visited the Philippine Islands last year to succeed the late General Leonard Wood as the Governor-General of the Philippine Islands. Col. Stimson is 60 years old and is a leader of the Republican Party. He is a friend and admirer of General Wood. It is generally expected that Col. Stimson will carry out General Wood's policy, which was so distasteful to the Filipino people.

Mr. Stimson is opposed to independence of the Filipino people; but he finds that the Filipino people are endowed with some good qualities, although that notorious proponent of Anglo-American domination of Asia, Miss Katherine Mayo did not find anything good at all among the Filipino people. Her book the "Isles of Fear" is as untrustworthy as the "Mother India."

Borrowing Money Outside the Country

The latest book by Prof. A. C. Pigou of the University of Cambridge, *A Study in Public Finance*, contains an illuminating exposition of the fundamental principles of Public Finance. In the course of his analysis Prof. Pigou shows that government expenditure may be broadly divided under two heads, *viz.* *Exhaustive* and *Transfer* expenditure. Exhaustive expenditures are such as involve a taking of funds from the public expenditure of the same by Government in a way which may or may not benefit the public indirectly. There are exhaustive expenditures, such as educational expenditure which benefit the public indirectly; there are others, such as payment of interest to foreigners on, let us say, a War loan, which do not benefit the tax-paying public in any way. Transfer expenditures are such as involve a mere redistribution of the national income. The Government take money from some man in the shape of taxes and pass it on to others (often to many of the tax-payers themselves) as interest on national debt, pensions, etc.

Exposing the danger and anti-social nature of exhaustive payments to foreign holders of a nation's public debt bonds, Prof. Pigou says in his characteristic lucid way,

...interest on the National Debt is often thought of as a single homogeneous entity. But in practice it includes both interest payable to foreign holders and interest payable to domestic holders. The payment to foreign holders involves the subtraction of so much actual real income—food, textiles and so on—from the use of the people of this country, whereas the payment to domestic holders involves merely a transfer of control over those things from Englishmen (or Indians) in their capacity of tax-payers to Englishmen (or Indians) in their capacity as fund holders. (Ital. ours.)

Prof. Pigou then points out how the burden of a smaller debt to foreigners is heavier than that of a much larger debt to internal holders. "For," he says,

£100 million of taxation to make foreign reparation payments is much more of a burden on a nation than £100 million of taxation to finance internal debt. In conceivable circumstances a nation might be able to meet internal debt upon the whole amount of its wealth without suffering any direct injury while at the same time to meet any foreign claim at all would involve some of its members in starvation.

(Italics ours.)

So that those who talk glibly of money and arrange the borrowing of huge

sums in Loodoo (as has been done again recently) may find something in the above to put a stop to their base sophistry. Had Prof. Pigou been writing on Indian Public Finance, he would certainly have added a few things to his argumentation. Namely, all foreign claims express themselves in the form of demand for actual goods. Foreign creditors are never interested in all kinds of goods produced in the debtor country. They are interested in only some, and when these are such as are necessities of life not already scarce in the debtor country, the result of their additional demand is acute suffering of the debtor nationals. On the other hand, if the demand were for manufactured luxuries etc., a foreign claim may mean a relief of unemployment, *i.e.*, an opportunity to utilise the idle resources of a country. So that, it is doubly foolish (criminal ?) for the financial heads of India to borrow money abroad, when it is known that foreign claims on India will always express themselves as demand for essential raw materials and food stuffs.

Trustees of the Depressed Classes

The Assembly debate on Mr. Jayakar's resolution on the 23rd February recommending that instructions be issued to all local Governments to provide special facilities for the education of notables and other depressed classes and also for opening all public services to them, specially police, drew government story-tellers into great confusion. Mr. Jayakar, Lala Lajpatrai, Paodit Malaviya and several other members exposed the government's hypocritical policy concerning the backward classes so mercifully that the much advertised *Ma-Baps*, Trustees of the backward classes, Defenders of justice and fairplay, etc., etc., cut an entirely sorry figure while attempting to take cover behind weak inanities.

Mr. Jayakar said his object was to speed up matters and to see that no local Government took shelter under the plausible contention that unless the Hindus themselves were prepared to admit equality Government did not propose to take steps at all. He feared there was a varied policy followed by the provincial Governments and wanted to know from the Government spokesman what efforts had been made in areas directly under the Government of India's charge so as to serve as a model for the provinces to follow. In

answer to Lala Mohanlal's question in the Punjab Council, the Finance Member there told him some time ago that the members of depressed classes were not enrolled in the police and when there was evidence that the depressed classes were treated on an equal footing by all sections of the community and further when the Government were satisfied that the enrolment of members this class would satisfy the requirements of efficiency then Government would be prepared to throw open the recruitment to them. This meant Doomsday and Mr. Jayakar wanted to know if the conditions postponing the reform till Doomsday had the approval of the Central Government.

Evidently it had, for in the government's reply there was a note of complete satisfaction with things as they were; rather, they appeared to feel that they were already spending too much on the upliftment of the Indian masses! The Government spokesman said,

Local Governments were keenly alive to their responsibility in the matter and it would in the circumstances be supererogatory on their part to send a direction to Local Governments.

The official expression of readiness to give the depressed classes their just rights when they showed efficiency and were acknowledged as equals by the other members of the community is an entirely unnecessary gesture; for it is their lack of efficiency and equal status that calls for special arrangement for their betterment. Had they been placed similarly with all others, would any man think of intruding upon the government's complacency on their behalf?

Lala Lajpatral moved an amendment to the resolution asking for a special grant of rupees one crore (which Mr. Joshi later asked to be made recurrent) for the training and upliftment of the depressed classes. He said,

The last decade's record did not show that even one per cent. of these classes went in school. Hindu private organisations were responsible for a good part of progress in this direction and the elder brother of Mr. Birla was spending Rs 15 to 20 thousand a month on these classes. (Applause). He wanted figures showing what had been done by Government effort as distinct from private help. He further wanted that roads and public wells should be thrown open and that a census be taken of these classes as the 60 million figure had been put up arbitrarily by the Government to be exploited for political purpose. The Lala accordingly moved his amendment.

It is a vile scandal that the use of public roads, wells etc. in many places denied to the so-called untouchables and that with the knowledge and connivance of the govern-

ment officials who are so just, high-minded, progressive and divinely entrusted with the peoples' good.

Pandit Madan Mohan Malaviya pointed out how mass education was the only solution to the problem of the backward classes. He was of opinion that until and unless India's finances were handed over to Indians, there was no hope of solving our social problems.

As might have been expected the government were strongly opposed to Lala Lajpatral's amendment which was lost by 47 to 25 votes. The amendment wanted the Government of India to sanction one crore for the education of the depressed classes from the Central Funds and issue orders that all wells that are not private, all streets and roads that are public and all institutions which are financed or managed, partly or wholly, from public funds be opened to the depressed classes and that a special list be made of the untouchables and others who are not untouchables, but at present included in the depressed classes in Government records.

Had the amendment been carried, the government would no doubt have had it vetoed. So there was never any real fear of government's being forced to spend India's revenues for India's good.

—

Teaching of Music in Schools

Some time ago, the Director of Public Instruction, Bengal, sent round to musicians of repute a letter in which he requested them to give their opinion on certain points dealing with the teaching of Music in the schools of Bengal. We do not know what kind of replies the D. P. I. got nor what he has finally decided upon regarding curricula and method of instruction. It is however, necessary to point out to the D. P. I. the necessity for extreme caution and expert advice of the *real sort* in the field of musical instruction; for although music is a highly developed art in India and its theory has been elaborately discussed and clearly stated by many classical and modern authorities; it is in the unfortunate position of a highly intellectualised art suffering from an abundance of popular versions (All claiming to be superior to the real thing).

This is a transitional age in which experts and people who have undergone a long and difficult training in particular branches of the arts and sciences are being challenged everywhere by the less qualified and more convincing type of innovators or reformers. This is evidently the result of modern hustle and cheap education. It is a stage through which we shall have to pass if we are to realise the ideals of democracy in every field of life. But while it lasts we shall have to be specially careful in our management of social education, lest we infect our national and traditional culture with shallowness and devote our energies to flashy excrescences.

Indian Music with its great number of *Ragas*, *Raginis*, *Tals*, and *Thats* offer to the student and the artist an endless vista. It takes many years to learn the mere A. B. C. and first principles of Indian music and its complicated Grammar. A bad beginning may so vitiate the musical outlook of the student as to make it impossible for him to ever appreciate the delicacy and subtlety of Indian music. So that when we go in to introduce musical instruction in our schools we should take the advice of the best available men, of real experts—*Sangit Gurus* of long experience. Even with our poverty and ignorance we have fortunately among us musicians who have, often for generations, employed themselves wholly to the study, practice and teaching of music. These men have kept our music alive through the ages and they are the men whom we should consult about the teaching of music.

Hinkler's Flight

Hinkler's flight to Australia is another step forward in the long struggle of humanity against time and space. The world is slowly being knit closer and closer together every day. The paradoxical and regrettable aspect of this situation is that the more we are being brought close together in the world of matter; the more alienated from one another we are becoming spiritually, economically and politically. This is probably due to the fact that man's endeavour is generally stimulated by mean militaristic and exploitative ambition. So that what might have meant salvation to humanity, becomes a great evil through abuse. Already the War Lords of the world are chuckling over the military possibilities of Hinkler's performance. What hopes, then have we for the world?

Colonel Barnardo

We Congratulate the Government on the good sense they have shown by removing Colonel Barnardo from the high post of Principalship of the Calcutta Medical College. In spite of repeated coatings of whitewash the true colour of the ex-principal's character could be still seen clearly by outsiders. It is unfortunate that the Government are not always so alive to justice and fairplay as one might expect from the way they never miss a chance to boost up their own greatness. Not that they have moted out fullest justice to the Colonel. But, still it was better than conferring a knighthood on him for services rendered in proving an Indian a thief.

"INDIA'S MANY LANGUAGES AND RACES."—DO THESE JUSTIFY FOREIGN RULE?

By J. T. SUNDERLAND

PART I

ONE of the arguments oftenest used in justification of British rule in India is the many races, tribes and peoples alleged to be found there, and especially the many languages alleged to be spoken. One British writer urges the necessity of British rule by telling us that there are 130 different languages in India, another says 170, another 185; and by including minute variations and dialects the number has been swelled to more than 200. It is hardly possible to read any book or extended article on India, from a British source, without having such figures as these put before us as an unanswerable evidence that Britain is needed there, and must stay.

But really what do these appalling figures and numbers signify? Anything in justification of British rule? or the opposite? Why should numbers even ten times as great make it necessary for the land to be ruled by foreigners and strangers? Are men born and reared in distant countries, who are without knowledge of these various Indian peoples, who are ignorant of their institutions, customs and needs, and who are unable to

speaking a single one of their languages, better fitted to govern them—govern them wisely and safely—than are their own intelligent and trusted leaders, born and educated among them, having life-long knowledge of their institutions, habits and wants and able to speak their tongues? Such a claim is amazing. And yet we hear it constantly made by the British, and repeated parrot-like in America.

The existence of many languages in India can be no more an argument against Home Rule there, and no more a proof of the need of foreign rule than is the existence of many languages in countries other than India a proof that those countries should be ruled by foreigners. Turn from India to Russia.

During all her later history Russia has had more languages, and also more races and tribes and nationalities, than India, yet nobody has contended that therefore Russia was incapable of self-government and ought to have been conquered and held in subjection by a foreign power.

As a matter of fact the United States of America has more languages and more nationalities than India. In order to get any

such numbers of Indian tongues as we are told that India possesses, there have to be included the languages and dialects of all the small and unimportant hill and mountain and jungle tribes that live in remote and often almost inaccessible places,—similar to the small tribes of our American Red Indians. In the United States we have people from all the nations of South and Central America, from all the nations of Europe, from nearly or quite all those of Asia, Africa and the principal islands of the sea. Now count the languages of all these, and to them add the nearly two hundred languages and dialects spoken by our own Red Indian tribes, and it is easy to understand the truth of the statement that we have more languages in this country than has India. But does anybody believe it necessary, on this account, for some nation beyond the sea, say Japan or Russia or France or England, to conquer and govern us?*

Canada would hardly like to have the claim made that it is unfit to govern itself because of its many languages, nationalities and religions. Yet according to recent statistics Canada has 178 languages, 53 nationalities, and 79 religious faiths. That is to say, considering the number of its population,† Canada has a far greater diversity of languages (as well as nationalities and religions) than has India. Yet Canada rules itself and has done so for much more than half a century with great efficiency.

As a matter of fact, the main, the really important, languages of India are not many, but few,—fewer than those of Europe. India has a population as great as that of all Europe outside of Russia. Yet what may properly be called the main tongues of non-Russian Europe are as many as ten or eleven, it not more: whereas the main languages of India do not exceed nine or ten; and these to a surprising degree are closely related,—the Tamil and the Telugu in the South being almost twin sisters (Dravidian), and all those in the North being children of the Sanskrit (Aryan), and therefore sisters.

It is also true that the main and most important races in India are few. When

the Aryan people came into India from the North-west, they found it for the most part inhabited by a race known as Dravidians. The Aryan invaders pushed on and on until they had possessed themselves of a large part of the country except in the South, driving out or amalgamating with the somewhat civilized but not so highly civilized Dravidians.

The India of to-day is nearly all Aryan and Dravidian,—but with a relatively small Mongolian or partly Mongolian element (about one-thirtieth of the whole population) in the North and North-east; a slight Persian and Afghan element in the North-west, and certain small miscellaneous elements in the hills and remoter regions here and there, which are remnants of a primitive people or peoples somewhat like our North American aborigines.

Thus we see how baseless is the claim that India is extraordinarily or seriously conglomerate or divided racially. As a fact, it contains less diversity of races than Europe, and far less than the United States of America, which, as already said, contains nearly all the languages and races of the world.

Why do not Englishmen, who urge that India is unable to govern itself and must be ruled by the British because of its diversity of tongues and peoples, apply the same principle to their own empire as a whole? The British Empire contains all the diversities of every kind that are found in India, and at least two or three times as many more. Do Englishmen think that therefore they are unfit to rule their Empire, and that it ought to be ruled by some outside power?

The fact is, this whole argument that India contains a large number of languages and peoples and therefore needs to be ruled by foreigners is a hollow, is a bogey, is something devised in order to furnish seeming justification for Great Britain's remaining in a country where, for selfish reasons, she wants to remain, but where she has no right to be. It is strange that any sane mind can fail to see instantly that the greater the number of peoples and languages there are in India or any other country, the stronger becomes the reason why it should be ruled not by foreigners but by its own sons, who know most about these languages and peoples.

The claim is made by many Englishmen that the diversities of language, race, and so-

* A recent census of New Bedford, Mass., shows that in that relatively small American city 54 languages are spoken.

† In 1921 the population of Canada was 8,783,453, and that of India 318,212,450.

forth, found in India, destroy her unity, make it incorrect to think or speak of India as one, or as a nation at all: and for this reason she cannot govern herself.

This argument, which is accepted as true by many who know nothing to the contrary has been answered many times over, and with great thoroughness, both by Indian scholars and by Englishmen, who have shown that, notwithstanding all the diversities that have been mentioned, deep down below them all India is profoundly one—that as a fact she has a unity older and more fundamental than that of any other extensive country or great people or nation in the world with the possible exception of China. Let us see what are some of the evidences of this as shown by historians and scholars.

Perhaps the most widely circulated and therefore the most mischievous statement we have of the claim that India has no unity, is not a nation, is that made by Sir John Strachey on the opening page of his well-known book, "India." There he says:

"The first and most essential thing to be learned about India, is, that there is not and never was an India possessing according to European ideas any sort of unity, physical, social, political, or religious; no Indian nation, no people of India of which we hear so much."

This alleged condition of things he claims to be a clear justification of British rule. What answer is to be made? A more than sufficient answer is furnished by a high British official, writing much later than Sir John Strachey, who has given us two of our most trustworthy books on India. In his important work, "The Government of India," Mr. Ramsay MacDonald, at one time Premier, declares that India is one in absolutely every sense in which Mr. Strachey denies the unity. Here are his words (pp. 28, 29):

"India from the Himalaya to Cape Comorin, from the Bay of Bengal to Bombay, is naturally the area of a single government. One has only to look at the map to see how geography has fore-ordained an Indian Empire. Its vastness does not obscure its oneness; its variety does not hide from view its unity. The Himalayas and their continuing barriers frame off the great peninsula from the rest of Asia. Its long rivers, connecting its extremities and its interior with the sea knit it together for communication and transport purposes; its varied productions, interchangeable with one another, make it a convenient industrial unit, maintaining contact with the world through the great ports to the east and west."

"Political and religious traditions have also welded it into one Indian consciousness. This

spiritual unity dates from very early times in Indian culture.

"A historical atlas of India shows how again and again the natural unity of India has influenced conquest and showed itself in empires. The realms of Chandragupta and his grandson Asoka (305-232 B. C.) embraced practically the whole peninsula, and ever after, amidst the swaying and falling of dynasties, this unity has been the dream of every victor and has never lost its potency."

Elsewhere (*Indian World*, November, 1910), Mr. MacDonald gives the following further testimony as to the fundamental unity of India. He says:

"One thing which the stranger in India quickly discovers is, that Indians—at any rate Hindus and not a few Mohammedans—always think of India as a whole. In spite of her various languages, in spite of her different races and castes, in spite of her great distances, she is always thought of as one. Benares is the sacred city of both Buddhists and Hindus. Numbers of the holy places of India are holy to Hindu, Buddhist and Mohammedan, all alike. The Ganges is the sacred river of practically all India. All Indians feel a sacred reverence for the Himalayas. Indian culture is to a remarkable degree one. The great Epics, the Mahabharata and the Ramayana, are more truly universal classics in India than is Shakespeare in England. As represented in her legends, the councils of her gods always have ruled and still rule the whole land south of the great mountains, her pilgrims have wandered and still wander to her shrines from all her corners. This sense of unity in the heart of the people of India is a far greater binding force than the separatist force of the differences in social status, caste and religion."

Says Vincent Smith, than whom there is no higher historical authority:

"India circled as she is by seas and mountains, is indisputably a geographical unit, and as such rightly designated by one name. Her type of civilization, too, has many features which differentiate it from that of all other regions of the world, while they are common to the whole country in a degree sufficient to justify its treatment as a unit in the history of the social, religious, and intellectual development of mankind." (*Early History of India*.)

William Archer in his "India and the Future" devotes a chapter to "The Unity of India" in which he declares that Indian unity is "indisputable."

There is no greater uniting force known among peoples and nations in the world than religion. This applies with pre-eminent emphasis to India.

Many centuries before the Christian Era Hinduism spread over virtually the whole peninsula of Hindustan. Although originating among the Aryan peoples of the Northwest, it soon extended beyond, and was widely accepted by the Dravidian peoples occupying other parts. Thus it became early

and it remains still, an all-India religion, exercising a strong unifying influence upon practically all the inhabitants of the land and all Indian history and civilization.

Hardly less is to be said of Buddhism, the child of Hinduism. It spread everywhere in India, and its influence everywhere was to create a spirit of unity and brotherhood throughout the whole country.

Writing of the unifying influence of Hinduism and Buddhism, Lord Acton says :

"Just as Christianity attempted during the Middle Ages to provide a common civilization for Western Europe, on the basis of which the various nations and races might combine to a common State, in the same manner Hinduism, provided, during many centuries, a common civilization for India, which has made and still makes the Indian continent a political unity in spite of a thousand disintegrating forces.... To Hinduism, with its offshoot, Buddhism, belongs this great glory that it was not content with a narrow racial boundary, but included the whole continent in its embrace from the Himalayas to the farthest shores of Ceylon. There are few more imposing spectacles in history than this silent, peaceful penetration of Hindu civilization, till the farthest bounds of India were reached."

Mohammedanism, which came into India much later, has sometimes been called a divider. But even if in certain respects this is true, in a larger and truer way it has been a unifier. The very fact that it has penetrated to virtually all parts of India, has tended to give all parts a common interest in one another and therefore to bind all together. Having become an all-India faith, like Hinduism and Buddhism it has tended to unify the whole land.

What is a nation? What is national unity? Is there any higher authority than John Stuart Mill? In his "Representative Government," Mill defines a nation as follows :

tions; collective pride and humiliation, pleasure and regret, connected with the same incidents in the past."

Does this definition of nationality describe India? Yes, absolutely; in every respect and in every point.

The truth is, if there is a real nation in the world, a nation with a unity so long-standing and so deep (the growth of thousands of years) that it has become a part of the very intellectual and moral fiber of the people, an ingredient of their very life blood—that nation is India. Compared with the unity of India, that of every American and European nation is superficial and ephemeral.

It is true that India's unity is made up of variety; many constituent elements enter into it. But of what important national unity is not this true? *E pluribus unum*, "one formed of many," is the motto of the United States; showing that our own American nation glories in the fact of its composite and comprehensive character. Canada is also one formed of many. Every large nation of Europe is formed of numerous smaller political units gathered into one, and most of the nations of any considerable size contain peoples of different races, religions and languages. But these differing elements do not prevent them from being true nations, or from possessing a real unity. Rather is their national life larger and richer because of the many and diverse elements of which it is made up.

This is essentially the condition of things that exists in India. Her eminent poet, Rabindranath Tagore, expresses it well :

"We (the Indian peoples) are one all the more because we are many;
We have made room for a common love,
A common brotherhood, through all our
Our unlikenesses reveal the beauty of a
common life deeper than all.
Even as mountain peaks in the morning sun
Reveal the Unity of the mountain range
from which they all lift up their
shining foreheads"

* A new kind of unity in India has been created by British rule, a kind not foreseen much less desired by the foreign rulers, but now conspicuous and ominous and growing rapidly, namely, the unity of a common desire and determination to throw off a hated yoke.

Practically all the Indian people are now united in their realization of the wrong of being ruled by a foreign nation, of the degradation that it entails upon them, of the humiliating arrogance toward them of their rulers, of the heavy and crippling financial load laid on them by an expensive foreign government, of the exploitation and impoverishment of their country in the interest

But even if this were not so ; even if all the statements made by Sir John Strachey and the rest of the imperialists, as to the lack of unity in India, were true, still what right would that give the British to be there, forcing their rule upon an unwilling people ?

A century ago, Italy had no unity. Would Britain have been justified for that reason in conquering and ruling Italy ? In the seventeenth and even as late as the eighteenth century, Germany was divided into some two or three hundred kingdoms, principalities, and other petty sovereignties of one kind and another, with hardly a shadow of real unity among them. Did that give England a right to subjugate and govern Germany ? China to-day has very imperfect unity. Does any one claim that it would be right for Britain or Japan or any other foreign nation to conquer and rule China ? There have been times in England's own history when she had little unity, when for long periods she was distracted by many and serious divisions. Does any Englishman believe that those divisions gave any foreign power a right to come and subdue and govern England ?

Then why would want of unity, why would divisions, in India, even if they existed to the monstrously exaggerated degree affirmed by men like Sir John Strachey, give Great Britain even the shadow of a right to conquer the land and rule it by the power of the sword ?

One further thought in conclusion.

The British declare that they cannot give India (India as a whole) self-rule, because she lacks unity. But there are great Provinces, great States, really great Nations in India

which possess unity,—unity quite as complete and perfect as that of France, or Germany, or Italy, or the United States. Why is not self-rule given at least to these ? In other words, why does not Britain grant self-government to such great and important populations as the Bengalis in the East, the Marhatias in the West, the Telugus and Tamils in the South, and others, who are united in language, in race, in history, and in every other important respect, who have literatures, arts and cultures of their own, and whose numbers are greater than those of most of the European nations ?

What interpretation is it possible to put upon the fact that all these States and Provinces in which there is no lack of unity are held in subjection just as firmly and relentlessly as is India as a whole, except that the question of unity has little or nothing to do with the case ? and that the British hold India simply because they want to hold it, for their own advantage, the alleged lack of unity being merely a convenient, and, to persons ignorant of India, a plausible, excuse ? Is this interpretation false ? If so, why do not the British correct it, as they easily may, by giving self-rule at least to those great sections of India which nobody can deny are as united as England itself ?

• II

Instead of Britain refusing to give India self-government because of lack of unity, she ought long ago to have learned the lesson taught by history a hundred times over, that nothing is so effective in producing unity among divided peoples as self-government, that is, as the bringing of all parties and classes and sections together for common thinking, common planning, common working for the common welfare ; and that is just what democratic self-government means. When men, however far apart, begin to plan and work together, and bear responsibilities together, in the interest of a government which they feel is *their own*, in trying to promote the safety and prosperity of a nation, which is really *theirs*, they inevitably tend to grow serious, constructive and united. Many illustrations of this might be mentioned. It will be sufficient if I cite two ; the case of the British Colonies in America which became the United States, and that of Canada.

of foreigners, of the the injury done their children by the refusal of the government to provide adequate schools and education. These and many other injustices have strongly and increasingly tended to unite all sections of the Indian people by giving them a deep grievance which they all share ; a common reason for complaint and protest, a common battle to fight. As Mr. H. W. Nevins has said, "Every act of injustice and tyranny on the part of the British rulers, has promoted India's sense of unity, by creating, among all classes, a realization of common suffering, and a new and united impulse to shake off the tyranny and thus end the suffering." As a fact, there is no other such uniter of any people anywhere in the world as a common feeling that they are oppressed, and a common fight for freedom. This kind of unification is now strong in India, and is steadily and irresistibly deepening and becoming more intense.

In the case of the former, few persons have any adequate understanding at all of the wide differences and divergencies of almost every kind that existed among them. The Colonies were very widely scattered extending all along the Atlantic seaboard from near Nova Scotia in the North to near the Gulf of Mexico in the South. Their inhabitants were from different countries of Europe; they had different religions and spoke several different languages. Their industrial and commercial interests were very different, and in many cases antagonistic. It was widely declared in England that these thirteen different Colonies (virtually thirteen little separate nations), with so many differences, rivalries and contentions, could not possibly unite in one government, or rule themselves; and that without the overlordship of Great Britain there would be disorder, anarchy and local wars throughout the land.

Says the historian Lecky:

"Great bodies of Dutch, Germans, French, Swedes, Scotch and Irish, scattered among the descendants of the English, contributed to the heterogeneous character of the Colonies, and they comprised so many varieties of government, religious belief, commercial interest, and social type that their union appeared to many incredible."

An English traveller named Burnby made an extensive tour of observation through the American Colonies in 1759 and 1760, and on his return to London published an account of the same, in which he said:

"Fire and water are not more heterogeneous than the different Colonies in North America. Nothing can exceed the jealousy and emulation which they possess in regard to each other. The inhabitants of Pennsylvania and New York have an inexhaustible source of animosity in their jealousy for the trade of the Jersey, Massachusetts Bay and Rhode Island are not less interested in that of Connecticut. The West Indies are a common subject of emulation for them all. Even the limits and boundaries of each Colony are a constant source of litigation. In short, such is the difference of character, of manners, of religion, of interest, of the different colonies, that I think, were they left to themselves, there would soon be a civil war from one end of the continent to the other, while the Indians and Negroes would watch the opportunity to exterminate them altogether."

As a matter of fact, the differences and antagonisms between the Colonies were so great that, even after the Revolutionary War

had been fought and their independence from Great Britain had been won, it was difficult to persuade them to unite, and very difficult for them to form a government acceptable to all. But no sooner was a common government set up, with its parliamentary or representative system, which placed all the colonies on a level and set all in the task of working together and planning for the common good, than the old differences and antagonisms began to disappear. And it was not long before the new nation, the United States of America, was as united, as peaceful, and as efficient a government as probably existed in the entire world.

Turning to the history of Canada, we find a situation in many respects the same, and with the same lesson to teach. For a long time Canada was denied self rule; she was regarded as not fit to govern herself, partly because her area was so great, stretching from the Atlantic Ocean to the Pacific; and partly because her people were so divided in race, language and religion, — her white population being about one-half French, speaking the French language and professing the Roman Catholic faith, and the other half being English, speaking the English language and professing the Protestant faith, while in the land, scattered throughout all parts, were scores of tribes of aborigines, or native "Red Indians," all having separate customs and cultures, and all speaking different tongues, and still in addition to these, there were in the far north various tribes of Eskimos, with strange languages, and with customs and modes of life different from all other peoples.

How could a country of such vast extent, and with a population so scattered, divided and diverse, and possessing so little unity of any kind, govern itself? Surely, it would be full of anarchy, wars and bloodshed, resulting in ultimate division into smaller nations forever fighting one another, if England withdrew her hand.

Was this what happened? It was the exact opposite of what happened. So long as the foreign rule of Great Britain continued there was discontent, ever-increasing discontent, with insurrections and rebellions breaking out here and there, and others forever threatening. There was no feeling of general unity, no assured general peace and no general contentment until the equality was given self-rule, that is, until it was

given its present dominion status, with freedom and power to manage its own affairs. Then a marvellous change came. A feeling of unity such as would have been forever impossible under a foreign rule began to make its appearance; the different parts of the country began to develop a common interest, and to draw together for promotion of the common welfare, and there was such contentment and peace, and also such efficiency of government, as had never been known before.

In these experiences,—that of the American Colonies which separated themselves from Great Britain and under independence grew united in spirit and strong; and in the experience of Canada which also found that self-rule meant unity and strength, there is a very important lesson for both India and Great Britain. It is folly to claim that because of differences of race and language and religion India requires to be ruled by foreigners. What India needs to make her united and strong, is self-government. Nothing in the world would be so effective in causing the people of India to forget their differences of race and

language and religion and to become united, and, when united, peaceful and efficient and powerful, as to set up for themselves a parliamentary government of their own, and begin the practical work of ruling themselves. That would mightily increase their self-respect, their confidence in themselves, their moral stamina, their interest in one another, their desire to promote peace in the land, and their ability to defend India in case of danger.

If the British, with all power in their hands, had set up a Parliamentary Government in India when Lord Ripon (in 1880-1884) made so fine a start toward it (which India hailed with delight but which the British thwarted) we may well believe that, by this time, all the Indian peoples outside of the "Native States," and probably with some of them included, would have been working together through their representatives as harmoniously, and, so far as can be seen, wellnigh or quite as efficiently, as Canada or the United States.

NEW PERSIA IN WORLD POLITICS

By DR. TARAKNATH DAS, PH.D.

WHEN Napoleon planned to attack Britain in India with Russian aid, Great Britain had to direct her attention to Persia, so that it might not be used as the base of operations against India. When the fear of French aggression disappeared, the problem of Russian march, through Central Asia to the Persian Gulf took its place. Later on when Germany was seeking an outlet in the Persian Gulf, for her Berlin-Bagdad Railway, Great Britain agreed to settle her differences with Russia, purely for strategical reasons—safety of India. Thus it should be well to bear in mind, while studying British policy in Persia, that although British economic interests in that country are very considerable, yet Britain's Persian policy is primarily based on strategical reasons. So long as India remains under

British control, so long as Britain continues to play the role of dominant power in the vast region between the Suez Canal and the Persian Gulf, strategical considerations will be the deciding factor in formulating British policy.

It is the opinion of a very competent American observer and student of World Politics, that—

"Almost every action of British Government with respect to Persia, since the beginning of the nineteenth century can be interpreted as the result of aggressive or acquisitive ambitions. Especially this is so in the present century, when the progress of British influence in Persia has very often appeared to strike at the independence of that unfortunate nation. It seemed on several occasions (as in 1919) that Great Britain, having been instrumental in detaching two of the Persian provinces, Afghanistan and half of Beluchistan, and having acquired domination over the mineral

wealth of the South-west, was about to take the final gulp and swallow the whole country.*

In 1919 when, through the efforts of Lord Curzon, the Anglo-Persian Treaty was concluded, Russia was in no position to oppose the British attempt to incorporate Persia into the British Empire. So sure were the British statesmen—Lord Curzon and Sir Percy Cox—about the importance of the Anglo-Persian Treaty of 1919, by which British control over Persian Finance, Army and Foreign Relations was to be firmly established, that they paid 75,000 *tamans* to the three Persian statesmen—Vossag-ed-Dowleh, the then Prime-Minister, Prinz Firuz, the Minister of Finance and Saran-ed-Dowleh—who signed the treaty on behalf of Persia. But new Persia—Nationalist Persian—hated the corrupt ministry and the cabinet of Zia-ed-Din on February 26, 1921 repudiated the Anglo-Persian Treaty of 1919. Persian nationalists dared to take this bold stand, because the Government of Soviet Russia, under the leadership of Lenin and Tchicherin had repudiated the Anglo-Persian Agreement of 1907, (by which Persia was practically partitioned between Great Britain and Tsarist Russia). Furthermore, to stiffen the opposition to any further British encroachment in Persia, the Soviet Russian Government supported Persian national aspirations. By the Russo-Persian Treaty of 1921, the Soviet Government gave up all Russian claims and concessions in Persia, except Russian fishery rights in the Caspian Sea.

This meant a very serious defeat for the British Government, which was forced to change its tactics on the diplomatic battlefield of Persia. For the time being, it preferred to remain inactive politically and militarily, while merely protecting British economic and commercial interests—interests of the Anglo-Persian Oil Company, Indo-European Telegraph Company and the Imperial Bank of Persia, which are virtually British Government institutions, and other minor concerns.

When it became apparent to the British authorities that Reza Khan represented the strongest factor in Persian politics, they were willing to support him.

"In the autumn of 1925, when Reza ascended the throne, it was with the full approval and

sympathy of the British. The first Government to recognize Reza as the head of the provisional Government was the British, and the British recognized him first as Shah."*

Thus it is safe to assert that the British policy towards Persia has been to bring the country within the orbit of British influence or control. This policy has not been abandoned at any time, although diplomatic tactics of Britain in Persia varied to suit various circumstances.

The policy of Soviet Russia towards the peoples of the East is certainly not actuated by pure altruism, although the desire of some of the Soviet leaders, especially Tchicherin, is sincere. In this desire of freeing the peoples of Asia, there is the element of self-interest—preservation of the Soviet State—; so that the peoples of Asia would not make a common cause or be utilised by Great Britain against Soviet Russia.

It has been well said by a Soviet Russian diplomat in Persia, "Government may change, but Russia always remains." This Russia, under the Soviet Government has at the present time given up the aggressive policy in Persia and is following the policy of peaceful penetration. This Russia of today is as energetically opposed to any British economic advance in northern Persia, as was the old Russia of the days of the Tsars. "It is by no means an exaggeration to say that such an advance would contain definite danger of war."†

While now Persia, anxious to maintain her national independence, is trying hard to re-organise the administration of the land on more efficient lines by employing foreign (primarily American) experts, is busy in adopting measures to spread education among the masses and women and building railroads and other transportation facilities and a strong army for national defense, it seems that the Anglo-Russian rivalry in Persia is taking a new, definite and threatening shape.

It was the Russian support to the nationalist Persia that defeated the British project of controlling Persia through the Anglo-Persian Treaty of 1919. It was the Soviet-Turkish joint-action against Britain and Greece which contributed largely to the success of Nationalist Turkey.

* Ibid. p. 178

† Ibid. p. 157

* Sheehan, Vincent: The New Persia. New York, The Century Co., 1927, page 162.

Soviet support to the cause of Afghan independence strengthened the Afghan cause and later on Britain had to acknowledge Afghan sovereignty. Consolidation of Soviet Russian position through neutrality treaties with Turkey, Persia and Afghanistan has forced Great Britain to adopt means to strengthen her position in Palestine, Arabia, Mesopotamia, the Persian Gulf and the Indian North-Western Frontier regions.

Great Britain's recent treaty with the Kingdom of Hedjaz (concluded in May 1927), by which the signatories pledged themselves to maintain friendly relations with Babrein, is regarded as prejudicial to Persian interests. Bahrein, with a population of 120,000, consists of a group of islands in the Persian Gulf, 300 miles south of Basra. Although Great Britain in 1868 established a sort of protectorate over it, guaranteeing its autonomy, Persia never recognized this arrangement and always claimed Persian sovereignty over it; and the justice of the Persian claim was recognized by Lord Clarendon in 1869.

Last November the Persian Government protested against the Anglo-Hedjaz treaty; and not being satisfied with the British reply, during the last days of December 1927, complained to the League of Nations that "the treaty concluded between Great Britain and Hedjaz last May encroached upon the

sovereignty of Persia." The outcome of this dispute, in all probability, will result in British victory and thus further increase of British power and prestige in Southern Persia, and greater tension between Britain and nationalist Persia supported by Soviet Russia.

Whatever may be the future development in New Persia,

"It is not likely that Britain's hold over the Southern part of Persia will be relaxed; and the most definite trend perceptible in the course of the past few years has been strengthening of that hold, so that southern Persia is already, in a practical sense, a part of the British Empire. British policy defends that property; and its secondary aspect tends to advance to the north."

Anglo-Russian rivalry in Persia is acute and Persian nationalists are anxious to free their country from direct or indirect control of alien powers. This may lead to a conflict of serious character. In such a conflict, Persia may have the support of Soviet Russia, whereas the Arabs will fight for Britain against Persia, Afghanistan and Turkey will either adopt a policy of neutrality or side with Persia, whichever may serve their best interests. However, India's man-power, strategic position and military strength will be the determining factor in such a conflict.

A LILY FROM THE GUTTER

By SITA DEVI

THE world may be compared to a village, lying at the foot of a sleeping volcano. Man knows that any moment an eruption may occur, reducing his world to ashes, but he refuses to believe it. He could not live, if he believed it. So he goes on the even tenor of his way, as if there were not the slightest cause of fear.

But for the unlucky, the volcano rises out of its age-long sleep. The man who yesterday lacked nothing in men, money or fame, takes to the road today, a beggar nothing but his life left to him. Satyasaran,

the much-petted son of the Mitra family, was one such unfortunate.

His father came of a very rich family. For two or three generations, they had been spending the money, amassed by their forebears but had not yet succeeded in exhausting the store. He and his eldest son Nityasaran together, were trying hard though, to bring about this seemingly impossible event. Satyasaran's eldest sister, Saroja, was married with such pomp and splendour, that even the metropolis looked on ^{with} ~~as a~~ wonder. Nityasaran was sent to England

of various classes and castes, some turbaned, some with caps on, some bare-headed, abounded everywhere. There was no lack of Anglo-Indians and Anglo-Burmese too. Small eating shops could be seen everywhere on the footpaths, which were greatly patronised even by very well-dressed people. Chinese and Burmese men went about selling *Mohinga* which seemed a great delicacy. *Burmese flower-women and fruit-women* walked along with free easy strides. It was evident that they had never known *pordah*. The rickshaw reigned here, as the king of conveyances. The rickshawmen were all of the province of Madras. Satyasaran went on and on, without knowing where he was going. Up to this time, he had been following a high road. Now seeing a small, thickly peopled lane, before him, he directed his steps there. Evidently, the dwellers hereabouts, were very poor. The lane was dirty, the houses looked insanitary and dingy. People slept on the footpaths in broad daylight, others lolled here and there, fanning themselves with the handkerchiefs they usually tied round their heads. Most of them were coolies and rickshaw pullers. They spoke in Tamil and Telugu, which were nothing but mere sounds to Satyasaran.

At the other end of the lane, before a small shop, a furious quarrel seemed to be raging. About twenty persons, male and female, shouted and gesticulated with all their might and a large crowd had gathered around to see the fun. Satyasaran felt curious and went and stood amidst the crowd.

The combatants seemed to be Madrasites, so much Satyasaran guessed from their language, though he hardly understood a word of it. A young girl, of about twenty years, sat on the ground, weeping. She had an orange-coloured Saree on, with broad red borders. She wore no ornaments. Her face was pretty and her complexion, though dark, glowed with health. A large fat man, stood before her. He had many thick gold ornaments on and wore a cloth with fancy borders. He seemed in a furious temper and was shouting angrily at an attenuated old man, who, on his part, waved his arms about wildly, and seemed to be trying to make his adversary see reason. The fat person rushed at the young woman, every now and then, and pulled her sharply by the arm. The girl snatched away her hand and wept

even more loudly. Questions in all the dialects of India, were being showered up on these persons, but none answered these. They were too busy, with their own quarrel.

Satyasaran wanted to know, what the matter was. He looked around and saw that there were a few Bengalis in the crowd. He approached an old gentleman and asked, "What's the matter, sir? What are they quarrelling about?"

The old gentleman looked up and said, "These people have very little to do, save quarrel. They toil like slaves, squander all their earnings on drink, then fight and quarrel. Last of all, they go to the hospital and die."

"But what's the bone of contention in this case?" Satyasaran asked again. "Why is that fat man polling about that girl so?"

"He has bought the girl, of that old man", the gentleman said, "and the girl does not want to go with him. So this scene".

Satyasaran could hardly believe his ears. "What do you mean? Bought the girl, did you say? Won't the police arrest him?"

The old gentleman made a gesture of contempt with his hand. "Thousands of such cases happen everyday", he said. "What informs the police? This fat rascal will take away the girl, will keep her for some days, and then will sell her to somebody else, whenever he wants money for drink. To these people, women are no better than chattel. This girl is in for a good beating, she is picking up such a row."

Satyasaran was highly excited. "What an awful state of affairs!" he cried. "I did not know, that such things could happen in broad daylight, in any civilized country. Ought not we to inform the police?"

"What would be the good of that?" the old gentleman asked. "The police would arrest this old man and the fat rascal, but they would do nothing for the girl. Her friends and relatives won't take her in, even if she has got any here. Even if they do, they themselves will become her persecutors, a few days later."

Satyasaran kept on saying, "But this is infamous, sir. One can't look on quietly and do nothing. Could nothing be done to save the girl?"

The old gentleman laughed. "Of course, something could be done, if you cared to do it. You can buy the girl from that fat

rascal, if you offer a price big enough. But I don't think you need be so very anxious about the girl. She is making such a fuss, not because she is being sold like cattle, but because she does not like that man. Being sold into slavery is nothing new to them."

Satyasaran gave very little heed to his last words and said, "I can buy her, if there's no other way. It might mean the loss of everything I have, but that matters little. I cannot stand by and see a fellow creature sold into infamy. But where am I to help her, even if I succeed in buying her? I have landed here just today, and I have no relatives here."

"Arrangements for keeping her in safety might be made," the old man said. "But if you really intend buying her, then please, hurry up. Their meeting is drawing to a close, it seems. I think they are going to have recourse to their fists."

It was really so. The fat man let out a roar like that of an animal and seizing the girl by her hair, lifted her by main force from the ground. The crowd began to melt away. Nobody listened to the piteous cries of the girl; even the old man, who had sold her prepared to walk off, with his bundles.

Satyasaran could bear no more. He made his way through the crowd, and pushed back the fat man, thus releasing the girl. A terrible uproar ensued. Satyasaran's voice was completely drowned in the turmoil. The old gentleman rushed to his help and standing by him, he began to explain to the people in a mixed dialect of Telugu and Hindi. The uproar lessened and the girl looked up at Satyasaran, her big eyes full of gratitude. Her recent purchaser, too, stared at him, an ugly smile wreathing his puffy face.

"What have you told them?" Satyasaran asked.

"The thing they understand best of all," he replied. "I told them that this young gentleman from Bengal has taken a great liking to this girl. If you sell her to him, well and good. But if you don't, we will send for the police, you will all be severely punished, as the young gentleman is related to the police superintendent."

Satyasaran shrank within himself in dismay. Good Heavens! What a character had he been given, before so many people. But he was prepared to stand all, if he could save the girl thereby. It mattered very little, what this motley crowd thought of him.

"Ask them," he told the old gentleman, "how much they want for the girl."

The fat man waved his arms about and poured forth a torrent of words in answer to this question. Satyasaran approached the girl and asked, "What's your name?"

The girl understood Hindi a little, she looked at Satyasaran and answered, "My name is Kanakamma, Babu."

At this juncture the old gentleman turned round and said, "This rascal is pretty greedy. He wants two hundred for the girl, though he himself had scarcely paid fifty."

Satyasaran was in a hurry to close this affair. "All right," he said, "I shall pay two hundred. But I have not got the money with me. I must return home to get it. Would these people wait here for me?"

"It is difficult to answer for them," the gentleman said. "You better do one thing. My house is close by. Ask this rascal and the girl to come with us, and wait for you in my rooms. You go and get the money, as quick as you can. You were destined to lose money to-day, otherwise why should you happen to be here just at this moment?"

"Well, it is not pure loss," Satyasaran said. "I may have lost in money, but I consider it a gain to have saved a fellow-being from worse than death."

"You are young yet," laughed the gentleman. "You look at the world through rosy lenses. We have grown hard. To us, loss is loss. But let's get a move on, it's no use standing bareheaded in this sun."

His flat was not very far from where they stood. They arrived there in a minute. The sight-seers were a bit disappointed at not being able to see this drama to the end and gradually melted away.

A few children rushed out of the inner rooms, at the advent of these strange visitors, and gazed at them with wide open eyes. The ladies, too, looked out, through half-closed doors and windows. Kanakamma stood in a corner in a shrinking attitude. The fat man sat down on the floor and gazed around curiously. Satyasaran rushed off almost at once to get the money.

He took a rickshaw and made the coolie run for all he was worth. His brain seethed with conflicting thoughts. What was he to do with this girl? If it had been a boy, instead of a girl, the problem would have been much simpler. He could have worked as a servant in his house. But he had no

of various classes and castes, some turbaned, some with caps on, some bare-headed, abounded everywhere. There was no lack of Anglo-Indians and Anglo-Burmese too. Small eating shops could be seen everywhere on the footpaths, which were greatly patronised even by very well-dressed people. Chinese and Burmese men went about selling Mohinga which seemed a great delicacy. Burmese flower-women and fruit-women walked along with free easy strides. It was evident that they had never known purdah. The rickshaw reigned here, as the king of conveyances. The rickshawmen were all of the province of Madras. Satyasaran went on and on, without knowing where he was going. Up to this time, he had been following a high road. Now seeing a small, thickly peopled lane, before him, he directed his steps there. Evidently, the dwellers hereabouts, were very poor. The lane was dirty, the houses looked insanitary and dingy. People slept on the footpaths in broad daylight, others lolled here and there, fanning themselves with the handkerchiefs they usually tied round their heads. Most of them were coolies and rickshaw pullers. They spoke in Tamil and Telugu, which were nothing but mere sounds to Satyasaran.

At the other end of the lane, before a small shop, a furious quarrel seemed to be raging. About twenty persons, male and female, shouted and gesticulated with all their might and a large crowd had gathered around to see the fun. Satyasaran felt curious and went and stood amidst the crowd.

The combatants seemed to be Madrasis, so much Satyasaran guessed from their language, though he hardly understood a word of it. A young girl, of about twenty years, sat on the ground, weeping. She had an orange-coloured Saree on, with broad red borders. She wore no ornaments. Her face was pretty and her complexion, though dark, glowed with health. A large fat man, stood before her. He had many thick gold ornaments on and wore a cloth with fancy borders. He seemed in a furious temper and was shouting angrily at an attenuated old man, who, on his part, waved his arms about wildly, and seemed to be trying to make his adversary see reason. The fat person rushed at the young woman, every now and then, and pulled her sharply by the arm. The girl snatched away her hand and wept

even more loudly. Questions in all the dialects of India, were being showered up on these persons, but none answered these. They were too busy, with their own quarrel.

Satyasaran wanted to know, what the matter was. He looked around and saw that there were a few Bengalis in the crowd. He approached an old gentleman and asked, "What's the matter, sir? What are they quarreling about?"

The old gentleman looked up and said, "These people have very little to do, save quarrel. They toil like slaves, squander all their earnings on drink, then fight and quarrel. Last of all, they go to the hospital and die."

"But what's the cause of contention in this case?" Satyasaran asked again. "Why is that fat man pulling about that girl?"

"He has bought the girl, of that old man", the gentleman said, "now the girl does not want to go with him. So this scene".

Satyasaran could hardly believe his ears. "What do you mean? Bought the girl, did you say? Won't the police arrest him?"

The old gentleman made a gesture of contempt with his hand. "Thousands of such cases happen everyday", he said. "Who informs the police? This fat rascal will take away the girl, will keep her for some days, and then will sell her to somebody else, whenever he wants money for drink. To these people, women are no better than chattel. This girl is in for a good beating, she is picking up such a row."

Satyasaran was highly excited. "What an awful state of affairs!" he cried. "I did not know, that such things could happen in broad daylight, in any civilized country. Ought not we to inform the police?"

"What would be the good of that?" the old gentleman asked. "The police would arrest this old man and the fat rascal, but they would do nothing for the girl. Her friends and relatives won't take her in, even if she has got any here. Even if they do, they themselves will become her persecutors, a few days later."

Satyasaran kept on saying, "But this is infamous, sir. One can't look on quietly and do nothing. Could nothing be done to save the girl?"

The old gentleman laughed. "Of course, something could be done, if you cared to do it. You can buy the girl from that fat

rascal, if you offer a price big enough. But I don't think you need be so very anxious about the girl. She is making such a fuss, not because she is being sold like cattle, but because she does not like that man. Being sold into slavery is nothing new to them."

Satyasaran gave very little heed to his last words and said, "I can buy her, if there's no other way. It might mean the loss of everything I have, but that matters little. I cannot stand by and see a fellow creature sold into infamy. But where am I to help her, even if I succeed in buying her? I have landed here just today, and I have no relatives here."

"Arrangements for keeping her in safety might be made," the old man said. "But if you really intend buying her, then please, hurry up. Their meeting is drawing to a close, it seems. I think they are going to have recourse to their fists."

It was really so. The fat man let out a roar like that of an animal and seizing the girl by her hair, lifted her by main force from the ground. The crowd began to melt away. Nobody listened to the piteous cries of the girl; even the old man, who had sold her prepared to walk off, with his bundles.

Satyasaran could hear no more. He made his way through the crowd, and pushed back the fat man, thus releasing the girl. A terrible uproar ensued. Satyasaran's voice was completely drowned in the turmoil. The old gentleman rushed to his help and standing by him, he began to explain to the people in a mixed dialect of Telugu and Hindi. The uproar lessened and the girl looked up at Satyasaran, her big eyes full of gratitude. Her recent purchaser, too, stared at him, an ugly smile wreathing his puffy face.

"What have you told them?" Satyasaran asked.

"The thing they understand best of all," he replied, "I told them that this young gentleman from Bengal has taken a great liking to this girl. If you sell her to him, well and good. But if you don't, we will send for the police, you will all be severely punished, as the young gentleman is related to the police superintendent."

Satyasaran shrank within himself in dismay. Good Heavens! What a character had he been given, before so many people. But he was prepared to stand all, if he could save the girl thereby. It mattered very little, what this motly crowd thought of him.

"Ask them," he told the old gentleman, "how much they want for the girl."

The fat man waved his arms about and poured forth a torrent of words in answer to this question. Satyasaran approached the girl and asked, "What's your name?"

The girl understood Hindi a little, she looked at Satyasaran and answered, "My name is Kanakamma, Babu."

At this juncture the old gentleman turned round and said, "This rascal is pretty greedy. He wants two hundred for the girl, though he himself had scarcely paid fifty."

Satyasaran was in a hurry to close this affair. "All right," he said, "I shall pay two hundred. But I have not got the money with me. I must return home to get it. Would these people wait here for me?"

"It is difficult to answer for them," the gentleman said. "You better do one thing. My house is close by. Ask this rascal and the girl to come with us, and wait for you in my rooms. You go and get the money, as quick as you can. You were destined to lose money to-day, otherwise why should you happen to be here just at this moment?"

"Well, it is not pure loss," Satyasaran said. "I may have lost in money, but I consider it a gain to have saved a fellow-being from worse than death."

"You are young yet", laughed the gentleman. "You look at the world through rosy lenses. We have grown hard. To us, loss is loss. But let's get a move on, it's no use standing bareheaded in this sun."

His flat was not very far from where they stood. They arrived there in a minute. The sight-seers were a bit disappointed at not being able to see this drama to the end and gradually melted away.

A few children rushed out of the inner rooms, at the advent of these strange visitors, and gazed at them with wide open eyes. The ladies, too, looked out, through half-closed doors and windows. Kanakamma stood in a corner in a shrinking attitude. The fat man sat down on the floor and gazed around curiously. Satyasaran rushed off almost at once to get the money.

He took a rickshaw and made the coolie run for all he was worth. His brain seethed with conflicting thoughts. What was he to do with this girl? If it had been a boy, instead of a girl, the problem would have been much simpler. He could have worked as a servant in his house. But he had no

for continuing his studies. He lived there three years, and came back with, Lord knows, how much knowledge, acquired. Man only saw that he had acquired a very pretty English girl for his wife.

Nityasaran's mother was not living. Neither was there any other aged female relative in the family. So the new daughter-in-law did not have to meet with any obstacles in the shape of orthodox relatives. The father was a famous agnostic, and did not care a penny about orthodoxy. He frowned as he saw his new daughter-in-law, tho seemed to forget her existence altogether. Saroja's relatives-in-law became loud to abuse for a few days, but meeting with no response anywhere, had to stop, baffled. The youngest girl, Niroja, had not yet been married at all, so there were none to that quarter to abuse the Mitras, for lack of orthodoxy.

The new bride, suddenly developed a most amazing hobby. She wanted motor cars, matching all her dresses. The infatuated young husband did not find anything extraordinary in this demand. So blue cars, green cars, cream-coloured cars, silver-gray cars began to roll in one by one, and fill all the garages. Niroja turned up her pretty nose, Saroja wrote a most abusive letter to her brother, while their father sat with a hideous smile on his lips and a glass of wine in hand. Satyasaran, alone, of all the family made no remarks. He was busy, preparing for the M. A. examination, and had no time to inspect the garage of his sister-in-law.

At this juncture, the volcano woke up suddenly. Nityasaran, his wife and Niroja, came home from a feast, and died within twenty-four hours, of acute food-poisoning. Niroja was the last to expire. As her body was being carried out of her room, a tremendous report was heard from a room in the first floor. The old man, their father, had blown his brains out.

The heart and brain of Satyasaran seemed to be paralysed. He did not weep, he did not talk, only sat on like a dumb animal, in a corner of his room. Saroja came over from her husband's house. She wept loudly and wanted Satyasaran to come away with her. But he would not budge an inch.

As soon as the old man died, dame Fortune left his house for ever. He had enormously overdrawn at the bank and had borrowed money right and left. The family solicitors at once advised Satyasaran to apply

for insolvency. He left the home of his boyhood for ever with nothing but a few clothes, which he carried in a suitcase. He had to put up at Saroja's, for a few days, but he had determined not to stay there, for more than two or three days.

The metropolis seemed like an inferno to him. He was determined to leave Bengal, as everything connected with his past had become insufferable to him. He could not even look at the face of his sister. If any friends came to see him, he would promptly walk out of the house.

"You will go mad, if you keep on like this," his brother-in-law, Akhil, said. "Why don't you start on a tour? You better stay out, for a year or two."

"I have not money enough to buy a third class railway ticket", Satyasaran said. "Where can I go?"

"Oh, that's all right," said Akhil, patting him on the shoulder. "We have taken thousands from your father when we needed them. So we should be able to lend you a few hundreds in your hour of need. If you don't want to accept a gift, take it as a loan, and repay it when you are able."

"I don't think, I shall ever be able to do that", said Satyasaran with a sad smile. "Still, it is better to borrow from you, than from a stranger. Give me five hundred, at present."

"Where do you think of going?" his brother-in-law asked.

"I think, I shall go to Burma," Satyasaran replied, "it is said to be a land of opportunities."

No calendar was consulted to find out an auspicious moment for starting. Misfortune was already a permanent guest at his home, so it was not needful to offer her a bribe of fear. The first steamer available was good enough for Satyasaran. He started as a deck passenger. He scarcely heeded how the three days passed. Sometimes he bought food and sometimes he went without.

He knew many people in Rangoon. He had wired to one of them before starting, to meet him at the wharf. He was relieved to see that the gentleman had complied with his request. He was a stranger to the place, and it might have gone hard with him, had he been left alone to fend for himself.

He found the land refreshingly new. The men belonged to another race, their dresses were strange, their speech meaningless to him. Many of the houses were built to a

strange way. Satyasaran began to hope, that he would be able to forget the blow, destiny had dealt him, if he stayed on here. How cheerful and care-free, these Burmese looked! He wondered if they had ever suffered! Could they go about in such bright coloured dresses and with snob smiling faces, if Fato had been unkind to them?

"These people are not as poverty-stricken, as those of our own land, are they?" he asked his friend, Biswanath Babu. "None of them seem poor."

"That's true to a certain extent," his friend replied, "but these people are not so very rich, as may appear at first sight. They spend less on the other necessities of life, and so, are able to dress much better, than the Indians."

They reached their destination very soon. Biswanath did not live here with his family, because it cost too much. But he had grown too old to mess with various strange young-men, so he rented a small flat, and lived there, with his Chittagonian servant.

The hackney carriage stopped before a house in a small lane. Biswanath Babu got down, and shouted—"Kamini, Kamini," looking upwards. A few minutes later, a tall, stalwart man came down the stairs of the house, collected all the luggage and carried them up, single handed. Satyasaran felt amused to think, that the fellow was called Kamini (lady). He certainly did not look effeminate.

They came up the narrow and dark stairs and entered a room on the first floor. Biswanath Babu understood clearly the amazement, with which his guest was surveying the room. "We have no houses here, as we understand the word in India. Most of us have to pass our days in those wooden cages," he said.

Satyasaran sat down in that dark, bare room, destitute of any kind of furniture. Perhaps, this was what he needed, he thought. The more drastic the change, the better for him. He had come here to forget that he was the son of a very rich man, so he should not expect any kind of luxury and comfort.

"I shall have to rush off to my blessed office," his friend said, "after I have had my breakfast. You, too, have yours. What will you do, all the afternoon?"

"I shall look around a bit," Satyasaran said.

"All right", Biswanath said; "but be careful not to pick up a quarrel with any

Burmese. These people don't think much of stabbing a person."

"I have very little practice in the art of quarreling," Satyasaran said, "I could not quarrel now, even if I tried."

He went to have his bath. He came back to see the servant preparing to lay their breakfast. Instead of the customary pieces of carpet, two newspapers were spread on the floor. Two tumblers of aluminium were secured for the drinking water. Biswanath Babu was waiting for him. Satyasaran had eaten next to nothing in the steamer, so he was hungrily expecting his breakfast. He sat down without delay.

But the first mouthful nearly drew tears from his eyes. How painfully hot! Besides, his palate was a stranger to such remarkably bad cooking. He gave up all hopes of eating the vegetable curry and began to take his rice with the *dal* alone.

"Cannot you eat?" asked his host. "This fellow used to sweep roads in his own country, I think. In Rangoon, he has turned out to be a very good cook. He does not know a single thing! One could eat a bit, if he would only boil the things. But no, he must cook! I cannot teach him anything, he is such an awful idiot. Bring some more *dal* for the new Babu, you good-for-nothing wretch. Is the fish very hot too? I told him to do his best, as I was expecting a guest, so he has lavished all the red pepper he had in his store on the breakfast."

The servant had begun to look very much abashed, and Satyasaran felt a certain pity for him. Why had Fate played him such a trick? His name did not suit him, neither did his occupation. He should have been a prize fighter by rights. So in order to console the fellow, he said, "No, no, the fish is all right."

The man was so pleased, that he ran off at once to bring him more fish. This dish, too, was very hot; but Satyasaran ate on with heroic fortitude, restraining his tears with difficulty, in order to keep his word.

After finishing breakfast, his host left him for his office. Satyasaran rested about half an hour, then he too walked out. He was new to the place, he looked about him very carefully, so that he might not forget his way.

Rangoon was the capital of Burma, but there were not so many Burmese people about, as one would expect. In fact, one met more Madrasites here than Burmese. T.

of various classes and castes, some turbaned, some with caps on, some bare-headed, abounded everywhere. There was no lack of Anglo-Indians and Anglo-Burmans too. Small eating shops could be seen everywhere on the footpaths, which were greatly patronised even by very well-dressed people. Chinese and Burmese men went about selling Mohinga which seemed a great delicacy. Burmese flower-women and fruit-women walked along with free easy strides. It was evident that they had never known purdah. The rickshaw reigned here, as the king of conveyances. The rickshawmen were all of the province of Madras. Satyasaran went on and on, without knowing where he was going. Up to this time, he had been following a high road. Now seeing a small, thickly peopled lane, before him, he directed his steps there. Evidently, the dwellers hereabouts, were very poor. The lane was dirty, the houses looked insanitary and dingy. People slept on the footpaths in broad daylight, others lolled here and there, fanning themselves with the handkerchiefs they usually tied round their heads. Most of them were coolies and rickshaw pullers. They spoke in Tamil and Telugu, which were nothing but mere sounds to Satyasaran.

At the other end of the lane, before a small shop, a furious quarrel seemed to be raging. About twenty persons, male and female, shouted and gesticulated with all their might and a large crowd had gathered around to see the fun. Satyasaran felt curious and went and stood amidst the crowd.

The combatants seemed to be Madrasis, so much Satyasaran guessed from their language, though he hardly understood a word of it. A young girl, of about twenty years, sat on the ground, weeping. She had an orange-coloured Saree on, with broad red borders. She wore no ornaments. Her face was pretty and her complexion, though dark, glowed with health. A large fat man, stood before her. He had many thick gold ornaments on and wore a cloth with fauzy borders. He seemed in a furious temper and was shouting angrily at an attenuated old man, who, on his part, waved his arms about wildly, and seemed to be trying to make his adversary see reason. The fat person rushed at the young woman, every now and then, and pulled her sharply by the arm. A girl snatched away her hand and wept

even more loudly. Questions in all the dialects of India, were being showered up on these persons, but none answered those. They were too busy, with their own quarrel.

Satyasaran wanted to know, what the matter was. He looked around and saw that there were a few Bengalis in the crowd. He approached an old gentleman and asked, "What's the matter, sir? What are they quarreling about?"

The old gentleman looked up and said, "These people have very little to do, save quarrel. They toil like slaves, squander all their earnings on drink, then fight and quarrel. Last of all, they go to the hospital and die."

"But what's the bone of contention in this case?" Satyasaran asked again. "Why is that fat man pulling about that girl so?"

"He has bought the girl, of that old man", the gentleman said, "now the girl does not want to go with him. So this scene."

Satyasaran could hardly believe his ears. "What do you mean? Bought the girl, did you say? Won't the police arrest him?"

The old gentleman made a gesture of contempt with his hand. "Thousands of such cases happen everyday", he said. "Who informs the police? This fat rascal will take away the girl, will keep her for some days, and then will sell her to somebody else, whenever he wants money for drink. In these people, women are no better than chattel. This girl is in for a good beating, she is picking up such a row."

Satyasaran was highly excited. "What an awful state of affairs!" he cried. "I did not know, that such things could happen in broad daylight, in any civilized country. Ought not we to inform the police?"

"What would be the good of that?" the old gentleman asked. "The police would arrest this old man and the fat rascal, but they would do nothing for the girl. Her friends and relatives won't take her in, even if she has got any here. Even if they do, they themselves will become her persecutors, a few days later."

Satyasaran kept on saying, "But this is infamous, sir. One can't look on quietly and do nothing. Could nothing be done to save the girl?"

The old gentleman laughed. "Of course, something could be done, if you cared to do it. You can buy the girl from that fat

rascal, if you offer a price big enough. But I don't think you need be so very anxious about the girl. She is making such a fuss, not because she is being sold like cattle, but because she does not like that man. Being sold into slavery is nothing new to them."

Satyasaran gave very little heed to his last words and said, "I can buy her, if there's no other way. It might mean the loss of everything I have, but that matters little. I cannot stand by and see a fellow creature sold into infamy. But where am I to help her, even if I succeed in buying her? I have landed here just today, and I have no relatives here."

"Arrangements for keeping her in safety might be made," the old man said. "But if you really intend buying her, then please hurry up. Their meeting is drawing to a close, it seems. I think they are going to have recourse to their fists."

It was really so. The fat man let out a roar like that of an animal and seizing the girl by her hair, lifted her by main force from the ground. The crowd began to melt away. Nobody listened to the piteous cries of the girl; even the old man, who had sold her prepared to walk off with his bundles.

Satyasaran could bear no more. He made his way through the crowd, and pushed back the fat man, thus releasing the girl. A terrible uproar ensued. Satyasaran's voice was completely drowned in the turmoil. The old gentleman rushed to his help and standing by him, he began to explain to the people in a mixed dialect of Telugu and Hindi. The uproar lessened and the girl looked up at Satyasaran, her big eyes full of gratitude. Her recent purchaser, too, stared at him, an ugly smile wreathing his puffy face.

"What have you told them?" Satyasaran asked.

"The thing they understand best of all," he replied. "I told them that this young gentleman from Bengal has taken a great liking to this girl. If you sell her to him, well and good. But if you don't, we will send for the police, you will all be severely punished, as the young gentleman is related to the police superintendent."

Satyasaran shrank within himself in dismay. Good Heavens! What a character had he been given, before so many people. But he was prepared to stand all, if he could save the girl thereby. It mattered very little, what this motly crowd thought of him.

"Ask them," he told the old gentleman, "how much they want for the girl."

The fat man waved his arms about and poured forth a torrent of words in answer to this question. Satyasaran approached the girl and asked, "What's your name?"

The girl understood Hindi a little, she looked at Satyasaran and answered, "My name is Kanakamma, Babu."

At this juncture the old gentleman turned round and said, "This rascal is pretty greedy. He wants two hundred for the girl, though he himself had scarcely paid fifty."

Satyasaran was in a hurry to close this affair. "All right," he said, "I shall pay two hundred. But I have not got the money with me. I must return home to get it. Would these people wait here for me?"

"It is difficult to answer for them," the gentleman said. "You better do one thing. My house is close by. Ask this rascal and the girl to come with us, and wait for you in my rooms. You go and get the money, as quick as you can. You were destined to lose money to-day, otherwise why should you happen to be here just at this moment?"

"Well, it is not pure loss," Satyasaran said. "I may have lost in money, but I consider it a gain to have saved a fellow-being from worse than death."

"You are young yet", laughed the gentleman. "You look at the world through rose lenses. We have grown hard. To us, loss is loss. But let's get a move on, it's no use standing bareheaded in this sun."

His fiat was not very far from where they stood. They arrived there in a minute. The sight-seers were a bit disappointed at not being able to see this drama to the end and gradually melted away.

A few children rushed out of the inner rooms, at the advent of these strange visitors, and gazed at them with wide open eyes. The ladies, too, looked out, through half-closed doors and windows. Kanakamma stood in a corner in a shrinking attitude. The fat man sat down on the floor and gazed around curiously. Satyasaran rushed off almost at once to get the money.

He took a rickshaw and made the coolie run for all he was worth. His brain seethed with conflicting thoughts. What was he to do with this girl? If it had been a boy, instead of a girl, the problem would have been much simpler. He could have worked as a servant in his house. But

female relatives here, to whom he could entrust the girl. He was completely new to the place and did not know, whether there were any homes here, for such shelterless creatures.

He arrived at his destination and rushed indoors. Kamini was a bit surprised to see him. Without telling him anything, Satyasaran opened his trunk and took out two hundred rupees in currency notes. He mounted his rickshaw again and was back to the scene of action, within a few minutes.

As he handed the notes to the fat man, he got up baring all his teeth, in greedy pleasure. "Salam, Babu", he said, and went down the stairs, still grinning. Kanakamma looked at her deliverer with the frightened gaze of a wild gazelle. "What am I to do with her now?" Satyasaran asked the other gentleman.

"First let us enquire", he said, "Whether she has any friends or relatives here."

The girl, upon enquiry, said that she had an aunt living in Kalabasti, she could find shelter there for this day. But they were very poor, they would not keep her for more than one day. Her uncle was a heavy drinker, and he would beat her.

"Not a very desirable shelter for a girl", Satyasaran said "It would be out of the frying pan into the fire" for her. What's to be done then?"

"Let her go there for tonight at least", the old gentleman said, "To-morrow we would think out something for her. Do you know your way to their house, girl?"

The girl said, she would recognise the house, if taken to Kalabasti. "I am completely new to the place," Satyasara said, "Since you have done so much for her, do a bit more. Let us go and leave her at her aunt's."

They hired a hackney carriage and started. Kalabasti was not very far off it was but a suburb of Rangoon. Reaching that quarter, they dismissed the carriage and walked along on foot. Kanakamma led the way. At last they entered a narrow, evil-smelling lane. The houses on both sides were of wood or tin, not a single brick and mortar one, amongst the lot. The inhabitants seemed to be all Telugu-speaking.

They stopped before a tumble-down hut, roofed over with tin. The master of the house happened to be seated outside on a broken wooden bedstead. He let out a shout, as he saw Kanakamma. At once a

crowd of people rushed out of the hut. Pointing out a most hideous-looking hag, the girl introduced her to the gentlemen as her aunt.

"Ask her," said Satyasaran, "Whether you might stay with them for a day or two."

A torrent of words in Telugu, poured out. After five minutes of this, the girl informed them that her relatives could keep her for two days, but not a day more. But she must pay them eight annas for her food. Satyasaran handed out the requisite amount at once, to the greedy old woman. "Enough for a drink tonight" muttered his companion.

Satyasaran and the other gentleman departed, after assuring the girl again and again, that they would certainly come for her, at the end of two days. As long as they could see her, Kanakamma stood at the door of the hut, looking at them with frightened, piteous eyes. Satyasaran felt pity for the poor girl. If he could have left her in a better place, he would have felt more at ease. But these people were a thorough bad lot. Perhaps they had already begun to belabour her with firewood.

Reaching town, they dispensed with the carriage and walked along again.

"Can any arrangement be made for her, within two days?" he asked his companion anxiously.

"Certainly", he replied. "Forty eight hours should be enough for such a simple job. Empires have been built up and overthrown within this time."

"Shall I find you at home, in the evening?" Satyasaran asked, "If you say so, I shall meet you there with Biswanath Babu. Everything will have to be done by you. I am totally useless in this place, I know nothing and nobody."

"The most important part has already been taken by you," laughed the old gentleman, "viz, providing the money. Are you at Biswanath Babu's place? Do you mean Biswanath Ghosh of the Bank?"

"Yes, yes," said Satyasaran; do you know him? Then there will be no difficulty. What shall I tell him?"

"Tell him," said his companion, "That you met Gopal Choudhuri. He will understand."

He accompanied Satyasaran to his flat, but did not come in. The front door was open, so he went in, and sat waiting for Biswanath Babu. Kamini brought him a cup of strong tea and a plate of home-made sweets. Satyasaran began to sip his tea

slowly, the sweets looked too repulsive to be taken, so he left them alone.

Biswanath Babu came in after a time. He threw his hat violently on a chair crying out, "I am fed up with this life. I want a bit of rest for my old bones." Then he turned to his young guest and asked "My dear boy how did you enjoy yourself? Did you like the town?"

"I saw very little of it," Satyasaran said, "I got entangled in a nasty business which took up all my time."

"How's that?" asked his host. Satyasaran related everything in detail. Having heard him out patiently, the old man shook his head disapprovingly, "no good," he said. "Why did you poke your head in this nasty business? These women are accustomed to be sold as cattle. Beating, too, is no novelty to them. Now, what do you propose doing with the girl?"

"I want your advice for that," Satyasaran said, "You and Gopal Babu must settle it."

"Gopal Chondhuri is old enough to know this world. He should have given you better counsel. What's the use of throwing away good money? How much have you still left? Give it to me or put it in a savings bank, otherwise all the loafers and beggars of Rangoon will soon relieve you of it."

"I have not got much with me," Satyasaran said, "I started with one thousand. I have paid for my passage here, and bought a few necessary things for myself. Then I spent these two hundred. I think I still have about seven hundred with me."

Kamini brought in tea for his master at this juncture. "Leave the money with me," he said, beginning to eat, "or better put it in the postal savings bank. The less money there is in the house, the better for all. The town is a hot bed of thieves."

After finishing his tea, Satyasaran's host started out with him. Very few people, walk on foot here, because the rickshaw is very cheap. So these two, took a rickshaw, and within five minutes, they had reached their destination.

Gopal Babu was waiting for them. He welcomed them cordially, then said, "Fortunately, an opportunity has presented itself. I think, we can dispose of the girl satisfactorily. But judge for yourselves."

"Please tell us," Satyasaran said eagerly.

"A friend of mine," the old man said, "is on the look out for an ayah for his child. But he cannot pay as much as the profes-

sional ayahs demand here. He could give eight or ten rupees, besides board and lodging. You can place the girl there if you think it advisable. It is safe enough, I can assure you of that. She would be as safe there as in the house of her own parents."

"I think you should avail yourself of this opportunity," Biswanath Babu said, "She will get a good training there and may get a better paid post afterwards."

"Then we will have to bring her over from Kalabasti tomorrow," Gopal Babu said, "Her relatives must be belabouring her pretty soundly by this time. But I advise you young man, to be more prudent in the future. Let these manage their own affairs, don't you get yourself mixed up in them."

Satyasaran smiled without replying. After a few minutes, they got up and took their departure. They felt very little inclination to return to their stuffy little flat just then. So they started for one of the cinemas.

Next morning, after tea, the three started out to bring Kanakamma back from her aunt's house. They had to spend nearly half an hour, in finding out that beautiful lane. At last they got it. Kanakamma was busy, pounding turmeric in a huge mortar. Catching sight of Satyasaran and his companions, she rose up at once and advanced to meet them.

"She is very young," Biswanath Babu said.

As soon as they knew that the Babus had come for Kanakamma, not only the inmates of that house, but also all the inhabitants of that lane crowded around. All gazed at Satyasaran with such rapt attention that the poor fellow grew red with embarrassment. He understood that to them he appeared as the future husband of Kanakamma.

Kanakamma had been wearing an old dirty saree, probably belonging to her venerable relative while busy with pestle and mortar. But now she went in, washed her hands clean and came out wearing that orange-coloured saree, they had formerly seen her in. Her aunt had given her another saree and a brass jar, probably as wedding present. These she carried in her hand.

"One carriage won't hold four," Gopal Babu said, "One of us will have to go by train."

"Let me go," Biswanath said, "You two are indispensable. I shall wait for you at the corner of—th St." He went off to catch his tram.

Satyasaran hailed a passing carriage and all three got into it. They started for the town.

Biswanath Babu was soon waiting for them at the turning of a lane. The carriage stopped. "Is your house here,?" the girl asked.

Satyasaran answered that he did not live here, but the gentleman in whose house she would have to work, lived here. Kanakamma's face became pale with fear and some other emotion. "Then you won't keep me with you?" she asked.

Drops of sweat stood out on Satyasaran's brow. So this girl, too, cherished this hope? How was he to make her understand the utter impossibility of such a happening? Fortunately, Gopal Babu was engaged in a hot debate with the cabman, and did not hear them, otherwise Satyasaran might have found himself in an embarrassing situation.

Somehow he made her understand, that as there were no female relatives of his, in this town, he did not need any ayah just then. So, for the present she would have to stay there, to get a training. If in the future, some better post offered itself, she could go there.

Kanakamma remained silent, with sad, pensive face. That people bought ayahs with hundreds of rupees, for other people, must have seemed a bit strange to her.

Kanakamma was placed with her new master, then Satyasaran and his friends took leave. Satyasaran's heart was full of pity, annoyance and shame. What a frightful mess! Did the girl really cherish this absurd hope? Was she very much disappointed? The more he tried to solve the problem, the more intricate it became. Should he see her again, or should he avoid her completely in future? But how could he avoid her? He was her guardian now and must look after her in some way.

Before Biswanath left for his office that day, he told Satyasaran again and again not to be so philanthropic, as he had once been. Satyasaran went out that day too, but he carefully avoided every place, where he saw more than two people standing together.

A few days passed off, like this. During the daytime, Satyasaran would go about "in search of work, but towards evening, he could not help going sometimes to see Kanakamma. So the narrow lane saw him very frequently. As soon as he would enter the lane, Kanakamma would be seen walking about with

her two small charges. Her large eyes would grow bright with joy on catching sight of him and she would walk up rapidly to him and ask, "Are you all right, sir?"

Her joy would pierce his heart like an arrow, he would answer her somehow and ask how she was. Then he would leave in a hurry. In trying to save her from sorrow he had brought greater sorrow to her perhaps. There was no way out of this mess.

But he had scarcely brought money enough to enable him to pass his days in idleness. Of course, his host did not ask him for money or alter his treatment of Satyasaran in any way, but he himself began to feel ashamed of living on the old gentleman for such a length of time. He told everyone he knew, in the town, to find some sort of work for him. But he soon understood that it was no easy job he had given them. He was a rich man's son and had never learnt the art of sycophancy or bribery so no job awaited him. He grew tired of eating another man's bread.

But even that opportunity did not last long. Biswanath Babu was called home, he had a grown-up daughter to marry off. He called Satyasaran and asked, "Where do you want to go? It will be sometime, before I am back."

"I shall find a seat in some mess," Satyasaran replied.

"I know about half a dozen messes," Biswanath said, "I shall see if I can find you a decent place for you. The cooking must be a bit good, and the flat roomy. But anyway, you must be prepared to rough it, there's no other way."

He soon found a place for Satyasaran to live in. But the poor young man was extremely uncomfortable in his new home. He had been accustomed to have a suit of rooms, a servant and a motor car to himself. Now he had to live in a small room, with three or four strangers. He had to dress here and to sleep here. The personal habits of most of his fellow-lodgers were repulsive to him, besides the flat was very untidy and dirty owing to the negligence of the servant. At first sight, everything seemed so utterly hopeless to him, that he nearly turned tail and fled. But better reason supervening, he sat down in a chair, trying to pacify himself.

In the evening he went out after refusing him tea. His feet carried him along, almost unconsciously, to the turning of the street. Kanakamma was seen, as usual, walking

about with her small charge. As Satyasaran came near her, he noticed that the girl had grown very thin, her eyes appeared unnaturally large in her emaciated face.

Before she could speak, Satyasaran asked her, whether she was all right and whether her employers were treating her well.

"Yes sir," she replied, "The mistress is very kind, but my heart feels heavy within me."

Satyasaran did not know, what reply to make to this. He stood silent for a few minutes, then left, after having told her, his new address. He also told her to communicate with him, if she wanted anything.

Two or three months passed away, but Satyasaran's position did not change. People advised him to take up some kind of business. But where was the capital? He had only a few hundred rupees with him. Nothing much would be left to finance any kind of business, after he had taken enough from it to meet his own requirements. The few gentlemen, with whom Satyasaran had come to live, were quite intimate with Biswanath Babu. He had requested the manager not to press Satyasaran for money, till the youngmen got some kind of job. He had assured them again and again that they won't lose a penny by it. But, though Satyasaran did not have to pay for his board and lodging the money in his trunk steadily dwindled. He had not learnt the art of doing without everything, and there were some expenses he could not but incur, in order to keep his self-respect.

But his health began to fail. He became dispirited and gloomy. He could have returned to Calcutta, but no better fate awaited him there. Saroja was in very poor health and her husband prescribed a trip to Switzerland for her. He did not believe Indian doctors would be good enough for a girl, whose family could show four deaths within twenty-four hours.

Sunday was a day of rest for all the members of the lodging-house. Everybody got up rather late. The Babus returned very late at Saturday night, after visiting cinemas or theatres or card parties and so made up for it, by sleeping till ten o'clock next morning. The servant, too, was in no hurry to get up as he had not to serve tea early.

But on Sunday, all had to get up earlier than on week days. The servant was the first to wake up and his unearthly yell

drove sleep out of that quarter. Everyone jumped out of bed in alarm to find all the trunks gone and the back window wide open.

It was quite evident, what had happened. The neighbours, the passers-by and even the police soon made their appearance on the scene. The poor servant got the first dose of their fury, but it was soon evident after a few questions had been put to him, that he was in no way to blame. He had served supper to the boarders at twelve last night, and then had gone to sleep. He had left the Babus still talking and cracking jokes amongst themselves. The door between the bedrooms and the kitchen remained shut always, so he could not have gone in again and opened the window for thieves to come in. Probably the gentleman had been too tired to shut it at all and had fallen asleep leaving it open.

Most of the stolen goods and the trunks with their locks broken, were soon salvaged from the back lane. Some costly clothing were missing. And needless to say, the packet of currency notes in Satyasaran's trunk was completely missing. The other youngmen never kept much money with them, so their losses were nothing compared to his.

The day passed off somehow amidst hopeless gloom. This last stroke of misfortune seemed to shrivel up his heart. He took nothing but water, the whole day. The other members of the lodging-house ate and drank as usual, and went out to look after their own affairs.

Satyasaran had become worse than a beggar now. A beggar could at least ask charity of others, but he could not do even that. Death seemed preferable to him. He had no friends or relatives here or elsewhere, who would help him with five rupees.

In the evening, he went out, being unable to bear the stuffy atmosphere of the flat any more. He walked about aimlessly till it became quite dark. But he did not feel the least inclination to return home. "I shall go and look up Kanakamma," he thought "she is another unfortunate."

It was quite late, and Kanakamma was no longer to be seen in the lane, she had gone in with her charge. Satyasaran went up to the flat and asked for her. The master of the house was absent and a boy of eight or ten years of age went and called Kanakamma at his request.

As soon as she entered, "Are you unwell, Babu?" she asked.

Satyasaran replied in the affirmative and also told her the reason of his not being well.

He could derive no benefit thereby, yet he could not help telling her. Though he had no friends or relatives here, yet he had many fellow countrymen. Yet this girl from a far off province, who spoke an alien language, seemed much nearer and dearer to him, than those persons.

"What will you do now, sir?" the girl asked after a while.

Satyasaran had not decided. He told her so. Then he took his leave, as it would not look well, if he stayed too long, talking to the ayah.

Next day he noticed a change in the manners of his fellow boarders. He had been here, nearly three months, but had not yet paid anything for his board and lodging. Up to this, nobody had taken any exceptions to that, and he had been treated as courteously as a guest. But now everything began to change. A man, who had got money in his cash-box might be excused and even be treated politely even if he did not pay punctually. But one, whose coffers are known to be empty, had no claim upon anybody's forbearance or courtesy. So Satyasaran met with neglect first of all, and then even insults made their appearance.

His tea now had no sugar, or if there was sugar, there was no milk. While others got good helpings of the fish curry only a bit of its tail would be left for him. Nobody would wash his cast-off clothes and his bed would remain unmade for days.

He began to feel as if he was in a prison. Where was he to go, to whom was he to turn for help? He nearly went crazy with continual thinking.

One evening, he pushed away his cup of cold sugarless tea, after one sip. The manager was heard to remark from the next room upon this. People, he said, who lived upon charity, should not be too fastidious, and above all, they should not waste.

He sat for a while, as if stunned, then telling the servant not to cook for him in the evening, he went out. He had scarcely eaten anything for his breakfast, but he was too utterly sick at heart, to remember this.

He had no money to spend on rickshaws. So after two or three hours' continuous walking about, he began to look about for a place

to rest in. Almost unconsciously, he arrived at the entrance of—th street. Kanakamma was walking about, holding a small child by the arm. She advanced to meet him, and asked solicitously after his health.

Satyasaran replied that he was all right. Kanakamma did not believe him. In fact it was impossible to believe him, if one looked closely at his face. The girl asked again, whether he had taken anything. This time, he told her the truth. His legs were shaking, owing to exhaustion and want of food. "Come sir, let us go in," the girl said, "You can rest a bit then".

Satyasaran held back. What would her master think, if he went in? He did not know them very well. Kanakamma replied that everybody had gone out, only the small children were left in her charge.

Satyasaran felt too tired to argue further. He followed her in obediently and sat down. Leaving one of the children to keep him company, Kanakamma went to the inner room, with the smaller child. Satyasaran made no attempt at conversation with the child, but sat, dumb with misery.

The girl returned after a while, carrying a plate full of food. She had probably bought them from some eating shop, near by. She had also brought tea. Placing all these before him, she said, "Eat now, Babu".

Satyasaran was in real need of food, yet before he began, he asked her how she had procured them. She had bought them with her own money, the girl replied. Satyasaran then fell to, without further demur.

As he was preparing to leave, after finishing his dinner, Kanakamma told him to come again on the morrow. She would keep food ready for him. Satyasaran hesitated. Perhaps her employers would be angry with her, if she brought him in everyday like this. Kanakamma said that the mistress was a very good woman, and she would not mind at all. Besides, she was spending her own money and they had nothing whatever to do with it. Satyasaran accepted her invitation gladly, as he was heartily sick of the food at the lodging-house which was now being thrown to him as if he were a dog.

As soon as he returned, he saw that he had done well. The manager had given him seven days' notice. He must, of course, pay them one hundred rupees, on account of his board and lodging. Else his personal belongings would be attached. These, of course, would not fetch more than tea or

twelve rupees, the manager took care to inform him.

Satyasaran escaped out of the flat, as if it was on fire. He did not return, even to sleep, but walked about the whole night. He rested at roadside shops, or on park premises.

In the morning, he returned for a change of clothing and to have a bath. The Babus had just finished tea. Nobody asked him to have a cup, and he did not dare to ask for it. The manager came and asked, "What about the bill, sir?"

"I am trying to raise some money," Satyasaran said.

"Yes, try your best," the manager said. "Don't make us walk the court," with that he left.

Satyasaran's brain began to feel paralysed. What a trick of fate! Many a time, he had thrown away one hundred rupees on beggars, and here he was now, on the way to the civil jail, because he could not pay that sum to his creditors.

Kanakamma was amazed to see his face, when he turned up at her place in the afternoon. Without asking any questions she rushed to bring him food. After he had finished eating she asked him whether he had been able to procure the money.

Satyasaran replied in the negative. Nobody here, would lend him any money. "Write home", the girl advised.

"There's nobody in my home now", he replied.

Kanakamma asked whether the other Babus were going to turn him out, if he could not pay.

Satyasaran told her the bitter truth. What was the use of biding it? After a while, he got up and left. He was afraid that the girl might incur the displeasure of her employers, on his account. Kanakamma followed him to the door. "Don't be afraid, sir," she whispered "You have helped the unfortunate and God will help you."

Satyasaran had very little faith left in the mercy of God. He smiled bitterly and went down to walk the streets again. Very late at night, he returned home and slept the sleep of utter exhaustion on his dirty unmade bed.

He used to sleep in the outer room. Towards the small hours of the morning, he heard somebody knocking at the door. He went and opened the door to find Kanakamma standing there.

Before he could speak, the girl thrust a packet of currency notes into his hand, saying, "Take this, sir. Pay your creditors, then go home. Don't stay in this wicked country."

Satyasaran was dumb with amazement. How on earth had this girl procured so much money, within such a short time?

"Where did you get these?" he asked Kanakamma.

She thought for a moment. Then in her broken Hindi, she related to him the history of the money. She had sold herself to that fat rascal, her former admirer, for this money. To-morrow she would have to go to him.

Tears dropped from Satyasaran's eyes. He tried to thrust the money back into her hand, saying, "Take them back I cannot accept your blood-money."

She refused to take it back. She began to descend the stairs, saying, "God will look after me, sir. Don't grieve over me."

Leaving Satyasaran, standing like one paralysed, she disappeared in the half-light of the approaching dawn. For several seconds, he could not decide what to do. Then he rushed down the stairs and into the street. But finding it quite deserted, he came back again. Addressing the invisible he cried out aloud, "I accept your sacrifice to-day, in order to save myself. But I am saving myself only for you. The day will come, when I shall bring you back from hell, by the sacrifice of that very life".

HOW PARLIAMENT GUARDS THE INTERESTS OF INDIA

By Dr. J. T. SUNDERLAND

WE are often told with much assurance that the interests of the Indian people are safe, because they are carefully guarded by the British Parliament, especially by the House of Commons, that splendid group of 615 men representing the best intelligence and character of the British Isles. Of course, such a body of men do not, will not, and cannot neglect so grave a responsibility, so important a part of the Empire, as India, or fail to see that the Indian people are ruled honorably, efficiently and justly.

This sounds assuring. But what are the facts? Does Parliament give careful attention to India, or watchfully guard her rights? Indeed, do the majority of the members of Parliament know anything more about India than a schoolboy, or pay any attention at all to Indian affairs, unless there is an insurrection or some other form of serious trouble there? How can they? India is so far away, and they are so overwhelmed with matters nearer home that must be attended to!

When, at the far end of a Parliamentary session, a day is announced for discussion of Indian affairs, what happens? It is the signal for everybody to be absent who can possibly find an excuse.

Mr. Ramsay MacDonald, in his book, "The Government of India" (pp. 43 and 51), says:

"It must be admitted that Parliament has not been a just and watchful steward of India. Its seats are empty when it has its annual saunter through the Indian Budget...Very few members of Parliament have any real knowledge of Indian affairs, and there is a deserted House of Commons when the Indian Budget is under consideration."

There lies before me, as I write, an extended report of the debate on India, in the House of Commons, July 17, 1927. According to the report, there were within call when the House was fullest 220 members; but never in the Chamber at any one time more than fifty; and the average attendance during the debate did not exceed twenty-five.

Writes Mr. Alfred Kinnear, M. P.

"I recall thirty Indian Budget nights in the House of Commons. Scarcely one of

drew an audience of fifty members—one eleventh part of the membership. At a recent budget debate, when a matter of very great importance was up for discussion, there were present, by count, fourteen persons,—thirteen Liberals and one Tory. At another, there were twenty present, and another, there were three on the Tory side and one on the Liberal."

In a letter written from London by Mr. Lajpat Rai, under date of July 22, 1926, and published in *The People*, of Lahore, August 15, that eminent Indian publicist says:

"Nothing proves so forcibly the absurdity and the morality of the British Parliament's control over the Indian government, as the spectacle of a debate on India in the House of Commons. I have attended several such debates on previous occasions, and last night I attended another. Before the Under-Secretary of State for India introduced the subject of India, the House was full and everything was lively, almost exciting, although there was nothing of any great importance on the topic. But the moment the Under-Secretary for India got up, the House emptied. Soon the front benches were entirely unoccupied. Only a very few members remained. The whole scene was dull, cold and depressing. The speeches made were equally dull and uninteresting. There was no sign of life or interest anywhere."

Edward Thompson in his book, "The Other Side of the Medal" (Harcourt, Brace & Co., 1926, page 13) says:

"It has long been notorious, and a theme of savage comment by Indians, that the Indian Debate in the House of Commons has been regarded with indifference by the few who attended and with contempt by the many who stayed away. Sir Henry Fowler's noble appeal some years ago that every member should consider himself a member for India, since India was disfranchised in the assembly that controlled her destinies, won a spectacular triumph when made; but it has been forgotten. Two years ago, a Member of Parliament of twenty years' standing asked a friend of mine, 'What's happened to that fellow Gander—or some such name, who used to give us so much trouble?'—thus showing that it is possible for one to be a British Privy Councillor and yet be utterly ignorant of the man in India who is our greatest British contemporary."

At a large meeting of the British Labor Party held in the University Institute, London, in January, 1926, Major Graham Pole, M. P. described the interest, or rather the complete lack of interest, the British Parliament (that "sleepless guardian of India's

nally, just as Isaac Walton exhorts his angler, in hooking a worm, to handle him as if he loved him."

Such is affirmed by an English historian to have been British rule in India at the middle of the last century. The Indian people declare that there has been little or no real improvement since. A few more offices or salaried positions are grudgingly assigned them; but they are given no more power or authority in the management of the Government of their own country, and their treatment by the British officials is actually more haughty and more humiliating than it was when John Dickinson wrote. As to Parliament, it is widely claimed by those who have fullest knowledge of the past and the present that this British legislative body actually knows less about India to-day and takes less interest in its affairs than at any time in the past.

Ramsay MacDonald says there is actually less Parliamentary control of the Indian administration now than there was in the days of the East India Company.*

It should not for a moment be forgotten that the extremely conservative House of Lords is a part of Parliament, that it is less intelligent concerning India than even the House of Commons, that it is constantly and notoriously opposed to liberal measures for India and favourable to those that are oppressive, that it openly sympathized with the ultra-tyrannical Rowlett Acts of 1919 and that it actually defended and commended General Dyer for his horrible Amritsar massacre. Think of claiming before the world that such a body, which has to some degree veto power over legislation by the House of Commons, is a careful guardian of the interests of the Indian people!

One cause alone, even if there were no other, makes it absolutely impossible, in the very nature of the case, for the British Parliament to guard the interests of India with even an approximation of wisdom and justice. I refer to the fact that Parliament contains not a single representative of India.

Suppose New York or Massachusetts, or Michigan, or Louisiana, or California were allowed to send no representatives to the United States Congress in Washington, could such a wholly unrepresented State depend upon having its interests properly guarded? Suppose London, or Lancashire or Yorkshire

or Wales or Scotland were not allowed to send a single representative to the British Parliament, could any one of those great constituencies be convinced that its interests would be safe?

How then about India?—a nation in a far distant part of the earth, which has a population nearly three times as great as that of the entire United States and more than seven times as numerous as that of the British Isles, and of whose languages, customs, civilization and needs, the British Parliament is almost absolutely ignorant.

It is astonishing how little knowledge of India seems to be possessed by many of even the most eminent members of Parliament. It is the commonest thing to find distinguished members of both Houses condescendingly referring to the Indian people as if they had no culture and no civilization. I find even Mr. Balfour, who is accounted a man of exceptional intelligence, actually insulting the Indian people by writing and speaking of them, not once, but again and again, and habitually, as if they were barbarians requiring to be civilized by Britain.

Is it anything less than lunacy to believe that an English legislative body, many of whose most conspicuous leaders are so ignorant of India, and which does not contain a single representative of that great and distant nation, can intelligently and justly guard its interests,—even if we assume every legislator to be actuated by the most generous, honorable and altruistic motives?

Is it said that India does have one representative, if not in the British Parliament, at least in the British government in London, and near enough to Parliament so that his voice may occasionally be heard there? I mean the Secretary of State for India.

The reply is clear. Even if we grant that this official is a representative of India, what is one, under such conditions? *One* would be utterly inadequate to represent a country so enormous as India, and interests as vast as hers. But it is not true that in the Secretary of State India has even one representative. That eminent official is not an Indian but an Englishman. He may never have been in India; probably he has not. Very likely he does not know a single Indian language. Most Secretaries of State do not. Furthermore, (what is vital), he is not chosen by India, but by England; therefore, he is not India's representative at

* "The Awakening of India," p. 263.

all, but England's. He never is, or can be, anything more than a make-believe representative of India, because he is not appointed or even credentialed by the Indian people; just as no man can be a real representative of a business firm or corporation who is not chosen or appointed or credentialed by that business firm or corporation. To be sure, he is one of the men who dominate and control the Indian people, but that is not because he is their representative, or has any right to control them, but because he is their master, put over them by Britain, without their having any part in the matter.

Is it said that even if Parliament fails, the English people themselves will not fail? They are a great liberty loving and just nation, and may be depended on in some way, through Parliament or otherwise, to see to it that India's interests are carefully protected.

Mr. H. W. Nevison, the eminent English publicist, who knows both England and India as well as any man, answers with the question:

"How many persons in England know anything about India, or can afford time to think about her? I doubt if one per cent. of the British people gives to India a thought from year's end to year's end."

Dr V. H. Rutherford, M. P., says the British people "are never even consulted" about Indian affairs.

The truth is the whole claim or idea, so widely entertained in the world, that in the British Parliament the Indian people have an intelligent, careful ever-solicitous and safe-guardian of their rights and interests, is a pure fiction. There is not a fact to support it. *India has no such guardian; and she can have none until she becomes free and is therefore able to guard and protect herself.*

Said Thomas Jefferson

"The people of every country are the only safe-guardians of their own rights."

"Modern India Its Problems and Their Solution." Introduction, p. xi. (1927).

POST-WAR REFORMS IN GERMAN SCHOOLS

By DURGA PRASANNA RAY CHAUDHURI M. A. (GOVTINGEN)

Lecturer in German—Calcutta University

BEFORE leaving Germany early in 1926, I had the privilege of visiting some Secondary Schools in Berlin and its neighbourhood during one whole winter with the kind permission of the Prussian Minister of Education. I had also visited a number of Primary Schools for boys and girls in Prussia and elsewhere, and attended teachers' Conferences and meetings of Students' Unions in connexion with Secondary Schools on several occasions. And, besides seeing the various classes of schools actually at work there, I had further interested myself in the theoretical side of the school reform movement initiated in Germany after the War, by reading a fairly comprehensive volume of literature on the subject. It is, therefore, hoped that the following pages

dealing with the salient features of this movement in Prussia, from which technicalities and minute details have been excluded as far as possible, may not be quite unwelcome to those who are interested in school-work in that country.

Before the new regulations came into force, the Secondary Schools in Prussia used principally to supply to the various Universities and technical Colleges recruits for those of the higher professions which presupposed a university education. But according to the new regulations, even would-be primary school teachers have got to pass the final examination of a Secondary School, before they can join one of the three pedagogical academies that have recently been set up for their professional training. The

Secondary Schools have thus got the whole burden of public instruction in the land thrown on their shoulders.

The new ministerial regulations comprise all the higher schools within one single system complete in itself. They go under the general name of "unity schools," because they are all run on the same principles. The lower forms of the "unity school" constitute the so-called elementary Ground School, where the child has to stay for four years and from where he may afterwards go to a higher or middle school. Again, the child may also begin direct in an elementary school, of which the first four years are identical with the ground school; and, after staying there for seven years, he may go on to a higher or Secondary School. Thus we see that in this system the elementary schools, the secondary schools and the university are all organically united.

Five pivotal subjects are common to, and are compulsorily taught in, all kinds of secondary schools; and, as a rule, the greatest attention is focussed on them. By this means it is sought to maintain the unity of German culture. These common subjects which form the nucleus of instruction in all secondary schools help to unite these amongst themselves on the one hand, and to link them with the elementary schools on the other.

In addition to teaching these common subjects, the various kinds of secondary schools have also got to make special arrangements for those other subjects that distinguish them one from another.

The school curriculum is drawn up from year to year by the teachers' union concerned in the light of the directions received from the authorities. But there is no absolute standard for this. In drawing up the curriculum for any particular year, the special tastes and capacities of the teachers as well as of their pupils are always taken into consideration. What cannot be got through in one year is left over for the next.

The great aim of all instruction in German schools is to inculcate upon the minds of the pupils the traditions of German culture. This purpose is mainly served by the five subjects referred to above. They are: Religion, German, Civic Rights, History and Geography. Equally compulsory for all schools are also Physical Exercise and the following subjects, *e. g.* Music, Drawing and

athletics.

The instruction that is imparted is required

to be fairly comprehensive, undue stress on any particular subject being avoided as far as possible. Nevertheless concentration on any one problem with a view to its satisfactory solution is also encouraged. And an ideal goal for this purpose is furnished by the traditions of German culture, which are the same for all schools. But the different kinds of secondary schools aim at different results, and the grouping of their subjects, also is consequently different in essentials, as also are the problems on which they each of them concentrate. This variegated character of the Secondary Schools therefore makes it imperative that it should be carefully considered as to how the principle of concentration may be in each individual case suitably adapted. Since a good comprehensive education aims at a harmonious development of the personality of the pupil, it necessarily includes education on national lines, civic rights, development of the aesthetic tastes and of philosophical insight. All these things go beyond the scope of special individual subjects and yet do not interfere with the legitimate function of any of them. An attempt to divide the subjects into a number of watertight compartments and then to supply ideas that run counter to each other through the teachers of the various subjects separately, defeats the end of all instruction, burdens the soul of the student, and weakens the unity of will and purpose in the teachers.

As a matter of fact, the most outstanding things about the post-war reforms in German Schools are:—(1) the emphasis that is laid upon the principle of concentration, (2) the introduction of practical lessons, and (3) the place given to manual skill as a means of acquiring intellectual knowledge. And it is in pursuance of these very principles that the old preparatory school has been abolished and the ground-school established in its place (see below).

In drawing up the curriculum of any particular subject, the teachers who have been specially trained to teach that subject have got the decisive voice. All teachers have got the certain class in any given year have to meet and exchange opinions frequently, whilst teachers engaged on teaching the same subject in different classes at the same period make it a point to attend each other's lessons and then compare notes to the advantage of all concerned.

Every lesson that is given has to be "a

practical lesson". This simply means that the teacher must on no account look upon the mere transmission of stuff as the sole object of his lessons, but must always stop to consider what particular qualities of the student may be developed and strengthened by them. And special stress should be laid on the development of the power of independent judgment, feeling, imagination and will-force. One of the first principles of practical instruction is to look upon the whole class as a band of collaborators working together on a basis of give and take.

The duty of the teacher is simply to direct, and the scholars are expected to use their common sense in turning that guidance to account by taking up independent lines of work and investigation according to their respective tastes and capabilities. In the ministerial enactment upon this subject it is stated: "The first and the great task of practical instruction is to bridge the gulf which exists between the acquisition of definite knowledge (without which no higher intellectual work is possible) and the acquisition of the capacity for independent work (without which mere knowledge is fruitless)".

Manual skill, imagination, initiative, and the power of expression have to be promoted and encouraged by degrees by setting suitable tasks to be done at home and also by means of instructions imparted in the class. The scholars must be made to feel that they form a fellowship of workers and should even set tasks for themselves from time to time. The tasks which the scholars set themselves of their own accord, if properly guided, may be made to yield as useful and important results as the usual routine work gone through at school does. In order that such tasks may produce the maximum result, they must be done systematically. Even in primary schools children are to be encouraged to practise this wholesome exercise as far as practicable.

All the compulsory work to be done by the boys in the class must grow organically out of the lessons given by the teachers, and the idea is to make as many of these lessons as possible fruitful for all the scholars by thoroughly discussing them with the whole class.

Any written work done by the pupils in the class should be judged as a whole; and when an expression of opinion is made about it by the teacher in writing, its merits as

well as its defects should be pointed out. An expression of opinion in the shape of a mere mechanical enumeration of errors should be always avoided. Such dictionaries and reference books as are allowed for the preparation of written home-tasks, should also be allowed when an exercise is given to be done in the class.

In Secondary Schools consisting of nine classes, the students of the three top classes are permitted to go in for some optional subjects and also to take part in the work of the students' literary unions. But participation in the work of these unions is purely voluntary. There may be unions for all subjects, not even Philosophy being excluded. And it is the students themselves who choose which of these unions they are going to join. Two hours in the week are set apart for the work of each one of these unions; and its deliberations are conducted under the competent guidance of a trained teacher.

In addition to looking after these students' unions, the teachers have also got to attend conferences of their own, which, too, are held subject by subject. In these conferences they not only discuss the methods of instruction to be followed but also decide on the stuff to be taught. The curriculum of the whole school is also given a definite shape in these meetings. And teachers of the same subject are required to attend each other's lessons as hearers from time to time.

Then there are also associations of teachers who happen to teach the different subjects in one and the same class in any given year. These associations are very important. Apart from other considerations, a proper assessment of the merits of the students from the standpoint of all the subjects, individually and collectively, can only be made here. The teachers of these associations also have got to attend each other's classes as in the above case.

The school curriculum consists of the following subjects:—

A. For higher schools of all denominations.

1. Subjects that form the nucleus of all instruction, e.g. Religion, German, Civic Rights, History and Geography.

2. Art-subjects:—Music, Drawing and Aesthetics (also needle-work for girls).

3. Physical Exercise.

All these subjects under 1, 2 & 3 are compulsory for each individual pupil, male or female.

B. For different kinds of higher schools for boys, e.g.,

(i) *Gymnasium or Grammar School*:—*Latin, Greek, French, English, Mathematics, Physics, Chemistry, Biology, and Hebrew* (the last named being optional).

(ii) *Realgymnasium or German Secondary School* for modern languages. There are two types of this school.

The older type teaches:—*Latin, French, English, Mathematics, Physics, Chemistry, Biology, and Spanish* (the last one is optional).

And the reformed type teaches:—*French, Latin, English, Mathematics, Physics, Chemistry, Biology and Spanish* (the last one being optional).

The difference between these two types of schools is that while the former teaches Latin for nine years, French for seven years, and English for six years, the latter teaches French for nine years, Latin for six years and English for four years only.

(iii) *Oberrealschule or German Secondary School* for the sciences: *French, English, Mathematics, Physics, Chemistry, Biology, Latin and Spanish* (the last two being optional).

The schools under (iii) may at their option replace French or English by some other modern civilized language.

The new creations of the post-war reforms are:—

(iv) *Deutsche Oberschule* or the German Upper School, where Religion, German, History, Geography, Mathematics, Natural Sciences, Drawing and Music are the compulsory subjects, which every scholar attending the school has got to study. Besides, the Science of Civic Rights, Aesthetics and introduction to Philosophy are to be taken up either as independent subjects or as auxiliary to other subjects in the curriculum. Add to this two modern foreign languages which a scholar must read if he wants to take the leaving-certificate, although only one of them is taught as a compulsory subject at school. The characteristic subjects of the German Upper School are:—*History, Geography, and the foreign language for which the scholar enters first.*

(v) The *Anfbauschule* or the Upbuilding School, which has now taken the place of the defunct seminaries for training men and women teachers for elementary schools. The pupils of the Primary Schools also may take their leaving certificates from here. After

having put in seven years at primary schools, they may join the *Anfbauschule*, if found fit for it, where they will have to stay for six years more before they can take the school-leaving certificate. The *Anfbauschule* has the same object in view as the *Oberrealschule* or the *Deutsche Oberschule*.

The subjects italicised in the above paragraphs are the characteristic subjects (forming the distinguishing features) of the various schools concerned. It should be noted here that the study of all the languages is not taken up simultaneously by any scholar. And all instruction is, of course, imparted through the medium of German.

A German child has to go to school at the age of six. He spends four years at the so-called Ground-school and then goes on to one of the secondary schools, where he stays for nine years more; so that by the time he leaves school, he is nineteen years old (provided of course there has been no break in his studies).

Corresponding to the boys' schools there are also secondary schools for girls. Their general appellation is *Lyzeum* (a word of Greek origin which eventually came to mean a teaching-place). They have almost the same curriculum as the corresponding boys' schools; only they put in a lesser number of actual working hours at school on hygienic grounds, and supplement their usual course by such items as needle-work and house-wifery etc., which are so essential to women.

In these higher schools tuition fees are charged according to the following rates:—

Parents whose annual income does not exceed 2500 M. are charged no fees at all for the schooling of their children.

For an annual income of from 2500 3300 M. the monthly school fee is 7½ M. for the first child and 3½ M. for the second child, while the other children are taught free.

Parents enjoying an annual income of from 3300-5000 M. have to pay 11½ M. for the first child, and 7½ M. for the second child, and the rest are taught free.

For annual incomes above 5000 M. the rate is 15 M. for the first child, 11½ M. for the second and 7½ M. for the third, the other children being allowed to read free of all charges.

Twenty German Marks are equivalent to one English pound.

These rates are for Berlin and its suburbs. Smaller towns and country districts charge

fees on a lower scale. But State Schools throughout the rest of Germany have nearly the same rates. In most primary schools there are arrangements for the free distribution of milk and hot breakfast to the children. In secondary schools such arrangements exist only for the poorer students. And I have seen warm milk being sold by the authorities of some secondary schools in Berlin to their poorer students during the pause between two lessons at less than the market price. Funds are supplied for this purpose either by the State or by the municipalities of the towns concerned, and occasionally donations are also received from rich people. In primary schools there are also arrangements for free warm baths (*douche*) for the poorer children, who have no such opportunities in their own homes.

The pre-war regulations for the school certificate examination (which is usually taken after a stay of nine years in the secondary school) had to be recast in conformity with the new ministerial enactments in regard to school reform. Personality and individual likings of the candidate in respect of the principal divisions of the examination must be taken into account. A remark on his religious creed may be entered in the leaving certificate only at the express request of the candidate. "The teachers of the top most class put together their opinion of each individual scholar. This statement of opinion should not only show the development of the intellectual powers and all the good and bad points in the character of the scholar, and through light upon his capacity for independent intellectual work, but should also contain, as a rule, all that is likely to be of any practical value in forming a correct estimate of him. In doing so, the development of tastes, the power of observation, the clearness of understanding, the inventive faculty, imagination, the power of judgment, the capacity for describing a thing, and so on are as much to be taken into account as his special talents and particular activities in the different spheres of life in and out of school, his share in the work of the students' organizations and the success attained therein, noteworthy achievements in sports and gymnastics, the extent of his participation in the youth movement and other things of a like nature. Furthermore, internal and external hindrances, domestic situation, pecuniary circumstances, the condition of health etc., are also to be considered,

should there be any occasion for doing so."

This detailed leaving certificate is a post-war institution. Before the Revolution of 1918 it used to consist of a few words only. But now, as we have seen above, it almost amounts to a short essay on the candidate in question.

The examination continues to be both oral and written as before. But to it is now added another examination in sports and gymnastics. Another departure from the old regulations is that a scholar, having failed once in the school certificate examination, may take his chance again after one year, and not after six months as heretofore. (The latest ministerial regulations to hand allow an unsuccessful candidate to take his examination again after six months also). Besides, the candidate may, under the new regulations, submit a thesis, which he has prepared at home in the course of the year on some phase or aspect of one of the subjects in which he is going to be examined, whereupon he will be exempted from the compulsory written examination in the same subject or in some kindred subject at his choice.

Compulsory written papers for all secondary schools for boys and girls are a German essay and Mathematics. Add to this

(a) for Grammar Schools, two translation papers—one from Latin and the other from Greek—into German. Under the old regulations the candidates were required to translate from German into Latin, which was, of course, a more difficult task. Besides those who want to be examined in Hebrew have to translate into German a comparatively simple paragraph from the old Testament and write grammatical notes thereon.

(b) for Realgymnasiums or German Secondary Schools for modern languages, a French paper and an English paper. Here candidates are always given the option of substituting the English paper by a paper on translation only, from Latin or English into German.

(c) for Oberrealschulen or German Secondary School for the sciences, a paper on one of the two modern foreign languages (French or English) according to the choice of the candidate and a paper on one of the natural sciences, e.g. Chemistry, Physics, or Biology, also at the candidate's choice. Before the War a candidate used to be examined in

the foreign languages and Biology has been introduced since the Revolution only. Formerly a choice between the science subjects was not allowed to the candidate. The authorities used to choose for him.

(d) for Deutsche Oberschule or German Upper School, one paper on the modern foreign language, for which the scholar had enrolled himself first, and one paper either on History or Geography according to the choice of the candidate.

These examination rules for the secondary schools for boys hold good also for the corresponding secondary schools for girls.

When a candidate is taking a written examination at school, he is allowed the use of such reference books and dictionaries as are recommended for his use at home. In the essay paper on German the candidate is allowed the option of choosing one out of four topics, which are, as a rule, widely different in their scope. It is also a relief for the Grammar School students that instead of having to translate a German text into Latin, they are now required to translate from Latin into German, which is their mother-tongue. The scholars of the Oberealschule are now examined in one foreign language only. And the Latin paper is no longer compulsory for the scholars of the Realgymnasium.

For the oral examination the candidate may choose any one subject in which he expects to do well. The other subjects in which he is to be examined are determined by the board of examiners. Total exemption from the oral test is no longer allowed. Before the new regulations came into force, a scholar who had done very well in the written examination, did not have to take the oral test at all; while on the other hand, if he had done badly in the former, he would not be so much as allowed even to go in for the latter. Under the present system, however, even the scholar who has done badly in the written examination may take his chance at the oral test; and if he does equally badly here also, then he is declared bad for the whole examination. On the other hand, even the best scholar from the point of view of the written examination must take his oral test also. Of course, such a scholar is normally expected to do well here also, although he may not always show nearly to the best advantage at such a test. In that case the quality of his leaving certificate will be a little. With this certificate he may

go to the university or to a high technical college or even enter some suitable profession. In the event of his failing to obtain this certificate, he will have to seek re-admission to the same class and take his chance again after six months.

The ministerial directions recommend that the oral examination should be held chiefly in such subjects only as are likely to afford the candidate an opportunity to "display his special ability," and not in subjects in which he is likely to fare badly. Besides, every candidate should be examined orally as far as subjects as possible. And the oral examination should on no account consist of a mere string of isolated questions and answers; while a mere reproduction from memory of things that have been learnt by heart is to be sternly repressed. On the contrary, each student is to be called upon to speak on one or more topics in a connected and systematic way in the form of a discourse; and, in doing so, he should be given sufficient time to arrange his thoughts before he begins to speak. Briefly, the oral examination is to be a kind of seizure by the candidate on a subject or subjects in which he feels quite in his element.

THE MIDDLE SCHOOL.

Upon the aims and conditions of the Middle School the Minister of Education remarks as follows:—

"The great developments in the domains of handicrafts, applied arts, trade and industry, agriculture, and forestry, naturally demand greater efficiency in the training of boys and girls for these avocations. Hence arises the necessity of making provision for a suitable training for sundry intermediate positions in the State, the municipalities and other private organizations, so as to meet the increased demands of trade and industry as influenced by these new developments.

"The elementary schools can meet these demands only to a very limited extent. And the Secondary Schools also cannot undertake to do this work adequately, because their principal function lies in the direction of scientific work.

"Thus arises the necessity for a kind of school that is to occupy something like an intermediate position between the elementary school on the one hand and the secondary school on the other.....Such an educational institution is supplied by the Middle

School, which is only a further development of the ground school and consists of six standards. By effecting the necessary alterations in the curriculum and by making simultaneous arrangements for imparting instruction in the different subjects of the Secondary Schools also, the Middle School may further be in a position to prepare students for the Secondary Schools as well without neglecting its own legitimate duties."

After having been at the Ground School for four years, the child comes to the Middle School, where he then stays for six years. Therefore, when a child does not go farther than the Middle School, he has been under instruction altogether for ten years. Here the child has to pay a school fee of 5 Marks per month if the annual income of his parents is 5000 M. or more. The second child of the same parents is charged $3\frac{1}{4}$ M., the third $2\frac{1}{2}$ M. and the fourth is taught free of all charges. When the parents' income is M. 3300-5000 the first child pays $3\frac{1}{4}$ M., the second $2\frac{1}{2}$ M. and the others are taught free. For an income between M. 2500 and 3300, the first two children pay M. $2\frac{1}{2}$ and M. 1 $\frac{1}{4}$ respectively, while the rest go free. Parents whose incomes are under M. 2500 have to pay nothing for the education of their children. (20 Marks = £1). The State and the municipalities concerned pay for the children that are taught free in all the above cases.

In the Middle School, ordinarily one foreign language is taught as compulsory. But from the third or the fourth class onwards, the children may, if they so desire, take up another foreign language. French is the compulsory foreign language taught in most Middle Schools.

In the ministerial decree there are five different plans for the Middle School. Plan I. (which is the general curriculum for boys) contains, in addition to instructions in the elementary school-subjects and foreign languages, also courses in book-keeping, handicraft, gardening and shorthand (the last three subjects are also taught in Secondary Schools outside of their ordinary courses of study). This plan is of a piece with Plan III which is the general curriculum for girls. But here there is an additional course in house-keeping also. Plans II and IV supply courses of study for boys and girls with a special eye to their future calling.

The requirements of the first three classes of the Middle Schools are essentially identical in all the plans. In the first three

classes the subjects "trade, traffic and industry" are given some prominence in Plan II (for boys) and a course of type-writing is added to the curriculum. In plan IV (for girls) instead of instructions calculated to prepare scholars for industrial careers a course of training in hygiene (with special reference to nursing and child welfare) has been introduced. There is a course in housewifery also.

Plan V (the curriculum for Middle Schools preparing scholars for Secondary Schools) omits altogether the subjects that are specially designed to provide for commercial teaching, house-keeping and humanitarian work generally.

It may be noted here that before the Revolution of 1918, there were only two kinds of Middle Schools one for girls and the other for boys, instead of five as now; and only one foreign language used to be taught instead of two as at present. Much more stress is now laid upon those subjects that prepare a young man or woman for a practical career.

Concerning the methods of instruction, the Reforms demand here, as in all other cases, that the lessons should be practical ones and that the learners should be encouraged to concentrate on some definite goal from the very start. The schools should not be a party to the mere memorizing by the students of all sorts of undigested materials, but should try to assist the scholars to a practical understanding of the various sub-subjects and problems handled. It is, of course, obvious that on account of their young age and very limited intellectual capacity, the idea of concentration cannot be kept as much to the fore in the case of the Middle School children as in that of the higher classes of Secondary Schools. As elsewhere the teachers of Middle Schools meet to committees and conferences at regular intervals in order to discuss, deliberate and take their decisions on all matters relating to class-work.

After the War reductions in the teaching staff had to be effected for reasons of economy, and lessons in handwriting were done away with in consequence. Before the Revolution of 1918, lessons in handwriting were compulsory in all Secondary Schools from the sixth up to the ninth, that is to say, for three years (see below). The number of hours for Latin has also been curtailed.

some Secondary Schools on the same ground of economy.

There are also some higher secondary schools, which do not lead up to the school certificate examination, and cannot, therefore, qualify students for the university or the high technical colleges, but give them a training for subordinate ministerial positions only. These schools have got a nine-year course; that is to say, the pupils are taught here up to the standard of the fourth class (counting from the top) of a regular secondary school. So a student on leaving a secondary school of this incomplete type, may go over to a regular secondary school and stay there for four years more, when he will be eligible for entrance into the University or the high technical colleges.

The classes of a German Secondary School are:—Sexta (6), Quinta (5), Quarta (4), Tertertia (junior 3), Obertertia (senior 3), Untersekunda (junior 2), Obersekunda (senior 2), Unterprima (junior 1), Oberprima (senior 1).

In Germany a child goes to school at six and puts in four years at the Ground School and nine years at the Secondary School. So that by the time he has taken the school certificate examination, of course, is the usual course without any break in his career, he is exactly nineteen years old. Before the Revolution he could leave school at eighteen, because Prussia had then a kind of preparatory school with a three-year course in place of the Ground School of to-day.

THE PRIMARY SCHOOL

The Primary School has got eight classes. No fees are charged. A child begins to attend the Primary School when he is six years old. The first four years form the so-called Ground School, *which every child must attend*, unless he is physically unfit. The Ground School is thus the first school which every child has got to attend and which is, of course, the same for all children irrespective of their birth and social standing. The child who takes the full course of a primary school is fourteen when he leaves it. But he may also leave it at the age of ten, and go to the Secondary School or to the Middle School.

It is of supreme importance that here also the children must not learn mechanically but should be made to feel the spirit of their lessons and digest and make their own by

means of practical illustrations whatever work they might do under the guidance of the teachers.

The idiom which the child daily hears in his home should not be altogether ignored by the teachers of the primary school. Games, practical observations of nature and manual activities (e. g. forming figures in plasticine or clay, putting together of small sticks or rods, making coloured drawing, carving etc.) should be resorted to by way of illustrating the lessons and stimulating the child's interest in them.

The subjects in which instructions are given in the Ground School are Religion, Geography of the child's home district, German language, Arithmetic, Drawing, Music and Gymnastics, and for the girls, during the last two years of their Ground School life, needle-work also.

When the child first comes to school, all these subjects are not taken up one after another in keeping with any cut and dried time-table, but he is always treated to a comprehensive lesson covering all of them rather freely. And the aim of the first course of lessons is to give the child some definite ideas and informations about his own country. Absolutely no home-tasks are set to the child at this stage.

The last four years of the Primary School are devoted to preparing apprentices for an active practical life and for the professional schools. Simultaneously arrangements are also made for giving the necessary training to those who may prefer to go up to the Aufbauschule (see above).

Here also the teachers strictly follow the fundamental principles of practical teaching. The employment of the hand is very important on the part of the pupils. Sketches, drawings, educational appliances etc., (especially those necessary for elucidating the idea of vacuum and teaching geography and the natural sciences) are provided, made directly by the pupils, who are also encouraged to conduct independent experiments in the natural sciences and to make their own collections of interesting materials relating to the science subjects they study. Animals and plants are collected and carefully studied in terrariums, aquariums, insectariums and school-gardens. Lessons are given on the handicrafts, needle-work and on house-keeping. During excursions which must take place periodically under the new ministerial re-

gulations, sketchmaps are drawn by the pupils of the landscapes that are visited and experiments are made in the measurement of distances by conjecture. Agricultural farms and workshops are also visited as often as practicable.

The subjects of instruction are religion (occasionally biography), German, History and Civic rights, Geography, natural sciences, Arithmetic, Space, Drawing, Music and Gymnastics; and for the girls also needle-work.

A DUTCH CRITICISM OF MISS MAYO

[Reviewing the Dutch translation of Miss Mayo's book "Mother India" Henriette Roland Itoet-van der Schalk, a Dutch poet and probably one of the greatest poets living—writes as follows in "Recht en Vrijheid" (Right and Freedom), the paper of the Dutch section of the "League against Imperialism and Colonial Oppression"]:

"WESTERN PRIDE"

A Dutch translation of "Mother India", Miss Mayo's much discussed work, by J. de Gruyter, has been published lately. This book will, no doubt, by its more or less sensational character find many readers, also in our country.

For that reason we want to say something about it here, because it is an extremely dangerous book. It is a book full of pride's poison. It cajoles and flatters the belief of the ruling classes of the Western countries in their superiority over the East—the superiority that puts upon them the "duty" to act as the "tutors" of these "minor children," as they have to be "educated" for self-government, etc. The "White Man's Burden" isn't it?

In itself there is nothing against Miss Mayo's drawing attention to certain social evils existing in continental India. The worst of these all is child-marriage, with its consequence of sexual overstimulation, of great sorrow in body and soul for the far too young mothers, and of early exhaustion and weakening of the race. Further the author illustrates with many examples how the population sins against the most elementary ideas of hygiene, for which again the women are the worst sufferers. She also calls our attention to the religious intolerance leading to repeated fights between Hindus and Muslims; to the unbearable hindrances put in the way of social development by the caste-system and the negation of humanity

which is its consequence; and lastly to the hardness and cruelty with which animals are treated, specially the "holy cow," which in spite of its holiness often is left to a slow death of starvation.

Nobody will think of denying that these evils are terrible, and if a stream of love for the peoples of India ran through the book of Miss Mayo, love for the victims of delusion, stereotyped thought, and social oppression—women pariahs, the brutes—if the spirit of the book were one of raising the Indians of all creed, rank and caste to co-existence and labour, and fight the deep-rooted evils of their society—in that case Miss Mayo really would have done a good deed in writing "Mother India."

The spirit of Western pride, however, emanating from it, the spirit of contempt for the entire civilisation of the East speaking from every page—based only on the impotence of understanding the principle, the root and essence of that culture—that spirit spoils what is good in Miss Mayo's book, and utterly destroys the eventual good results it could have led to if the case had been different.

I will not try to answer the question here if the picture the author draws of the Indian society is quite correct. One hardly can doubt that the facts she quotes are true. It is, however, possible that she greatly exaggerates the range of these facts. It is also possible that some, or all evils, which she describes, only occur amongst certain castes or in some parts of the country. It is also possible that from the side of the indigenous population more energy is put in the fight against them than we could learn of from her description. In all these cases the impression created by her book would be a false one, even if the

fact she mentions are correct in themselves. I will have to leave it to more competent judges if the one or the other be the case.

What I only want to do here is to show why all champions for right and freedom, for self-management and self-government of the Asiatic peoples, have to feel the spirit of this book as being **THOROUGHLY** hostile to their efforts.

Firstly: In the book Miss Mayo enthrones the modern hygienic as the only deity we all have to worship. To the commands of this deity everything must be sacrificed, the entire spiritual beauty and spiritual grandeur of a world-conception and a view of life, which for centuries and centuries have reconciled millions with their own difficult, hard existence, and taught them to find a sense in life in general, taught them to feel themselves as a part of the Absolute.

When Miss Mayo, shuddering with disgust, tells us about many customs of the pious Hindu,—repulsive to our feeling (so for instance, going barefooted through filthy mud, and drinking very polluted water) she does not think for one second, that the thought of *bodily pollution* does not even occur to the pious Hindu, as he is entirely pervaded by the idea of *spiritual purification* which is for him the meaning of bathing in the Ganges, the "holy stream."

This single instance illustrates the whole antithesis between the naturalistic—materialistic conception of—and attitude towards life in the West, and the supernatural, spiritual conception of the East. The former leads in its last consequence to the worship of the bath-tub, tooth-brush and filter; the latter, also in its last consequence, to the absolute neglect of the demands of the body.

Here lies a widespread problem, the problem of a great shortcoming, as well in the East as in the West—the crooked growth and one-sidedness of both Western and Indian civilisation.

For Miss Mayo and her consorts, however, these problems do not exist even; they have no other idea of culture than filter, bath-tub and tooth-brush.

Secondly: The perception which Miss Mayo hammers into her readers is, politically, absolutely reactionary, that is to say, in favour of imperialism. Whatever good there is in India has been brought by the English. The English are making untiring efforts to bring about enlightenment, culture,ocracy and humanity. Whatever is

wrong, comes from the Indians themselves, their sloth, their egotism, their indifference, their mentality unchangingly running in fixed grooves. It is nonsense to give self-government to the peoples of India; what they need is, on the contrary, being put under much more severe domination—only English rule can help India; "English interference as much as possible" should therefore be the slogan.

Miss Mayo has never heard, apparently, of the purifying, regenerating, energystimulating power of national freedom. She thought that the progressive powers of Eastern society at this stage of Asia's awakening are mainly focussed on making an end to the evil and shame of foreign domination; that these powers, when once the great aim of the nationalistic movement will be reached, will be at the disposal for other not less important ends—the self-development and self-regeneration of the indigenous world—this thought never seems to have struck the author of "Mother India." Not more than the idea that nations and classes can be educated to the realisation of responsibility only in and through freedom.

Worst of all, however, is the boundless pride of which the book bears witness, the spirit of self-contentedness and phariseism. Constantly one hears the author sighing, bending her breast, "O Lord, I thank Thee that we in the West are not like these—that we have no child-marriages, and no superstition in the purifying working of the excrements of the cow, and no murder and killing in the name of faith, and no starving cows and calves. O Lord, how good we are, and how hygienic and how enlightened. Thank Thee that we are not like these."

That "we" in America, however, have the justice of lynchings, and the electrocutions, and the race-prejudices against the Negroes in its crudest form, and the unchecked child-labour in the workshops, and the extension of imperialism through forces of arms, and its maintenance through oppression and the "trial in the third degree" and the torture of political criminals—all these things do not come to our mind for one second. So much the better, otherwise that loud tone of high-handed authoritative-ness would soon come to an end. And whoever wants to enjoy the reading of "Mother India" in the full consciousness of his superiority—here in the enlightened civilised Netherlands, where no end of work

is done for hygiene, social provision, and improvement of social standard he will do wise not to think about the village of the "inadmissibles" under the smoke of Amsterdam (Do not inadmissible and un-touchable have some affinity of sound?) and about the thousands of slums in the capital, the "traps" of the senteneurs in Rotterdam, the hidden darknesses of the practice of abortion and the terrors of vivisection, done by specialists, hardened by countless experiments. He should not think about the vegetative existence of the tens of thousands

of unemployed, the starvation of the children in Drenta, the transport of beef-cattle, and about many other unsavoury sides of our "civilisation."

Above all, however, let him never think about the aimless, senseless toil through the desert, into which the existence of millions of workmen has developed, without philosophical, religious or social ideas. The desert in which the only oases consist in the coarsest form of sensual pleasure and sport, and the dope through dance or the sensational film.

LORD OXFORD : MAN OF AFFAIRS AS MAN OF LETTERS

By PROF. DIWAN CHAND HARMA, M.A.

I

NO one has done more than Lord Morley to combat the heresy that a man of letters cannot be a man of affairs. It has now been established beyond doubt that a predilection for literature does not unfit a man for participation in active affairs. On the other hand, we find that men who have a bent for literature and fine arts are taking an active interest in shaping the destinies of their countries. Dr. Hauptmann's name was proposed some time ago for the Presidency of the German Republic, and Paderewski has ever been the moving spirit in his country. People who trot out such preposterous statements are, in fact, those who have never come under the soothing and refining influence of literature themselves. They have as remote an idea of the belles-lettres as a blind man of the elephant. Literature is, indeed, a great force and its devotees are free of all departments of life. Its blessings are especially of an incalculable importance to a man who has to pass his days in *Romuli facie*. Literature enlarges a man's sympathies, gives him a breadth of outlook, adds polish and grace to his utterances, and nourishes in him the temper of admiration, hope, and love by which alone we live. A man who cultivates a love of it always finds in it his consolation and inspiration. If he

meets with difficulties, he learns to grapple with them; and if he does not find the need of his efforts, he learns to despise it.

II

It is, therefore, obvious that there is no antagonism between a man of letters and a man of affairs. But, on the other hand, I think, it is very difficult to find a man of affairs who is also a man of letters. Such a man is rare in these days. All the statesmen in England these days seem to pay little heed to the literary quality of what they say or write. Sir Arthur Quiller-Couch has made fun of an utterance of Mr. Lloyd George in his book *The Art of Writing*. Mr. Lloyd George does not only snap his fingers at literary polish and grace, but he seems to be careless of English idiom too. This is, of course, something pardonable in the case of a man about whom it is said that he never writes and seldom reads. But if Mr. Lloyd George lacks literary finish, his chief the Earl of Oxford was a rare combination of a man of affairs and a man of letters. No one who reads his books can question his title to that. His writings were the outcome of the mind of a man, who had read widely, thought deeply, and who possessed the inimitable gift of elegant expression. As one goes through the pages of his books one

wooders how he could manage to read so much. History, biography, criticism and classics—these were the pastures in which he browsed or grazed. He drew a fine picture of the age of Hadrian, and as regards biography he spoke of the Dictionary of National Biography, with the same rapture as did Keats about Chapman's Homer. To those who wish to develop critical acumen, his advice is, "Familiarise yourself with these masters: De Quincey, Carlyle, Hazlitt, Lamb, Coleridge, Bagehot, Matthew Arnold, Stevenson and Richard Holt Hutton." What a formidable array of names! But he was at his best when he came forth as an apologist of the classics. It is by reading his fervid words about the classics that one can plumb the depths of his erudition:

The man who has studied literature, and particularly the literature of the ancient world, as a student should, and as only a student can, I am not speaking of those two whom it has been merely a distraction or a pastime such a man possesses resources which, if he is wise, he would not barter for a king's ransom. He finds among men of like training with himself a bond of fellowship, free-masonry of spirit and understanding, which softens the asperities and survives the conflicts of professional or political rivalry. He need never be alone, for he can, whenever he pleases, invoke the companionship of the thinkers and the poets. He is always annexing new intellectual and spiritual territory, with an infinitude of fresh possibilities, without slackening his hold upon, or losing his zest for the old. There is hardly a sight or a sound in nature, a passion or emotion or purpose in man, a phase of conduct, an achievement of thought, a situation of life—tragic or comic, pathetic or ironical, which is not illuminated for him by association with the imperishable words of those who have interpreted, with the vision and in the language of genius, the meaning of the world.

When we read all this we cannot but feel the same wonder which the ignorant rustics felt at the omniscience of Goldsmith's Village Schoolmaster.

III

I think no one can lay claim to being a man of letters if his writings do not possess an atmosphere. There is an atmosphere about good writing as there is a fragrance about flowers. You can as well distinguish between the atmosphere of different writings as you can the fragrance of the rose from that of the jasmine. As we go through the work of an author, we naturally inhale his atmosphere. Who can read Hazlitt without being impressed with his lyrical effusions? We watch in his writings, as it

were his personality with all its sorrows, comforts, delusions and whims. We do not see him as we see the players in a masquerade with their faces hid by mask within mask, but we see him as we would have seen the first parents in the Garden of Eden before they had tasted the fruit of knowledge. We see him in his undress and feel the glow and warmth of his intimate personality. A man who reads Hazlitt without catching a glimpse of his personality misses the life-breath of his writings. The same might be true of Carlyle. Who can study Carlyle without being infected by his moral vehemence, his prophetic solemnity and the fierceness of his denunciations? A man who pores over Carlyle without being touched by these things is like the playgoer who goes to see Hamlet without ever knowing the Prince of Denmark. This atmosphere, this relish, odour, fragrance, bouquet—call it by what name you please—is unmistakably present in all great writers. It is, as it were the hall-mark of a great writer. No one can read the pages of Lord Oxford without learning his secret. There is an air of serenity and dignity about all that he writes. There is no spirit of contentment in them which can jar upon our ears; all is written with sweet reasonableness. There is nothing slipshod, and he never aims at cheap effects. Nowhere do we find the ignoble ease, the feeble facility of an amateur, but everywhere there is the restraint, the rigid discipline which comes of conscientious workmanship. Whether he talked about the unfortunate Haydon (But Haydon, though cursed with a vain and violent temperament, a prey to ambitious always in excess of his powers of execution, perpetually hovering on the confines of the insanity to which he at last succumbed, was one of the acutest and most accomplished critics, and on the whole, the most strenuous and indomitable controversialist of his time), or the golden age of Hadrian, and whether he discoursed on the use of culture or on the necessity of the critical spirit he never lost hold of his subject and always spoke in measured terms.

IV

But Lord Oxford was not only great, because he spread an atmosphere about whatever he talked or wrote. He was also the master of form. Formlessness is the besetting sin of all modern authors. It is,

in fact, the necessary consequence of romantic freedom. The power to move is not the only distinguishing mark of a work of art—a work of art must also possess form. And form is nothing but the artistic masonry, the faculty by means of which the author builds thought upon thought, phrase upon phrase, and argument upon argument in a consistent whole. It is that which gives completeness and unity to the whole and by means of which parts bear a relation to one another.

This architectural quality distinguished the bards of Greece and Rome, Milton and Ben Jonson, but the succeeding generations lost the secret of it. Lord Oxford was the literary mason who built his essays or speeches. In this he presented a contrast to other writers or speakers. Bacon's essays are nothing but a string of statements. De Quincey, Hazlitt and Lamb, all possess intolerable prolixity. They always pour their thoughts out in inextricable confusion. Lord Oxford's essays, on the other hand, have a beginning, a middle and an end. Read any of his essays, and you can see how he unfolds his points like the petals of a flower. There is nothing out of place; and everything bears the mark of careful planning.

Atmosphere form and expression—these are the titles of Lord Oxford to emiaence. Lord Oxford was the master of stately, compact, and concise style. He had the habit of throwing out pregnant remarks—remarks which lighted up many a dark notion. For instance, who can question the felicity of expressions like these, "If representation is the function of art, interpretation is the function of criticism." "It is not the function of a biography to be a magnified epitaph or an expanded tract." Herein Lord Oxford rivalled Bacon in the sententiousness of his remarks. But he could be homely as well. "There is no nutrition to be got out of chopped straw like this." "The promise has come home to roost." But it was not by virtue of his occasional felicities of phrases that he was great—everything that he wrote was full of sustained dignity. Sometimes he rose to the height of splendour

and eloquence as in the last paragraphs of his essays. Anyone who reads the last paragraph of his address on 'Culture and Character' will bear testimony to it. His choice of words was, in fact, right and unerring, though sometimes he was obsessed with the vices of a pedant in choosing the unfamiliar words. This is what he says:

The temper which I am endeavouring to describe is not in any sense one of intellectual detachment or indifference nor has it anything in common with that chronic paralysis of the judgment, which makes some men incapable of choosing between the right and wrong reason, or the better and the worse cause. It implies, on the contrary, an active and virile mental life, equipped against the fallacies of the market-place and the cave, animated by the will to believe and to act, but open always to the air of reason and the light of truth. One final counsel I will venture to offer to you. I speak as an old University man who, in a crowded and somewhat contentious life has never wholly lost touch with the interests and the ideals of Oxford days. In the short span which, in fuller or lesser measure, is allotted to us all is to be wisely spent, one must not squander, but one should husband and invest, what never comes again, and what here and now is offered to every one of you. The more strenuous your career, the more you will need to draw upon that unfailing reservoir. Some times, amid the clash of public strife there may steal back into the memory of us the sombre lines of the greatest of Roman poets:

*Di Jovis in tectis iram miserantur Iunem
Amborum, et tantos mortalibus esse labores.*

That is but a passing mood, except in an ill-tornished mind. Keep always with you, wherever your course may lie, the best and most enduring gift that a University can bestow, the company of great thoughts, the inspiration of great ideals, the example of great achievements, the consolation of great failures. So equipped, you can face, without perturbation, the buffets of circumstance, the caprice of fortune, all the inscrutable vicissitudes of life. Nor can you do better than take as your motto the famous words which I read over the portals of this College when I came here today. "They have said, What say they? Let them say."

That Lord Oxford was a man of letters as well as a man of affairs, no one would question. That he lacked careless abandon, and rarely let himself go, does not matter. People who wish to cultivate a stately, dignified and terse style will do well to pore over his pages till his secret is learnt.

PEACEFUL TURKEY

THE FOREIGN POLICY OF NEW TURKEY

By J. H. RICHARD. (Former Minister)

(Translated from the French Political & Parliamentary Review by Maneklal Vakil,
M. A., LL. B., F. S. S.)

THE defeat of the Greek army on the Sukbaria on 30th August 1922, the entry of Mustafa Kamal Pasba into Constantinople, the dethronement of the Kallit and the proclamation of the Turkish republic have put an end to the lamentable agonies of the "Sick Man" of Europe. On the morrow of these events of capital importance a new man appeared perfectly wise, animated with an ardent patriotism, with an inextinguishable thirst for progress, with a firm decision to be free and a master in his own house. To achieve the core of the heritage of the Sick Man there was placed symbolically a doctor at the head of Turkish diplomacy. Tewfik Rouchdy Bey had been a pupil of one of our faculties of medicine, later a doctor about 1908 in France, later still an officer and at last the founder of the New Foreign Policy of Turkey.

This foreign policy has a considerable importance not merely from the point of view of the special problems of Eastern Europe but also from that of the large problems of the world. The republican Turkey—disburdened of her Slav and Arab impediments, reduced to the strict ethnic limits of purely Turkish territories but occupying on the flanks of Russia on the one side and of those of the Anglo-Indian Empire on the other and across one of the great highways of communication of the world on the other side, a position, the intrinsic importance of which will increase in proportion to the increase from year to year of her own power and her own specific weight—is a factor of which one cannot without danger diminish or misappreciate the value at a time when some open or hidden conflicts imperil through Balkanic or far-Eastern incidents the security of the big nations. It is not a matter of indifference to know exactly what this new factor will or will not bring about in moments of crisis while so curiously placed astride over what I shall call several lines of princi-

pal forces of the great international covetousness.

Having been frequently in long residence in Turkey, sometimes in very grave times, I happened to be at Angora, at perhaps the most critical moment of the affair of Messul when General Pangalos pushed by some insidious advice dreamt of throwing himself across the road to Byzance. The very numerous negotiations with the leaders of the real Turkey and particularly with Tewfik Rouchdy Bey the Minister of foreign affairs, in one word, a number of enquiries seriously carried on since the summer of 1925 make it possible for me, I think, to try to define with a certain precision the outlines of this Turkish foreign policy which must not be confounded at any price with the foreign policy of the former Ottoman Empire.

The first period that was terminated with the signature of a provisional agreement with the United States and which commenced with the signature of the treaty of Moscow with the Soviet Russia was a period of liquidation. The Ottoman debacle of 1918, the partition of Asia Minor amongst the victorious allies and lastly the Greco-Turkish campaign had created a collection of problems which had to be solved without delay with the object of destroying all germs of possible conflict and of equally assuring to the New Turkey that thing which she required above all to carry through the great work of her national reconstruction, namely "the Peace".

"We are trying to settle in their smallest details, those problems which we may have with our neighbours," said to me the Minister of foreign affairs in the preceding summer. "Because all that we did, tended to one unique object which was for us an end in itself and not a means, viz, the peace, peace within the boundaries of our national state which we did realise. It is this principle which guides us since the first congresses of

Erzeroum and of Sivas. We desire peace not to prepare ourselves for future wars but to have peace and be able to work for our grand enterprise viz. to make our country a modern and prosperous state. The settlements that we seek are also definite agreements first with our neighbours and then with the whole world.

"All our policy is based on this principle that peace is indispensable to Turkey because our duty is to give to the nation the maximum of welfare and of happiness. Then in the life of the peoples as in that of individuals the secret of happiness is to know how to be contented with what one has and to work to develop its welfare within the limits of the conditions that may have been given."

The regime of Kamal Pasba put these principles into practice with an unchanging rigour, going (in every settlement which he negotiated namely the Turko-Russian settlement, the Turko-Syrian settlement, the settlement about Mossul) to the extreme limit of possible concessions so as to arrive at certain accords from which all can be foreseen and from which all germs of later conflict may be eliminated and also so as to come out of each one of these settlements more independent and more free. It was thus how he concluded successfully the treaty of Moscow with Russia completed by the agreement of Paris in December 1925, the treaty of Franklin-Bouillon and the agreement of Angora with France and Syria, the treaty with Persia, the agreement with Bulgaria, and at last the treaty of the Turko-Iraqean good neighbourliness with England which put an end to the conflict about Mossul.

In the series of neighborly settlements the last agreement concluded is that which was being negotiated with Greece but indefinitely postponed by the unstable politics prevailing in that country. With this last agreement the New Turkey completed the cycle of her arrangements with the countries on her boundaries; and that is what permitted a Turkish diplomat some time ago to tell me with a legitimate pride, "While we are no members of the League of Nations we have in reality, better than any other power, understood and applied the spirit of Locarno since we are the only people who have concluded with all our neighbours treaties of nonaggression."

In the interval several agreements and

conventions were, moreover, signed with several countries more distant namely the Servian Kingdom, Poland etc with which Turkey had been at war during the world conflict of 1914-18, as well as with several neutral countries. And it is quite recently that the last signature has been put to this work of international consolidation by the exchange of notes since the last few weeks which will permit Tewfik Rouchdy Bey and the American negotiator Admiral Bristol to re-establish between Turkey and the United States diplomatic and commercial relations; and this will be so in spite of the rejection of the treaty of Lausanne by the Senate of Washington.

"All our foreign policy will be very simple and very easy to understand if one well takes into account the fact that we are seeking to establish general peace step by step—so told me one day a Turkish minister—because it is impossible to establish at one single stroke such a general peace. All that we do, all that we sign, tends to this unique object, to the enlargement of peace and not towards the building up of political alliances pitched against one another."

Since the fall of the empire and proclamation of the republic the curve of Turkish Foreign Policy has remained constant, there being nothing to shake the sincerity of this declaration. We have seen Turkey in course of this period, ready in the way of defending herself when she saw her independence and her integrity being threatened; such was the case in the Spring of 1926 when Angora mobilised five classes of reserves to war against Pangalos and his friends of London against the risks of a Thracian adventure. Never have we seen her building up any alliance for war.

In particular,—and this is a question which was often treated in our daily press mostly with a spirit of passion which excluded the possibility of an objective analysis—the special relations created between Angora and Moscow by the treaty of Moscow and the convention of 1925—do these signify the enslavement of New Turkey into the hands of the masters of Kremlin? This is a question of first rate importance at this actual moment when the masters of Kremlin are engaged at the other end of Asia to which Turkey is the western gate, in a merciless fight though indirect against one of the largest powers in the world. In other words, in signing with Russia the 28...

already known have even Mustafa Kamal Pasha and his colleagues delivered their country bond hand and foot to this Third international inseparable from the Sovietic government and have they made a sort of base for communism in the Eastern Basin of the Mediterranean upto the Balkans on the one side and upto middle and central Asia on the other?

Let us examine, if you like, separately these two faces of the problem.

If Turkey was to become, since the treaty of Moscow, the slave of the Komintern, this state of affairs should manifest itself by an infallible first symptom, difficult to conceal, of the intensification of communist propaganda in Turkish territories. I mean not merely the internal propaganda directed against the constitution of the Turkish state but above all the external propaganda directed from Turkey into the neighbouring states as the internal propaganda can have very little chances of success in an almost purely agricultural country where the peasant enriched by the recent suppression of the tithes which used to ruin him, had no cause of discontent.

Certainly Russia did attempt to organise in Turkey one or the other propaganda. The first had a lamentable failure of its own accord and the three communist journals in the Turkish language subsidized by the Komintern rapidly disappeared for want of finding a single reader. The second showed itself in an attempt made in April, 1924 to create under colour of a "Mission of Study" a centre of operation against Bulgaria near the Thracian frontier at Andrinople. This attempt had no more success. Comrade Krzemlinsky chief of the Mission of Studies and his colleagues Kasass, Sokoloff, Topchibatcheff and Vassilevski passed 58 days in the half-deserted capital of Eastern Thrace where they had hired a whole house for a rent of 408 Turkish pounds per month. They tried to win popularity by paying a pond for their boot-polish as well as for a newspaper with three piastres and by trying all possible means to get into intimacy with the local population. But very discreetly they had been segregated all round. An eye-witness narrated to me one day under the shadow of the wonderful minarets of the Mosque of Andrinople how the Sovietic Mission found itself reduced to the society of only two citizens certainly amiable but who were connected with some families of the police department. A few days later

a French diplomat, the greatest one we had since the war in Eastern Europe, told me with a smile, "No, never will Turkey adopt this policy which is the most senseless possible one and which consists in playing with explosives to harm a neighbour at the risk of the materials exploding into her own face."

The events have proved, however, better than all possible argument that the centre of communist propaganda for the Balkanic States works elsewhere than in Turkey.

The precise facts which I observed with my own eyes are exactly not the symptoms of subservience. Doubtless an objection may be raised that there are certain facts relatively of small importance which otherwise is constant, that the Third International does not seek to create internal and external embarrassments to those countries where the Russian Government has some interest of real value,—and this is the case with Turkey—and that it has other lands far larger in which it can usefully and decisively use the Turko-Sovietic collaboration. In other words, repeating accusations levelled against Turkey at the time of the Odessa interview between Tewfik Rouchdy Bey and M. Tchitcherine, one may speak of the Russo-Turkish collusion in Asia in a project of a Pan-Asiatic movement directed against Europe and of the complicity of the States of the Black Sea in the Anglo-Russian duel which is taking place in the far-East.

Will, and can Turkey safeguard in this respect the pure pacific character of her foreign policy and will she discard the temptations which her Eastern European and Asiatic friendships may possibly attempt to offer? I put this question directly a short time ago to the Minister of Turkish Foreign Affairs and Tewfik Rouchdy Bey gave me some categorical and characteristic replies which I consider it useful to reproduce here in their entirety.

"Certainly we have some Asiatic interests, but we are no Asiatic power. We have some Asiatic interests because we are here at the gate of Western and Central Asia and because we are an extension of European civilization to these countries. But we are not precisely an Asiatic Power for that very reason; it will be absurd to maintain that a few hundreds of meters of water which separate the two coasts of the Bosphorus form a limit between the two continents and the two civilizations.

"From this condition of affairs in fact is derived all our Asiatic policy.

"All that which contributes to the project of grouping together all Asiatic Powers in a fight against Europe is absurd and moreover, entirely foreign to our comprehension. For that we are rather too immediately connected with Europe by our interests and destiny.

"If we should attempt to do the contrary, it would be fatal and it would violate all which appeals to our good sense and that would not be beneficial either for ourselves or for any body else. The events in China affect us only from one point of view. As everywhere, so in China a movement of nationalism would draw our sympathy but we should wish that the movement is evolved in a particularly peaceful fashion.

"We frankly told our Asiatic as well as Western friends that there will only be on this earth a single civilization, the modern civilization which we know. We, therefore, do not consider that there can be a fight between two civilizations. All obstacles and all restrictions which hinder the development of this civilization appear to our eye like a reaction against which we have a perfect antipathy."

It is not possible for me to define more clearly the attitude which the actual Turkey of today would take in the matter of the events of the far-East, though she is certainly nationalist and revolutionary but pacific everywhere and a friend of all attempts at national reconstruction when she can see a promise of general progress, but a resolute opponent of all violence and all attempts of seducing her into that violence. I think I can conclude that neither the European Imperialists nor the Pan-Asiatic ideology have any chance of finding at Angora either assistance or support.

We are far from the "Conspiracy of Odessa."

There are, yet, in the immediate neighbourhood of Turkey some germs of conflict nearer and possibly more virulent. A profound crisis is going to shake and shake again the Balkan Peninsula, a crisis which I have studied in this very place for some time and of which the counter strokes at once reach Turkey who, if she is only an Asiatic Power, still remains a counter-Balkan power.

And first of all before commencing the examination of the new Balkan situation

created since the 27th of November last by the conclusion of the Italo-Albanian treaty at Tirana it would be convenient to define the relations which exist at the present moment between Turkey and the various Balkan States.

The enquiries which I made both at Angora as well as elsewhere enable me to describe the present condition and those relations; friendly with Greece, correct with Bulgaria, officially friendly with Yugoslavia but practically with some obscurities as the result of a certain rancour against such and such internal or external manifestations of several cabinets presided over by M. Ozunovitch.

Turkey did make in favour of her neighbour Bulgaria last summer, a movement which appears to have had the object of establishing between these two countries frankly amicable relations. At the moment when the government of Sofia received from the cabinet of Bulgaria and Athens the famous identical note so regrettable from the point of view of a development of good inter-Balkan relations and so perfectly sterile otherwise the government of Angora signed with Bulgaria a provisional agreement of a duration of six months with the intention of concluding a definite commercial treaty. This was a very small thing but in the spirit of Turkey it was the expression of her will to dismember collective manifestations of hostility against Bulgaria and all aggressive policy with regard to this country the independence and the entire sovereignty of which are to Turkey a necessity, national as well as international.

One can believe that this manifestation is going to inaugurate a novel era in the Turko-Bulgarian relations, an era of frank and intimate relations and also of real and loyal collaboration. This would appear to be more justified because no discord of any sort whatever, nor any latent conflict exists between these two states the greater part of whose interests are precisely in agreement.

If one now examines the chapter of the Turko-Serbian relations, there are unfortunately several difficulties which one can recognise. But the actual isolation in which the Serbian Kingdom finds itself in the Balkan peninsula is possibly for a good part of it the consequence of a tactical committed by the Serbian radicals in

ciating themselves with M. Pangalos in an attempt to isolate Turkey.

* * *

Such are the results of my personal enquires. It will, however, not be useless by way of conclusion to compile them by means of a certain number of official declarations in which the Minister of Turkish Foreign Affairs has defined the point of view of his government regarding the different problems presented by the Balkans.

"And first of all I want to tell you that we are ourselves perfectly tranquil. We do not feel in the slightest degree threatened for many reasons and specially because we have a solid position and because any attempt of expansion across the Balkan peninsula if at all is made, it will weaken itself, the further it goes away from its base and approaches us."

One of the fundamental doctrines of Turkish political ideology is in effect the invulnerability of the actual Turkey. One may not doubt it because this doctrine has been affirmed at the moment of the affair of Mossul officially in an interview which I had with the Turkish Minister. It is a fact that Angora, the actual capital, is beyond all offensive, even aerial. On the other hand, Constantinople is not considered as a vital position of the country. A Turkish politician told me, also during the same critical period of the Anglo-Turkish negotiations, "Constantinople! even supposing this town is so easy to approach and it seems to me that we have proved the contrary during the world-war very well—we shall evacuate it. Constantinople is the fatal point of the Globe. Whatever power settles herself there, there will be a great war. It is not we that are

threatened at Constantinople; it is the world peace."

"It is necessary," continued the minister, "that the Balkan nations form an alliance amongst themselves. But it is necessary also that this alliance should be general. The alliance between any two powers, if it is concluded in a manner to stop the others from joining, will, by the consequence, be immediately the cause of a contrary group comprising the rest. So it is necessary that the Balkans, all Balkan States, live together peacefully and sincerely and discuss the liquidation of their mutual difficulties. It is necessary on all sides that the Balkan countries cease to be instruments in the hands of others. It is not necessary that an alliance of the Balkan nations must be directed against such and such a great power or the privilege of influence of such and such another. This alliance should be equally appreciated by all the great powers. And above all, I must tell you that it will be sterile enough to attempt anything in the Balkans without the assent of Turkey and that of our friend Russia." Such is the clear exposition of the foundations of the Turkish policy in the Balkans.

* * *

There is nothing there which can weaken the least in the world the sincerity of this policy of "Peace for the sake of peace" which I announced as the fundamental idea at the commencement of this article.

There is nothing also there (and this also essential for us) which would conflict with the real interests of France, a peaceful power whose prestige in the East is desired by all those who are attached to the ideas of agreement and equilibrium.

1

The Acid Test of Courage

Nicodemus came in the night, secretly, for he had courage enough to brave the darkness and the wind, but not enough to brave the opinion of men.

—Henry Barbusse, in *Jesns*.

Prayers

PRAYERS are like trees reaching
Toward the higher rain;
Who has seen trees reaching
Toward the sky in vain?

ENGLISH

"THEORY OF GOVERNMENT IN ANCIENT INDIA (Post-Vedic): A thesis approved for the degree of Ph.D. (Hon.) in the University of London (1926) by Beni Prasad M.A., Ph.D., D.Sc., Reader in Laws and Politics, University of Allahabad," pp. 367 and pp. 3 as Foreword by Arthur Berriedale Keith, D.Lit., D.C.L., Professor of Sanskrit, University of Edinburgh. Price Rs. 8-8, published by the Indian Press Ltd., Allahabad, 1927.

The volume is a mere load to the library of the country. To illustrate, take two self-contained and complete paragraphs on subjects marked by insets on the pages of the work under review.

"THE VARAHA PURANA

"The Varaha Purana, recited by Visnu as Varaha or the Boar Incarnation to the personified earth, whom he had saved from annihilation, contains only brief and scattered allusions to the creation of the world and the reigns of kings. Here and there it mentions monarchs who tired of worldly prosperity, installed their sons on the throne and themselves departed to the forest to lead ascetic lives. It declares that Brahmanas must be worshipped by all. None should display indignation or jealousy towards them."—(p. 198).

"THE KURMA PURANA

"The Kurma Purana, recited by the divine Tortoise Incarnation to the Rishis who sang his praises at the churning of the ocean, presents a vivid picture of idyllic existence and a perverted society. The world began with abundant Kalpa trees, which showered necessities and luxuries on all at the prompting of the heart. When they disappeared at the commencement of the Treta-yuga, men were seized with greed. By the Kali-yuga or the present dark age, virtues departed from the earth. Men are now feeble, irascible, covetous and untruthful. Brahmanas do not study the Vedas, nor repeat the hymns nor perform ablations. They will associate with Sudras and join

them in the performance of religious rites. Princes, surrounded by Sudras, shall prosecute the Brahmanas. Sudras will occupy higher positions than Brahmanas. All alike will insult and disparage the Vedas and gods. That's what is destined to happen but what ought not to happen." (p. 193).

It would be difficult to find men with normally constituted mind, who would agree to read all this as the Theory of Government in Ancient India. Pages after pages and chapters after chapters, we get such matters which have nothing to do with any theory of any government. It is a literary curio shop with questionable commodities like

"SUBSEQUENT NITI LITERATURE

(a) "During the Middle Ages many Niti works were composed closely following the lines traced out in the ancient age. Nor has the stream altogether dried up in modern days. For instance a board of ten Panditas at the court of the Sikh Maharaja Ranjit Singh at Lahore in the first half of the nineteenth century compiled a Niti Sastra called Vivad-arnavasetu" (pp. 266-267).

The Vivad-arnavasetu is not a niti-sastra, but a Digest of Hindu Law, prepared not for Ranjit Singh, but for Warren Hastings, by Pandits of Bengal under Rama-Gopal Tarkapanchanan of Nadia and is the original of the famous 'Gentoo' Code.

"PURUSAPARIKSA

(b) "Another work of a similar character, though of inferior merit, is the Purusapariksa by Vidyapati Thakur, a protégé of Swaminadaya, composed in the 14th or 15th century but belonging to the old tradition." (p. 293).

Swasinha is unknown to history. Nor would a Hindu king so willingly named a lion amongst dogs. The name of the Sanskrit book which is spelt throughout as 'Purusapariksa' (पुरुष परीक्षा) is in the original Purusapariksa (परीक्षा) and not 'त'.

It is evident that the knowledge entered through this tome is catalogue information and the scholarship is of the type aptly called *suchi-panditya* by a living wit. The successful doctor does not even know the names of Chandrasekhara's Rajanitaranaka (1924), nor does he know King Somadeva's Manasollasa (Baroda 1925). It is doubtful whether he has even read Kamradaka "a summary of Kautalya," (p. 243).

In the whole volume the bulk of original matter if called out will cover less than five pages. Less than one-fourth of the written matter would be remotely or directly relevant to the subject of the thesis. The theory of Government of "Ancient India" has not been even grasped, far less stated. There is the inevitable testimonial obtained from a European professor of Sanskrit, there is the inevitable bibliography of books read or unread commencing with the Rigveda down to Macdonell's History of Sanskrit Literature, there are footnotes at every page; but all this, combined, fail to make the volume a book.

The writer thanks one Prof. Teresa Joseph for kindly re-touching the draft of several chapters. Prof. Macdonell and Dr. Barnett "were pleased to favour" the author "with criticism of the earlier chapters." Yet we have such gems as "ascetic lives," "Sudras.....the Brahmanas" and again "Brahmanas," cited above; "Dakshina-Dakshana" (Jaina) has been translated as "Miserable miserable!" (p. 222); Bharadwaja is victimised as *Bharadwaj* (p. 150).

Suchi-Panditya prefers reading about authors and authorities, not the books themselves. Hence

"In the Hindu scheme of authorities, the Smritis are always preferred to Arthashastras, but Kamandaka more than once rejects Manu and the Manavas in favour of Kantalya" (p. 1512). The learned doctor ought to know by now the difference between the Manava Dharmashastra and the Manava Arthashastra. And he would have known it, had he cared to read the Arthashastra and Kamandaka.

Before he undertook to abuse his ancient and modern countrymen, Dr. Beni Prasad should have learnt to read his texts. "In Kamandaka, as in other Hindu writers, Rajan or Swamin (sic) often conveys the sense of Government or State" (p. 150) is one of the statements which cannot be invested with authority in spite of a dozen doctorates. "As in Medieval Italy, so in ancient India, diplomacy too often became synonymous with fraud" (p. 149).—"the monarchy was despotic. Hindu theory knows of no constitutional checks" (p. 358), etc. competes with Miss Mayo minus her language and her art in quoting evidence.

I do not object to an Indian consecrating his energy to proving the Hindu civilization to have been a society of semi-barbarians. Have we not seen Hindus in Moghul times describing their countrymen as *Kafirs* and their death as departure to hell? It is a tradition, it must be kept up. But what I object to is doing it in an unscientific, unlearned way. Dr. Beni Prasad has reduced his undertaking to a pure *andhikara-charcha*. He did not equip himself for his undertaking.

K. P. JAYASWAL

THE CHILDREN OF THE KAVERI:—By Shanker Ram. Published by A. N. Parniah, 56, Bangaru Naicken Street, Mount Road, Madras. Price Rs. 12.

The book contains a small number of short stories which deal with the manners, customs and temperament of the people who inhabit the palm and fertile banks of the Kaveri. The book is steeped in local colour, and the gay old sinewy boatmen, who pay with his life, the debt of sacrifice which he owed to his goddess; the village urechin who contrives to send his cattle to the cattle-pound, because the fodder being scanty, he cannot feed them; the village physician, who can effect miraculous cures for snake-bite; and the *hor* Auto-player who steals from his home to hear a musician sing are all depicted with unerring insight and with fidelity to truth. The author is also free from the taint of sentimentality and melodrama, to which Indian authors are usually a prey. The stories are thus written by a writer, whose powers of observation are equal to his skill at interpretation, and whose adherence to truth does not make him too literal. His stories are full of quiet beauty, pathos and tender human appeal, and possess that art which conceals art. One can never have too much of such stories, and the author is to be congratulated on producing such an excellent book. Careless proof-reading and defective format have, however, spoiled, to some extent, a book of otherwise excellent stories.

BY WHAT AUTHORITY:—By J. Krishna Murti. Published by the Star Publishing Trust Erde Ommen Holland.

In going through Mr. Krishna Murti's book, I am reminded of the old adage, "Old wine in new bottles." I do not think Krishna Murti has any new message, but the old gospel that the Kingdom of happiness lies within us, he preaches with such enthusiasm, earnestness and conviction that it is impossible not to be influenced by what he says. His writings, full of crystalline simplicity, indescribable charm, and beneficent power, have another salutary message to teach us. He is never weary of telling us that we should cut ourselves off from all old traditions and customs that hamper our growth. Thus he preaches his message of Liberation and Happiness—a much-needed message, to a world, which is full of misery, and that has a slavish and unwholesome regard for authority.

DWINCHAND SHARMA

INDIAN PENAL CODE:—By Mr. Dinesh Chandra Roy, M. A. B. L., Fakir, Calcutta High Court. Published by Messrs. M. C. Sarkar & Sons, Calcutta. 1927.

It is a very remarkable publication. The author has taken infinite pains to make this work useful to the busy lawyers by his exhaustive and well-arranged notes under each section. Another special feature of this book is that the author has given copious extracts from the judgments of the High Courts and the Judicial Committee which are appropriate and would be immensely helpful to the profession. The arrangement of the subjects is excellent. The Index is exhaustive and well-arranged. We have no doubt that the book will find favour with the practising

lawyers and the students alike. The printing and get-up of the work leave nothing to be desired.

A COMPARATIVE STUDY OF THE LAW OF INSOLVENCY IN BRITISH INDIA: By D. B. Kishirsagar, LL. B. Poona. Paper Bound. Price Rs. 2-12. 1927.

The book, under notice, is an welcome addition in the field of legal literature. The introduction consists of very useful material and the comparison of the Provincial and Presidency Towns Insolvency Acts will repay perusal. The book will prove very useful to practitioners, businessmen and the students.

G. M. S.

EVERYMAN'S DIARY: Published by the Bengal Industrial Co., Paper and Ink Manufacturers, Calcutta, 1928.

This is an excellent pocket diary. The get-up is excellent and many useful informations have been incorporated in it. It will be useful to lawyers, physicians and to the general public.

S. K. D.

BENGALI

HILIN MASNAD-I-ALA: By Mr. Mahendranath Karan, Kshemananda Kutir, Po. Janka, Dist. Midnapore.

The small tract of Hilin in the district of Midnapore has fortunately got its careful historian in Mr. Mahendranath Karan. The house of Tai Khan Masnad-i-ala which played an important part in the seventeenth century established a sort of buffer state between Bengal and Orissa. The Masnad-i-ala has been remembered by our masses more because he earned a saint in the latter part of his life than because he wielded the powers of a petty Nawab. This history of Hilin is an achievement both on account of the materials accumulated and the method followed. Both Persian and Portuguese contemporary sources have been amply tapped. Prof. Jadunath Sarkar has helped the author both with materials and advice, and the latter has utilised them most creditably. Such monographs on other important sites of Bengal are an important field of work. The author has dispelled several misconceptions and established plausible theories based on facts and criticism. The chapter on the other Masnad-i-Alas has bearing on the history of other districts of Bengal, the inscriptions, the maps and illustrations are all very useful. We congratulate the author on his signal success.

RAMES BASU

HINDI

SRI GOURANGA MAHAPRASTHU: By Shivanandan Sahay, published by Khorga Vilash Press, Bankipur (Patna). 3+501+3. Price Rs. 2.

The school of Goudiya Vaishnavism inspite of many points of its contact with the systems of Ramanuja and Nimbarka is a striking departure from the latter two in some respects. The great

founder of this neo-Vaishnavism in Bengal is Sri Gouranga, the Prophet of Nadia. Until recently, very little of it was known beyond the confines of Bengal except, of course, Brindaban. But even Brindaban, as a stronghold of Vaishnavic culture, owes its all to the initiative of Sri Gouranga, and the subsequent efforts of his immediate followers, the great saints, who all hailed from Bengal. It is a happy thing to note that for some years past the cult of Sri Gouranga has been gaining ground in the Upper Provinces, and the late Khatu Shishir Kumar Ghose's monumental work, "Lord Gouranga" has been largely instrumental in acquainting the world outside Bengal with the life and teachings of the prophet. But in India this work could only reach the English-educated few who cultivated any taste for literature on such subjects. Babu Shivanandan Sahay's "Sri Gouranga Mahapraasthu" is therefore welcome as a laudable attempt to popularize the life-work of the great Mahapraasthu among the Hindi-speaking people of India. The author himself appears to be a devoted follower of Sri Gouranga and has offered feeling tributes of his devotion at the feet of his Lord in the form of verses composed by himself which we meet with here and there in the book. In the delineation of events the author has evidently followed Shishir Kumar Ghose's Bengali work "Sri Amiya Nimai Charita" which is regarded somewhat like a classic among the latter-day biographies of Sri Gouranga. In fact, the style of expression adopted in the book will strike the reader as nothing but the Hindi rendering of "Sri Amiya Nimai Charita" in many places. However, this Hindi work is no feeble imitation of its Bengali prototype. We endorse every word of this Hindi writer when he says that the greatness of Sri Gouranga's love-cult is self-evident, and does not require to be enhanced by the ungenerous attempt to detract from the merit of other systems, and that such unnecessary—sometimes positively unnecessary—discourses should not have been permitted to disfigure an otherwise highly inspiring production like the "Sri Amiya Nimai Charita".

In referring to the history of Navadvip, the author says that the founder of the Sen dynasty was Adisur, and that Adisur belonged to the Chandra Vansya Kshatriya stock of Karnatak in the Deccan. He has apparently relied on the authority of Dr. Rajendra Lal Mitra's "Indo-Aryans" in this respect. But we are afraid he has allowed his knowledge of the history of Bengal to fall into arrears, as later researches show that the Sen and the Sen dynasties are not identical. The founder of the Sen dynasty was not Adisur but Bhoja Sen—a scion of the Chandra Vansha Kshatriya branch of Karnatak who came to rule over a portion of Bengal about the twelfth century A. D.

We can safely say that the book under review will amply repay perusal, and will undoubtedly prove a valuable contribution to the growing Hindi literature in the spheres of biography, as well as religion.

D. N. O.

SATI-DHARA:—By Mr. Shishaya Chaturvedi, Published by the "Chand" Office, Allahabad.

The blood-stained rite of the Sutte has

history in India from time immemorial. All the facts relating to it are collected in this book from various sources. This book is mainly based on a Bengali work by Mr. Kumudnath Mallick. There are 28 pictures and portraits. The Appendix reprints the Regulation XVII of 1829 by which the rite was abolished.

PRACHIN JAINA SNARAK :—Compiled by *Brahmachari Satiprasad. The Digambar Jain Pustakalaya, Chandavari, Surat.*

This volume of the work which is of 5 parts contains descriptions of the Jain monuments and mementoes found in Central Provinces, Central India and Rajputana. The materials have been laboriously compiled from various sources. This work is an important collection of ingredients for the history of Jain India.

MERE PUNJ :—By Mr. Vansidhar Vidyalkar. *The Hindi-grantha-ratnakar, Ilwabagh, Bombay.*

This is a book of poems in the new style. Mr. Hariadrasa Chaitanpadya the poet writes in the Foreword—"A close contact with Western poetry and with India's greatest living poet, Rabindranath, has unquestionably gone a great way in moulding Vansidhar's style and thought and metre. Another important feature of our young poet's work is that he has also been handling Persian and Urdu metres with the mastery of originality. But in spite of models and influences Vansidhar is himself." In the preface the poet discusses about the modern movement and the mutations of metres. He has also tried the blank verse with success.

DHANATYANTRA KA ITIHAS Vol. II : By Acharya Ramdev, Gurukul University, Kanpur. 1927.

By the term "History of India" we generally mean a compendium of the dates and facts of political enterprises. But this volume is not a date-and-fact history of that description. Here is an attempt to reconstruct the internal history of Indian civilisation not excepting its political phase. The volume consists of four parts—the first deals with times of the Mahabharatam, the second with the Paranio proto-history before the advent of Buddhism, the third with social and political data supplied by the *Sukranitisara* (and this is based on the works of Prof. Benoy Kumar Sarkar), and the fourth one is a connected account of the achievements in Greater India. Though this is a compilation and not an original work, it will help the intending students in their endeavours.

SUDDHI-CHANDRODYA : By Kunwar Chandkaran Sharada, B.A., L.L.B., 1927.

Knwar Chandkaran Sharada of Ajmer is an indefatigable social worker of Rajputana; he is connected with all the important social activities of his province. His interest in the Hindu Sabha movement is well-known. The present work will greatly help the *Suddhi* activities inasmuch as it shows that outside elements have been consistently admitted into the Hindu society from the earliest times. We hope this book will receive the serious attention not only of the Hindi-speaking areas but in other provinces also. This is a veritable store-house of information on the subject. There are several pictures and portraits.

RAMESH BASU

MARATHI

SHAKTICA BHAV OR SHAKU'S BROTHER : By Capt. and Mrs. Limaye. Publisher N. G. Limaye, Chikhaldadi, Bombay. Pages 91. Price twelve annas.

This is a collection of short stories contributed from time to time by the writers to several Marathi periodicals. The stories are entertaining and are relating to love and war. The authors have displayed considerable originality in naming the book as the brother of Shaku, their daughter, whose picture is given on the cover. There is a ring of family air about the book, which is a joint production of husband and wife and the writer of the Foreword is the elder brother of the former. The stories will be read with pleasure.

MANUSMRTI WITH MARATHI TRANSLATION : By Mukund Shastri Mirajkar. Published by the Chitra Shala Press, Poona. Pages 600 Price Rs. three.

The foolish demonstrations of the burning of the Manusmriti at Madras and Mahad by some hot-blooded Brahmin-haters a few days ago, have not been able to put the work out of existence, nor have they smoothed the path of social reformers in the country. On the contrary, they have given the work a fresh lease of existence as is evidenced by the fact that the Chitra Shala Press of Poona has issued a fresh translation of that hoary work in a more attractive form, that the book will now be read by a larger circle of readers. In the Preface covering 40 pages is given a full summary of the work, chapter by chapter, at the close of which the learned translator has thrown a very wise suggestion that the work needs to be abridged and revised with necessary alterations so as to fit in with the present times and the advancement of society. The suggestion is no doubt very opportune and worth taking up.

LESSONS IN INDIAN BOOK-KEEPING : By H. S. Ghare Graduate in Commerce of the Tilak University. Published at the Arya Sanskrit Press, Poona. Price as. eight.

The author has treated the subject of Book-keeping in this treatise in a masterly way. He has shown that the Indian Book-keeping, though it is a system of single entry and as such less scientific and convenient, than that of the West is capable of being transformed into the more systematic and convenient one of Double entry with a few changes which the young writer has intelligently suggested. The attempt is no doubt praiseworthy and the book deserves to be used as a text-book on Book-keeping in all vernacular schools.

V. G. ARTE

THE BIOGRAPHY OF LOK. TILAK : By Mr. N. C. Kelkar.

A perusal of the second and third volume of "The Life of Lokamanya Tilak" in Marathi which Mr. N. C. Kelkar, M.L.A., published a few days ago reminds one of the verdict of Harcourt on the three "corpulent" volumes of Morley's life of Gladstone. "It will live as a model of what a life

with facts and incidents which cannot easily be controverted. Her grievance is that woman has been too long treated as an underdog in our society and that must cease. It suits her case to ignore some little good that might be put down to the credit of our society in respect of woman. But unless you are a zealot in a cause, you can make no effect. Prof. A. R. Wadia of the Mysore University has written a book on the Ethics of Feminism and Mrs. Sarojini has translated it. The translation is a model one and very ably done. Frankly she does not agree with many of the author's views and is prepared to write out a book herself controverting them. Failing that, the whole translation is interspersed with interesting footnotes showing her differences with the author's views. They are the best part of the book: they are at times observations showing us the unfairness of man-made laws and usages. Altogether it is a most refreshing performance, and a harbinger of much more we expect to come and she promises to give.

BRABMA BODHA: By Manilal Chhotatal Parekh. Printed at the Modi Printing Press, Rajkot. Cloth cover, pp. 138. Price 12 as. (1927).

Mr. Manilal Parekh is well-known as a writer of religious works and this translation by him of Maharshi Devendranath Tagore's book on the subject maintains his reputation as an expounder of serious thought.

THE OUTLAWS OF SORATH: By Jhaverchand Meghani. Printed at the Saurashtra Press, Ranpur, pp. 138. Paper cover. Price 8 as. (1928).

In five weeks the first impression of this book, of 2000 copies was exhausted and a second called for and as eagerly taken up: this is a feat even to the sale of Gujarati "best sellers." The compilation consists of the narration of the adventures of fine art of many notable outlaws of Kathiawad. The adventures read like romance and are so well-narrated that one almost falls in love with the freebooters who in certain respects even out-Robinhood Robinhood. The book is so spiritedly written that one who does not read it, would feel himself the poorer by not having read it. This is the First Part only.

SULTANA RAZIA: By Sadik. Printed at the Indian Daily Mail Press, Bombay. Thick card board. Pp. 299. Price Rs. 3-8. (1927).

It is a sumptuously got-up volume and though written in the form of a novel, shows the incidents and events in the life and reign of the Sultana in their true perspective. It is so well-written that we are sure that every reader would like it. A young Mahomedan from Irak writing an Indian vernacular so well is something worth noting.

PRABHAT NA RANG OR THE COLORS OF THE MORNING: By Vijayrai Kalliamar, B.A. Printed at the Aditya Printing Press, Ahmadabad. Cloth bound, pp. 240. Price Rs. 2-4. (1927).

Before his advent in the field of the literature of criticism, as the editor of the *Kaumudi*, Mr. Vijayraj had done a lot of *spade work*. The twenty collections from his pen printed in this handsome volume, cover a period of eight years' work and consist of dialogues, stories and humorous sketches. They are all readable articles, some of them thought-provoking. We are so glad that his writings have now been thus brought together in one place.

K. M. J.

MAGAHİ (BIHARİ)

SUNITA: By Babu Jainath Pati, Mukhtear. Amrarda. South Bihar: Printed at the Chitragupta Press, Gaya: 1928, pp. 16: Price Two Annas.

Babu Jainath Pati is a well-known Mukhtear of South Bihar, and an accomplished scholar and linguist who does not disdain his mother-tongue. We welcome this little story from him as one of the first publications of its kind in the speech of South Bihar which is current among a population of over six millions, who have already accepted Hindi as their literary language. The story is a slight one, showing the evils of marrying young girls to old husbands. The heroine runs away with a young man, her childhood's friend, and a great social evil is in this way exposed. The picture of some aspects of society in the Magah land as painted here is so doubt faithful, but there is not much characterisation.

With us, this value of this little work is primarily linguistic, but we hope the author will give us longer and equally faithful and preferably more pleasing pictures of life and society in South Bihar. An attempt like the present one is sure to be remembered among future students of Indian language and of social ethnology for the linguistic and the social material it preserves. Chap-books and popular books of verse are sometimes printed in Magah for the masses who do not feel at home in High Hindi or who love the accents of their mother-tongue more than that of the speech of the law-court and the school, but only through a conscious literary effort like the present one, that a neglected language can make a stand against the danger of being swept away.

It is perhaps too late in the day to think of creating a new literature in Magah, especially when its speakers both educated and uneducated have no sense of pride in it and are seemingly a little ashamed of their 'little language' which they are making haste to substitute by an indifferent kind of Hindi, a mixture of High Hindi and Awadhi. But if some Magah writer can lay open for us the soul of the Magah people through works (poems, dramas or novels) in their own language, he would certainly add a new world to the rich and varied domain of Indian literature. And Mr. Jainath Pati, scholar, man of affairs and lover of his people and his language, can very well be that Magah writer.

S. K. C

nation." [Spain's retort was a telegram of condolence "from a dead nation" to the British Prime-minister after one of the usual holocausts in the Boer War of 1901].

The cousins on the two sides of the Atlantic were brought closer together by the rise of Theodor Roosevelt, an imperialist after the heart of Lord Curzon, but, by a freak of fortune, born a republican citizen. This big game hunter and traveller (President 1901-1909) captured the imagination of the American populace and the English rejoiced when he gave a good conduct certificate to England's government of India, which had hitherto been suspect to the average American newspaper reader.

There was now formed a secret understanding between the very highest circles in England and the U. S. A., though the latter still found it necessary to placate the American voter by proceeding in public to bait the British lion. Ignorance of this secret was the undoing of Sir Mortimer Durand. In diplomacy with Asiatic powers, he had succeeded wonderfully. But when at the height of his fame he went to Washington as British ambassador, he, honest man, took his stand on his country's treaty rights and the recognised diplomatic amenities, and protested against America's threats and insults. What was the result? He was recalled by his masters! British diplomacy—like every diplomacy that wants to succeed,—had its eyes fixed solely on the main chance, regardless of kicks and frowns. Durand had not been given the hint and he came back a disappointed and broken down man, and England pursued her "world-policy" unhampered.

There was however, one source of trouble, the Irish Americans who had inherited, bitter hatred of England from their fathers that had migrated from Ireland after the potato famine of 1845. Some of these with the military experience gained in the Civil War, had gone back to Ireland and caused the Fenian outbreak of 1863. That rising had failed because there was no affinity between the wide-awake city-bred Yankee Fenians and the sleepy rural Catholic peasantry of Ireland. But Parnell's campaign found a wide response and lavish money aid among the Irish descendants in America, and the papers of the latter kept whipping American public feeling up against England,

almost repeating the language of the days of the War of American Independence.

Sir Horace Plunkett was sent out from England to counteract this propaganda. He met many of the Gaelic Americans and told them of the economic prosperity which Mr. Balfour's administration had given to Ireland, of the progress of co-operative dairy farming and the linen industry under Government support and guidance, of the improvement of the peasant's lot by Liberals and Conservatives alike, since the First Gladstone ministry. His reply he received from an old Irish emigrant was, "All that you say may be true. But I have taught my son to fight against England when the day comes as I am myself too old for it."

Even the Irish problem was at last settled by the granting of Home Rule. At all events, from the beginning of the present century the friends of England have outnumbered the Anglophobes in the States, as also in France. Between the United States and England the cultural affinity is too strong to be resisted; language, religion, political outlook and to a great extent blood also are the same, and have produced their effect. The cultural courting of America by the entire Society and press of England has gone on with increasing force to our own day. The American naturally feels the rich parvenu's eagerness to be recognised by the older Society of the Mother Country, especially as he has not to make any political sacrifice for it. England is more than willing to pat him on the back, and (incidentally) sell to him relics and "first editions" at fabulous prices. For nearly two generations the American ambassadors to the Court of St. James have been men of letters, and English Society has set itself to invite them to preside at the birthday celebrations of great English authors and the annual meetings of learned bodies. The *Times Literary Supplement* assumes an unwonted tender tone in reviewing the rotten cribs compiled by American professors and is judiciously silent about their defects. Woodrow Wilson's speeches and Col. House's letters have been received in England with ecstasy, as gems of thought and style. Conducted tours *en masse* of the American middle class,—which are the rage now,—have completed the work.

The future is being insured by the re-writing of American history which is now an accomplished fact. Professors O-good

this international question, is a very composite thing, and a thorough analysis of it in all its aspects, would furnish material sufficient to fill a volume. We must content ourselves here with making our analysis as comprehensive and as detailed as is possible within the scope of an article.

To those of us who are born, and go through life, without prejudices against members of other races, it is an ever-present mystery that it should seemingly be so difficult for the majority of our fellow-creatures to acquire that wider outlook which would enable them to realise that their own particular race is not necessarily superior to all others.

Yet, on investigation, we find that the early training of an individual is generally such as is bound to feed his natural vanity, and give him a tendency to look down upon all "foreigners."

Some races and some individuals are more prone to this form of conceit than other races and other individuals, and there are generally definite historical causes to account for it.

The main elements which produce and feed intellectual insincerity as applied to international intercourse, appear to be the following:—(a) Vanity (including the abuse of the natural and admirable sentiment of patriotism) (b) Fear (a nervousness that other races will in some way demolish us), (c) Conservatism of thought (adherence to stereotyped opinions, based on what was true of an earlier period), and (d) False criteria (the tendency to attach undue importance to non-essentials, and to emphasize the differences, rather than the essential resemblance between the nations).

The point we wish to make is, in ordinary parlance, this: that a large proportion of ordinary people, when they say they "hate" the members of a certain other race or nation, do not hate them at all; they merely *think* they do. By their conversation they are promoters of discord and hatred, which have such disastrous effects. At the same time, however, these people are the *victims* of false thinking, and as victims, should be pitied and enlightened, rather than merely hated. For, as we see daily, hatred begets more hatred, like the chain of murders in a Corsican vendetta.

In order to forestall any possible misapprehension, we wish to point out that this discussion is by no means limited to the

prejudices extant between Indians and Englishmen, though some space will be devoted to that issue. The Englishman is by no means the only one who is prone to prejudice, though it will be shown that he is somewhat in the position of a spoilt child in this matter. The Brahmin, for instance, has also been brought up in the idea that he, the twice-born, is a naturally superior creature. Everyone knows that a boy who has been petted and spoiled in his childhood, grows into an unbearably conceited young man; if the young man is really talented and capable, the more is the pity that he should suffer from this handicap. His admiring relatives and friends certainly show him no true kindness by continuing to shower incense on him every time he does something clever. In fact, the poor fellow will need all the moral fibre he has in him, if he is to withstand the onslaughts of his well-meaning friends.

We proceed to look more closely at the above-mentioned elements of intellectual insincerity as affecting the psychology of our relations with members of other countries.

(a) *The element of vanity.* To love the land of our childhood, and to maintain that in spite of the bores and wonders of other lands, there is (to us) "no place like home" is a natural sentiment, and this we take to be patriotism. On the other hand, to affirm that our own country and race monopolise all the virtues, and that no other country has any, is surely overdoing a good thing, and would make the logician shake his head sadly. Many friends (and books) tell us in our childhood that we must cultivate "proper pride" but pride we think, if it exceed the above-mentioned conception of patriotism, is only too apt to become improper, for pride and prejudice go hand in hand, not only in the title of the famous novel, but wherever there are dealings between people of different lands. A man is "proud" of having been born in London, for instance. That is admirable. He means that he considers it a privilege to be a Londoner, is thankful for that privilege, desires to defend that city if need be, and in all respects to prove himself worthy of his beloved birth-place. But is he justified in disdaining all non-Londoners?

In an essay by Sir John Woodroffe, in which the author admits that to himself, as a Westerner, the Gothic cathedrals and the fumes of Cypria make a stronger appeal than any Hindu temple or music, he says

themselves, and affecting to think even the prettiest brown-skinned babies ugly. The Hindus despise the Muslims because they are not Hindus, and the Muslims despise the Hindus because they are not Muslims. Many Jews, so much disdained by non-Jews mainly because they are Jews, secretly look down on the diet and manners of non-Jews. Why so? Because for centuries they have looked upon themselves as the Chosen People.

A further factor, in this element of vanity, is the fact that we naturally like our own race to be judged by its *best*, but are apt to judge another race by what is *worst* in its religious and social customs, conveniently forgetting that there may be at least a small section of that race striving for better things. This is most unfair, but it is a very common procedure.

Yet a third factor of the "vanity complex" is the unwillingness of people to utter those fatal words "I do not know", when they are asked for information concerning some foreign race.

This is one of the two ways in which eloquence, the subject of the preceding article, is bound up with the question of inter-racial relations. The connection is a very definite one, as far as the ordinary conversation and reading of the ordinary person is concerned. People like to impress their acquaintances by sweeping generalisations about foreign races. Now we know that it is a risky proceeding to make a generalisation of any kind; and yet people who have met, for instance, five or six Roumanians, will gladly tell their friends that *all* Roumanians have such and such characteristics. When the hearers of these generalisations are ignorant of the subject, they believe every word, and repeat it to their friends in their turn. The more eloquent the speaker, the deeper the impression which is made on the minds of the hearers. This is how false impressions arise.

(b) *The element of fear.* When in conversation with people who express dislike or distrust of other races, we often detect a certain indefinite nervousness in their minds lest friendship with people of different ideas and customs from those in which they themselves have been brought up, might have a demoralising effect upon themselves. To some extent there is reasonable foundation for such a fear, especially in the case of weak-willed individuals, who, for lack of discrimination, are apt to pick up the less desirable qualities

of their foreign companions. This is a danger we readily admit. Here again, however, there is a fallacy in the argument of those who feel this nervousness for the danger of contamination is a danger which exists not merely in inter-racial relationships, but within one and the same race. Everyone knows that a person of good morals, if his daily work brings him into the association of undesirable companions (his own compatriots) may be tempted to slip down to the level of those companions. A well-educated person, working among the uneducated, may, after a time, unconsciously begin to use the same slang expressions and incorrect grammatical forms which constantly assail his ears. Doctors and nurses, working among mentally defective patients, are apt to become depressed themselves, if they do not take sufficient recreation and change. Therefore, it is grossly unfair to confuse the two issues, and to take for granted that a person of another race is necessarily a person of inferior morals.

A few concrete instances:—

(i) *Indian horror of Western materialism, and the extravagance of women.* Many Indians are so convinced of the gross materialism of the entire population of Europe and America, and especially of the extravagance and immorality of the women, that they think no good can come of association with such people. The origin of this prejudice is only too obvious. (1) Many Westerners are materialistic, and many Western women are extravagant and of lax morals. (2) It is precisely these undesirable types which are brought most to the notice of the Indian public both in newspapers and cinema films. (3) Most Indians have no opportunities of meeting the best types of Europeans and Americans. Such meeting would do much to tone down their horror of Western depravity. Even a visit to the West, if the eyes of the tourist are already prejudiced and pre-disposed to see only the "wrong side", does not necessarily dispel illusions. A middle-aged Hindu merchant visited England on business about four years ago—his first visit. On his return to Poona he asked him for his general impressions. He replied with great heat: "I have only one impression: my country worships God, *yours* does not."

Argument would have been useless.

It is a comical experience to a woman of the middle classes coming from Europe to live among Indians, to witness the very

whence comes much of the stupid arrngance met with, on the part of English people whether in England, in India, or in the Colonies. The magazines are not, of course, responsible for all the damage, but their influence is too far-reaching to be ignored. We repeat that the following specimens are typical, and were not searched out for purposes of illustration. In fact, it was the preponderance of this type of story which forced itself on the writer's notice in magazines that she was reading for pleasure, and which, in the first place, suggested the present article as a corollary of the two previous ones.

(i) "Glamour" by E. Brett Young in *Cassell's Magazine of Fiction*. Agatha, a young American lady, travels Europe with her aunt, "in search of information and glamour."

"They passed on to Egypt, where the most expensive varieties of glamour, like the most expensive varieties of all other kinds of spoof, are to be found. Which is not to be wondered at, seeing that romantic novelists have been thriving for the last three generations on the desert's illimitable freedom, voices from minarets, mystery of veiled women and subtle Oriental perfumes."

Achmet is the guide, who claims to be an Arab of kingly descent. Agatha, already fascinated by the guide's melancholy eyes and dignified bearing, regards her American fiancée, Simeon Jackson as dull. When the guide, whom she has paid out of all proportion, tells her he loves her, she is, of course, properly indignant. However, she then regards the matter in a gentler light, and to make amends, offers him a sum of money he had mentioned as imperative to save his little brother's life. Unwisely she allows him to come up to her room in the evening to receive it. The result is that the two ladies are given notice to quit the hotel, as Achmet happens to be one of the greatest scoundrels in Cairo. The ladies return to Italy. Aunt Martha returns to America in disgust at her niece, who has in the meantime summoned Simeon. Simeon and Agatha are married in Naples. She suggests a trip to Cairo. They stay at the identical hotel. Next morning the flabbergasted newly-wed husband receives the following note from his bride:—

"Forgive me," he read. "It is no good looking for me. I have gone with the only man I love into the desert's illimitable freedom. Forgive and forget."

Then, while the police capture Achmet,

and prepare to bring the repentant bride back again, the following are Simeon's reflections:—

"There is something devilish about this damned 'country,' he thought. 'The poor child's not responsible. Glamour—that's the word.'—'To run off with a white man's own thing. But a nigger—' Agatha had never explained to him in her letters that the Egyptians are of Aryan descent."

Our reflections, expressed in plain English, are (a) that the young lady was "asking for trouble," (b) that it was wrong of her to return to Cairo after her wedding, when she knew that Achmet possessed a fascination for her, and (c) that the important element of her bad behaviour was, not the dark complexion of the man with whom she ran away, but the fact that she did elope with another man—on honeymoon, too—which made her deliberately planned action all the more heartless and inexcusable. A further irritating thing about the story is that the only picture in the text is one showing Agatha, looking charming in her white frock, sun-top and flowing veil, addressing Achmet: the words below the picture are: "You! she said, flushing from her neck to her hair. How dare you speak to me like that?"

The author would probably object to our criticism. We admit that the guide Achmet was a rascal, and that, anyway, the whole thing is only fiction, and need not be taken seriously. Our contention is, however, that this is just the kind of thing which appeals especially to the British flapper, and gives her the few ideas she has on Oriental rice. The rascally Egyptian guide takes a firm hold of her imagination, the impression is deepened by the attractive picture, and nothing you can say to her will persuade her that all Egyptians, whether educated or uneducated, in fact all men of dark complexions, are not Achmets.

(ii) "*The Street of Many Arches*," a £50 prize story, by Gwen Lally and Joan Conquest, in "*The story-Teller*." Lotah, a beautiful girl who has been brought up in the Chinese quarter of the dock district of London, is saved from transportation to China, where she would have been forced to live a life of shame in the notorious "Street of Many Arches." Her rescuer is Rex Power, an English artist, who marries her. She is very loving and talented, wears Chinese dress, and knows but little English. She turns out to be an English girl, having

been saved as a baby in China during the civil wars, by an old Chinese woman.

The last portion of this pretty and well-written romance is, in our view, entirely disfigured by the undue relief and satisfaction of all parties, including the heroine herself, at the discovery that Lotah really had the good fortune to have been born British, and that she is not really Oriental at all. It is with almost unseemly haste that she discards her Chinese dress (in which, we must confess, she looks very pretty in the picture) in favour of a costume befitting an English girl. When the couple had been so happy, even before the discovery, what need for the authoresses to lay such great stress on the fact of Lotah's British extraction?

(iii) *"The Lily Kiss—The Story of a Great Sacrifice,"* by Louise Jordan Minn, in the *New Magazine*. The scene, as in (ii) is in Pennyfields. There is the sympathetic character of a Chinese servant Chong No. The villain is Yang O, the man whose adopted daughter is the heroine, Peach Blossom. Wilfrid Harvey, the English doctor, treats Chong No, half-dead from his master's beating. The heroine (who also turns out to be an English girl) had been rescued by Yang O during the civil wars. It is true that he had been on the point of killing her, but he had saved her on account of the mark of the Celestial lily which was found on the girl's arm. The trend of the authoress' concluding remarks is very similar to that of (ii).

(iv) *A Story of Canada* (exact title forgotten). A young English authoress goes on a holiday to the wilds of Canada in search of ideas for her next novel. In spite of the warnings of her acquaintances, she goes forth on a canoe, attended only by a Red Indian servant and his wife. These servants get drunk, and leave the young lady in the lurch. She is in desperate plight on a small island in the midst of the rapids. What would have happened, had not a gallant young Englishman emerged from the forest at the psychological moment and rescued her, it is hard to say. Romance follows, and the novelist must have had plenty of material for her next book.

Now if the author had left it at that, nothing could have been more charming. But unfortunately the gallant Englishman indulges in a speech, in which he deduces from the incident of the drunken servants,

that skins of all hues ranging from yellow and red, to brown and black, should be abhorred. His logic, if not quite evident to us, was at least persuasive to the heroine, for she murmurs fondly: "Yes, you have taught me a lesson. I shall never again trust myself with any but a white man."

One could continue quoting *ad infinitum*, but the above will suffice for the present purpose.

One somewhat different instance will be appended, namely a case in which anti-Oriental "suggestion" was literally thrust upon a story merely by the coloured advertisement poster announcing the cinema version of it. This was probably deliberate trade exploitation of anti-Oriental prejudice, to attract the masses to the cinema show. The story in question is "Broken Blossoms" included in "Limehouse Nights" by Thomas Burke, describing life in London's "Chinatown." Neither is the story nor in the cinema version is there the slightest anti-Chinese tendency. On the contrary, the hero is a young Chinaman who keeps a small shop in Limehouse. Of gentle disposition and disgusted at the opium-smoking habits of the majority of his compatriots in that district, he leads a quiet, solitary life. Near by, lives a degraded specimen of an Englishman, a drunkard, who ill treats his twelve-year old daughter. One day, when the father has beaten her till she faints, the girl is found lying near the door. The Chinaman takes pity on her, picks her up, and carries her unconscious to his lodging, where, with no ulterior motive, he tends her for some days till she recovers from her bruises. This is the first kindness the child has ever known, and she forsakes the Chinaman as her natural protector, begging him not to send her back to her father. But the father, pouring the foulest abuse both on the Chinaman and on his innocent daughter, gets the child into his clutches again, and this time she succumbs to wounds inflicted on her by her father in a drunken fit. When the Chinaman sees her dead, he despairs, for affection for the poor child who had loved him so innocently, had sprung up in his heart. He dies by his own hand.

The large coloured poster inviting the public to see this film drama, depicted the moment when the Chinaman takes the unconscious fair-haired girl in his arms. There was no fault to find with the picture from the artistic point of view. Falling almond-blossoms

Seagoing Tricycle has speed of Ten Miles an hour

When he wants an ocean ride, a New York inventor is independent of boats, for he pedals out on his seagoing tricycle. It is sturdily constructed and well balanced on floats. At the time

Motor Tricycle That Rides the Ocean Waves; Securely Balanced on Three Floats, the Rig Can make Ten Miles an Hour, Under Favorable Conditions

the accompanying photograph was taken, the rider was making about ten miles an hour without great effort off Atlantic City, N. J.

Crystal Sphere of Fortunes Shows Craftsman's Art

Quartz balls, fashioned by Japanese artisans, are prized for their beauty, symmetry and clearness even if there is doubt as to their revelations. Some of the best specimens are cut with two simple tools as the chief instruments, a piece of steel to round the angular quartz block into a sphere and a lamboo joint to give the final polish. The art of cutting the crystals is handed down from father to son, the skill of the craftsmen

being manifest in the mountings prepared for the spheres and in shaping them.

Japanese Craftsmen Are Experts in the Art of Cutting Crystal Balls like This, Using But Two Simple Tools

Pictures By the New Woman A.R.A. Mrs. Laura Knight

Mrs. Knight is a daughter of Mr. Charles Johnson, and was born at Long Eaton, in Derbyshire, says *The Illustrated London News*. In 1903 she married Mr. Harold Knight, the portrait-painter, who was a fellow student with her at the Nottingham Art School. "In those days," she recalls as quoted by *The Daily Mail*, "women were not allowed to paint from the nude, and we had to study such parts of the human form as

were revealed to us by the school censors. For years I have visited the theatres to draw ballet girls." Her picture in this year's Academy was "Dressing for the Ballet." She first exhibited at the Academy in 1903, and her work is represented in many public galleries in this country, as well as in the Dominions and America. She was

awarded a gold medal at San Francisco in 1915, and served on the jury of the International Art Exhibition at Pittsburgh in 1922. Her studies of colored women, of which we reproduce examples here, were made during another visit to the United States this year. Mr. A. J. Munnings, R.A., has said; I regard Mrs. Knight as the greatest

represented the title of the story. The point is that the *first impression* given to the man in the street, who was unfamiliar with the story, was that the Chinaman must be a villain in the act of abducting a probably unwilling English girl. The story, of course, contradicts the impression made by the poster, but we know how almighty is that first impression!

The element of fear (concluded). In many cases, it would appear to be religious sentiment which underlies the element of fear discussed above. When a person not merely loves his religion, but maintains that his religion is the *only* true one, the natural corollary is that the religions of other races are false, and that the notions of those races are accordingly perverse. When a person really and truly thinks or feels this, it is difficult to say anything to him, for he will merely tell us that we are tainted by laxity and indifference, which we delude ourselves into calling by the euphuistic name of tolerance or liberalism. It is herein that, it seems to us, adherence to any religion which claims to be the *only* true one, and does not admit that there are more paths to Heaven than one, is an unprogressive thing. Nevertheless, there are religious persons professing a faith which claims to be the *only* true one (we refer to Christianity) who manage to combine their piety with a love of intellectual fairness in inter-racial intercourse. This very difficult psychological point must be left for profounder thinkers to explain.

We only quote, as an instance of liberalism, a few lines from a book ("The Christ of the Indian Road") by a Christian missionary, Dr. E. Stanley Jones, a zealous preacher who is admittedly and definitely out to convert souls to his own faith:—

"In the...forms and customs of Hinduism I think there are five living seeds: 1) That the ultimate reality is spirit, 2) The sense of unity running through things, 3) That there is justice at the heart of the universe, 4) A passion for freedom, 5) The tremendous cost of the religious life."

The role of the iconoclast is easy, but the role of the one (i. e. the missionary) who carefully gathers up in himself all spiritual and moral values in the past worth preserving, is infinitely more difficult and infinitely more valuable. Hence we can go to the East and think God for the first time, we may find there, believing that they are the very footprints of God. He has been there before us."

(c) *Conversionism of thought.* We accept stereotyped view of a certain nation, based

on facts which may have been true of an earlier period in the development of that nation, and we do not readily modify that fixed view. The writer has met many Europeans at hill-stations and elsewhere, a large percentage of them born and bred in India, who refuse to realise that changes have taken place for the better, among the Hindus, for instance. The writer is convinced that, in a large percentage of cases, the absurd notions held by these Europeans are not mere affectation, but rest mainly on the fact that those who express them have no knowledge of their Indian neighbours more up-to-date than English novels dealing with the period of the Indian Mutiny. The only Indians they come into contact with, are their domestic servants, their dhobis, and the tradespeople who supply them with food and clothing. Space does not admit of our giving samples of this naivete, though page after page of authentic ones could be produced.

(d) *False criteria.* We undoubtedly tend to attach undue importance, in our dealings with other races, to external manners, which, important as they may be in as far as they affect hygiene, are not the essential thing. The best way is surely to make reasonable allowances, when the manners of other races clash with our own, and to take the advice of a Latin maxim which says "In essential things—Unity; in doubtful things—liberty; in all things—charity" (i. e. tolerance). Of course, while humanity lasts, there will inevitably be quarrels as to where the line between essentials and non-essentials is to be drawn but about the third thing there is no doubt.

Where manners are mere manners, and do not affect health, we advise tolerance and compromise. The Jew, even in Europe, keeps his hat on, to swear in a law-court, while the European takes his hat off. The Japanese is taught to make as much noise, and the Englishman as little noise, as possible, while eating. Are these things worth making a fuss about?

Where manners of a certain race are obviously unhygienic, people who have had the good luck to be brought up on more hygienic lines, can make up their minds to be forbearing: we must admit, though, from bitter experience, that even an excellent person, if he is in the habit, shall we say, of spitting, may become a sore trial to us and that, do what we may, sheer disgust

does occasionally get the better of us. If anything is to be done, let it take the form of a more hygienic training for the next generation while they are still young enough to be trainable!

The other factor is that, while the differences between races are constantly being emphasized—and certainly, for practical purposes, we have to take them into account the essential human resemblance between them is mostly overlooked. Leaving cannibals out of the discussion, a man is a man first, and everything else comes next.

We have to add one final, important factor. Many a person has in reality far more sympathy with other races and their problems, and a far better opinion of the members of such races, than he will admit to his compatriots. He is *deterred from sincerity by lack of courage*. When at a party or a dinner-table, all those present (your compatriots) are unanimous in their condemnation of a certain race, it takes some courage to be the sole exception, when this difference of opinion quite frequently involves your being treated with icy reserve by one half of the company and with sneering sarcasm by the other half. We personally think that Truth is always worth some sacrifice, but there are many whose moral courage fails them, and who, during the general conversation, will always side with the majority, though afterwards they may confess that they have some intimate personal friends among the race which they have just been condemning with the most sweeping generalisations.

It is so rare to find people who will talk dispassionately on any subject involving other races. If we even mildly protest against any absurd statement, of the kinds discussed above, people immediately grow excited, and accuse us of having "an axe to grind." If we, in our turn, get heated, all is lost. The only way is to smile benignly, and try not to lose our temper!

It is even more galling and painful, when you are conscious that intimate friends, or persons whose good opinion you value, condemn you in their minds, inferring that (because you try to create better understanding with a certain race) you condone or even admire the weak points and vices of the foreign race in question! These friends ask you, with a superior air, how you can deny the defects of the race in question, or whether

it is that you intentionally shut your eyes to facts.

The whole point is that no level-headed person does deny them. What we do wish to deny is that many faults of character, even though found in an entire race, are not inherent, but are the results of environment, early training and long traditional habit. This, then, is a hopeful doctrine.

The optimistic aspect of the whole question
We should not, however, allow ourselves to be engulfed in an ocean of despondency; for there is a bright side to all this trouble. We have succeeded in diagnosing at least a great part of the obnoxious disease of inter-racial *prejudice* *in its intellectual insincerity*. Though obstinate and malignant, the disease is not incurable. The diagnosis itself is the first step. Consensus of opinion regarding the diagnosis is the next step, and then the physicians, with the co-operation of the patient, can proceed to apply their remedies. Possibly, one he knows what ails him, the patient can best effect his own cure, if he is really determined to get well.

In the meantime the physicians are already at work, though there are quite a number among them who do more harm than good. As in all diseases, prevention is better than cure, and parents, teachers, Scoutmasters, Girl Guide leaders, and members of textbook committees, in short all who have the care of children in their hands, in all countries, have a golden opportunity to keep the minds of the rising generation as free as possible from stupid prejudices. After all, it is wonderful what real, solid education can do!

Great changes do not come about in five minutes, nor even in a single generation, but every sustained effort in the anti-prejudice campaign is worth while.

Meanwhile, not only preachers, professors and journalists, but all whose daily work brings them into contact with many people, can merely by their ordinary conversation, exert considerable influence in the direction of a more reasonable inter-racial mentality, while even the humblest of private individuals can, by his example, show the circle of his friends and acquaintances, that he or she, for one, shows the intellectual insincerity which leads to such narrowness of mind, and creates so much unnecessary bitter feeling.

The only woman A. R. A.

— *Popular Mechanics*

Science Produces the "Electrical Man"

On a table in the New York office of the Westinghouse Electric and Manufacturing Company stands an invention that might be mistaken for a

other combination of human sounds will the door-opener respond. But must the orders be spoken human words? Speech is needlessly complex for the engineer's purpose. Besides, a machine ought to respond to every language—something that no human being can do. "One," "une," "ein" all have the same meaning, but only to an intelligence that understands English, French and German.

AN ELECTRICAL ESPERANTO

Accordingly, Wensley decided to invent a simplified, universal language which anybody could speak and which could be understood by the listening automaton—a kind of electrical Esperanto. Musical tones constitute such a language. In Wensley's system but three tones are required, and these are generated by electrically driven tuning forks, so that constancy of pitch is assured. If you are a good musician with a perfect sense of pitch—you may whistle or sing the tones or blow them on a pipe, and the receiving automaton will respond.

In the dispatcher's office the tones are directed into an ordinary desk telephone by means of a loud-speaker. The automaton at the receiving

The Mechanical Man

The Mechanical Man

end is more complicated. Much like a radio receiving set tuned to a particular broadcasting station it responds only to one of the three tones that happens to be transmitted. By means of amplifiers the energy of the received tone is magnified so that it can operate a relay or switch, which in turn actuates selective mechanism much like that of an automatic telephone.

The method of using this televoxal system is simple. Suppose that Mrs. Twitchell, who is concerned about her club, suddenly becomes clubroom is table on which stands a small box surmounted by a telephone, toward which the form of a loud-speaker is directed. On the face of the box are push-buttons which control pitch pipes or tuning forks, each emitting different note.

By means of the push buttons and the pitch-pipes Mrs. Twitchell talks the electric electrical esperanto that Wensley has invented for her.

Her first step is to ring up "central" in the ordinary way. "Give me Main 2350," she says.

MADAM GIVES HER ORDERS

The telephone operator calls the number. When the bell in Mrs. Twitchell's home rings a sound-sensitive relay lifts the receiver-hook, starts up the station-signal buzzer and sets the whole apparatus for action. She does not have to ask "Is this Main 2350?" She hears a special combination of buzzes which she recognizes as those of her automaton. If she has the wrong number she simply hangs up the receiver. So does the automaton. Then she rings up again, just as if she were calling a living friend instead of an unemotional combination of wires, magnets and vacuum tubes. At last she hears the peculiar combination of tones emitted by the televox of her own home and she is ready to talk electrical Esperanto.

"Tweet" sings one of Mrs. Twitchell's pitch-pipes. In electrical Esperanto this means simply "Hello, stand by for orders."

The televox stops buzzing at once and sends out a series of one-pitch notes meaning "I'm ready. What do you want?"

Mrs. Twitchell's pitch-pipe says "Tweet, tweet." These notes the automaton correctly interprets to mean "Connect me with the electrical stove."

"buzz, buzz, buzz, buzz-z-z-z—" the televox replies, which is the same as saying "You're connected. It might interest you to know that the switch is open and that there is no heat."

Mrs. Twitchell pushes another button. "Br-r-rung. An order that means "Close the switch and start the oven."

The televox stops the long buzz that informed Mrs. Twitchell of the oven's condition, closes the switch, and then gives a short, staccato buzz to notify her that the switch is closed and the oven started.

"Tweet, tweet, tweet, tweet" hums Mrs. Twitchell and thus commands "Connect me with the furnace down in the cellar and tell me how hot it is."

Four answering buzzes tell her that she is connected with the furnace and two additional buzzes convey the sad news "It's pretty low."

"Tweet, tweet, tweet, tweet, tweet—connect me with the draft-opening switch."

Mrs. Twitchell hears five answering buzzes, then a short buzz, the whole perfectly intelligible to her as "You're connected with the furnace draft switch. Permit me to report that the drafts are closed."

"Toot," says Mr. Twitchell, or "Open the drafts."

Back comes a long buzz. "The drafts are opened."

Mrs. Twitchell blows her third pitch-pipe, the same as saying "Thanks. Good-bye." Whereupon she goes back to her bridge game.

Thus Wensley gives her command over an electrical slave that renders service uncomplainingly and unerringly. Her televox can be applied to any piece of household apparatus that can be driven by a motor actuated by an electromagnet or controlled by a thermostat or that can emit a sound. It will tell her if she left the windows open in the living room and then close them at her command, if the postman has dropped any letters in the mail-box, if the children are in the house and if the baby is crying. Her conversation with her televox sounds much like random notes played on a piccolo.

EVEN ACROSS THE OCEAN.

The telephone line transmits and receives simply the sounds of Wensley's artificial musical language. Hence no electrical connections with the telephone are needed. You can take the transmitter and loudspeaker to London, if you like, and buzz your orders to the televox in the United States or Cuba that happens to be in tune.

In Washington, D. C. an official in the War Department calls for a relay connected with a water-level indicator. As soon as the connection is established the relay reads of the water level by an appropriate number of buzzes. If the water is too high in one reservoir it is partly diverted into another by calling for another relay which controls the motors whereby gate-valves are opened.

What if the televox should be crippled? It simply emits a howl for help when it is called—all that a human being could do under similar circumstances.

Since the televox was devised primarily to meet the demands of automatic substation control it will find an extensive application when central stations are generally connected into what are called "superpower" systems. Even now it is possible to switch electric energy from our distant city to another in whole groups of States. By 1930 power will be pooled to form a great reservoir that will be tapped anywhere as it is required. If Niagara's factories are closed at night energy will be sent to New York, if need be, to run trolley cars during the rush hour. A few gigantic power plants, packed with turbines and generators of unprecedented output will take the place of hundreds now required to light cities and turn the wheels of

factories. What will become of the old plants? They will be reduced to the status of substations—automatic substations controlled by high-pitched musical notes and giving commands to televox automata.

It is no wild dream to imagine all the States east of the Mississippi supplied with current under the control of a single dispatcher located in Cleveland. At his elbow are as many telephones as a stock broker requires. Before him is a televox about as big as the average telephone switchboard of a hotel. Its buttons control the usual tuning forks or pitch-pipes. A lamp glows—a signal from Station 31. "Something is wrong in Philadelphia," says the king of the switchboard—power dictator of the Eastern United States. He plugs in a jack, puts the telephone receiver to his

Creator of the Mechanical Man

ear and listens. Four long buzzes and two short. "Thunderstorm in Philadelphia. The sky is black. More light is needed." Whereupon the power dictator switches electric energy from Miami, where the sun is blazing, to eastern Pennsylvania.

Wensley's televox assumed the form of a sound controlled automaton simply because of the wide distribution and convenience of the telephone. The selectors that operate motors and electromagnets at the receiving end and thus open doors and valves, announce the temperature of a room, buzz the information that water in a reservoir is too high by four feet, might be influenced by any form of radiant energy. A photo-electric cell is to light what the telephone is to sound; it converts light into electricity. Flash a light in front of such a cell and electric impulses can be sent through space or over a wire to affect automatic devices.

The bolometer is an artificial sense organ that feels heat. It can measure the temperature of a man's face at the distance of a mile. Move your hand in front of a bolometer forming part of an electric circuit and again it lies in your power to start and stop remote machinery. Or send radio signals to a receiver mounted at any con-

point and you can steer a torpedo on its deadly course, guide a crewless submarine.

Wensley's invention effectually disposes of the Robot type of automation dear to writers of fiction and plays, or the artificial man created by a Frankenstein. There will never be a Robot—a brainless, tireless, unemotional mechanism fashioned in the image of a man, performing all the functions of a man, moving about stilly but surely, pulling levers, turning control wheels, wielding broom, pick or shovel. Medieval contrivers frittered away their talents in constructing lifelike automata that could write a name and play a tune or two, and that outwardly resembled Robots. The modern engineer has no patience with such fantastic creations.

CONTINUED WITH FUNCTIONS

Man is a highly complex organism adapted to live in a highly complex environment. In a factory in an artificial environment, he is 99 per cent. useless. So long as he sits at a machine he might as well be legless. So long as he does nothing but feed bars of steel into a machine he might as well be earless and noseless.

For that reason engineers like Wensley are not concerned with mere imitations of men, but solely with a few functions that men are called upon to perform under special circumstances. An automatic shoe-polishing machine is not expected to play the grand piano. Linotypes, printing presses, trolley cars, sewing machines, the hundreds of automata in daily use are very human in their deliberately limited way, but they never look human.

LIMITATIONS OF A ROBOT

To drive home the limitations of an actual Robot, let us assume that an engineer undertook to construct one and to endow it with many human talents as possible. The machine would, of necessity be brainless, because even the most ingenious technologist cannot make a collection of wheels, shafts, magnets and wires think. But it could move, hear, see and feel under human control. Instead of legs its creator would give it wheels for simplicity's sake—wheels which would be driven by electric current supplied either by a battery or a little dynamo mounted within what might be called the "trunk." Its eyes would be photo-electric cells that would resemble the familiar vacuum tubes of a radio set and would perceive minute differences of light and darkness. Its ears would be telephone receivers, so that it could hear and respond to spoken or musical commands in accordance with Wensley's system. A thermostat would enable it to feel heat, so that if the temperature rose above a critical point it could automatically walk, or rather roll, away to cooler surroundings.

I could be endowed with a limited sense of touch, so that it could feel the difference in thickness between a sheet of paper and a block of wood. It would probably have six or seven arms for simplicity's sake, paradoxical as that may seem. A living human arm is much too complicated; it is both sense organ and tool. Some of the Robot's arms would be strong enough to lift weights of perhaps fifty pounds and would be miniature cranes; others would be mere tubes with claws and fingers mounted in ball-and-socket joints; still others would be mere hooks. In other words, the engineering Frankenstein would analyze the principle functions of the human hand and arm as

a tool-grasping and tool-using device, and then proceed to invent separate mechanical equivalents of the requisite number.

Within the trunk of this Robot—a box-like trunk—would be a collection of selectors that would control locomotion and the movements of the half dozen arms with their hooks, claws and fingers. Open the trunk (there is a little door at the back) and you see within a maze of magnets and wires that suggest the mechanism of an automatic telephone system or the interior of an adding machine. The selectors are connected with the photo-electric cells that constitute the creature's "eyes" (placed one in front and one back or the machine) and with the telephone "ears," so that either flashes of light or sounds could energize the proper circuits and thus govern the movements of the many arms or of the wheels that serve for locomotion.

AN IMAGINED "ALGERNON"

Call this creature "Algermon", order it about by name, it would nevertheless be little more than a huge electro-mechanical doll. In order that it may move with certainty from room to room its wheels would run on rails. In response to a command flashed by a light (to which the photoelectric "eyes" would be sensitive) it could drag a vacuum-cleaner over a restricted path, turn the gas on and off in the kitchen oven, open and close windows, push an electric switch button to start and stop a motor in the home or the factory, and perform perhaps a dozen very simple operations dependent on pushing, pulling, lifting and twisting.

The household or the factory would have to be adapted to the creature's limitations. Furniture or machines, for example, would have to be so placed that its movements would not be hindered; switches would have to be located near the tracks on which it moved. It would have to be so constructed that having executed a command to lift the baby in its crib and carry it from the nursery to the living room it would automatically return "as you were" to its station in the butler's pantry there to await new orders from a flashing light or from a loud-speaker.

"Algermon" would not be a thing of beauty. He would not even suggest a man. In fact, he would simply be a box mounted on something that would be like a trolley running on a narrow-gauge railway track. He would not have a "head", for his "eyes" and his "ears" could be placed anywhere on the box. Probably he would have four or five feelers or antennae which would enable him, insect-like, to grope his way and which, at the slightest contact with an obstruction in his path, would cause him to stop dead and thus avoid a collision.

NO RESEMBLANCE TO A HUMAN

As soon as we have our Robot we see his hopeless inferiority to an automobile, a reaping machine, a shoepegger, or any of the countless contrivances that perform one task well. Study any machine or any scientific instrument invariably it proves to be either a simple artificial muscle or an artificial sense organ. What is an electric crane but a huge arm and fist of steel hundreds of times more powerful than human biceps? What is the folder of a printing press but the equivalent of a hand? Look at the knot-tying mechanism of a reaper as it travels along in a field of wheat. What is it but the equivalent of the three fingers

volcanologists sent daily bulletins, by wire of courier, to Naples and the other Vesuvian towns, which were printed in poster form and prominently displayed. These reports, from the front had most reassuring and steadying effect upon the population, who argued that if men could live on the volcano itself at such a time, the danger could not be serious elsewhere."

The eruption of 1906 blew off about 350 feet of the summit of Vesuvius and enlarged the crater. Mr. Talman tells us, "Near the center of the crater rises the 'eruptive conelet,' which marks the summit of the volcanic vent. In the eruption of which telegraphic crews has just come to hand the lava in the now shallow crater overflowed the eastern rim into a depression called the Valle dell' Inferno (Valley of Hell), and some of it flowed through ravines in the outer wall of the big prehistoric crater (Monte Somma) into the adjacent

country, threatening the village of Terzigno." To quote further.

"Back in the year 1911, when the crater was still nearly 1,000 feet deep, volcanologists began a series of audacious descents to the crater floor, scrambling down the almost perpendicular walls with the aids of ropes. In May, 1912, Prof. Alessandro Malladra, Vice-Director of the observatory, made the first of the numerous ascents by which he won high renown throughout the scientific world. The almost overcome at times by the heat and gases, Malladra and his companions remained for hours at a stretch within the crater taking photographs, measuring temperatures and collecting samples of gases and minerals. In recent years, with the building up of the crater floor, access to it has become easy, and it has been visited by numerous investigators."

STUDENTS AND POLITICS

By N. N. SIRCAR

OWING to recent occurrences this subject, which is of great importance at all times, is drawing pointed attention of all persons interested in the welfare of students. About those occurrences I have no first-hand information, and regrettable as they are, I desire to say nothing about them. Which party is to be blamed, or whether the blame is to be allocated to both parties is outside the scope of this contribution, which is directed to discuss the question from a broad point of view.

Before considering the question whether students ought to participate in politics, it is worthwhile to clear the ground by stating that considerations applicable to other students in other countries may not be wholly applicable, to the narrower issue discussed here, viz., whether students in Calcutta Colleges should take active part in politics.

What is found desirable for an English boy in Oxford may be wholly inadvisable for a Calcutta College boy.

To clarify our thoughts let us try to put ourselves as far as possible in the position of one who, having matriculated in, say, Mysen-sing or Birbhumi, is taken out of his home, and transplanted to a Calcutta Hostel or 'nts' Mess. The boy has been bred up in normal surroundings of his home-life—

family life which is the cradle of social affections, where the first elements are acquired of that tenderness and humanity which cements mankind together. Obedience to parents, affection for brothers and sisters, taking part in the usual social and religious functions, the attendant discipline, the small daily sacrifices for others, and a thousand other constituents make him part of a complex organism. He is violently detached from this organism as if by a clean surgical operation and he is sent out for his academic career to the soulless monster of a huge city.

The average boy is not sent to Calcutta, because he is a scholar keen on acquiring scholarly attainment for its own ends but because in the average case his parents require him to take the B. A. or M. A. degree, as in Bengal that is the only key to open the gates of livelihood—the legal or the medical profession or Government Service. To the vast majority of cases the needy parents are pinched and straitened as the result of keeping the boy in College. The privations fond parents in the interest of their sons are prepared to bear, are a matter of common knowledge and experience.

Cut off from the restraining influences of home-life, the boy has now come to live in

the city of dreadful night, amidst condition most antagonistic to moral well-being.

Unless the boy is an idler he has a strenuous life before him. He spends laborious hours, in getting up lecture notes and going through Keys and Annotations. His time is passed with Addison and Shelly, Burke and Hume—foreign ideas delivered in a foreign language. His work is mainly 'grind and cram' which is inevitable where the main object is to do well in examinations.

He lives, in fact, in an artificial and unreal world bending down under the weight of examinations while his Anglo-Saxon brother, in the hospital, the mine, the factory or the architect's office, starting young, is going through his apprenticeship stage by stage, giving scope to his practical capabilities for increasing and developing in the direction requisite for his future task and the special work for which he desires to fit himself.

It is well-known and I remember having read the exact figures in one of the issues of the *Modern Review* that in India the percentage of boys joining the University, out of those who have matriculated, is greater than the corresponding percentage to England (substituting School Finals for Matriculation).

It has also to be remembered that the education of our boys is divorced from religion. If every Indian boy does not turn out to be a cold-blooded atheist and a rank materialist, it is because the influences of heredity, family life and the atmosphere in which he had his being, save him from that end. His reserve fund is sufficient to leave him a balance, after continuous debit during his academic career. In his leisure hours, what is the recreation of the average boy?

He devours with keen appetite the tasty meal which is supplied in the columns of the daily papers—papers which for obvious reasons devote an unduly large part of their reading matter to politics, and politics alone.

The popularity of a paper depends on the hotness of the stuff served by it, on the temperature of the air it breathes out, and on the mercilessness of its attacks on its political opponents and persons in authority.

Subjects of the most vital importance to our well-being, and even to our existence as a community, receive such negligible attention that the young reader may be excused if he comes to believe, that physical fitness, development of trade, industry and commerce, and other vital matters are mere

trivialities compared to the dismissal of a Minister or the removal of a Statue.

The last and not the least of the important factors influencing the student's life, consists in the fact that, on coming to Calcutta, he has become one of a 'herd' or a 'crowd'. Neither of these words is used in any contemptuous or derogatory sense. They are used to convey the idea that the boy has become one of many who are gathered together for purposes of action or observation.

In this sense, the members of Parliament of one of the parties is as much a herd or a crowd, as students assembled in a Hostel or in College Square.

From the mere fact of assembling together there results new psychological characteristics, which may add to or differ very materially from the average characteristics of individual constituents of the 'crowd'.

This subject has recently been keenly discussed by some thoughtful and brilliant writers, but with the limited space in my command, a digression into this interesting topic is hardly possible. There are some conclusions in which all writers agree and which are borne out by experience.

The crowd is dominated by considerations of which it is unconscious. These considerations may be better or worse than those of the individual, explaining no doubt the fact that a crowd is often as easily more heroic or more criminal than its average constituent. "They turn aside from evidence that is not to their taste, preferring to deify error, if error seduce them. Whoever can supply them with illusions is easily their master. Whoever attempts to destroy their illusions is their victim" (Gustave Lebon). "Given to exaggeration in its feelings, a crowd is only impressed by excessive sentiments. An orator wishing to move a crowd must make an abusive use of violent affirmations. To exaggerate, to affirm, to resort to repetitions, and never to attempt to prove anything by reasoning, are methods of arguments well known to speakers at public meetings."

When addressing a crowd, an effective orator hardly ever makes the mistake of appealing to its 'reason'—and sentiment is only the factor that counts.

If an individual student (to take an example) had been approached, and asked to go bare-footed in honour of Khndiram Bose, the chances of his acceding to the request ~~we~~ have been small.

The case was more fully described by "Truth" in June, 1898:

"In times past Africa was left as a field of missionary labour. Associations sought to Christianise the natives. But this attempt soon became a mere pretext for robbing them of their earthly possessions. Nowadays we seem to have given up even the pretence of spreading Christianity in the Dark Continent. We openly and avowedly want its inhabitants to buy our goods and to work for us or to give place to us. If these unfortunates inhabit a district where Europeans can live, we expel them by means of spirituous liquor and the diseases that we drag in our train. If they inhabit a part of the continent where Europeans cannot live, we send punitive expeditions to force them to receive our goods. In either case we call upon Providence to bless us for our civilising efforts."

As the Rev. Mr. Macdonald refers in particular to the British rights of conquest in Kenya and states that the Indians are in the wrong we may refer him to Mr Winston Churchill who has stated in his "African Journey" that Indian soldiers bore "an honourable part" in the conquest and pacification of Kenya. Mr. Churchill has strongly condemned the British policy of "deliberately squeezing out the natives of India from regions he has established himself in under every security of good faith." Lord Olivier has stated in an article on "Trusteeship":

"There flourishes, specially in Kenya, the doctrine that the White Man's trusteeship must be exercised 'educationally' through the simple method of

inducing the native to work on the white man's estate."

What is the policy pursued by the British Government? In 1923 the Duke of Devonshire declared:

"His Majesty's Government record their considered opinion that the interests of the African natives must be paramount, and that if, and when those interests and those of the immigrant races should conflict, the former should prevail."

But this, like the Queen's Proclamation of 1859, has been treated as a scrap of paper. Lord Cranworth, speaking at the Royal Colonial Institute in April, 1926, gave out that "Never must, the interests of the white population be allowed to be swamped by the interests of the natives." This represents the policy actually followed. It is worthy of remark, as stated by Mr. Andrews, that "with one or two notable exceptions, the missionaries and chaplains appear to have sided with the Europeans in an anti-Indian campaign." Archdeacon Law, in a letter to the "Times" in April, 1923, wrote:

"I doubt if there is a single missionary today in Kenya who does not contemplate with dismay the granting of the Indian claims. For, pressed in its logical conclusion, it will mean that the Government will pass into the hands of a non-Christian people."

In the light of these facts the Rev. Mr. Macdonald's defence of the British policy in regard to the Kenyan highlands is understandable.

LORD SINHA

By Sir BROJENDRA MITTER,
Advocate-General of Bengal

LORD Sinha was the most brilliant advocate of the Calcutta Court within living memory. By sheer dint of merit he rose from an obscure position, without any special advantages, in the way of wealth or patronage, to be the undisputed leader of the Calcutta Bar. The call of duty took him to other spheres of activity and whatever position he was called upon to occupy, he filled it with dignity and distinction. It was a career of uninterrupted success due to his valuable endowments—physical

health, power of work, a clear and powerful intellect, a gift of ready and direct speech and above all, common sense, courage and honesty.

The public career of Lord Sinha is well-known to all. One special feature is that he was almost always the first Indian to hold the high positions he did. He was the first Indian Advocate-General of Bengal, Executive Council member of the Viceroy's Council, the first Indian King's Counsel, the first Indian Benchers of an Inn,

the first Indian Under-Secretary of State, the first Indian Member of the English Peerage, the first Indian Governor of a Province. A man of ionate modesty, he never sought any of these positions. They came to him and the man was always greater than the position he held. He never cared for popular applause, but found satisfaction in selfless and unostentatious discharge of duty. His life was rich in service to his country and the empire.

At the Bar, Sinha had his early struggles and disappointments. For a time he eked out his precarious income by teaching law in the City College. But talent like his could not long remain unappreciated. He soon came to be known as a sound lawyer and powerful advocate—incisive in cross-examination and lucid and forceful in argument. He was uniformly fair to the Court and to his opponent and he commanded the confidence and esteem of the Bench, the Bar and the litigant public to an undisturbed measure.

He was called to the Bar in 1886. In 1903, he was appointed Standing Counsel and four years later, Advocate-General. In 1909 he was appointed the Law Member of the Viceroy's Executive Council. He was knighted in 1914. He reverted to the Bar and from 1915 to 1917 he was again the Advocate-General. 1917 was the turning point in his career, for after that he never came back to the Bar which brought him fame and fortune. In that year he was selected to represent the Government of India in the Imperial War Conference along with the Maharaja of Bikanir and Lord Meston. In 1918 he was made a King's Counsel and in the same year he was made a member of the Imperial War Cabinet. In 1919 he was sworn in as a Member of the Privy Council and made a peer of the realm. In 1919-1920 he was Under-Secretary of State for India and in that capacity piloted the Government of India Act through the House of Lords. In 1920 he was appointed Governor of Bihar and Orissa which position he had to give up at the end of 1921 on the ground of health. In 1921 he was decorated with the insignia of K. C. S. I.

Prior to 1915 Lord Sinha had not taken much active part in politics. In that year he was prevailed upon to preside over the Indian National Congress. His presidential address was a momentous pronouncement. It is no secret now that the famous declara-

tion of policy made by Parliament on the 29th August, 1917 was the outcome of that address. In those days the ideal of the Congress was self-government within the Empire. Lord Sinha over forsook his faith in the connection of India with England. He always had a long and clear vision of India's future and his faith grew in intensity with the passage of years.

For a few years after 1921 Lord Sinha spent his time mostly in study and travel. He gained a varied and unique experience of men and affairs. With the restoration of his health, we had in Lord Sinha a man rich in knowledge, ripe in judgment and wise in counsel. He came to be regarded as a valuable Imperial asset.

Two years ago, Lord Sinha was given a seat in the Judicial Committee which the aged Lord Parmoor readily vacated in his favour. Lord Sinha was delighted to go back to his first love, the Law, and soon made himself at home in the Privy Council where he enjoyed the confidence and esteem of his colleagues and the Bar.

In his varied career, Lord Sinha made many friends in India and in England. Indeed, he had a talent for making and keeping friends. His frank and open nature was singularly loveable. His courtesy, reasonableness and fairness disarmed opposition and his sincere and ardent patriotism commanded respect. If he was great as a lawyer, administrator and statesman, he was greater as a man. His was the robust manly character of a cultured gentleman in which the best qualities of the east and the west were happily commingled.

I had the good fortune of knowing Lord Sinha intimately and I know that whatever might have been the scene of his activities or triumphs, his heart was always in the Calcutta High Court. In fact, the last afternoon he spent in Calcutta, he came to meet the members of the Bar at the Bar Library.

He has left many friends at the Bar to whom his death is a great personal loss. They will cherish many intimate and personal acts of kindness at his hands. We had hoped that he had many more years of service to his country. Sudden death has cut off an exceptional career. His memory will live long in the Calcutta Bar and the Calcutta High Court.

LORD SINHA'S POSITION AT THE BAR

In order to be able to appreciate Lord Sinha's position at the Bar, it is necessary to
